Three other witnesses were mentioned by Lord Dunraven to the committee as persons whom he thought would give evidence to the same effect as above stated: Mr. Kersey, a resident of New York, who had been the representative of Lord Dunraven in the United States in matters connected with this match; the captain of the steamer City of Bridgeport, which was used at the races as a tender to the Valkyrie, and the pilot of the Valkyrie. These witnesses were not produced. It was not claimed that their evidence would be other than cumulative to that given by the other witnesses on the part of Lord Dunraven, and of the same character. Nevertheless the committee, on their own account, not being authorized to issue compulsory process for the attendance of witnesses, invited the attendance of Mr. Kersey, which he declined to give, stating as his reason the objection of those for whom he acted in his business. And they made such efforts as they could to obtain the other two witnesses, but without success. Mr. Young, the pilot, was at sea. Capt. Parker, of the City of Bridgeport, though quite willing to appear, was unable to attend.

It will be perceived, therefore, that considering this case in the first place, upon the evidence introduced on the part of Lord Dunraven alone, the only proof in support of the charge it involves consists in the opinions of the witnesses above referred to, formed merely by looking at the vessel in the water on two successive days, that on the latter day she was from 1½ to 4in. lower in the water than on the former, and that these opinions were based solely upon the general appearance of the vessel as apparent to the eye, and upon no measurement or other data whatever by which they could be verified, excepting only that a pipe hole of about an inch in diameter, which on the first day was just at the water's edge, was the next day not to be seen. The committee attach no importance to the opinions of the witnesses who only saw the Defender from a distance of 200 or 300yds. There remain, therefore, but three persons—Mr. Glennie, Mr. Ratsey and Lord Dunraven himself—who ever got near enough to the Defender to see the pipe hole, even if it had been visible.

It is obvious that a very slight list of the vessel to starboard might have made this pipe hole visible on the first day, and that a similar list to port might have made it invisible on the second, quite irrespective of its actual position in reference to the l.w.l. A difference of 3 or 4in. in the distance of the bobstay bolt from the water might, if it existed, have easily occurred from a change in the trim of the vessel in consequence of the presence of the crew and their belongings in the fore-castle or other temporary cause, bringing her a little down by the head. Lord Dunraven himself says in his publication, above quoted, that the difference in the height of the bobstay bolt above the water might result from an alteration in trim.

The Erie Basin, where the Defender was observed on the first day, is a small, entirely inclosed space, where the water is practically smooth. On the second day the Defender lay inside of Sandy Hook in the lower bay of New York, a large body of water open to the ocean for five or six miles on its easterly side. Its surface is necessarily at all times in motion, and during the night between the two days the wind had been blowing heavily. It is obvious that the difference in the condition of the water in which the Defender lay upon the two days might well have produced a difference of apparent immersion.

The fraud that is involved in the charge thus made, if it is found to be true, is a very grave one, utterly destructive to the reputation of all who should appear to have been concerned in it, and especially odious under the circumstances of a friendly contest between citizens of different countries, exciting international interest, and supposed to be conducted by gentlemen, upon a high plane of honor and mutual confidence.

From the magnitude and difficulty of the operation necessary to its consummation, it must unavoidably, if it occurred, have been participated in not only by Mr. Iselin and those concerned with him in the management of the Defender, but by all officers and crew of that vessel, and many others incidentally employed.

It appeared from the evidence of Mr. Herreshoff, the designer of the Defender, confirmed by other witnesses, that to have produced an increased immersion of 1in. on the Defender would have required 7,155lbs. of additional weight, or about three and a quarter long tons; that to have produced such an immersion of 3in. would have required about nine and three-quarters tons; and an immersion of 4in., about thirteen tons; and that an immersion of 1in. would have lengthened the l.w.l. 8in., and in the same proportion for each additional inch of immersion. If such a result was produced, therefore, all the weight thus shown to be required must have been removed from the vessel before the first measurement on the 6th, replaced during the night of that day, and again removed during the night of the 7th, in time for the remeasurement on the 8th. And this was Lord Dunraven's theory, as finally stated upon cross-examination.

Such a fraud should not even be charged without due regard, first, to the established character of those upon whom the imputation of guilt must fall; and second, to the kind and degree of the evidence upon which it rests. To justify even accusation, suspicion must at least be reasonable; yet upon the hearing before the committee, the evidence above summarized (and hereafter appended in full), so slight, so extremely liable to mistake, is all that is offered in justification of the charge publicly made in the London *Field*. It is not readily to be believed that any expert, however skillful, could determine by the eye, between one day and another, and under circumstances so diverse, a difference so trifling in the displacement of a vessel, especially one with which his previous acquaintance was small. Lord Dunraven himself had the candor to say that he did not claim that this evidence, even irrespective of anything that was shown to the contrary, established the truth of his charge; he did claim, however, that the omission of the Cup committee either to remeasure the Defender on the evening of the race or to put a representative on board to remain during the night, so far prevented the proof or disproof of his claim as to justify him in renewing it after the matter had been revived by the Cup committee's report of Oct. 24; and that point will be specially considered hereafter.

But the case was not left to stand upon the evidence thus far reviewed.

On the part of Mr. Iselin there was introduced the testimony of a large number of witnesses, including, besides his own, that of the designer of the Defender, the official measurer, the captain, all the officers and all the crew of the Defender, numbering thirty in all (excepting five seamen, who were shown to be at sea and therefore inaccessible), all the gentlemen who were on board the Defender at the time of the race and all other persons, so far as the committee could learn, who had such means of observation as enabled them to know any facts material to the issue. These witnesses were personally present, except thirteen seamen, whose testimony was taken by *ex-parte* affidavits.

By this evidence there was established, to the entire satisfaction of the committee, the facts now to be stated.

The Defender, by her original design, was built and intended to sail without any loose ballast whatever, all weight thought necessary being introduced into the keel by a single casting, to the amount of about 85 tons. This calculation was based upon the rule of the New York Y. C. requiring yachts to sail in such races with their tanks, fittings, bulkheads, etc., on board, as when prepared for ordinary use.

During all the sailing of the Defender after her completion down to the time of this race, including various trials with the Vigilant to determine which of those yachts should be entered in the competition for the Cup, the Defender had sailed without any loose ballast whatever, but with her tanks, fittings, etc., on board. She was measured officially for the trial races on Aug. 31, 1895, and her load waterline was then found to be 83.55ft. She sailed with this line in all races prior to the Cup race now in question, when her load waterline was found by the official measurement of Sept. 6 to be 85.45ft., a difference of but 4.8in. in length, corresponding to 3.5in. of immersion. She is a boat of unusual stability and power, and all the evidence, both scientific and practical, was to the effect that additional ballast beyond what she originally contained was not required, and would certainly have diminished rather than improved the speed of the boat. Such was the opinion at the time of the race of Mr. Herreshoff, the designer; Capt. Haff, her sailing master, and Mr. Iselin.

It is plain, therefore, that no motive existed for increasing the ballast of the Defender. It cannot be supposed that there could have been an intention to place the vessel upon a different trim from that previously determined by her designer and manager to be the best.

After the arrival of the Valkyrie in the United States it was found that she was stripped of her fittings, water tanks, bulkheads, etc., and not in a condition to comply with the rule of the New York Y. C. above mentioned. A clause was accordingly introduced in the detailed agreement for the Cup races, executed on Sept. 4, waiving that rule.

On Sept. 4 and 5 the Defender, while at New Rochelle, was stripped and had all her fittings, water tanks, bulkheads, etc., taken out of her, which were weighed and found to be about 7,000lbs. Before this material had been removed from the upper part of the vessel, Mr. Herreshoff and Mr. Iselin had estimated that its weight could be efficiently replaced by two tons of loose ballast in the hold. Two tons of lead, consisting of forty-two pigs, were therefore obtained from New York, carried by steamboat to New Rochelle, and there put in the hold. The weight of the material removed proved, however, to be greater than they had anticipated, and they accordingly decided to add one ton more of lead ballast; and another ton was thereupon sent from New York to the Erie Basin. On Sept. 6, the day of the first official measurement, at the Erie Basin, and prior to the measurement, this ton of lead, consisting of twenty-one pigs, was placed temporarily on the cabin floor of the Defender, above the place it was to occupy in the hold. On the evening of Sept. 6, the day before the race, it being found that this lead could not be stowed in the hold without the pigs being cut in two, it was carried on to the Hattie Palmer, her tender, which was alongside, and each of the twenty-one pigs was cut in two, carried back again, and stowed in the hold of the Defender.

About five tons of lead ballast were in like manner put on board the Valkyrie shortly before the measurements, some portion of which at the time of the first measurement was temporarily placed on her cabin floor.

It was very clearly proved that the Defender had not been lightened in any way before the first official measurement on Sept. 6, except by the taking out of the tanks, fittings, etc., above mentioned (the weight of which had been replaced by lead ballast to the extent indicated), and by the substitution of a steel boom and gaff for the wooden spars theretofore in use. Nor was any other ballast or weight of any description put upon the Defender after the official measurement of Sept. 6 and before the race on the 7th, or taken out of her after the race on the 7th and before the remeasurement on the 8th.

There were no tanks left in the boat into which water could have been introduced as ballast, and the hold was examined and found to be dry immediately before and during the race. Lord Dunraven admitted that water could not have been used as ballast without tanks to contain it. After the Defender's bulkheads were removed at New Rochelle she was open from stem to stern, so that no ballast could have been concealed. Mr. Iselin personally examined the hold before the measurement on Sept. 6. Immediately before the race on Sept. 7 both Mr. Iselin and Mr. Herreshoff examined the hold again to see how the twenty-one pigs had been stowed the night before, and the condition of the hold as to water. No ballast of any kind, to any material amount, could possibly have been put on board or taken off the Defender, as the committee believe, without the knowledge of all the officers and crew, and of Mr. Iselin and his guests.

The work referred to by Lord Dunraven as done on board the Defender the night before the race was the moving and cutting and replacing of the lead before mentioned, and likewise work done by a party of riggers in fitting new wire ropes forming bridges for the mainsheet blocks—several riggers from New York, as well as the officers and crew of the Defender, testifying before the committee that they were engaged on such work that night, and that it lasted until 3 o'clock in the morning, and was of a nature to make considerable noise. The Hattie Palmer, after lying a short time alongside, left the Defender for the night before 10 o'clock both on that evening and the next, and did not return to the Defender on either night.

In respect to the pipe hole on the port side of the Defender, noticed by Lord Dunraven at the time of the measurement the day before the race, and which proved to be the discharge of the bilge pump, it was shown by a careful measurement and survey made by Mr. De Luze, a civil engineer experienced in such work, assisted by Mr. Hyslop, the official measurer, and testified to by them, that when the vessel lay in still water, trimmed and ballasted as she was on Sept. 3, the discharge hole would not be visible, being entirely below the l.w.l. as defined by the external marks affixed on that day, as above stated; and this was shown upon a drawing prepared by Mr. De Luze.

This hole was not, as thought by Lord Dunraven and his witnesses, about an inch in diameter, but was 2½in. in diameter.

It is not disputed that the Defender was in substantially the same trim and the same degree of immersion on both the 6th and 8th of September. And Mr. Hyslop testified positively that the marks which had been painted on the Defender in his presence by Mr. Watson were still visible at the time of the hearing before the committee, identically as they had been put on.

The committee had no reason to doubt the accuracy of these measurements, or the correctness of the evidence in respect to them. But they deemed it most important that it should be settled beyond any possible question whether the discharge hole of the bilge pump was or was not visible above the l.w.l. if the vessel was upon an even keel. At the request of the committee, therefore, Capt. Mahan kindly undertook to make a further examination of the Defender, now lying at New Rochelle, with reference to this point. He made a visit to the yacht in company with Mr. Iselin and Mr. Askwith, but found that under the uncertain weather conditions prevalent at this season a measurement direct from the water surface was scarcely practicable, and recommended that the matter in question should be settled by measurements starting from points of origin within the yacht herself. He therefore obtained from the Brooklyn Navy Yard, through the kindness of Naval Constructor Bowles, the services of Mr. Hibbs, an assistant naval constructor in the United States Navy, who, without being apprised of the result reached by Mr. De Luze and Mr. Hyslop, or seeing the drawings, went to New Rochelle and made a careful measurement of the location of the bilge pump discharge in reference to the l.w.l. as marked on the Defender externally by Mr. Watson. The request made to Constructor Bowles for the committee was as follows:

"The committee would like to have accurately determined by measurement the exact position of the bilge pump hole on the port side of the yacht Defender, indicated in plan submitted, so as to show conclusively the vertical distance of the lower rim of the hole from the racing waterline, two points of that line being shown at the lower edge of the red disk and of the mark on the stem.

"These two marks were placed by the measurer when the yacht was in racing trim and on even keel.

"Committee would also like to know the vertical drop of said hole, corresponding to 1°, 2° and 3° of list to port.

"Also, would noticeable trimming by the head be produced by shifting thirty men—say two tons—from center of gravity to the men's berthing quarters?

"N. B.—Note if red marks are of some standing.

"A. T. MAHAN."

Mr. Hibbs reported in writing to Constructor Bowles, by whom the report was transmitted to the committee through Capt. Mahan, that the lower edge of the discharge hole was 2½in. below the l.w.l., thus confirming the accuracy of the previous measurements by Mr. De Luze and Mr. Hyslop. Mr. Hibbs followed a different method of measurement from that adopted by the others, for he ascertained the position of the bilge pump hole entirely by measurements starting from within the yacht herself and not from the water. It follows, therefore, as a mathematical certainty, that upon an even keel, in the Erie Basin, this discharge hole would have been below the level of the water.

By further experiments made at the same time, Mr. Hibbs also ascertained that:

1. A weight of two tons moved from a position amidships through a distance of 13.75ft. athwartships would incline the Defender one degree, and would drop the discharge hole 2½in.

2. That a weight of five tons similarly moved through 11ft. would incline her two degrees and would drop the discharge hole 4½in.

3. That a weight of ten tons similarly moved through a distance of 7.25ft. would incline her three degrees and would drop the discharge hole 6½in.

4. A weight of two tons was moved from the center of gravity of

the water plane, forward on the middle line to the horizontal position of the center of gravity of the crew's berthing quarters, a distance of 32ft. 6in. The change of trim thereby occasioned on the waterline was as follows:

Forward, $2\frac{1}{2}$ in. down.
Aft, 2 in. up.

Mr. Hibbs further stated that he carefully examined the paint marks on the stem and side of the Defender, and that it was evident that they were of some standing.

The proof showed that as the vessel lay in the Erie Basin just before the official measurement on Sept. 6 she had a slight list to starboard, probably occasioned by the movement of the crew to that side of the vessel before they were put in position amidships for that measurement. And it was further shown that the quarters of the crew were in the forecabin; that their cots, bedding, etc., there were of the weight of about 40lbs. to each man; that these cots, etc., were taken out before the race and transferred to the Hattie Palmer and returned to the Defender after the race, and that their presence on board at the time she was seen by Lord Dunraven and his witnesses early on the morning of the 7th, or the congregating of the crew forward for any reason, might have brought the vessel a little down by the head, as shown by the experiments of Constructor Hibbs, and so have brought the bobstay bolt nearer the water.

On the occasion of Lord Dunraven's coming alongside the Defender in his gig, there was a general and perfectly natural movement of nearly every one on board to that side of the yacht.

If, as Lord Dunraven suspected, the Defender had entered upon the race of Sept. 7 with her racing line increased by the addition of ballast after the measurement of Sept. 6, she would have been violating the rules of the New York Y. C., under which the race was sailed, one of which is as follows:

"If any yacht, by alteration of trim or immersion by dead weight, increase her l.w.l. length, or in any way increase her spar measurements as officially taken, she must obtain a remeasurement."

This rule is specifically reproduced in the special agreement of Sept. 4 governing the Cup races.

Lord Dunraven did not make any written or other communication to the Cup committee or to Mr. Iselin on the subject of the increased immersion of the Defender, except that made to the committee through Mr. Fish.

The rule of the New York Y. C. on the subject of protests for violation of the rules of a race is as follows:

"A yacht having cause during a race to protest against any other yacht for a violation of these rules shall display flag B of the club signal code, which shall be known as the protest flag, and keep such flag flying till answered from the judge's boat by the answering pennant. A protest must be supplemented by a written statement of the facts, which must be sent to the regatta committee before 6 P. M. of the day following the race."

Lord Dunraven did not raise his flag, as required by this rule, nor make any protest at all against the Defender on that race.

With reference to the suggestion of Lord Dunraven that the omission of the Cup committee to remeasure the Defender on the same day of the race, or to put a representative on board of her to remain during the night, justified his suspicion that her displacement had been tampered with between the race and the remeasurement on the following day, a few words should be said.

It has already been pointed out that a remeasurement of the Defender after the race and on the same day was impossible, because the Erie Basin, where alone it could take place, was too far distant to be reached until too dark to make it, and that Lord Dunraven was so informed by Mr. Fish when the request was made. It was fully proved that such a measurement could not be made by artificial light. The remeasurement that took place on the next day (Sunday), at 10 o'clock in the morning, was, therefore, the earliest possible.

In regard to the request, which Lord Dunraven states that he made to Mr. Fish for transmission to the Cup committee, namely, that each of the two yachts should be taken into the charge of the committee for that night, it is conclusively shown that no such request reached the committee.

Mr. Fish denies that any such request was included in the message with which he was charged. That he did not understand that it was included is shown by the fact that in delivering the message a few hours afterward, gravely impressed as he says with its importance, he made no mention to the committee of such a request.

It further appears that a memorandum of the message sent was made by Mr. Fish in writing, which was produced and put in evidence, and contains no allusion to the request in question. Mr. Fish testifies that he made this memorandum in Lord Dunraven's presence, because unwilling to trust his own memory, and in order to be assured that it should be accurately conveyed; that he read it over to Lord Dunraven, who suggested a correction, which was underlined; and that this memorandum contained the whole message as given to him, and as delivered by him. Lord Dunraven remembers that some memorandum was made by Mr. Fish at the time concerning this message, but does not recollect that he himself suggested any correction. But even upon his own recollection of the facts, the written memorandum seems strongly to confirm Mr. Fish's statement.

It is testified by the Cup committee that the memorandum was delivered to them by Mr. Fish as the message he had received, and it is clear that it was acted upon by them as such, and that the publication by Lord Dunraven in the *Field* was the first knowledge that committee had of any alleged request that they should take charge of the vessels pending remeasurement. It is also to be observed that Lord Dunraven in his letter to Mr. Kersey of Sept. 27 makes no mention of such request, for all he says there is: "I don't know whether Fish ever told the committee I wished the ships measured immediately after the race."

It was shown that the message from Lord Dunraven as to the increased immersion of the Defender, and the reason for his request for a remeasurement of the Defender, were not communicated to Mr. Iselin by Mr. Fish or by the Cup committee, and did not come to his knowledge till long afterward.

It has not been suggested that the members of the Cup committee, or any of them, were or could have been parties to any tampering with the waterline of the Defender. The complaint of Lord Dunraven, made through Mr. Fish, was not stated in such terms as to suggest to them, in the absence of any definite request, that they ought to put a representative on board the Defender that night. This is apparent from Lord Dunraven's own statement of it in his publication in the *Field*. The committee have not been referred to any precedent for such action, nor to any rule of any yacht club in which such a remedy has been provided for. It necessarily implied distrust of all persons connected with the management of the Defender, and from their knowledge of these gentlemen it would doubtless never have occurred to the Cup committee unless specially demanded.

But whether the Cup committee should of their own motion, upon the suggestion that was in fact conveyed to them by oral message from Lord Dunraven, have taken that step as a matter of precaution, becomes now in the present case totally immaterial to consider, because, as has been shown, the evidence is conclusive that nothing did take place or under the circumstances could possibly have taken place on board the Defender that night tending to support the charge made by Lord Dunraven. A representative of the Cup committee, if he had been on board, could therefore have discovered nothing and prevented nothing.

The only other circumstance that the committee deem it material to allude to is the omission by the Cup committee, until after the first race, to cause the l.w.l. length of the competing yachts to be marked externally on the vessels.

This was indicated on both yachts by the measurer at the time of the official measurement by means of copper tacks placed in the decks. That these marks were accurate is not questioned. This method of marking the waterline length was in accordance with the uniform practice of the New York Y. C.

At the last race for the America's Cup, which took place in 1893, and in which a yacht belonging to Lord Dunraven took part, the l.w.l. length was so marked, and without objection by him.

On the present occasion the first request made by Lord Dunraven for an external marking was contained in a note dated Sept. 5, 1895, the very day upon which the boats were to be measured, addressed to Mr. Canfield, the secretary of the Cup committee. That committee without delay convened a meeting and acted favorably upon the request, provided Mr. Iselin consented, his consent being necessary to any modification of the terms of the agreement. He at once assented, and within a few hours after the receipt of Lord Dunraven's request the committee had sent a sub-committee to the Erie Basin, where the boats were to be measured, to see that they were marked externally as requested by Lord Dunraven.

But the Valkyrie had already been measured and had left the basin, and could not return on account of the tide. It was therefore arranged that the marking should take place on Sept. 8, the day following the first race. And the measurer was ordered to preserve the batten used in the first measurement, and to take steps to make sure that the yachts should be at the same point of immersion.

It is apparent, therefore, that the reason why the external marking was not made until after the first race had been sailed was because Lord Dunraven was so late in his request for a method of marking not customary and not provided for in the agreement for the race that it was impossible that it should be had any sooner.

Lord Dunraven must be in error in his recollection that in his conversation with Mr. Fish he demanded and as a result secured the external marking of the boats. And the suggestion that Lord Dunraven had repeatedly asked to have the vessels marked externally before the first race is not sustained by any evidence.

It is very much to be regretted that, if Lord Dunraven's suspicions were not dispelled at the time of the remeasurement of the Defender

on Sept. 8, he did not say so then, instead of accepting in silence the result which verified the previous measurement. The remeasurement was the committee's response to the communication which they had received through Mr. Fish. In connection with their knowledge of the circumstances, which made it impossible that the imputed fraud could have been perpetrated without Mr. Iselin's concurrence, and their knowledge of Mr. Iselin, it satisfied them; and, as we have seen, it justly satisfied them.

To all appearance it satisfied Lord Dunraven. He was present at the remeasurement and met there the members of the committee and Mr. Iselin. He made no request for further action. He made no objection to proceeding without further action. He made no inquiry as to how or how fully his oral message through Mr. Fish had been delivered, and no suggestion that any request which he supposed to have been contained in that message had not been complied with.

He sailed the next race in the series that had been agreed on without protest or objection on account of the change which he had told Mr. Fish he believed to have been made in the load waterline of the Defender before the first race. And he testified that his belief that such a change had occurred did not influence him in his final withdrawal from the match at the third race. The Cup committee seems to have been warranted in supposing that Lord Dunraven's suspicions were allayed, and that no further steps were necessary to settle any question of fact or to vindicate any one's reputation.

Upon careful consideration of the whole case, the committee are unanimously of the opinion that the charge made by Lord Dunraven, and which has been the subject of this investigation, had its origin in mistake; that it is not only not sustained by evidence, but is completely disproved; and that all the circumstances indicated by him as giving rise to his suspicion are entirely and satisfactorily explained. They deem it, therefore, but just to Mr. Iselin and the gentlemen concerned with him, as well as to the officers and crew of the Defender, that the committee should express emphatically their conviction that nothing whatever occurred in connection with the race in question that casts the least suspicion upon the integrity or propriety of their conduct.

And the committee are not willing to doubt that if Lord Dunraven had remained present throughout the investigation, so as to have heard all the evidence that was introduced, he would of his own motion have withdrawn a charge that was so plainly founded upon mistake, and that has been so unfortunate in the publicity it has attained, and the feeling to which it has given rise.

The committee append a full stenographic report, revised by the counsel on both sides, of all the evidence laid before them, and of all the proceedings on the hearing, and likewise copies of all the documents and papers introduced on either side, as considered by the committee.

And they ask to be discharged from further consideration of the subject referred to them.

The committee cannot take leave of the case without expressing their regret that a part of the evidence now annexed should have been surreptitiously obtained by a New York newspaper owned by one of the oldest members of the club, and published with comments very adverse to one of the parties on the morning of Jan. 20. They had deemed it important under the peculiarly delicate circumstances of this case, and the interest it had excited both in England and the United States, that no part of their proceedings should be laid before the public, or become the subject of discussion, until the whole evidence and their conclusions upon it could be made known in both countries. Their request to this effect was so obvious in its propriety that it was most honorably observed by all the many persons who had access, in a greater or less degree, to the proceedings of the committee. It was, therefore, in spite of the committee's efforts, in opposition to their well-understood wishes, and in disregard of the best interests of the yacht club, that this premature and imperfect publication was made.

E. J. PHELPS,
J. PIERPONT MORGAN,
W. C. WHITNEY,
A. T. MAHAN,
G. L. RIVES.

JAN. 21, 1896.

During the reading of the report Mr. Morgan was interrupted by applause. At its conclusion ex-Com. James D. Smith moved that it be accepted and the committee discharged with thanks, the motion being unanimously carried.

Mr. Lewis Cass Ledyard then moved that the consideration of the committee's report and of the matters referred to therein be postponed until the next general meeting of the club, Feb. 13, and that in the meantime copies of the report and the evidence be sent to each member of the club. This was also carried unanimously and the meeting adjourned.

The full report of the committee, a pamphlet of nearly 600 pages, and which, it is understood, was distributed in London at the same time as in New York, contains, with the evidence taken by the committee, the following report made to it by the America's Cup committee on Dec. 14 and now published for the first time:

To Messrs. J. Pierpont Morgan, William C. Whitney and George L. Rives, a committee appointed at a special meeting of the N. Y. Y. C., held Nov. 18, in reference to certain published statements by the Earl of Dunraven, regarding the late match for the America's Cup:

GENTLEMEN:—In pursuance of the intimation conveyed in your letter of Nov. 22, 1895, that your committee would be glad to receive any statement which the members of the America's Cup committee desired to make, we propose to submit herewith a somewhat detailed review of the events involved and to consider the character of the charges made by Lord Dunraven against the yacht Defender, his evidence, his procedure and the action taken by the committee in the more important circumstances of the contest.

It is proper to state at the outset that the responsibility for the course pursued falls on the committee solely, as those in control of Defender were not informed of the charges made against their vessel.

(I.) As to marking the yachts.
In his published statement Lord Dunraven seems to imply that his request that the yachts be marked on the outside at the ends of the l.w.l., was made prior to the signing of the agreement of terms, and that the committee neglected to take action in the matter until after the first race and only as a result of his charge against Defender. Such an implication is a misrepresentation of the facts, which are as follows:

On Aug. 30 Lord Dunraven met the committee to discuss the conditions of the race. He then suggested marking the yachts at the water level. The committee replied that this was not the custom of the club, and Lord Dunraven waived the point. A draft of the conditions, with some few alterations, was prepared by the secretary and was submitted to Lord Dunraven and signed by him on Sept. 4 (not Sept. 6, as he now says). After the meeting on Aug. 30 Lord Dunraven did not recur to the subject until his letter dated Sept. 6 (not 5) asking that the yachts be marked on the outside at the l.w.l. On this day, Sept. 6, the yachts had agreed to be at the Erie Basin for measurement. Upon receipt of this request two of the committee proceeded to the Erie Basin in order to arrange, if possible, that the yachts should be marked that day.

It was found that Valkyrie had been measured and taken out of the Basin, and that it would be impossible for her, on account of the tide, to return and be marked that day. It was therefore arranged with Lord Dunraven and Mr. Iselin that the yachts should be marked, as the former requested, on the morning of the day following the first race, and that the representatives from each side should be present.

As Mr. Watson had undertaken to affix the marks, the measurer was instructed in his presence to preserve the marked batten used to locate the ends of the l.w.l., as measured from the end of the overhang, to apply the same when the marks were affixed, and thus insure that the l.w.l. was the same as when first measured on Sept. 6.

(II.) As to the complaint made by Lord Dunraven during the match that Defender exceeded her measured l.w.l. during the first race:

(a) The facts in the matter are as follows:
Prior to the start, on Sept. 7, the day of the first race, Lord Dunraven stated to Mr. Latham A. Fish, a member of the committee and the representative of the N. Y. Y. C. that day on Valkyrie, that he, Lord Dunraven, and some four or five others whom he named, were confident from their own observation that Defender was 3 or 4 in. deeper in the water than when measured the previous day. He stated that he believed this alteration had been made without the knowledge of the owners of Defender, but it must be corrected or he would discontinue racing.

He said he did not wish to say to the committee what action they should take, but he desired a remeasurement that day, after the race. Mr. Fish remarked to Lord Dunraven that, in his opinion, it would be too dark after the race to remeasure that day.

The first intimation that the committee received of this conversation was when, in response to a hail from Valkyrie, Mr. Fish was taken on board the committee boat shortly after 6 P. M. Mr. Fish immediately reported to the committee. Owing to the lateness of the hour it was a physical impossibility to take Defender to a proper place and remeasure her that day. The committee took steps to insure that a remeasurement the next day, in connection with the marking, should be thoroughly done. This remeasurement showed less than $\frac{1}{2}$ in. difference in the l.w.l. length of Defender as compared with Friday's figures. And thus the matter ended.

It is proper to note here that Lord Dunraven is in error in asserting that he asked or suggested that a watch be placed on both vessels until measured.

We do not make this denial as a defense of the committee's action or as implying that such a request or suggestion would have been followed.

As will appear from what follows, the committee decided upon a course of action which did not involve proving or disproving Lord Dunraven's implication of fraud.

As bearing somewhat on the case, it is only fair to Mr. Fish to say that he was in no way acting as a member of the committee that day on Valkyrie, but merely as the representative of the N. Y. Y. C., to see fair play during the race, and his only function in this matter was that of a trustworthy messenger.

(b) As to the nature and gravity of the charge made by Lord Dunraven against the yacht Defender:

Lord Dunraven's complaint contained an assertion that his adversary exceeded her measured l.w.l., and a call for remeasurement. If it went no further than this, it was completely satisfied by the remeasurement made at the earliest opportunity. If it went further, then it was a charge of fraudulent violation of the rules by the yacht Defender, and the owners were directly responsible. A plea that by their neglect the fraud had been committed without their knowledge would have been puerile. Any attempt to treat such a charge informally, or to evade the gravity of the accusation, was and is futile. With no knowledge as to what supervision had been exercised by Mr. Iselin, Lord Dunraven expressed to Mr. Fish his belief that the owners of Defender were in ignorance of the alleged alteration, and he knew says:

I told * * * him (Mr. Fish) I thought some mistake had been made and that all the weight put into Defender after measurement had not been taken out.

Did Lord Dunraven seriously think he could relieve the owners of the burden of his charge, or that a matter of at least 20,000lbs. of weight might have been left in Defender by "mistake" when removing such weights as had been put in after measurement, and that a watch should be set to prevent this "mistake" from being corrected before remeasurement?

(c) As to the evidence on which the charge was based:
Lord Dunraven based his charge on his observation of the bobstay, a pipe hole amidships, and the line of the bronze plating. He further cited that Defender was 6 in. longer than when measured for the Goslet Cup race, and that men were working on the Defender until 1 A. M. on the night of Sept. 6. These last two points seem to us, as matters of evidence, about equally devoid of importance.

The bobstay, as Lord Dunraven admits, would be of little value as a guide, unless the position of the crew, sails, etc., were the same as during measurement. The pipe hole "amidships," his other mark, awash when seen in the basin during measurement, would be immersed by a list of less than 2° in a vessel of Defender's beam at the l.w.l.

On these grounds Lord Dunraven unhesitatingly attacks the good name and faith of every man on Defender during the nights of Sept. 6 and 7, and the owners of the vessel as well, whatever he may be pleased to say to the contrary.

In vessels of the outline of Defender, the l.w.l. length increases about $\frac{1}{2}$ in. for each inch of immersion. Perfectly still water is necessary to locate the end of the l.w.l. when measuring, and the slightest disturbance of the surface is certain to produce the illusion that the l.w.l. is longer and the vessel more deeply immersed; it seems probable that Lord Dunraven and his friends were suffering from such an illusion.

The complaint made to Mr. Fish was of an increased immersion of 3 or 4 in. This would involve the transference of 20,000 to 30,000lbs. of ballast. In his public statement Lord Dunraven claims that Defender's l.w.l. was about 1ft. longer; this would correspond to an increased immersion of less than 2 in.

It is not our province to reconcile these statements; we can only say that, in our opinion, it would be hardly possible in open water to recognize an increase of 1ft. in the l.w.l. length, or of less than 2 in. in the immersion, of a vessel of Defender's outline.

(d) As to the course of action adopted by Lord Dunraven in the matter.

In explanation of his course of action, Lord Dunraven now says in his published statement:

"I was reluctant to make a formal complaint to the Cup committee on a matter which it was of course impossible for me to verify; in any case nothing could be done before the race was started."

A charge of such gravity admitted of no alternative. If made at all it demanded imperatively a formal complaint.

"Nothing could be done before the race was started."

Before the start on Sept. 7 Lord Dunraven asserted to Mr. Fish that a condition of the contest had been violated. He had ample opportunity between the time he made his alleged discovery and the start of the first race to formally signal his protest and announce his refusal to race an opponent whom he suspected of fraud, until an investigation of the accusation and evidence had been made.

In this way a remeasurement could have been secured that day and the charge verified, if true.

(e) As to the course of action and the position taken by the committee.

When Mr. Fish reported to the committee it was too late to remeasure Defender that day. Lord Dunraven asserts that the remeasurement the next day proved nothing, and intimates that it was the duty of the committee to place a watch on Defender until measured in order to prevent the perpetration of a new fraud which would conceal the previous one.

As between Lord Dunraven and us the question is: Was this the duty of the committee under the circumstances?

Leaving aside all question of the power of any committee to take such action or of this committee, under the powers delegated to it, we reply that such action was not incumbent on the committee, and for the following reasons:

First—The charge was of a disgraceful and shameful action, and in order to receive attention it demanded to be presented in an unqualifiedly formal manner.

As a matter of fact it was made in an informal verbal message, unaccompanied by protest or signed statement of any kind, and was coupled with inadmissible pleas advanced by the accuser to the effect that the owners were probably ignorant of the alteration and that it was due to mistake.

Second—As a basis for treating Defender as an accused criminal, the charge was founded on most illusory and insufficient facts.

Third—The accuser neglected his opportunity to protest before the race and so secure a remeasurement that day, and in view of such neglect the onus of taking up the charge of fraud did not rest on the committee, and, *a fortiori*, they were not bound to have recourse to methods unprecedented in the history of American yacht racing.

The charge involved the transference of 20,000 to 30,000lbs. of weight and the connivance of the whole crew of the American yacht and her tender, and was considered by the committee absurd and preposterous.

The committee decided to treat the complaint simply as a call for remeasurement, and to disregard all imputations of fraud, and by so doing to force upon the accuser the issue either to support his charge and protest against his treatment by the committee, or to drop the subject and go on with the match.

We maintain that the circumstances justified such a treatment of the matter by the committee.

Lord Dunraven did go on with the match until a further grievance induced his withdrawal, and he made no further reference to the subject in his dealings with the committee.

We maintain that the committee were entitled to regard his action in continuing the contest after his complaint, and especially after his threat of withdrawal, as tantamount to a withdrawal of his charges, and an acknowledgment that he no longer had grounds of complaint, and that he was also in honor bound to so regard it.

If this is so, the statement in the *Field* of Nov. 9 that Defender sailed the first race immersed below her measured l.w.l., must, in justice to Lord Dunraven, be considered, not as a recurrence of his former complaint, but as a new accusation, and must, in justice to the owners of Defender, be treated as such.

Some surprise has been expressed at the equanimity with which the committee's report to the N. Y. Y. C. was received, as compared with the indignation aroused by Lord Dunraven's published statement.

The difference of feeling seems to us perfectly rational. By the report it appeared that a charge of fraud had been made or implied by the challenger, which by his continuation of the contest he subsequently withdrew or abandoned.

In his published statement Lord Dunraven asserts: That Defender exceeded her measured l.w.l. in the first race, and criticizes the measures adopted by the committee as ineffective, thereby implying that Defender, by means of the opportunity afforded, was restored to her original length before the remeasurement.

(III.) As to Lord Dunraven's complaint that the committee would not postpone the last race in order to consider his suggestions for avoiding an overcrowded course.

After sailing two races, Lord Dunraven informed the committee that he considered the circumstances unsuitable for yacht racing, and would race no more until a remedy was found.

Strenuous efforts were made to control the accompanying vessels. These efforts gave every promise of success on the morning of the third race, when a part of his grievance was removed by securing a clear start.

Lord Dunraven's proposed conditions as to changing the course or not announcing the dates and times of racing the committee did not think possible to grant.

It seemed to them time to end the matter. It seemed to them useless and undignified to delay the start for further parley with a challenger who in the middle of a contest had seen fit to advance new conditions in the form of an ultimatum under a threat of withdrawal.

(IV.) As to Lord Dunraven's withdrawal from the match.

Lord Dunraven justifies his withdrawal from the contest on the grounds that he did not have a fair field and a reasonably unobstructed course.

If by "a fair field" he implies any discrimination against him by accompanying vessels, we must affirm that he is in error; but from his letters we infer that he admits that there was none.

In the absence of such discrimination, the only reason left for his action was the obstructed course, equally objectionable to both contestants. We fail entirely to see that this justified a withdrawal any more than any other material difficulty which might arise and which might, to the mind of one contestant, spoil the sport. At all events, on the day of the last race the physical objection did not exist up to the time that Valkyrie withdrew, and it would seem that Lord Dunraven must have been moved by other considerations.

With a perfectly clear start and every indication of good intentions on the part of accompanying vessels, it seems to us impossible to justify Lord Dunraven's conduct, as a sportsman, in not starting and sailing the race at least until such time as he had reason to complain that his vessel was suffering from interference.

We have the honor to remain your obedient servants,

JAMES D. SMITH,
LATHAM N. FISH,
J. FREDERIC TAMS,
GOUVERNEUR KORTRIGHT,
A. ROGERS,
J. R. BUSK,
A. CASS CANFIELD.

The affidavit of Lord Dunraven, on which the case is based, is as follows:

I, Wyndham Thomas Wyndham Quin, Earl of Dunraven and Mount-earl, do solemnly and sincerely declare as follows:

On Aug. 31, 1895, I was on board of Valkyrie in the Erie Basin. Defender came into the basin and lay close to us for some time previous to going into the dock. That being the first occasion on which I had an opportunity of seeing her in smooth water and close to, I observed her very closely and carefully noticed her trim, her line of immersion and general appearance. I again saw the Defender on Sept. 6, when she was in the Erie Basin for the purpose of measurement.

I noticed at once that the Defender was floating much lighter than when I saw her on Aug. 31. I myself carefully looked at the port side of the Defender, the starboard side being next the quay and so not visible, and I specially noticed an outlet hole about midships, which was just cut by the water a little above the base. The hole was rather more than an inch in diameter.

I also distinctly noticed the line of bronze plating and also the bobstay bolt. Mr. Watson was on board the Defender before she was measured, and immediately on his return from the Defender he also pointed out to me the pipe hole and the bronze plating and the bobstay bolt indicating the flotation line of the Defender.

Both yachts lay inside Sandy Hook on the night of the 6th and I slept on board the City of Bridgeport, which lay a short distance from the Valkyrie. About half past 6 in the morning of the 7th September I was awakened by Mr. Glennie, who requested me to come up and look at Defender. I looked at her carefully through a pair of glasses and I was convinced that she was lying deeper in the water than when measured. I went in the gig to put Mr. Henderson on board the Defender as my representative.

I then inspected the Defender with great care to see whether the pipe hole and other marks which I had previously observed were in the same position as when she was measured.

The outlet hole on the port side was nowhere visible above the water, and in my judgment and belief the line of bronze plating and the bobstay bolt were nearer to the water than when she was measured. Judging from the fact that the pipe hole was immersed and by the position of the bronze plating and bobstay bolt, I came to the conclusion, which I still believe to be a true conclusion, that the vessel was immersed 3 or 4 in. deeper in the water than when she was measured.

I also looked carefully at the general trim of the Defender. She was lying true on the water and had no list to port or starboard.

In forming the aforesaid conclusion I also took into account the general appearance of the Defender and her trim in addition to the other matters before mentioned.

Declared before me at 11 Ely place, Holborn, in the County of London, this 10th day of December, 1895.

WILLIAM JACQUES,
Commissioner of Oaths.

The testimony of Lord Dunraven, when examined by Mr. Choate, was as follows:

Q.—I should like to have you say whether you then believed a fraud had been committed on the Defender, or on the part of the Defender, on the first day's race? A.—I believed that the vessel was immersed deeper in the water. I stated that it was possible or probable that a mistake had been made and that all the weight put into the vessel had not been taken out.

Q.—Did you have a realizing sense of the charge that was involved in the statement which you made? A.—I quite realized the facts that the complaints that I made involved the possibility that some person had intentionally altered the w.l. length of the vessel.

Q.—Did you know what the measurement of her l.w.l. length had been on the 6th in the Erie Basin? A.—Yes.

Q.—Did you know that it was 89 85ft.? A.—Well, I cannot say now.

Q.—Well, you knew what it was? A.—I knew at the time. I don't know what it was now.

Q.—Now, it appears by your statement that you complained to Mr. Fish on the morning of the 7th that she exceeded that day her measured length by about 1ft.? A.—In my opinion—of course I did not calculate it out—the vessel being 3 in. deeper in the water, it would have made her about 1ft. longer.

Q.—But you did not suppose that that would lengthen her l.w.l. more than 1ft.? A.—Judging by the eye and roughly calculating, I should think about 1ft.

Q.—You knew it was capable of being definitely and mathematically ascertained, did you not? A.—Yes, I should suppose so.

Q.—But your belief was that some substance or substances to the amount of nine or ten tons had been secretly introduced into her after she was measured and before you saw her on the morning of the 7th? A.—Yes; that a weight of nine or ten tons had probably been introduced into the vessel. But I should like to say that speaking of 3 or 4 in. of course is more or less vague. I was judging by the eye solely, and cannot be tied down to a definite statement that the vessel was sunk 3 in. It might have been 2 3/4 or 2 1/2 in. Of course, I was merely judging as well as I could by the eye.

Q.—Well, you have stated in your public statement that on the occasion of putting Mr. Henderson on board not only that you felt perfectly certain that the Defender was immersed deeper than when measured, "but that she was in my deliberate opinion floating about 4 in. deeper in the water than when measured." That is correct, isn't it? A.—Yes.

Q.—Can you describe that otherwise than as an intent to cheat and defraud? A.—Cheat in the ordinary sense of the word, certainly.

Q.—Was there more than one conversation that you had with Mr. Fish on the Valkyrie on the 7th? A.—On this particular subject?

Q.—Yes. A.—No.

Q.—Quite sure? A.—To the best of my recollection only one. I don't think I alluded to the subject at all again to Mr. Fish.

Q.—Did not Mr. Fish, after you had had your conversation with him in the morning, and much later in the day, say to you that it was too important a matter to be conveyed by word of mouth? A.—No.

Q.—What? A.—No.

Q.—Did he ask you subsequently during the day to repeat what you had said? A.—No; not to my recollection.

Q.—Let me see if I cannot refresh your recollection. Did he not take pencil and paper and ask you again to say what you had said? A.—No; Mr. Fish made some pencil notes. I think that was at the time of the first conversation—the only conversation I had with him.

Q.—He did have a pencil and paper then? A.—Yes.

Q.—That was after you had—? A.—I won't say whether it was a piece of paper Mr. Fish wrote on or his shirt cuff. I did not agree to supply him with any paper, and it may have been a newspaper.

Q.—What passed between you and him, to your recollection, about the paper, and what you wrote on it, or his shirt sleeve, if it was that? A.—I think Mr. Fish asked me if I could give him any paper to make a note of what I was saying, but we had no writing materials on board the ship. I think Mr. Fish made a note of some kind on, as I say, a bit of newspaper or something.

Q.—He did not do that, did he, until after you had stated to him what you had to complain of? A.—Yes; at the time.

Q.—As you spoke did he write? A.—As we were sitting and talking, certainly. It may have been a minute or two after I had spoke, or while I was absolutely talking on the subject. There was no lapse of time.

Q.—Do you remember his reading what he wrote? A.—No.

Q.—You don't remember whether he did or not? A.—No, I don't think he did.

Q.—Do you think if you saw that paper you would recognize it? A.—No.

Q.—Or would you know where the paper came from? A.—No.

Q.—Did you produce the paper or he? A.—I don't think I did; I don't know. I think Mr. Fish may have produced it himself, or somebody may have given him the back of a letter. Really, I don't remember.

Mr. Askwith—Will you produce it?

Mr. Choate—It is in the possession of Mr. Smith, and it will be produced.

Q.—Isn't it correct to say that it has been stated by you with some variation three or four times? In your statement to day you said, "Mr. Fish asked me what I wished to be done, I said that I wished

the committee to put one of their members or some reliable representative on board each of the yachts immediately after the race." Is that as nearly as you can recall exactly what you said? A.—Yes.

Q.—Did you think that nine or ten tons of any material could be loaded on board the Defender, after she was measured and before the race, without its being known to a very considerable number of people? A.—Lead could not be loaded, of course, without its being known to a considerable number of people. I presume water might be introduced without its being known to a number of people.

Q.—Did you believe that water had been introduced? A.—I really had no opinion as to what was done.

Q.—Had you any intimation from any of your friends or acquaintances that the Defender at any time had, by the use of water ballast, accomplished any such thing? A.—No.

Q.—Now, to come back to the original measurement of Sept. 6. How far were you from the Defender? A.—I suppose about 15 or 20 yds.

Q.—The Valkyrie had some lead ballast on the cabin floor, had she not, when she was measured? A.—Yes.

Q.—And that, of course, was not left on the cabin floor during the race? A.—No; it was put below.

Q.—Did you have any representative upon the Defender when she was measured? A.—Yes. Mr. Watson.

Q.—At this time you were satisfied that she was floating considerably higher than when you had seen her on Aug. 31? A.—Yes.

Q.—Then you were of the opinion that some weights had been taken out of her and not replaced? A.—She had been lightened up, yes.

Q.—Do you know that there is more than one hole on the port side, one pipe hole? A.—No, there was only one that I noticed.

Q.—Under the masthead runner? A.—Yes, I should think so.

Q.—Well, supposing that there are in fact two, did you see two on that day? A.—No.

Q.—You saw only one? A.—I saw but one.

Q.—And that was about amidships, just cut by the water? A.—Yes. Cut by the water a little above the lower edge of the pipe.

Q.—And it was a hole rather more than 1 in. in diameter. Now, where was this bobstay iron or bolt? A slight depression of the bow in the water would considerably change the relation of that bobstay bolt to the water? A.—Yes, a depression, of course, would bring it nearer the water.

Q. (by Mr. Rives)—How high above the water was it when she came to be measured? A.—I should think 12 or 14 in.

Q.—How far was it above the water when you saw her the morning of the 7th, down at the Horseshoe? A.—I should think about 12 or 14 in., but that is, of course, a mere estimate of what the perpendicular height would be.

Q.—What time were you towed down to the Horseshoe on the evening of the 6th? A.—About 6 o'clock.

Q.—And how far away from the Defender did you anchor or lay? A.—About 200 yds.

Q.—Then, how far away were you when Mr. Glennie woke you up and you came on deck and looked out with your glasses? A.—About 200 yds.

Q.—How was the water that morning? A.—Smooth. Not as smooth as it is in the dock.

Mr. Rives—I have here a statement from the advance sheet of the New York Y. C. committee's report, giving the direction of the wind that morning.

Mr. Choate—You can show that, then?

Mr. Rives—Wind, 10:50 A. M., was northeast, and therefore, according to agreement, starting line was shifted from the Lightship, compass course for going out, east by south.

Mr. Whitney—You are speaking of different time; earlier in the day?

Mr. Choate—Yes.

Q.—Do you recollect, with the light now thrown upon it, the wind at 10:30, how it was at 6:30, and how the water was? A.—The water was quite smooth, and I think the wind may have been northeast. However, I do not dispute the facts. As a matter of fact, there was scarcely any wind at all.

Q.—What did Mr. Glennie say when he called you? A.—That the Defender appeared to be much deeper in the water.

Q.—Was the port side or starboard side then exposed to you; the Defender's? A.—The starboard side.

Q.—Well, with your glasses you did not look for these special marks on the bobstay bolt and the pipe and the bronze plating at all? A.—The pipe was on the far side.

Q.—On the far side? A.—Yes.

Q.—And you didn't have any aid from that? A.—No.

Q.—Did you with your glasses look at the bobstay bolt? A.—I looked at the vessel all over, yes.

Q.—And you could see the marks of the bronze plating; how the bronze plating lay on the water? A.—I could see the difference between the bronze and the aluminum.

Q.—Then you made up your mind very satisfactorily, did you not, that she lay deeper in the water than when she was measured? A.—Yes, I felt pretty sure she was.

Q.—And in your opinion could any judgment be formed—accurate judgment—as to that at the distance of 200 yds. as she lay in the water? A.—I don't think any man looking at the vessel could say certainly, more than that she was very considerably deeper.

Q.—Then for any definite judgment you cannot rely upon the eyesight or opinion of any one on board the City of Bridgeport or the Valkyrie, who did not approach the Defender more nearly? A.—Not as to a definite statement.

Q.—As to whether the load waterline had been lengthened 1 ft. or 3 ft., or whether she had been immersed 1 in. or 4 in. deeper than when measured? A.—Oh, yes; I don't quite agree with that.

Q.—Did you get any definite statement or opinion from anybody else on the Bridgeport or Valkyrie as to how much deeper she was immersed than when measured? A.—No.

Q.—You never could have got one? A.—I don't think so.

Q.—Or how much her load waterline had been lengthened? A.—That is a matter that I would sooner not put in that way, because I have no possibility of saying accurately at all how much the vessel was lengthened by every inch of immersion.

Q.—You have no definite statement from any one on the Valkyrie or Bridgeport as to either of these points, how much deeper she was immersed or how much her load waterline was lengthened? A.—I don't think so.

Q.—Then your whole statement rests on the general idea that you got, and that others might have got, from the distance where they were, on the City of Bridgeport and Valkyrie—your whole statement rests upon your own observation as you approached the Defender with Mr. Henderson to put him on board? A.—I am not sure whether Mr. Ratsey and others, who mentioned it, made any estimate of the amount the vessel was immersed or not; but as far as I am concerned, if you mean that I made this complaint that the vessel was immersed some 3 or 4 in. deeper, I made it on my own observation, yes.

Q.—And that was when you put Mr. Henderson on board the Defender? A.—I should think very probably not.

Q.—Your opinion in going yourself to put Henderson on board was to observe narrowly the situation? A.—Yes, partially. I rowed under her stern on the starboard side and put Henderson on board on the port side, and then, having left him, rowed ahead of the vessel, if I remember right.

Mr. Choate opened the case for Mr. Iselin as follows:

Mr. Choate—I do not think it requires any opening statement upon my part. We shall call several witnesses, we shall satisfactorily disprove what Lord Dunraven and his counsel have expressed their entire inability to prove. They have shed no light upon the statement contained in this letter, that it was possible for those three separate acts of fraud—for those three episodes in one scheme of fraud—to be accomplished without the knowledge of the managing owner of the Defender. We assert that it is utterly impossible that any such thing could have been done without the full knowledge of Mr. Iselin, and that any experienced yachtsman must know that perfectly well. We propose to prove by the designer of this boat, Defender, on what theory and scheme she was built as a competitor, and a successful competitor, for the America's Cup. We shall show that she sailed in the trial races without any ballast whatever, and that she sailed those races as she was designed, and fulfilled the expectations of her designer; and that, as she had then been a successful competitor over the Vigilant, it was his purpose, as well as the purpose of her owners, that she should be prepared and trimmed and ballasted to sail the Cup races as nearly as possible as she was upon the trial races.

After the arrival of the Valkyrie, to carry out this plan and expectation of Mr. Herreshoff, a great deal that was in her was taken out—water tank, waste tank, the trimmings of the cabin, and a great many other things that will be described by him and by those who took them out—and they were weighed and found to weigh about 7,000 lbs. Now on consultation between Mr. Herreshoff and Mr. Iselin it was decided that as those objects of weight had been to a considerable extent in the upper parts of the Defender, 6,000 lbs. packed and placed as lead ballast down by the keel would be an equivalent and would take the place as nearly as possible of the 7,000 lbs. that had been taken out. She was taken to New Rochelle, was stripped, as I have said, and 2 tons of lead, 42 pigs, I think, were put in her. It was found, before the weighing of what was taken out had been completed, that the 2 tons was not enough to equal what had been taken out, 7,000 lbs. Accordingly, when she was to come down to the Erie Basin before measurement, another ton was purchased to make the 6,000 lbs., and 21 pigs of lead were bought and ready to be put upon her when she came to the Erie Basin, and were placed upon her cabin floor immediately over the place where they were to be finally stowed as ballast, and were on her cabin floor when her measurement took place.

Now, it is perfectly apparent, to me at least—I do not know what

view the committee may take of it—that upon the evidence that has been furnished by Lord Dunraven, practically the whole matter rests by his observation by eyesight, aided, as it is, by Mr. Glennie's much less definite observations by his own eyesight, upon which he hardly feels that reliance can be placed. I think we shall show you by satisfactory evidence covering the period from the time this yacht left New Rochelle until the Sunday when she was remeasured and found to be exactly as she had been when measured the first time on Friday, that this is a mere delusion or illusion on the part of Lord Dunraven and his friends, originating possibly from these affidavits of the seamen that they saw or heard something going on between the Hattie Palmer and the Defender on the night of Sept. 6, until well into the morning. There was something going on there. There is no doubt about that. It was the preparation among other things, of this 21 pigs of lead, which in order to be properly stowed with the 2 tons that were there before, had to be cut. For the purpose of cutting them they were carried from the Defender's cabin floor over to the deck of the Hattie Palmer, and were there cut and were carried back, and were properly stowed below, where they were intended to be, and where they finally were when she sailed on her race. I understand that the only object of this inquiry, as announced by the chairman of the committee, is to determine whether she did sail on the race more deeply immersed or with a longer load waterline than she had when measured. We shall prove incontestably, if any human evidence can be relied on, that there is no foundation whatever for the charge. We are fortunately able to furnish the closest observation and watch upon her, and what went on her during these episodes of the scheme of fraud.

I shall put Mr. Herreshoff on the stand and shall put Mr. Iselin on the stand at the outset, and shall afterward, by such a preponderance of proof, establish this negative, if you please to call it so, to disprove this charge that has been made, that I think even Lord Dunraven himself will have to withdraw it. We will call Mr. Herreshoff first.

Q.—State what your general plan was by which the Defender was to be adapted within the 90 ft. limit by the deed.

A.—My design for the Defender's waterline was about 89 ft. There must be some leeway in case we should want more ballast. I figured very carefully to get the whole amount of ballast in one casting in the keel. This we were very fortunate in, the casting coming out exactly as we intended, and the vessel being very near to the intended waterline. In that condition she appeared to have plenty of stability, more than seemed to be necessary, and it was decided to increase her sails. There was no change in the ballast of the boat from the time she first floated until her cabin was taken out previous to the Cup races.

Q.—How much would her l.w.l. be lengthened by an immersion of 4 in.? A.—It would be lengthened 33 in.

YACHTING NEWS NOTES.

Messrs. Reed Bros., of Fall River, have now on the stocks a yacht of their own design for A. Homer Skinner, of Fall River. She will be 44 ft. 6 in. over all, 30 ft. l.w.l., 12 ft. 6 in. beam and 4 ft. 9 in. draft, without board. The iron keel weighs 6,000 lbs. and she will carry 1,500 sq. ft. of sail. There is a large cabin finished in quartered oak and a stateroom, w. c., refrigerator and all cruising fittings.

George Matthews, of New York, former owner of Culprit, Fay, Carlotta and Republic, is now building a cruising yawl from his own designs, the work being done by John Coughtrie at Mr. Matthews's place on the East River. The new yacht will be 40 ft. over all, 28 ft. l.w.l., 10 ft. beam and 6 ft. 6 in. draft, with a lead keel of 4 1/2 tons.

YAMPA'S VOYAGE.—II.

New York to Gibraltar, 1895.

Jan. 23.—Kept going under the same sail until daylight; then wind shifted to W. by S., which made us dead squared before it. Put bonnet on squaresail and downed foresail and jib. On deck at 8 A. M. Wind W. by S. and very squally. Running dead before it under double-reefed mainsail and whole squaresail. Rather a heavy sea on. Spent most of the morning aloft helping reeve off chafing gear on the different halyards, etc. Found the motion aloft entirely different from going aloft "on the beach." At noon took sun and made us lat. 35° 12' N. A heavy rain squall about noon smothered down the sea a bit, but also deadened the wind some.

Four P. M. Noticed that the bonnet of squaresail had chafed a hole by continual rubbing against the forestay. Lowered it on deck and sewed on a heavy piece of canvas to prevent any more chafe. At 5 P. M. reset sail. Wind now getting very light and sails commencing to slat around some. At 7 P. M. were becalmed, so downed and furled mainsail to keep it from slatting to pieces, and set maintirysail. 8 P. M. wind struck in light from the S.W. Sea now all over the shop and we are only doing about five knots. Such a fine night that Teddy and I paced the deck until 11:30 P. M. Wind still S.W. and very light.

Jan. 24.—Kept jogging along all night under maintrysail and squaresail. Wind still S.W. and light. During the midwatch a shark had mistaken the rotator of our log line for something edible and swallowed it. He also bit the line off as clean as you could cut it with a knife.

Luckily, we had a large stock of rotators on board, and had a new one out in a very short time. At 7 A. M. another hole was discovered chafed in the squaresail. Lowered it down and patched it; then sewed on a lot of chafing mats, which did the business. On deck at 8 A. M., in time to lend a hand setting squaresail. Took sight for longitude this A. M. and worked it out. Wind continued very light.

Jan. 25.—Kept her going under the same sail until 5 A. M., when wind struck in from the north. At daylight set foretopsail; a fine whole sail breeze. At 6:30 A. M. downed maintrysail, shook out reefs and hoisted full mainsail. On deck at 8 A. M. in time to help set maintopsail. Yampa now under full sail and going fast; sea comparatively smooth. Teddy and I took sight for longitude about 9 A. M. and worked it out. Took a long trick at wheel and managed to raise a fine blister on my left hand. We had been logging off twelve and one-half to thirteen knots an hour all morning.

Just before noon all hands were rather startled for a second by a large whale—a finback—that came up to blow not more than 150 ft. to leeward, and paid no more attention to us than if we had been a piece of driftwood. Had a good shot at the sun at noon and made our position lat. 36° 33' N., lon. 42° 53' W. Spent some time aloft this afternoon searching the horizon for "chums," but not a vessel was in sight. Wind continued steady all afternoon, and we were doing twelve and one-half knots and standing up like a church. At sunset wind freshened up and we clewed up and furled both topsails. Sea also picking up some. From noon until 8 P. M. we logged 103 miles, an average of twelve and seven-eighths miles an hour. Wind started to lighten up after 9 P. M., and kept shifting about from N. to N.E. At midnight we had hardly steerageway, and at the change of the watch we downed mainsail and set maintrysail.

Jan. 26.—During the early morning we ran into a rather heavy sea from the N.E. and had little or no wind to back it up. Looked as if it had been blowing very hard here from the N.E. a day or so ago. Wind still very light and shifting from N. to N.E. At daylight set foretopsail. On deck at 8 A. M., hardly steerageway and a heavy sea on. Under maintrysail, foresail and topsail, forestaysail and jib. Discovered a chum this morning, a barkantine, bound to the westward, with everything set. Went aloft with a glass to get a good view of her and

discovered another "chum," a "square-rigger," hull down to leeward, and bound east. Rather a hazy morning and could not see very far. Wind continued very light all morning, and we only logged about one and one-half or two knots an hour. Tried the new Winchester rifles this morning, towing bottles astern for targets. Sun broke through the clouds about noon and we managed to get a good sight. Our position at noon was lat. 36° 43' N., lon. (by dead reckoning) 39° 34' W. Wind died out completely at 2 P. M. and we were becalmed all afternoon and evening. Spent most of the time reading. Had the skipper to dinner and we all dressed for the occasion. First time any one has had on a "b'iled shirt" since we left New York. At midnight we were still becalmed and rolling around a bit.

Jan. 27.—Were becalmed until 4 A. M., when a light air struck in from the E. Sea had smoothed down a good lot during the night, and we were moving along at a three-knot gait. Turned out at 8 A. M. Wind still very light; under maintrysail, foresail and topsail, forestaysail and jib. Had a good sight for longitude this morning. At 10:30 wind shifted to S.E., and we took in maintrysail and set double-reefed mainsail. At 11:30 shook out reefs in mainsail and set maintopsail. Wind freshening somewhat, and we are now close-hauled for the first time this trip. Took a trick at the wheel for an hour or so, and found she was beautifully balanced on the wind. Our noon position was: Lat. 37° 05' N., lon. 38° 55' W.

Freshened up a little in the afternoon, and wind kept shifting from E. to S.E. Our course is now full and by. The change in temperature is very perceptible as we run up our latitude, and to-day is very raw and penetrating. All hands are now wishing for a warm S.W. wind. It clouded over somewhat during the afternoon and wind freshened up considerably. At sundown we clewed up and furlled both topsails to snug her down for the night. Sea also started to pick up some. Wind continued steady all night, and we were on the starboard tack heading E. by N., two points to the north'ard of our course.

Jan. 28.—During the early morning it freshened up some, and by 8 A. M., when I got on deck, there was quite a big sea on. Wind still about S.E., but shifts a point or so either way at times. Our course is again full and by. Breezed up hard about 9:30 A. M., and we called all hands to double reef mainsail. Spent most of the morning at the wheel. My hands have now toughened up from pulling and hauling and will not blister again. Had a good sight at the sun, and our position at noon was: Lat. 38° 30' N., lon. 36° 02' W. We are nearly a degree and a half further to the north'ard than we wanted to be. Spent some time aloft in the afternoon looking for "chums," but there was nothing in sight. About 3 P. M. it clouded over and we had rain squalls all afternoon. Wind lightened up a little at sunset and sea was smoothed some. About 9 P. M. a heavy drizzle started in, and boots and oilers were called into play. Wind too let up all the time, and at midnight we had hardly steerageway.

Jan. 29.—Were becalmed until 3 A. M., when wind struck in from the S.S.E., and it started to rain in earnest, and smoothed down the sea a little. Wind rather light all morning, and at 8 A. M. shook out reefs in mainsail. Yampa now under full lower sails, and logging about seven knots. Wind continued about the same all morning, and it rained until nearly noon. Sun then broke through and gave us a chance for a sight. Our noon position was lat. 38° 45' N., lon. (by dead reckoning) 34° 04' W.

About 1 P. M. wind shifted to S.W. and struck in very light. Set maintopsail and started sheets all around. Such a sea on and wind so light that we do not run down our longitude very fast. About 4:30 it clouded over again and wind kept decreasing all the time. At 8 P. M. we were again becalmed. Clewed up and furlled main- topsail and lowered and furlled mainsail. Light air struck in soon after from the W., and we set maintry- sail. Wind did not last very long, and at 10 P. M. we lowered and furlled foresail to keep it from slatting to pieces. At midnight it was a dead calm. Yampa under maintrysail, forestaysail and jib, and rolling like an old tramp steamer.

Jan. 30.—Were becalmed until 4 A. M., when light air struck in from the N.W. Downed maintrysail and set mainsail and foresail. Still quite a heavy sea on and we were not making much headway. At daylight set both topsails, which helped her along a bit. Turned out at 8 A. M.; beautiful, clear day, but wind very light; we are only doing about three knots. Had a fine sight for longi- tude this A. M. Wind died out completely by 10 A. M. and we started in rolling again. Teddy and I spent all morning making sand bags for the lifeboat. She has a centerboard in her, and we are going to rig her up and knock about when in port. Still becalmed at noon. Had a good shot at the sun and our position was lat. 38° 25' N., on. 32° 35' W. After luncheon we had some rifle prac- tice, which lasted until 2 P. M., when light air sprang up from the S.W. It gradually increased, and soon we were ogging ten knots. Took a trick at wheel and found she tanded very easily.

Wind kept freshening all afternoon and we were doing 2½ knots. We resolved to drive her for all she is worth to-night, and try and make up for time lost while be- calmed. On deck soon after; still carrying both topsails and going like a torpedo boat. Sea has commenced to pick up a bit, and we are throwing spray all over the lace. From 7 to 9 P. M. we logged 26½ knots, an average of 13½ knots an hour, which was fine work considering her large sea on. Wind and sea increased so much that t 10 P. M. we clewed up both topsails. Drove her along under full lower sail until midnight, then at the change of the watch double reefed mainsail, which eased her up bit.

Jan. 31.—Wind kept breezing up all early morning ntil we were going like a horse. Sea increasing all the ime. At 3 A. M. maintopsail clewline carried away, nd as the topsail had not been furlled it slammed and aged around for some time before it could be secured. ent two men aloft to do the work and after some trouble ey managed to lash it to the lee shrouds. At daylight ind moderated a little, but with heavy sea still running. et foretopsail about 6 A. M., which made her steer much asier. Turned out at 8 A. M., rather a hazy morning nd very raw. Sent two men aloft to reeve off a new yamp- topsail clewline.

Yampa under double reefed mainsail, foresail and top- ail, forestaysail and jib and going very fast. Sun man- ged to eat its way through the haze about 9 A. M. and ave us a sight for longitude. On figuring it out found

were abreast of Pico, Azores, but about thirty miles to the south'ard. Went aloft with a glass, but on account of the haze could see nothing. The fox terrier evidently could smell land. He kept standing with his paws on the lee rail and snuffing in the direction of Pico. Wind continued steady all morning, and were running down our longitude at a 10-knot gait. Had another good sight at the sun at noon, and our position was lat. 37° 51' N., lon. 27° 28' W

Rather a heavy rain squall at 1 P. M., which lasted for an hour or so; smoothed down the sea some. At 3 P. M. wind shifted to west and it cleared up. Headsails were doing no good, so we downed jib and took bonnet off forestaysail. At 4 P. M. we took an azimuth and also a sight for longitude. Wind increased a little about 5 P. M. and we clewed up and furlled foretopsail. Crew then started in to rig up ground tackle. Took the plugs out of the hawse pipes, led the chains through the hawse pipes and back to the rail, where they were secured and ready to be shackled on to the anchors at a moment's notice. At 6 P. M. we lowered mainsail and set maintrysail. We were running down too fast and did not want to get to leeward of Ponta Delgada. Wind started to increase after sundown and a howling old sea picked up. At 10 P. M. it was blowing half a gale, so we double reefed the foresail. At 10:30 gale increased, so we hove her to on the starboard tack under maintrysail, double reefed foresail and forestaysail, bonnet off. It started in to rain hard about midnight and the sea is running very high. We are jumping into the sea a lot; but Yampa is very dry and riding like a duck.

Feb. 1.—Wind shifted to W.N.W. during the early morning and blew harder than ever. Kept her hove to on the starboard tack until 5 A. M., then wore ship and stood in toward St. Michael's. During the night we had been headreaching a little all the time and had worked nearly twenty-five miles off shore. Our log only gave us credit for doing about three miles. On deck about 7:30 A. M., still blowing a gale and raining hard. A howling old sea on and a cold dreary morning.

At 8:15 sighted St. Michael's dead ahead and kept her on the wind so as not to get to leeward of Ponta Delgada Harbor. Found we were not doing very good work under such short canvas and at 9:30 A. M. downed main- trysail and set double reefed mainsail. That at once put new life in her and also made us put our lee rail under. The skipper and I went aloft to look for the entrance of the harbor. Did not have to hang on very much, as the wind flattened you to the rigging so that it made it very hard to move. It was a grand sight from aloft to watch her plunging into the seas and the way she threw the spray from her bow was beautiful. Made a lee of the island about 10:30 A. M. and shook out the reefs in fore- sail and set jib.

Found we were a little to windward of the harbor and started sheets a little, and stood in toward the break- water. Set a signal for a pilot. Just outside the entrance of harbor the pilot came alongside in a whaleboat. We luffed up and threw him a line. He would not come aboard, as the quarantine laws are very strict, and re- mained alongside in his boat and did the piloting from there. At 11:30 we let go the hook just inside the break- water and sent up the quarantine flag. Teddy and I both agreed that the sail this morning surpassed any other we had ever experienced.

Our hook had hardly touched the bottom before we were surrounded by a fleet of small boats. The natives in them seemed to regard us as a curiosity, although Yampa had been here a few years ago. After waiting about an hour the health officer boarded us and gave us *pratique*. Made an arrangement with the pilot to tow us into the harbor proper and moor us. At 2 P. M. a little tub about 20ft. long came alongside and gave us a line. We then started heaving up anchor. Just as we broke out our anchor a squall of wind came along, and we started to drag the tug out of the harbor stern first. Had to let go the hook again. We repeated the operation three times before the tug managed to get us started. When we were at last under way and slowly moving up the harbor, the skipper, Teddy and I went ashore in the gig to have a look at the town. While rowing ashore we had a good look at Yampa; and from the condition of her paint, one would think she had been battling with the elements for months. The rust had managed to work through the cement, and left dirty yellow streaks all along her white sides.

W. IRVINE ZEREGA.

Rifle Range and Gallery.

Pittsburg Rifle Club.

PITTSBURG, Pa., Jan. 28.—The Pittsburg Rifle Club held its regular weekly shoot on its indoor range this evening; the range is 40yds. It tel again made the best average, and score in one string 90 out of a possible 100. The scores were:

Events:	1	2	3	4	5	6	7	8	Average
Ittel.....	90	78	76	81
Whiting.....	71	75	81	78	76
Staib.....	79	65	70	75	69	70	71
Lawrence.....	72	69	68	62	68
Hofmeister.....	73	60	69	69	69	62	64	..	67
Sorg.....	63	60	66	64	67	60	69	73	65

Schmidt.....	59	67	58	69	69	57	63
Burt.....	..	60	55	52	56
Lautenslager.....	58	57	40	52

On Saturday, Jan. 25, A. Sorg and W. Hodgdon, two members of the club, shot a match on the out-door range at Wilkinsburg; the match was one of 60 shots, 200yds. range, highest possible score 600 points. Hodgdon won by 25 points, scoring 457 to 432. Scores were: Hodgdon, ... 79 77 70 76 81 74—457 Sorg, ... 68 70 77 66 75 76—432

Zettler Rifle Club's Tournament.

NEW YORK, Feb. 1.—The two days' tournament of the Zettler Rifle Club closed this evening. The affair was a thorough success and the attendance of riflemen was very satisfactory. The headquarters of the club are at 219 Bowery, this city, and in those headquarters were gathered together during the tournament some of the very best rifle shots in the world. The range is 75ft., three tunnels. On the ring target three shots are allowed, the two best scores to count; the highest possible, of course, is 75.

The winners were:

M. Dorrier, Greenville R. C., 74, 72; F. C. Ross, Williamsburgh Shoot- ing Society, 73, 73; L. Flach, Zettler R. C., 73, 73; G. S. Weidman, Our Own R. C., 73, 73; Henry Holges, Zettler R. C., 73, 73; Dr. James A. Boyken, Zettler R. C., 73, 72; Charles Horney, Williamsburgh Shoot-

ng Society, 73, 72; M. B. Engel, Zettler R. C., 72, 72; R. Busse, Zettler R. C., 72, 72; L. Buss, Empire R. C., 71, 71; C. G. Zettler, Zettler R. C., 70, 69; W. F. Uhler, New York R. C., 70, 69; B. Zettler, Zettler R. C., 69, 69; J. A. Deats, Empire R. C., 70, 70; B. Walthers, Zettler R. C., 70, 69.

The winners on the bullseye target were as follows: C. G. Zettler, Zettler R. C., 6 degrees; Dr. James A. Boyken, Zettler R. C., 9; Henry Holges, Zettler R. C., 11; Philip Feigel, Zettler R. C., 11; L. Flach, Zettler R. C., 12; H. D. Muller, Zettler R. C., 13; F. C. Ross, Williams- burgh Shooting Society, 13; Charles Horney, Williamsburgh Shooting Society, 14; B. Zettler, Zettler R. C., 14; James Bodenstab, Empire R. C., 14.

Cincinnati Rifle Scores.

CINCINNATI, O., Jan. 26.—Payne and Hasenzahl shot a match to-day of 8 scores; Payne won by 10 points, scoring 634 to 624. The scores below were made by members of the Cincinnati Rifle Association under the following conditions: 200yds. range, strictly off-hand, standard target:

Payne.....	8	8	7	10	6	9	8	9	8	9—82
	6	9	9	7	9	10	7	9	9	8—83

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Cal., Jan. 26.—To-day was one of the worst our rifle- men ever experienced, and the wonder is that a single good score was made. The wind blew almost a hurricane, changing at times during the day to every point of the compass on the south. The members of the Columbia Pistol and Rifle Club were out in force despite the weather, and considering the conditions and the light bullets used, some excellent work was done. The new target is becoming better liked as the marksmen become better acquainted with the system of scoring. The scores to-day were:

Pistol: All comers', 3 shots; C. M. Daiss 8, A. H. Pape 13, F. O. Young 14, J. E. Gorman 16, Dr. L. O. Rodgers 22.

Rifle: medal and cash prizes: E. Jacobson 11, Ed. Hovey 28.

Rifle, Unfred medal, 3 shots: D. W. McLaughlin 12, F. O. Young 17, Dr. Rodgers 18.

Military rifle, Glindemann medal: F. O. Young 45, F. Poulter 45.

In two practice scores A. H. Kennedy made 103 and 126 with a pocket revolver.

Dr. Lee O. Rodgers, president of the Columbia Pistol and Rifle Club, announced the cash prize winners for January and their scores, as fol- lows: Rifle—First, McLaughlin, 12 points, Columbia target; second, F. O. Young, 12 points, being below McLaughlin according to Creed- moor rules; third, Dr. Rodgers, 14 points. Pistol—First, Charles Daiss, 8 points; second, A. H. Pape, 9 points; third, J. E. Gorman, 10 points.

ROEL.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Feb. 11.—DETROIT, Mich.—All day shoot of the River Range Gun Club; targets. R. H. Hall, Sec'y.

Feb. 12.—SPRINGFIELD, N. J.—Tournament of the Union Gun Club; targets. Open to all. E. D. Miller, Manager.

Feb. 12.—RUTHERFORD, N. J.—Invitation live-bird shoot of the Boil- ing Springs Gun Club. W. H. Huck, Sec'y.

Feb. 12.—BALTIMORE, Md.—Baltimore Shooting Association Handi- cap; 25 birds, \$25; no one allowed back of 30yds. Stanley Baker, Sec'y.

Feb. 12-14.—BUFFALO, N. Y.—Tournament at Audubon Park, under the management of B. F. Smith.

Feb. 21-22.—ROCHESTER, N. Y.—Tournament of the Rochester Rod and Gun Club; targets; team match, Rochester versus Buffalo, on Feb. 22. E. D. Hicks, Manager.

Feb. 21-22.—MEMPHIS, Tenn.—Winter tournament of the Memphis Gun Club; live birds and targets.

Feb. 22.—ROCHESTER, N. Y.—Return match at targets between teams of the Rochester Rod and Gun Club and the Audubon Gun Club of Buffalo.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

The local trap-score-fake reporter has been at work again, hunting for "space" at the expense of truth. The following appeared in a Brooklyn, N. Y., Sunday paper: "About fifty persons witnessed a live-bird match at Dexter Park yesterday afternoon between Wil- liam J. Clarkson and Allen W. Woods, two well-known experts at the traps. The contest was at 25 birds per man, 30yds. rise, with a 50yd. boundary, for a nominal sum and the cost of the birds. Numerous wagers were made at even money, but Clarkson won by the small margin of one bird." The actual facts were as follows: Allen Willey and Bill Clark wandered down to Dexter Park on the afternoon of the 25th, expecting to find some sweepstake shooting going on. When Clark got there he found Willey, the solitary arrival, trying his best to beat the proprietor, Lippack, in a game of "old sledge." Nobody else showing up, and Lippack being too good for Willey, the latter and Clark went out to shoot a few birds for practice. They shot at 15 each, for \$10 and the price of the birds; each man scored 14 out of 15, one dead out of bounds; they then agreed to try 5 more to settle it; both killed their five and quit. Each man paid for his 20 birds, packed up his gun and slid out of sight on a trolley car. Fifty persons pres- ent! Numerous wagers!

In New Jersey.

AT THE CARTERET CLUB.

Jan. 29.—The attendance at to-day's regular Wednesday afternoon shoot of the Carteret Club was very slim. Five shooters were all that could be mustered—Work, Knapp, Stafford, Lent and Morris. The latter indulged in some private practice prior to the arrival of the other shooters with a view to getting his hand in for a match that he was booked for; having shot at a large number of birds before the sweepstakes began, he was quite ready to take a back seat when his gun broke down and had to be put away. As a result, the other four shooters were kept busy walking to the score, twelve events being shot off by 4:30.

There is very little to be said about to-day's shooting; everybody was in poor form, nobody seeming to be half trying. Misses were so numerous that it became almost monotonous placing ciphers and little black dots on the score sheet. Knapp made the best average with 46 kills out of 57 shot at. Work came next with the low score of 13 kills to 61 shot at. Stafford scores 38 out of 60, Lent 27 out of 41, and Morris 12 out of 17. Work was shooting an old gun of his, a Baker, one with which he has done some great shooting in years past, but which has been laid on the shelf while its owner dined pigeons with a Purdy; the latter has been sent in for some repairs, hence the reappearance of the Baker on the scene. It is true that Work shot two or three different kinds of shells during the afternoon, but that wouldn't account altogether for his low score; the fact was he couldn't make the gun go where he wanted to point it, as he did of old; it apparently "fitted" him no longer. Peter Morris took a fancy to the gun and went out and killed 5 straight with it, some of them rattling good birds.

Of the other shooters, Knapp shot well at times, but seemed to lose interest, and consequently his time, at certain stages of the proceedings. This was particularly noticeable in No. 10 and in the first part of No. 11. He said he felt tired and slack, and he acted as if that was just what was the matter with him. Stafford was away off, and, drawing some very difficult birds, tried too hard to find them, getting slow and only filling his birds full of lead to see them drop dead out of bounds. Lent was as erratic as usual, killing some good birds and then slipping up on birds that anybody ought to kill.

So many small sweeps were shot that the score given below may be a trifle confusing. Following are the results in detail: No. 1 was a 5-bird sweep, \$5 entrance; Knapp won first money on 5, Stafford winning second money on the shoot-off with Work and Lent. No. 2 was the same as No. 1; at the end of the 5th round Morris had only to kill to win first alone; he missed, letting in Stafford, Knapp and Lent; on the shoot-off Knapp and Stafford divided first and second on the first round. No. 3 was a \$10 sweep, unlimited number of birds; 29yds. men and back, two misses and out; 28yds. men, three misses; 27yds. men and forward, four misses; Work and Lent divided, Work having killed 7 straight, and Lent being credited with 5 out of 6, with three more misses up his sleeve, against Work's two misses. Both men were shooting the same (Lent's) gun just then, and this was an important factor in the decision in favor of a division. No. 4 was a 10-bird event, optional \$10 or \$5 sweep; Knapp won first alone on 9 out of 10, Lent taking second money with 8 to his credit. Nos. 5, 6 and 7 were \$5 miss-and-outs; Knapp and Lent divided the first at the end of the 2d round; Knapp and Work cut up the other two at the end of the 1st and 3d rounds respectively. Six rounds deciding three \$5 events was a little too rapid, so recourse was had again to the favorite "5 birds, \$5, high guns." For some cause or other, probably a misunderstanding, Knapp won No. 8 on 3 out of 4, although had Work killed his 5th bird and Knapp lost his, the two would have been tied for first place. Work and Knapp divided No. 9, and then Stafford shot out Knapp and Work in No. 10. No. 11 was a curiosity; at the end of the 5th round Work and Knapp were tied with 3 each, Stafford having lost 3 birds; on the shoot-off Knapp won at the end of the 2d round. In No. 12 Knapp won first alone with 5 straight, Stafford shooting out Lent on the tie for second money.

The last event we saw shot was a 5-bird race, \$5 entrance, Bogardus rules, with the exception that the shooters stood at the 25yds. mark. That this was too far back under the conditions was clearly shown by the scores made, Knapp winning with about 3 kills to only 1 or 2 to his opponents' credit.

Considering that there was really little or no wind to help the birds, Superintendent Lumbreyer had an excellent lot of flyers on hand. They left the traps very fast and were very largely outgoing in flight. The best bird trapped during the afternoon was Work's 5th in No. 4; it was a pure white bird that lit out for Newark Bay as fast as it could fly, twisting like an English snipe and apparently evading both charges of shot. The weather was spring-like, the shooters sitting in the sun behind the score as if it was May instead of the heart of winter. The traps were pulled as follows:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	Total.
Work.....	11	10	11	18	11	61
Stafford.....	7	11	16	19	7	60

THE TARGET HANDICAP AT ELIZABETH.

Jan. 30.—The tournaments and other shoots held on the Elizabeth Gun Club's grounds have always been favored with fine weather; it has grown into a proverb with the New Jersey trap-shooters that Elizabeth shoots bring fine weather. To-day's target handicap race was no exception to the general rule, although it was perhaps the least favorable day for target shooting experienced by this organization. Early in the morning the sun came out bright and strong, the white frost on the roofs, sidewalks and lawns quickly disappearing. There was every prospect of a lovely day, one like its predecessor. Wednesday, one of the most perfect days of this remarkable winter. Between 10 and 11 a change came over the aspect of affairs; the clerk of the weather felt a touch of dyspepsia and turned off the sun, sending out a heavy leaden-colored pall to do duty for a sky, making everything gloomy and dull, turning what was originally a very fair background into something as near the color of the targets as one could imagine. The result is shown in the scores. Lower ones may have been made, but not on these grounds and not with such a body of shooters. Anybody who would have been willing at the start to bet that 85 would win first money would have been laughed to scorn. Yet J. S. Shaw won first money alone on 84 out of 112!

The weather was not altogether to blame for the poor scores; the way the targets were thrown had a great deal to do with it. More diffi-

cult shooting we have never seen. The targets were lined up and down the screen, the elevation at which they were thrown being entirely too low if A. S. A. rules were in force. This lowness of flight would not have been such a handicap had not the screen been too high by about a foot; a right or left-quartering target from either Nos. 2, 3 or 4 gained about 4 or 5yds. start of the shooter. With the targets thrown in such a manner, and with a background of a natural-colored fence, a few trees and a dark sky, it was no wonder the best of them fell down at times, the total scores suffering in consequence.

We do not believe in making the shooting too hard; it is apt to discourage beginners and get the best shots guessing for a time at least. For this reason we approve most highly of the plan now adopted by the manufacturers of both the standard target traps—the bluerock and the empire—that of placing stops on the traps, so that extreme angles in either direction cannot be thrown at will by the trappers.

The entry list could not but be satisfactory to the management; 19 entries at \$7 a head, \$2 out of each \$7 paying for the targets, is an entry to be proud of, and is decidedly encouraging for future efforts. We understand that similar handicap races will be run monthly, alternate months, at the Elizabeth grounds and at the grounds of the South Side Gun Club, of Newark, the next one being set for Feb. 25 at the South Side Gun Club's grounds. Besides the above 19 entries, the management permitted seven other shooters to enter the race for the price of the targets, making a total number of shooters just 26. Considering the number of targets required to be thrown to complete the shoot, something over 2,700 (including the handicaps), it seemed poor policy to permit men to enter for the birds; it does not matter so much when the sweeps are short and small, but it seems a wrong principle to allow a squad of 6 men to go out and keep the others, who have put up their money, waiting while that squad shoots at 150 targets, 25 targets to a man. If the management is wise, and this refers also to the South Side Gun Club, it will announce when giving notice of its next handicap that no entries for birds will be taken in the handicap race. Elmer Shaner's face would be a study if a shooter went up to him and asked to be allowed to enter in the Grand American Handicap "for the birds."

The event was shot off in series of 25 targets, the handicap allowance not being shot until all had completed their scores for the 100 targets. No person knew his handicap until he had shot at the last target of that allowance. Men went out to the score with any where from 15 to 25 targets in their pockets and shot along until they were called out by the referee; those with 2, 3 or 4 handicaps soon had their agony ended, while others kept shooting along as if "they never would stop." Out of the 19 entries, 7 got money; J. S. Shaw, with 12 extra targets, scored 84 and took first money; Carl von Lengerke and Capt. Money tied for second place with 83 each; Von Lengerke had 5 extra and Money 8 extra targets to shoot at. Third money went to J. Grier, of Dunellen, who scored 81 out of 110; fourth money was divided between Jim Elliott (scratcher) and E. D. Miller (2 extras), who broke 80 each. Dutchy took the fifth money with 79 out of 104. Edwards, Folsom, Elmer Sickley, Piercy and Schrafft were all within easy reach of the money, an extra break or two being all that was necessary to make everything lovely for either one of them. Sickley's case was rather a curious one; he has been shooting a Winchester for the past year and has been shooting it well. Quite recently he sold it, but, borrowing his brother's gun, came over to Elizabeth and entered for the handicap, expecting that the handicappers would take this matter into consideration. Sickley is a very good target shot, one of the many good ones in the New Jersey League, and was right in it with his 5 extra to shoot at; it should be well understood that in handicaps it is the men and their target-breaking capacities that are handicapped, not the gun. In framing the handicaps for this event the handicappers figured that a scratch man under the conditions as they then existed would not break more than 88 or 90 at the most; the object then was to bunch the others as close to the scratch man as possible, extra targets being awarded in such proportion as seemed likely to bring each shooter up to the 88 or 90 mark. After the start the light grew worse instead of better, a brisk breeze springing up at times and playing havoc with the scores, Jim Elliott, the scratch man, scoring only 16 out of his first 25! Noel Money's total of 50 out of his 100 was due largely to the breaking down of his gun; Morley, who is a good target shot, also fell down very badly. Miller led by a good margin at the end of the 75th round with 62 breaks, and looked all over a winner; his last 25 caused him a lot of trouble, 9 of them getting away from him. The scores for each 25 and for the handicap allowance are as follows, the targets of course being thrown at unknown angles:

	1st 25.	2d 25.	3d 25.	4th 25.	Handicap.	Total.
J S Shaw (12).....	16	20	17	22	9	84

* Only shot for price of the targets.

Both before and after the big event 10 target sweeps were shot off, entrance in each event being \$1. Nos. 1 to 7 were at unknown angles; No. 8 was one man up, standing at No. 3 score, 5 unknown traps, one shot and retire, squads of 6 men; No. 9 was the same in all respects save that the second barrel could be used. The scores were:

Events:	1	2	3	4	5	6	7	8	9
Dutchy.....	7	9	8	8	7	10	9	7	9
Edwards.....	5	9	8	9	8	7	6	8	8

EDWARD BANKS.

BOILING SPRINGS GUN CLUB.

Feb. 1.—The monthly club shoot of the Boiling Springs Gun Club, of Rutherford, N. J., was well attended notwithstanding the unfavorable condition of the weather. Platt Adams, one of our members, did some excellent shooting, tying Eddie Collins in the club shoot, which is shot as follows: 25 unknown angles, 25 reversed order. Scores:

Un-known, versed.	Total.	Un-known, versed.	Total.			
P Adams.....	21	44	James.....	21	15	36
E Collins.....	21	44	Paul.....	20	16	36
W J Simpson.....	21	42	Barron.....	14	16	30
G E Greiff.....	22	18	Thornton.....	16	12	28
Frank.....	19	20	Marvin.....	8	10	18
W H Huck.....	18	20	Hartman.....	12	6	18

Other sweepstakes were shot as follows, all being at unknown angles with the exception of No. 4, which was at 5 pairs:

Events:	1	2	3	4	5	6
Targets:	10	10	10	10	10	25
Adams.....	10	9	10	9	9	9
Greiff.....	8	8	9	8	8	20
Huck.....	8	8	9	8	9	31
Collins.....	6	8	10	9	9	9
Thornton.....	6	4	8	8	9	19
Marvin.....	4	4	7	2	2	2

SOUTH SIDE'S SATURDAY.

Feb. 1.—A heavy fog and moist surroundi s could not dampen the

ardor of the South Side's Saturday followers. Over 800 targets were thrown during the afternoon, the scores being as follows:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	10	10	10	10	10	10	25	10
W M Smith.....	5	4	6	6	4	3	5	19	9
J Dawson.....	6	6	5	5	7	9	6	14	5
A Whitehead.....	7	9	9	6	8	9	9	17	9
I H Terrill.....	7	5	9	6	4	4	17	17	9
L Thomas.....	6	7	8	3	6	6	20	9	9

No. 8 was shot as a team race, Thomas and Smith scoring 39 to 31 by Terrill and Dawson. W. R. HOBART, Sec'y.

NEW JERSEY TRAP-SHOOTERS' LEAGUE.

As announced in our issue of Feb. 1, the New Jersey Trap-Shooters' League decided, at its annual meeting held on Jan. 22, to change the conditions of its monthly team races from five-men teams and unknown angles to six-men teams and known angles.

The change from five-men teams to teams of six men from each club is one of which we fail to see the benefit. It has been proved by the past history of the League that it is hard enough for some clubs to put five-men teams in the field; the necessity for six-men teams will correspondingly increase the troubles of the captains of those clubs. We suppose that the idea of the League in adopting six-men teams was to do away with the breaking up of teams to fill a squad. For instance, the first squad consisted of a full team and a pivot man from the next team; second squad was made up of the remaining four men of that team and two of the third team, and so on. Of course, six-men teams will avert all that, each team being a squad by itself, if the system of shooting off the team races that prevailed in 1895 is observed this season. As, however, that system was in our opinion altogether wrong, we trust that the League will see fit to change the conditions still further.

Hitherto it has been customary to shoot off the teams in the order in which the respective captains handed in the names of those composing their teams. If the weather was dull and it was early in the season, a wise captain would hustle his men together and hand in the names of his team as soon as the manager was ready to receive them; he thus secured for his team the best light there was going. If there was a prospect of a thunderstorm it was just the same. The New Jersey League's shoot on the grounds of the Endeavor Gun Club last summer was a striking instance of the injustice of shooting the race by teams, the Endeavors themselves shooting under most unfavorable conditions. We believe firmly in splitting up the teams and shooting them so that no two men from any one team are in the same squad. Suppose there were nine teams entered: The first squad would consist of a man from each of the first six teams; squad No. 2 would be made up of men from the last three and the first three teams; squad No. 3 would be composed of men from the last six teams; thus at the end of the third squad each team would have two men that had shot off their scores. This system, one that is most generally adopted where there are only three or four teams, could easily be applied as above to the team races of the New Jersey League. It would do away with the advantages of better light and less wind liable to accrue to one or more teams while a lengthy team contest is being decided on the system of each team a squad by itself.

It is true that the system suggested would mean more work for the manager of the League, but what is a manager appointed for, if he is to have no work to do beyond figuring up averages at the end of the year and taking care that the League score book is on hand at all the monthly shoots?

There is an additional benefit attached to the above-suggested plan: Many men can only get to the grounds somewhat late in the afternoon, while others again have to leave early; it often happens that these men are members of the same team. League contests are advertised to commence at 2 P. M., and they should commence certainly not later than 2:30. With squads split up as above suggested, there is no reason why the League contests should not be started on schedule time. The feature of the idea that recommends it most strongly to us is that it is the nearest approach to absolute equality of conditions, a feature that has been strikingly absent in some of the previous contests, the conditions of light and wind in those contests having been very changeable.

The change from unknown to known angles is in accordance with our opinions expressed in our issues of Feb. 23 and April 27, 1895. As these contests are tests of skill, and only short ones at that, 25 targets per man, it seemed to us wrong that so great an element of luck as is permitted under unknown angles should be allowed to exist in the League contests. In a long race, say at 100 targets, we believe the "luck of the birds" will be equalized, but the League contests are not long races. By adopting known traps and angles, every shooter is treated alike; each man gets 5 straightaways, 10 right-quartering and 10 left-quartering targets. "Known traps and angles" is not a sporting, perhaps not even an interesting, way of shooting at targets, but it is more favorable to young and struggling clubs than unknown angles. It does away also with the possibility of some of the visiting shooters getting the impression that the home club has "fixed the trappers," or that the trappers are favoring the home team.

Split up the teams and give the boys known angles, and there cannot be any grounds for a kick, however slight, at any of the League contests in 1896. The interest in each monthly shoot will also be kept up until the last round, instead of fading away rapidly after some team has made a big score.

Peters Defeats Blake at Omaha.

OMAHA, Neb., Jan. 29.—M. C. Peters and F. H. Blake, both of this city, shot a live-bird race to-day under the following conditions: 100 birds per man, \$100 a side, 30yds. rise, A. S. A. rules to govern. Although neither man made a large score, Peters won very easily scoring 80 to his opponent's 70. Both men used Greener guns, 48grs. of E. C. powder and No. 7 shot; Peters used a Rapid shell, Blake a Smokeless. The scores were:

F. S. PARMALEE.

Cobweb Gun Club's Programme.

The Cobweb Gun Club, of New York city, one of the most go-ahead organizations in the State of New York, has taken another important step in its onward movement. The announcement that the club will hold a four days' tournament, March 18-21, will not astonish any shooter who is acquainted with the personnel of the club's management. Under date of Feb. 21 F. L. Train, captain of the Cobwebs, writes as follows:

"Will you kindly insert the inclosed notice of our tournament under the head of 'Fixtures' in your paper. We have chosen the dates March 18-21 inclusive with a view to giving the visitors to the Sportsmen's Exposition an opportunity of indulging in a little recreation at the traps. A great deal of care has been given to the selection of the events, and it is our aim to make it satisfactory to all sportsmen. There are in all 28 events, 20 at targets and 8 at live birds. On Saturday, March 21, the Cobweb handicap will be shot; conditions: 15 live birds per man, \$15 entrance, birds extra, handicaps from 25 to 35yds., 4 moneys, 40, 30, 20 and 10 per cent., guaranteed purse of \$50 and all surplus added. This, as a preliminary to the Grand American Handicap, will give the boys an opportunity to 'sharpen up a bit' and get 'fit.' The privilege of the grounds are extended to all visitors to the Sportsmen's Exposition."

The club's grounds are located at Baychester, N. Y., and are easily reached from this city by trains on the Harlem division of the N. Y., N. H. & H. R. R., which leave 129th street station of the Third Avenue Elevated every hour. The club's headquarters are at 2312 Third avenue, New York; any communications in regard to further information should be addressed to the captain, F. L. Train, as above.

On Long Island.

HELL GATE GUN CLUB.

Jan. 23.—The monthly live-bird shoot of the Hell Gate Gun Club was held to-day at Dexter Park, the attendance of members being remarkably good; 29 shooters took part in the club event, which was at 10 live birds per man. Louis Schortemeier was the only one of the 29 to go straight, the club's 1895 champion, P. Woelfel, falling down to 5 out of his ten. That the birds were a good lot is shown by the fact that there was only one 9 and four 8s. The scores made were as follows:

L. Schortemeier (28).....	2222222222—10	J. P. Dannefelser (28).....	0121022002—6
G. Dege (28).....	2111220112—9	R. Regan (28).....	21001001—2—6

EXCELSIOR ROD AND GUN CLUB.

Jan. 28.—The Excelsior Rod and Gun Club held its opening shoot for 1896 at the North Beach grounds this afternoon. The club shoot is at 10 live birds per man, and to-day this event was won by W. H. Archer, who tied for first place on 9 out of 10 with two other members of the club, Heimburger and Jackson. The three shot off the tie miss-and-out, Archer scoring 3, Heimburger 2 and Jackson 1. The scores in the club shoot were:

W. H. Archer (26) 9, H. K. Jackson (26) 9, H. K. Heimburger (29) 9, G. W. Orton (26) 8, T. E. Richards (26) 8, S. R. Williams (27) 7, D. J. Kingsland (27) 6, R. E. Deegan (28) 7, B. J. Williams (26) 6, A. T. Siegel (28) 5, T. L. Henderson (26) 5, J. W. Odell (26) 5, D. G. Nelson (26) 3, L. G. Wilson (26) 2.
--

BERGEN ROD AND GUN CLUB.

Jan. 30.—The Bergen Rod and Gun Club, of Brooklyn, N. Y., held its annual meeting this evening at the club's headquarters, Court street, near Atlantic avenue. The distribution of prizes for 1895 was part of the evening's proceedings. Robert J. Valentine won the first prize with 96½ per cent.; second prize went to J. W. Reynolds with 94½ per cent.; third prize was won by P. J. O'Brien with 89½ per cent.

The following is a list of the officers elected for 1896: President, Robert L. Valentine; First Vice-President, James W. Reynolds; Second Vice-President, Carroll B. Williamson; Secretary, Leonard J. Brown; Treasurer, Charles L. Pierson; Captain, Patrick J. O'Brien; Board of Trustees, James W. Reynolds, Henry L. Raymond, Charles L. Grey, Daniel W. Longman and Albert D. Griffiths.

DR. LITTLE DEFEATS LAIR.

Jan. 29.—Dr. Little and W. H. Lair shot a 50-bird match to-day on the grounds of the New Utrecht Gun Club at Woodlawn. The birds were only a moderate lot, not up to New Utrecht standard. The conditions of the race were: 50 birds per man, 25yds. rise, 50yds. boundary, use of one barrel only, loser to pay for the birds, and a stake of \$50 a side. G. Van Nostrand acted as referee throughout the race.

At the end of the first half the score was a tie, each man having 18 out of 25 to his credit. Out of his next 5 birds Lair lost 3 to his opponent's 2; the next 5 birds were fatal to Lair's chances, as he lost 4 out of the 5 while Dr. Little only lost 1 of his lot. At the end of the 49th round Lair withdrew, being practically shot out of the race, the totals showing 31 to 25, a lead of 6 for Dr. Little with only 8 more to shoot at. The winner shot 48yrs. of Schultze in a V. L. & D. shell, his gun being an L. C. Smith; Lair's gun was a Greener, and his load was 49grs. of Schultze in a trap shell. Below is the score in detail:

Dr. Little.....	3 1 2 2 3 4 1 5 1 2 3 1 3 4 5 3 3 5 4 1 2 3 1	13—31
W. H. Lair.....	1 1	7—25

The following four sweeps were also shot. Nos. 1, 2 and 3 were 5-bird sweeps, ties being shot off miss-and-out; No. 4 was a 3-bird sweep. Scores:

	No. 1.	No. 2.	No. 3.	No. 4.
Lair.....	120—2	022222—6	21222—5	202—2
Little.....	22021—4	102220—5	21200—3	20—1
Van Ord.....	12212—5	2100—2	2200—2	21—2

Trap Around Buffalo.

BUFFALO, N. Y., Jan. 20.—To-day the third and last 100-bird race between Fred. Emond and Jacob Koch was brought to a conclusion, Emond winning easily by 11 birds. In the first match darkness put an end to the contest at the end of the 98th round; in the three matches, therefore, each man has shot at 298 birds; out of that number Emond has scored 261 to Koch's 247. Koch made an excellent score in the second match, but did not win; on that account he changed his shells; this change was, I think, in a great measure the cause of so many of his birds going out of bounds before dropping. After the 75th round Emond shot in a careless, easy-going manner, as if the match was all over, as it really was, since Koch kept on losing bird after bird dead out of bounds. There is some talk of a match between Otto Besser, Jr., and Emond, but it seems hard to get them to come to terms. The score of to-day's match is below:

J. Koch.....	2002212201121220220121—18	
F. Emond.....	011212121211111111111111—22	

Jan. 25.—At the Audubon Gun Club's weekly shoot to-day the scores given below were made by the members present:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
H. Kirkover.....	14	7	13	9	4	Miller.....	9	6	13	7	6
Forrester.....	7	13	9	4	6	J. Fisher.....	9	9	9	8	5
Dr. Woodbury.....	13	8	12	9	7	E. Burkhardt.....	10	7	9	7	
L. W. Bennett.....	8	12	9	7	6	E. W. Smith.....	10	6	12	9	
Norris.....	8	12	9	7	6	Storey.....	10	4	9	5	3
Rennicke.....	13	5	13	9	4	P. Meyers.....	11	8	5	3	
Hanks.....	9	5	13	9	4	J. O'Brien.....	12				7
Williams.....	11	8	11	10	6	B. Talsma.....	12				
McArthur.....	11	8	11	10	6	Brown.....	8				11

In a miss-and-out, \$1 entrance, B. F. Smith defeated Kirkover by 2 to 1. E. C. Burkhardt then tackled Smith in a similar race, 25 cents being added to the stakes for each additional bird shot at; Smith won this event by 6 to 5. A similar event was won by Burkhardt, who scored 2 to Smith's 1. These two then shot another event of the same nature, darkness putting an end to it with the score a tie. B. F. S.

Meadville Gun Club.

MEADVILLE, Pa., Jan. 29.—A few members of the Meadville Gun Club shot some target events this afternoon, H. A. Johnson doing some capital work in the two 25-target events, the scores of which are given below:

No. 1, unknown angles:	No. 2, same:
H. A. Johnson.....	11111111111111111111—24

Reisinger.....	11111111111111111111—22

CHOICE BORN.

The Utica Tournament.

UTICA, N. Y., Jan. 24.—The two days' tournament which ended to-day was a very pleasant affair, although the attendance was not large. Quite a number of targets were thrown, 23 shooters in all taking part in the programme and extra events shot yesterday. Among those present from a distance were: Chas. Wagner, of Syracuse, A. and M. Barker, of Richfield; McCauley, Brainard and Paddleford, of Sherburne, etc. The scores made on that day were as given in the table below, all the events being at unknown angles:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	15	20	15	20	15	15	15	15	15	15	15	15

To-day was live-bird day and in consequence there was a good attendance of both shooters and lookers-on. Among the new faces were: E. C. Burkhardt, Buffalo; T. C. Pegnim, Canajoharie; George Mosher, of the Syracuse Arms Company; A. S. White and George, of Syracuse; etc. From the commencement of the shooting until about 1 P. M., the weather was most disagreeable; after lunch the weather improved a little and the birds in consequence flew much better. The handicapping was placed in the hands of H. L. Gates, of this city, as he was the best posted man on the merits of the shooters. As a whole the day was an unfavorable one for live-bird shooting, and the scores suffered in consequence. The scores were:

No. 1.	No. 2.	No. 3.	No. 4.

J. W. FULFORD.

Boston Gun Club.

BOSTON, Jan. 29.—Another beautiful afternoon greeted the shooters of the Boston Gun Club at Wellington this afternoon, and evidently the conditions were not to be denied, as nineteen in all graced the club's platform during the different events. The traps were allowed no leisure until darkness came to their rescue. Only one straight score appeared out of about 800 targets thrown 10 bird, known angles, and it is hardly so much the absence of skill on the part of the shooter as the variety of the known (?) angles which can be held accountable for the nines, eights and sevens that are so much easier to secure. Such a thing as monotony is unknown at the Boston Gun Club, and the targets are thrown with the greatest regard for fairness, but with a certain disregard for regularity. The target may be high, low, fast or slow, and nothing so confuses the modern trap-shooter accustomed to the regulation five-trap angles as the promiscuous flights from assorted traps. The nearer one can approach field shooting, the nearer such comes to be the highest form of practice, and together with the ever-present zero, we derive a certain amount of consolation from this and from the fact that "there are others." Scores below:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Targets:	10	5	6	10	10	5	6	10	5	6	10	10	5	10	10	10
Sheffield (15yds.).....	6	3	5	10	8	2	8	4	3	7	5	5	5	5	5	5

Gard (15).....	4	7	6	6	6	6	6	6	6	6	6	6	6	6	6	6

Four miss-and-out matches were also shot; one each won by Gard and Brown, and two by Miskay.

Events 1, 4, 5, 8, 11, 14, 15 and 16 were known angles (the two last at 20yds. distance). No. 12, known reversed; 2, 6, 9 and 13 were unknown angles. Nos. 3, 7 and 10 at pairs. Nos. 8, 9 and 10 composed the prize score, in which the following totals were made: Brown 17, Miskay 17, Gordon 16, Howe 16, Mason 16, Sheffield 15, Spencer 14, Horace 14, Adams 13, Nichols 13, Sawyer 13, Leroy 12, Johns 12, Avery 11, and Williams 9.

Smith and Hanson shot two matches at 10 pairs. Scores: Hanson 16, Smith 14; Hanson 12, Smith 15.

Lynchburg Gun Club.

LYNCHBURG, Va., Jan. 23.—The following scores were made by members of the Lynchburg Gun Club at the regular weekly shoot held to-day; all events being shot at unknown angles:

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, SATURDAY, FEBRUARY 15, 1896

VOL. XLVI.—No. 7.
No. 318 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page v.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream one year and the set of four pictures, \$5.
Forest and Stream 6 months and any two of the pictures, \$3.
Price of the pictures alone, \$1.50 each; \$5 for the set.

Remit by express money order or postal money order.
Make orders payable to

FOREST AND STREAM PUB. CO., New York.

A NEW JERSEY SCHEME.

HERE is something novel and interesting from New Jersey. Some student of game protection and politics has evolved a scheme to combine the two; and the plan has been embodied in a bill introduced into the Senate. The plan is this:

Exact from every non-resident of the State a license fee of \$10 for the privilege of shooting or fishing; and if he seeks to evade the tax, fine him \$100 or clap him into the common jail, there to "remain until the same shall be paid." The county clerk gets \$1 extra from the victim for his services in issuing the license, and the fine is to be divided, one-half to the persons who prosecute for it, and the other half to the county collector. The license appears to be good only for the one specific county in which it is issued. So far there is nothing new in this non-resident tax system; the novel feature is found in some entirely new county game commissioners' provisions.

These provide for a board of ten commissioners, who, on petition of twenty-five residents of a county, shall be appointed by the presiding justice of the Supreme Court. The duties of the ten commissioners are designated to be the enforcement of the game laws; their term of office is three years; and they are to "serve without any compensation whatsoever." The officers of the proposed Commission are a president, a secretary and a treasurer; and they are given authority to dispose of all funds which may come into their possession for the purpose of enforcing the laws and restocking the covers; they are authorized to arrest game law offenders; may employ agents to purchase game, birds and fish for stocking purposes, and may also employ aid to enforce the laws; all this provided that the funds expended by them shall come from their own treasury. The treasury is to draw its revenues from two sources: all sums received from non-resident licenses, and one-half of the fines collected by justices of the peace.

Such a plan may have originated with some person who is intensely interested in game protection, who would perhaps be willing to give his own time gratuitously to the cause, and imagines that in the several counties there will be found material for the boards of ten commissioners.

It is one of those schemes which with honest, earnest and competent men might work wonders; but which would be quite as likely to prove a failure and to give opportunity for fraud. Indeed it is just such a plan as the pot-house politicians would certainly welcome and make the most of.

There used to be a law in New Jersey which provided that non-resident sportsmen wishing to shoot or fish must first comply with the by-laws of the organized game societies. One game society got up a set of by-laws which required a non-resident to hand over into its treasury ten dollars before he could shoot birds; and as there was nothing small nor mean about the society, when a New Yorker had paid in his money, it gave him a license to pot song birds, the law of the State to the contrary notwithstanding. The fat income from New

York city song bird shooters was cut off when the ridiculous statute was repealed; but if this new measure should go through, doubtless ten thrifty individuals could be mustered in the same county to revive the profitable plan on lines suitably modified.

We beg to call the attention of the West Jersey Game Protective Society to Sec. 10 of this bill, which provides for the repeal of the charter of any organized game protective society now existing. That means that if the county commissioners go in the West Jersey Society goes out.

The charter of the West Jersey Society delegates to it the making of laws for non-resident sportsmen in the six southern counties of the State, and the society has enacted that no non-resident may shoot in that country until he shall have become a member of the society, \$5 the first year and \$2 per annum afterward. In the last annual report to the Legislature the New Jersey Fish Commissioners said of the law creating the West Jersey institution:

The law in our opinion is not in accordance with the spirit of American institutions. To exclude a man from certain privileges because he cannot afford to pay \$5 therefor does not speak well for the hospitality of New Jersey. Numerous complaints concerning this law have been received, and information obtained from our wardens is to the effect that the violators of the law who have been prosecuted in the counties where this law applies were almost invariably members of this society. Your Commission is also informed that the membership of this society is composed principally of sportsmen from Philadelphia and other places. Your Commission would accordingly suggest the repeal of this law.

There is not the slightest reason to believe that this extraordinary and preposterous delegation of the law making power to individuals would stand the test of the higher courts; unquestionably it would be declared unconstitutional. The only reason why it has not been tested is that those who have had their guns confiscated, or who have been fined under its provisions, have preferred to settle rather than to go to the expense and worry of fighting the imposition in the higher courts.

And now that we have mentioned the New Jersey Commission here is a pertinent suggestion: The members of the present board are doing excellent work; they have proved themselves to be intelligent, earnest, trustworthy officials. Game and fish protection under their direction gives promise of amounting to something. Instead of trying any new schemes give the present system a chance; back up the Commission with the funds they require; let them have the wardens they need for the work; and if there shall be found in any county ten men to co-operate with the Commissioners and their wardens the problem of how to protect New Jersey game will not long remain unsolved.

SALE OF GAME IN CLOSE TIME.

WE recorded last week a Minnesota game law decision, in which it was held that the law forbidding the sale of game in close time did not apply to game imported from outside of the limits of Minnesota. The immediate result of this ruling is that the game dealers of St. Paul and Minneapolis are sending broadcast to the hunters and commission merchants of adjoining States invitations to ship to them game, which, they explain, they can now openly expose for sale; and under the present conditions, as determined by the decision of the Supreme Court, they are enabled to offer more than usually enticing inducements to these outside dealers in game. The wardens of Minnesota, then, have to contend with the same obstacles which are encountered in New York State, where also it is lawful to sell during the close season game coming from outside the limits of New York.

The practical operation of a law which thus permits the sale of game all the year around is this: There are absolutely no restrictions upon the amount of game dealt in, nor upon the sources of supply from whence it is drawn. The way is perfectly open for traffic in game killed illegally in local covers. Under one bill of lading honestly covering a shipment of game from abroad, a dealer in New York may go on perpetually selling game received from New York hunters, or in Minnesota from Minnesota hunters. The protectors, wardens and voluntary associations of sportsmen cannot be expected to secure convictions of illicit traffic when the dealer has this sufficient shield in his invoices received with other game from other States. In New York city even so powerful and shrewd an association as the New York Association for the Protection of Game does not feel warranted in bringing action against a dealer, although the counsel of the

Association may be convinced that he is dealing in New York game, for in one single invoice the dealer has that which, like charity, covers a multitude of sins.

At the last meeting of the Association, held on Monday of this week, a committee of three was appointed by the president to endeavor to effect the repeal of Sec. 249, which is the provision permitting the universal sale of game, and to procure the passage of such other laws as may prevent the selling of game out of season in the State of New York. The members of the committee are Messrs. Charles E. Whitehead, Robert B. Lawrence and Benj. L. Ludington. The sum of \$500 was appropriated for the expenses of the committee, and we feel assured that they will make a strenuous effort to carry out the spirit of the resolution under which they were appointed.

The sportsmen of this State should band together and unite in an effort to repeal this iniquitous measure. The contest will not be an easy one, for it is almost certain that it will be necessary to overcome moneyed influence at Albany. The lobby is strong there this year and the interests at stake for the dealers are of such magnitude that they may be expected to spare no expense in holding their own.

Happily, as the defect in the Minnesota statue is one of title only, there is reason to believe that it may be remedied without special difficulty.

SNAP SHOTS.

Recent advices from the Yellowstone National Park indicate that the winter there is late and light, but little snow having fallen at last reports. A scouting party, which came in a short time ago from the southern part of the Park, reported that only six buffalo were seen on the trip. Of these three were in the recently-constructed corral and one just outside of it, one was near the head of Fox Creek just north of Two Ocean Pass. This one, the scout said, looked thin and was restricted by the snow to a small area where there was very little grass. The scout did not believe that it would live through the winter. The other was on Falls River, not very far from Beula Lake. There is an open tract of country there with warm ground and water, and this buffalo will probably live through. However, the party saw the carcass of another, recently dead, lying in the middle of the stream, only a short distance from where they saw the living one. Three moose were seen, yarded on Snake River. There was plenty of elk and other game.

Deer were formerly counted among the game animals of Massachusetts, for the protection of which laws were provided. Subsequently the species became extinct or was supposed to be extinct in the State outside of Cape Cod, and as the law was altered by successive Legislatures, in course of time it came about that protection for deer was no longer afforded except in the counties of Plymouth and Barnstable. This condition appears to have resulted from inadvertence rather than from any deliberate design of the Legislature, and now that the game is once more appearing in the northern and western counties of the State there should be no delay in restoring ample protection for it in those sections. Massachusetts should have a law providing for a close term of several years on deer everywhere within her limits. If this is supplied there is no reason to doubt that the species may gradually increase and add to the woodland attractions and possibly in time to the available game stock of Massachusetts covers.

The Bannock Indian matter has now reached the very stage where it should have begun months ago. The people of Jackson's Hole started in to negotiate with the Bannocks with repeating rifles, and demonstrated their skill in negotiation by killing a number of inoffensive Indians. Now a bill has been introduced into Congress providing for the appointment of a commission to treat with the Bannocks for a surrender of their treaty rights to hunt on unoccupied Government lands. We ought all of us as citizens to rejoice that the repeating rifle has been put aside, and that civilized methods have been resorted to to secure the desired end. If the Indians can be induced to surrender their hunting privileges by fair means a decided advantage will have been gained. The next step in order would be to restrain the lawless whites who kill game out of season and have been accustomed to lay upon the shoulders of the Bannocks the blame for the depletion which ensued.

The Sportsman Tourist.

THE KING OF CAMPERS.

WINTER is upon us and the moose have yarded, secure from the pursuit of honest men. The pools where the salmon splash in summer are smoothly blanketed in white and the whole wilderness sleeps, that in a few months it may greet us anew, fresh as a blooming girl. The rifle withholds its thunderbolts and lies lazily stretched on its row of pegs. The big reel that has sung the death song of many a hapless victim is a prisoner in its box. Rifle and reel, paddle and rod, these never grow old. If one could only live a thousand years to use them! They are the cure for business and politics, the refuge from the places "where discord rears eternal babel."

Amid the half-formed plans for next season my mind turns often to the stories of the heroes who found for us all the grand Canadian wilderness, that summer heaven on earth. The story of those men's voyages, as told by Francis Parkman, is in my opinion without an equal in the literature of outing. First among these explorers, of course, stands that ideal woodsman, that king of campers, Samuel de Champlain. As one reads the account, one does not know which to admire the more, the indomitable spirit and cheerful resourcefulness of the great explorer, or the marvelous genius of the historian. Surely Parkman is the monarch of wilderness description. Who that has read it can ever forget the voyage of Champlain up the Ottawa as described in "Pioneers of France in the New World?"

"All day they plied their paddles. Night came and they made their camp-fire in the forest. He who now, when two centuries and a half are passed, would see the evening bivouac of Champlain has but to encamp with Indian guides on the upper waters of this same Ottawa—to this day a solitude—or on the borders of some lonely river of New Brunswick or of Maine.

"As, crackling in the forest stillness, the flame cast its keen red light around, wild forms stood forth against the outer gloom—the strong, the weak, the old, the young; all the leafy hosts of the wilderness; moss-bearded ancients tottering to their death, saplings slender and smooth, trunks hideous with wens and goitres and strange deformity; the oak, a giant in rusty mail; the Atlantean column of the pine, bearing on high its murmuring world of verdure; the birch, ghastly and wan, a specter in the darkness; and aloft the knotted boughs, uncouth, distorted shapes, struggling amid dim clouds of foliage."

Then follows the description of the scene as they ate their evening meal and then lay down to rest. A shiver creeps over you as you realize the night's cold, for he says:

"Perhaps, as the night were on, chilled by the river damps, some slumberer awoke, kneeled by the sunken fire, spread his numbed hands over the dull embers, and stirred them with a half-consumed brand."

The sunken fire! How those three words bring up the whole scene. Not merely burned low, but eaten down into the mossy earth, below the level of the surrounding ground. Who can fully appreciate it except one who has looked in vain for a good camping chance away from the peat bogs that line the shores of so many Canadian rivers?

"Then the sparks, streaming upward, roamed like fire-flies among the dusky boughs. * * * As he lay once more by the replenished fire sounds stole upon his ear, faint, mysterious, startling to the awakened fancy, the whispering fall of a leaf, the creaking of a bough, the stir of some night insect, the soft footfall of some prowling beast; from the far-off shore the mournful howl of a lonely wolf or the leaping of a fish, where, athwart the pines, the weird moon gleamed on the midnight river."

O, good Mr. Parkman, you were there! You knew how it was yourself. And then the morning:

"Day dawned. The east glowed with tranquil fire, that pierced, with eyes of flame, the fir trees, whose jagged tops stood drawn in black against the burning heaven. Beneath, the glossy river slept in shadow or spread far and wide in sheets of burnished bronze; and in the western sky the white moon hung like a disk of silver. Now a fervid light touched the dead tops of the hemlock, and now, creeping downward, it bathed the mossy beard of the patriarchal cedar, unstirred in the breathless air. Now a fiercer spark beamed from the east, and now, half risen on the sight, a dome of crimson fire, the sun blazed with floods of radiance across the awakened wilderness."

"The paddles flashed, the voyagers held their course; and soon the still surface was flecked with spots of foam; islets of froth floated by, tokens of some great convulsion. Then on their left the falling curtain of the Rideau shone like silver betwixt its bordering woods, and in front, white as a snowdrift, the cataracts of the Chaudière barred their way. They saw the dark cliffs, gloomy with impending firs, and the darker torrent rolling its mad surges along the gulf between. They saw the unbridled river careering down its sheeted rocks, foaming in unfathomed chasms, wearying the solitude with the hoarse outcry of its agony and rage. * * * Over the rocks, through the woods."

That was the portage. "Over the rocks, through the woods!" We who have done it know, do we not?

"Then they launched their canoes again and with toil and struggle made their amphibious way—now pushing, now dragging, now lifting, now paddling, now shoving with poles."

As we read we wonder if Champlain really did learn to handle a setting pole and to trim the ends as they "broomed up." I think he did. Parkman did, anyhow.

"Day by day brought a renewal of their toils. Hour by hour they moved prosperously up the long winding of the solitary stream; then, in quick succession, rapid followed rapid, till the bed of the Ottawa seemed a slope of foam. * * * Now they glided beneath overhanging cliffs, where, seeing but unseen, the crouched wildcat eyed them from the thicket. * * * In the weedy cove stood the moose, neck-deep in water to escape the flies, wading shoreward, with glistening sides, as the canoes drew near, shaking his broad antlers and writhing his hideous nostril, as with clumsy trot he vanished in the woods."

Parkman understood the charm of the presence of the wild animals. He knew what a sense of companionship there is in a caribou track along the shore. The next

paragraph is, to my mind, one of the finest things in the English language:

"In these ancient wilds, to whose ever verdant antiquity the pyramids are young and Nineveh a mushroom of yesterday; where the sage wanderer of the Odyssey, could he have urged his pilgrimage so far, would have surveyed the same grand and stern monotony, the same dark sweep of melancholy woods; and where, as of yore, the bear and wolf still lurk in the thicket, and the lynx glares from the leafy bough;—here, while New England was a solitude, and the settlers of Virginia scarcely dared venture inland beyond the sound of cannon shot, Champlain was planting on shores and islands the emblems of his faith."

It has been suggested by some one that Parkman was too rhetorical for accuracy. The very opposite is true. He attains, by his selection of words, at once a conciseness and an accuracy impossible to any commonplace attempt. "Ever verdant antiquity!" Do you realize the tremendous sweep of the description? It is like a lightning flash by night, in whose brief brilliance the wilderness, eternal, primeval, evergreen, is revealed to the vision of one who, in more leisurely daylight, has become familiar with the details.

"The lynx glares from the leafy bough." What other word than "glares" can be found which so sums up the characteristic conduct of the lucivee? Did you ever see a lynx in a tree? Well, the first time you do, his bulging eyes will be all you will remember probably. It seems as though Parkman had hunted the language through for just the word that meant all he wished to say.

Read the account of how the dauntless Champlain, following a red-headed woodpecker, the first he had ever seen, became lost; how he wandered for three days. "He had found paths in the wilderness, but they were not made by human feet." How he finally followed a little brook to the big river, how he figured it all out and found himself, is told as only Parkman could tell it.

Among all the camp makers of Canada—the world's greatest camping ground—Champlain is foremost. Honor be to his name, and no less to that of Parkman, who, with an imagination of transcendent power, has illumined a minute familiarity with woodland affairs. The picture is so lifelike that we can see through the mists of 280 years the very flickerings of Champlain's camp-fire, and as we do so we thank the good God that we are privileged to gaze upon the same majestic scenes of rock and river, of mossy, barren and placid lake, unmapped and unnamed, in large part, as in the olden days. Oh, Canada, to thy gray and venerable hills, thy ever green shores, thy gentle, bounteous wilderness—to thee fond memory turns, while the repose of the snowdrift is upon thee, and the rifle hangs upon the wall. Brave is "the bright roll of thy forest chivalry," and no less brave is he who, with pen of light, has written the portrait of thy foremost hero and placed it in the gallery of imperishable renown.

FREDERIC IRLAND.

UNCLE LISHA'S OUTING.—XII.

The East Slang.

DURING the night the rain ceased and the morning broke through rifted clouds which slowly scattered in white-fleeced flocks and drifted away across the azure field. Though the storm had partially stripped the trees of their ripened leaves, they seemed none the less brilliant when the unveiled splendor of the sun fell upon them, for each unfallen leaf had gained more intense color, and like every branch and twig sparkled with innumerable drops of liquid crystal.

Leaving their companions to the pursuit of sport on shore Sam and Antoine took their guns and went down to the upper landing, where they were surprised to find a couple of blanket-coated swarthy men, just landed from a bark canoe, bending intently over the dew-beaded bottom of Sam's upturned canoe and conversing in unintelligible, low and musical tones.

"Dar was you Injin, jes' Ah tol' you," said Sam triumphantly.

At their approach the Indians turned toward them without any manifestation of surprise, and one of them, a good-looking man of middle age, greeted Sam with a pleasant smile of recognition.

"How do, Lovet? Know me? Me Joe Tocksoose. Make um dat canoe five, six year 'go."

"Why, yes; so you be," said Sam, giving him a cordial hand, "but I never s'posed I'd run ag'in ye here. Trappin' be ye?"

"Yaas, ketch um moosquas, some."

His companion ignored the presence of the white men after the first glance at them, and turned his back upon them and pottered lazily over a useless rearrangement of the traps and muskrats in the bow of his canoe. His low-browed face was sullen, his little eyes as cruel as a snake's, and he looked as if he might be a savage brother rather than a civilized descendant of his barbarian ancestors.

"You no trap um musquas?" Tocksoose asked.

"No, hunting ducks. Shot many, hev ye?"

"No, rather have musquas. Better for eat. Better for skin. Shoot um plenty duck?"

"Wal, some. Hain't hunted a turrible sight. Where be you a-campin'?"

"Up dar," the Indian answered, pointing toward the Slang. "Make 'em good canoe. Very good bark. Come see some day."

"Nawab, Tocksoose," the other Indian growled with gruff impatience as he shoved the canoe afloat and stepped into it.

"Onh-onh, me come," Tocksoose answered, and followed his companion. "Goo-by, Lovet, come see canoe," and getting clear of the weeds they paddled away as silently as if they were ghosts of their long-departed progenitors haunting the changed scenes of their earthly life. The Indians went across and down stream, examining and resetting their traps in houses along the border of marsh.

Sam and Antoine shaped their course up stream, finding no game on the ground which the trappers had just passed over, but after passing the South Slang ducks arose, singly and in flocks, frequently enough to give them all the shooting they could wish. But they missed much oftener than they killed, for Sam had not acquired the knack of cutting down his birds in the moment that they labored upward from the rushy covert before they began to climb the air in a swift ascending slant, or scurrying away in swifter level flight, when he continually made the mistake of shooting behind his mark.

Antoine always dwelt long on his aim, and when he attempted a shot at a single flying bird poked after it till it was out of range and then lowered his wabbling muzzle or blazed away into empty space. Now and then a duck succumbed to Sam's shot and came down with a head-long, surging splash into the marsh, perhaps to be lost in the even sameness of the sedgy level; perhaps to be retrieved after a groping search in the maze of wild rice stalks or denser tangle of more diversified marsh growth. Achieving such indifferent success, they came to the East Slang and entered the narrow channel, when a dusky duck arose from the weeds on their left with a prodigious flutter and outcry of alarm. Sam caught aim and fired in the instant during which she hung almost stationary after the upward spring. Confident of the correctness of his aim, he was surprised and disgusted beyond measure to see the heavy bird continue her flight climbing the air almost perpendicularly and with continually increasing speed to a height at which she looked no bigger than a swallow.

"Wal, by the gre't horn spoon!" was all he could say, and Antoine offered such soothing condolence as one is apt to receive when he has made an unsuccessful shot.

"Wal, Ah'll was spec' for see it tomlow, he was so beeg lak geese an' so close Ah can mos' stroke it wid mah paddle. Prob'ly you'll was hit it, but he was fool dauk an' a'n't know de way for fall, so he fall up, prob'ly, 'less prob'ly he was gat tire of dis wicked worl' an' goin' look for de angel. Bah gosh, he mos' gat where dey was."

They were still watching the towering bird when suddenly her wings closed spasmodically and she came down like a plummet, striking the water so near them that the canoe was sprinkled with the upbursting shower of spray, while in the center of the circling wavelets the inert, lifeless bird rose and sank like a balancing scale.

Again Sam ejaculated, "Wal, by the gre't horn spoon!" and Antoine was surprised into an expression of astonishment. A close examination proved that the bird had been hit by a single shot, which had bored the brain.

"Jes' Ah tol' you," said Antoine complacently; "you'll was mek him crazy in hees head of it, so he'll a'n't know de way for fall. Ah'll know what hail it jes' soon Ah'll see him fall up dat way, me."

Sam's gun was reloaded, and they were again moving forward when a small, dusky-hued waterfowl swam boldly into the channel before them within short range.

"Hol' on. Don't shot," Antoine said in a low but intensely earnest tone as Sam leveled his gun on the easy mark, but as the words were spoken the trigger was pulled, and out of the cloud of smoke the shot rained upon the spot from which the daring fowl had instantaneously vanished.

"Dar," cried Antoine in supreme disgust, as the rebounding echoes came rolling back from hill and woodland, "A'n't Ah'll tol' you? What for you shot at dat mis'bly leetly hell-davver? You can' keel it more as hit litlin, an' if you'll was gat it, he a'n't wors more as notin' 't all. Naow he gone daown for see his fader, de dev', an' in minute he come back for laft at you. Dar." And there indeed the uncanny, keen-eyed, sharp-billed head popped just above the surface two gunshots away, swimming for the marsh, where it presently disappeared.

Then they were startled by a rush of multitudinous swift wings, and a great flock of teal swept past, following every turn of the channel in their arrowy flight till they alighted with a long, resounding splash fifty rods further up stream. Standing up and peering cautiously over the marsh, Sam saw the flock swimming in the channel opposite to a clump of low-branched trees on the eastern bank.

"They hain't six rod from a good place to crawl up tu 'em," he whispered, as he settled back on to his knees and took up a paddle. "Le's run int' the brook here an' land an' tackle 'em from the bank. If we git a good lick at 'em we won't want tu hunt no more to-day."

They landed on the bank of the brook and held across the field till the clump of trees were in range with the place where the teal had alighted. Turning at a right angle, they advanced cautiously in this direction and were soon close behind a screen of low-hanging oak branches, looking between which they saw at least a hundred unsuspecting teal swimming and feeding within easy range, the blue wings gleaming in the sunlight in brilliant contrast to the dull color of the general plumage.

"You pour it int' the thick on 'em a-settin'," Sam whispered, as they silently cocked their guns, "an' I'll let 'em hev when they rise."

Antoine nodded and poked his gun through an opening to what he imagined to be a perfect aim on the thickest huddle of the flock. Sam felt a pang of contrition for the impending slaughter of the innocents, but held his gun ready to do his part in it. The roar of Antoine's gun was prolonged by the roar of a hundred pairs of wings starting to simultaneous flight, and quickly echoed by Sam's discharge. Rushing forward to the verge of the marsh, the shooters peered eagerly under the lifting cloud of smoke and saw one solitary wing-tipped teal struggling toward the cover of the marsh through the frost-blackened lily pads. Antoine had quite over-shot the sitting birds, and Sam, aiming at the whole flock, had missed all but the chance-struck victim.

As far up stream as there was water enough to float one, it must have been alive with ducks, for now the air was swarming with them, a disturbed congregation, uttering cries of alarm, some circling about in confused flight, some making straight away over the woods to the two creeks, and some following the course of the stream, passing overhead and before the chop-fallen gunners.

"Sam, bah-a-gosh!" Antoine ejaculated in most abject self-disgust. "Le's we load off aour gaun an' shot one 'nudder. We gat too fool for leeve some more."

"By the gre't horn spoon, Antwine," Sam replied in utter contempt of their performance, "we couldn't hit one 'nuther erless we helt the muzzles o' aour guns in aour maouths. We might's well go an' git the canew an' see if we c'n find that 'ere wounded duck," and he began carefully reloading his gun.

"Dat dauk? You maght jes' well hunt for haystack wid needle as hunt dat dauk. Nobody fan' him but mink or prob'ly de hawk. What for you load off you gaun? Bah gosh! Ah'll a'n't load off mah gaun some more. He a'n't so good as stick hwood. Ah, Sacre hol' damashin' gaun!" Antoine growled at his musket and handled it as if with an intention of smashing it on the nearest tree,

but at last shouldered it. Sam finished reloading and remarked as he set a cap on the nipple:

"It hain't no use o' blamin' it ont' the guns, Antwine."

They took the shortest way to the canoe, each engaged in the unprofitable silent self-communion which is a common but not happy experience of sportsmen. To what one of the brotherhood does not the missing of a lost opportunity come like a ghost to haunt his waking hours and trouble his dreams?

Their moody silence was continued as they paddled down the Slang, each plying the paddle industriously, quite regardless of every chance of a shot offered by rising or passing birds. Of the last there were not a few, for a boat was coming down the creek, disturbing the waterfowl with more frequent shots than Sam had ever heard except at a general muster of the militia, or had Antoine since the Papineau war.

"It was probly some boy jes' shot for mek nowse," Antoine commented.

The heads of the two occupants of the approaching boat could now be seen above the wild rice that hid craft and channel. Presently a pair of wood ducks sprang into the air a few rods in advance of the moving heads, one flying to the right, the other to the left, and in the same instant the polished barrels of a gun flashed upward in the sunlight, a jet of smoke puffed out, followed by another as quick as a finger could shift triggers, and as the double report rolled up wind to their ears the two canoe-men saw the ducks tumble limp and lifeless back into the marsh. Three more ducks, alarmed by the echoes that rebounded from the wooded shore beside which they were resting, got up together at long range, but the alert sportsman picked up a second gun and brought down two with the first barrel and with the second hit the last of the three so hard that it came down with a long slant in front of the canoe now emerging from the Slang. Sam finished the wounded fowl with a charge from his long single-barrel and exclaimed in reply to Antoine:

"Boys, I call'te that feller's a man, an' one 'at understand his business. By mighty! don't he jest clear the sky o' ducks? Le's let him go ahead, for I'd dumb'd sight rather see him shoot 'an tu shoot myself, leastways as I pear tu shoot tu-day."

ROWLAND E. ROBINSON.

THE TALKING PINE.—IV.

The Kloo-kwallie.

WHEN the leaves turned brown, the third moon after the ripening of the first salmon berry, I left the city of Squin-tum, the white man, and journeyed to the Lake of the Mountains, and smoked the chinooks until the moon rose; then I went in my canoe across the lake, and when the moon was only so high as the pine that has seen only one snow, I sat by the foot of the Talking Pine to see the light of the Kloo-kwallie, and watch S'doaks, the son of Yelth, the Raven, become a Tah-mah-na-wis man.

It was a good sight.

A fire was started and soon made to blaze high, that the Maschee Tah-mah-na-wis would have his power burned away.

Paints of many colors were brought out and soon all the dancers were painted so bright that the evil eye was blind. Spudt-tee-doch, the protector, was brought and stood up in the light.

"Listen," said the Talking Pine, and I heard a low song that came from a long way, and was faint like the voice of the lake when the wind ripples its face, and the kloo-kwallie was begun.

It was a low-toned song that had not many words, yet those words were not in the Twana language which was spoken by the tribe of S'doaks, and the Talking Pine told me he did not know the words, though he had heard the song many, many times when he was young.

Louder it sounded and many voices joined in, and then the klootchmen who do not dance gathered their skirts close and sat down to beat drums in time with the medicine chant that the men were singing. Like the beat of the surf on the ocean sand the song rose and fell, louder, and deeper and full, until a great noise like the sound of the streets in the white man's town across the mountains came in the air and filled it.

That was the song of the Kloo-kwallie, the song that nobody knows except the wild men who dance until all are hoo-ie and their eyes stare and see nothing, like the crazy folks who have looked on the evil eye.

With a great roar of voices and the beating of many drums came the dancers, all in line and all dancing slow. Each one would jump and then stand stiff like a man carved from wood, and then jump again. Around the fire they all moved until they looked like black shadows, and the light of the fire went up in the air and made bright the arms of the Talking Pine, and no light shone through the circle because so many were dancing.

After the men had danced for some time and the song was fast and the dancing wild, the Talking Pine whispered and told me to watch now and listen, for S'doaks would soon be tested by the fire.

As I watched the dancers seemed to get pelton, crazy the white men say, and two ran up to S'doaks and caught him, one by the neck and one by the heels, and they carried him to a small fire that was built to burn slowly. Over this fire they held S'doaks with his back close to it until it was burned and cracked, and blisters came and caused pain that would make any but a medicine man moan and cry out.

But S'doaks had strong medicine, and laughed while his back burned. Then they carried him back and set him down again in the circle to dance. As he danced around the fire and sang the medicine song the klootchmen gave him sticks pointed with bone, and with these he scourged himself until the blood began to flow and dried black against his skin.

The other dancers lashed his back and arms with switches and put cedar splinters which blazed like a torch against his skin, and S'doaks still danced, for his medicine was strong and his Tah-mah-na-wis made him so he did not feel his hurts.

Until the moon was straight over the head of the Talking Pine the dance went on, and then S'doaks fell down like a dead man with his eyes open. But he could not see, for his medicine had gone and he was like other men and like a man who was mem-a-loose—dead, you know.

Then the mid-win-nie men, who do not dance, took S'doaks and carried him to the medicine lodge and brought him back to life again and he got well in time.

The Talking Pine told me that he must go through the

torture as many times as he could before the moon when the birds nest, and that if he did this and his medicine was strong so he would not feel his hurts, then he would be a new Tah-mah-na-wis man and be one of the mid-win-nie clan and be a doctor.

This I know he did, for I saw him cure a boy who had looked on the evil eye and was already dead, but the medicine of S'doaks was strong and brought the boy back to his body and made him alive again.

And this was the dance of the Kloo-kwallie that was danced at the foot of the Talking Pine. When it was over, I got in my canoe and crossed back to my lodge and waited for word to come again from my friend, the wise one.

EL COMANCHO.

WITH A SURVEYING PARTY IN THE INDIAN TERRITORY.

BY FRANK WINCHESTER, ONE OF ITS GUESTS.

Part IV.

THE second day came clear with a strong north wind, and the Judge and I with a full supply of cartridges for ducks and geese went to the river after an early breakfast, but to our surprise we found no ducks where King and I had found them in such numbers, and I then led the way up the river toward the goose sandbar, on which a few could be seen sitting, the Judge laughing at the joke upon King and me, if the slickers should be found stolen; but when we drew near we saw the slickers lying on the sand and the few geese upon the bar paying no attention to them. Knowing that the main forenoon flight in from the feeding grounds would begin about 10 o'clock, we at once waded out to the bar, and each of us soon had a shooting hole scooped out in the sand in which we could lie and be covered by the slickers, and then the work began with a straggling one every few minutes until the main flight came, and then it was shoot until all of our shells were empty.

As we arose and looked at our work the Judge most emphatically declared, "Carried away by excitement, you and I, Son, have been worse than two pot-hunters; but I am done; I have had goose shooting enough for a lifetime." I felt that we were both unworthy the name of sportsmen.

A hail from the bank apprised us that Cap had sent a team down for our game, and though we ate every goose at camp neither the Judge nor I engaged in any more goose shooting on that trip, although they used that sandbar for a roost during our entire stay in camp.

While waiting for a suitable day for bass fishing the Judge, Cap and I had several conferences, planning to invent some method by which we could beat King catching bass, but the only result was that Cap and I determined to ask King to provide us with tackle so that ours should be as near like his as possible; the Judge contemptuously refused to give up his jointed rod and reel, declaring that "If three expert bass fishermen with civilized rigs could not beat a half-breed Indian with his bungling outfit, it was time we quit the business."

A few days after the storm we were aroused by King before daylight and told to "Get up before the morning star sets and get ready to go fishing." We found a warm south wind gently blowing, while the stars were shining with intense brightness in a cloudless sky. After a breakfast by lamp and fire light combined, we mounted our ponies and followed King down into an unknown land to fish for bass in a stream somewhere in that country called the Walnut. Forging the river, we followed King down the river about six miles until we came to the Walnut Creek, which proved to be a stream nearly three times as large as the Red Rock had been, but presenting many of the same characteristics, except that close to the river upon the bottom land is formed a wide deep pool resembling a bayou, extending nearly three-quarters of a mile, where it became a chain of deep pools connected by shallow ripples, like those we had found in the Red Rock near the northern part of the territory. In a canebrake near the river King, Cap and I each cut a fish pole to suit our individual tastes and King in addition cut a heavy stout cane, to the top end of which he tied a very large hook; in reply to the Judge's inquiry as to what use he would make of it, he said, "Would come handy to get big fish to shore," a remark which caused the rest of the fishing party considerable amusement.

Picketing out the ponies, we carried fishing tackle and guns and followed King up the stream, noticing the gunny sack carried by him, but having no idea of the use he would make of it until we came to a narrow and shallow pool well stocked with large minnows, when to our surprise King soon made a minnow seine of the sack, with which he caught a goodly supply of the minnows, and then used the sack to keep the minnows in and to keep them alive by placing it in the water. As the Judge had arranged his jointed bamboo rod while we were cutting our cane poles, when we reached a deep pool he was the first one to get a cast. He seated himself on a rock overhanging the pool, and as luck would have it, as his minnow struck the water it was seized by a black bass of about 3 lbs. weight which he soon landed, shouting, "Rod and reel forever." Returning his hook and bait to the water it was seized by a fish which darted away, resisting all the Judge's attempt to check him, in fact breaking the tip when the Judge tried to give him the butt, at which he said: "Boys, I've hooked the King of all the bass," and King replied, "No bass at all, but dum'd big catfish;" and with a broken rod the Judge worked upon his catch for nearly an hour while the rest of the party were catching bass, until he called upon King to help him land the fish, and as King gaffed his catch and drew it to shore the Judge moaned: "Boys, I've fooled away an hour's time playing a big flathead catfish, so big I could do nothing with him, and I thought all the time I had a big black bass, and he's broke my pole, and now we've got him shall we keep him or not?" King declaring his flesh better than any bass, the 20 lbs. of catfish was safely tied to shore.

Upon the Judge's declaration that his rod was ruined, King went out in the timber to a tree festooned with vines, and from beneath the vines drew a well-seasoned cane pole which he gave to the Judge, who soon had it rigged, and then joined us in catching bass. But there was no playing them. When we hooked one he was unceremoniously dragged to shore and placed upon the string, and so plenty were they that by 10 o'clock we all agreed that we had all we could use while fresh, although we had

returned to the water all that we thought weighed less than 3 lbs. Yet no two of us had equaled King's catch, and in spite of the fact that each of us copied King's methods and we fished the Walnut two or three times each week thereafter during our camp life, yet no two of us could ever catch as many pounds together as King would catch alone. While our fishing trips added to the variety of the food of the camp, even the Judge, scientific sportsman as he had theretofore been, in the hope of equaling—if not beating—King, degenerated with Cap and me into pot-fishermen, each using thereafter a large line, large hook and a cane pole strong enough to pull out to shore any fish that we might catch without waste of time; our efforts were fruitless, and King remained high hook in every contest. But oh! the delight that the well-broiled black bass gave as a change of diet whenever we wished a change from turkey, quail, possum, venison or bear-steak. And how memory lingers over the picture of those bass from 3 to 4 lbs. in weight that the cook placed before each of us! The aroma from some of those feasts yet lingers. Surely, the gods while feasting on ambrosia never surpassed in solid comfort the enjoyment we had at table during our camp life on that trip.

WITH THE BOBO BEAR PACK.—III.

Footprints in the Trail.

A FEW moments after saying good-by to Col. Payne and Mr. Foster, who waved adieus from the opposite side of the river, the remainder of the party started from camp with the entire available pack, bound to break the monotony of life by bringing one more bear into custody. Two days before Noel Money and myself, while prowling around on foot through the heavy cane near the river, had seen a fresh bear track, apparently of a big bear, not over three-fourths of a mile from camp. We were pleased to see Bobo head in that direction and not toward the Hurricane country. As luck would have it, our bear—or another bear which did just as well as ours—actually materialized. We had not gone a mile and a half from camp before the dogs began to sniff suspiciously along the trail. At first we thought it was only the deer trail, whose tracks were thick in the soil softened by the rain; but a moment later Bobo, leaning over in the saddle, pulled up and called for the others to stop.

"Here's your bear!" he said, pointing to a series of deep holes in the leafy mold along the path. "And you can bet he's a big one, too. Turn in the dogs!"

A moment, and all the dogs were sniffing at the trail. Another moment, and the entire pack was strung out, each dog giving mouth at the top of his voice. It was indeed a glorious chorus, enough to set every drop of blood tingling in one's veins. I presume every one shouted, and I know every one rode, each at his best. In an instant the path was silent and deserted, and in half a dozen different directions men and horses were seeking riding ways through the cane.

The Plan of the Battle.

In describing a battle no two eye-witnesses will speak of it alike, because of course no one man can see all of even a dog fight, let alone a battle, by himself. The description of a bear chase, therefore, can not be called comprehensive, for it is impossible for any one man to see much beyond his own nose. From what I could learn by converse with the various commanders of detachments as we rode back over the country where the battle was fought, I should imagine the situation to have been something like the following: The bear headed north and was in a few moments jumped in very thick cane. The chase bore to the left, Mr. Money and Bill, one of the colored men, bore also to the left and made down into a slough which took them half a mile from where they started.

Capt. Bobo, Fincher Bobo and myself went to the right. The others of the party kept still further to the right over toward a big bayou. Between Capt. Bobo's party and this bayou there ran a native hunter by the name of King, who was living in a shanty near the Bobo camp. King was on foot, but knew the country well.

We now were scattered over a couple of miles of country and we had the bear surrounded on all sides but one—the far side. It was this that made the weak point in our line and it was Capt. Bobo's part to head the bear. He knew that a certain direction would bring him to the dry bed of an old bayou which penetrated the middle of the battle-field, along which he could ride for a mile, and so perhaps by riding back again into the cane to the right could get in ahead of the pack, whose course we took to be about halfway between these two big bayous. If the chase was thus headed we had it in our hands, for the bear could not break away from the mile or so of heavy cane without being seen and killed by some one.

Trials of the Chase.

I knew nothing of this state of affairs until afterward. My own concern was to keep in sight of Capt. Bobo, who was going a hot pace through some stinging switch cane on his ride for the bayou. I found Mr. Foster's roan pony was master of but one gait with any speed to it, namely, a high-headed gallop, not altogether suited to grapevines and briars in combination with cane thickets. Moreover, he had notions of his own about following a trail, and was continually flying the track and getting lost out in the middle of the wide, wide world. A good bear horse will not do this, but will stick to the "hack" and follow it steadily, even when the rider can hardly distinguish it. The pony and I had several arguments over this, more especially when the trail began to lead up and down over the points of the bluffs along the bayou. Wherever the pony saw an opening or a thin place among the trees he wanted to go there. He hadn't lost any bear, and all he wanted was to get into thinner cover, where he wouldn't be continually rapped over the head by the canes which hung so heavy on all sides. In one of our arguments we plum lost the trail and Bobo got entirely out of sight. Then I let my angry passions rise, and spurred the pony to get him back into line. Then he ran me into a tree, and very nearly broke my leg, and the saddle came off, and I hopped around on one leg and thought of the army in Flanders. It was impossible to make the saddle any tighter, because the pony wasn't big enough to fill out the girth (we had to stuff hay around him to make him fit the saddle); so I set the saddle on top of him again, and with many groanings made on after Bobo with the saddle loose, except in so far as I could tighten it with a knee exceeding sore.

AN ADIRONDACK NIGHT.

BY FRED MATHER.

This was what was happening in my immediate vicinity. Meantime Fincher Bobo had left us and was following another hack to our right. The man King was now about abreast us on the right. Money and Bill were charging up and down their narrow slough about half a mile from us, expecting every minute to get a shot. Money had met misfortune also and had broken a saddle girth, changing saddles then with Bill, who got a very poor one in the bargain. As they rode on down in the slough a big buck jumped up in front of Bill's mule, frightening that placid creature nearly into a dead faint at first, and later into mulesquian pyrotechnics which must have been fun for Money to witness. The immediate result of all of which was that Bill came off the mule and landed on the ground in a sitting posture. At this he fetched a most grievous hollow groan. "W—whoa, mule!" he said, as soon as he could speak; and then, "Mr. Money, I've hu't in my innards! I've hu't in my innards, sho'h's you bohn. Whah's that bottle you has, Mr. Money?"

Mr. Money gave him the bottle, which he offered to carry after half emptying it. *Par parenthèse*, Mr. Money later asked Bill for the bottle, and Bill told him it had "done leaked 'most all out"—a statement in the main part quite accurate.

What the Bear was Doing.

While Money and Bill were engaged as above, the bear was fighting the pack within 100yds. of them in thick cane. Had they only known it, this cane was thinner a little away from the edge of their slough and there was an old hack out right across that body of cane. They rode past the hidden mouth of this path a dozen times, but did not see it. The fight was going on in an old burning, and here the dead cane and the briars made such a mat of cover that a man could not get into it. Money told me that the bear was once within 20yds. of him and he fully expected to get the shot, but he could not see either bear or dogs so thick was the cover.

The bear never crossed this slough at all, but paralleled it, Money losing his chance by not knowing that 20yds. more of scramble would have brought him into easy going and in sight of the bear. The bear kept right in the middle of this easy going, being now between Money and the man King, who was in the thin cane off to the right.

Meantime I had overtaken Capt. Bobo and we both rode on up the bayou. For a long time we could hear nothing and could not tell whether or not we had headed the bear; but at length as we got into a cross-hack leading over to the right from the bayou we could hear the chase very plainly. Capt. Bobo now sent Fincher in to find a hack leading into the heart of the brake (which he did not strike in time), and then Capt. Bobo and I chased back and forth along that narrow trail, according to the varying direction of the flood of savage music which came swelling down to us from the heart of the wilderness of cane.

"It's a running fight," said Capt. Bobo, "and they'll cross in here somewhere. He's our bear, sure, and you'll never have a better chance to kill one. Just tie your horse when they get a little closer, and run in on foot."

It seemed absolutely certain that I would kill this bear, and no thought to the contrary entered our minds. The dogs were less than 300yds. away. The noise they made may be judged when I say that I could hear not the least reason for Bobo's surprised statement that "he thought he heard a shot." I heard nothing but the dogs.

But the sound of the fighting grew less, became stationary. Puzzled, we set spur to the horses and rode the hack clear across to the big bayou beyond. We were now on what had been at the outset the right-hand side of the chase, and we were now riding back toward the start. There were therefore now on our right hand Fincher Bobo, Money and Bill and the man King.

How the Bear was Killed.

Where was this man King? None of us had given much thought to him, he being welcomed to the privilege of running after the dogs on foot if he liked. He did like it, and he ran so well that he got through the thin cane and kept abreast of the bear and the pack as they fought back and forth in the "burning." He heard the pack turn toward the bayou, and ran into the only clear space there was and climbed up on a fallen tree. He could hear the panting of the bear long before he could see him. At last the bear came out of the cane into the open. He was half standing up and looking back at the dogs, his tongue hanging out and himself blowing like a bellows. The little one-eyed cur dog called Bad-eye was the first dog to come in sight. The bear had never seen King at all. Bad-eye made a spring at the bear's head or neck. At that instant King fired the shot which Bobo had heard, and which lost me my bear on that day. King said he aimed at the bear's ear. The distance was 20yds., and he missed it by just 5in. He shot three times with a .38-56 Winchester, all bullets striking the neck or passing through.

So Bobo and I rode up from the bayou just two minutes, or 250yds., too late. There on the ground, summoned as if by magic out of the depths of the wilderness, lay a vast black object, inert save in such motion as twenty fighting dogs gave it in their still unappeased rage. "He's the bull of the woods," said Bobo. "I knew by his track he was a big one." And very big indeed he was for a black bear, just over 7ft. long along the top of his back from nose to tail, and 8ft. 6in. across his fore paws when his arms were extended. We thought he must have weighed between 500 and 600lbs., though he looked as if he would weigh 800lbs., to a novice.

Then we blew high and long to tell all men the bear was dead, and to us there came Fincher Bobo and Mr. Money and Bill, and also a gentleman who was a stranger to some, Mr. Beard, an old friend of Capt. Bobo's, who had arrived in that country that morning and was headed for our camp when he heard the dogs running and so joined the chase.

Our bear being much too large for any horse or mule to carry, we cut him up into sections of a few hundred-weight each and took him into camp. His hide, larger than that of my pony would have been, was given to me to wrap about my pony so the saddle would fit him. And if any man doubt the bigness of said hide, let him come up into the FOREST AND STREAM office and take a look at it.

But this was not the last bear we killed.

E. HOUGH.

909 SECURITY BUILDING, Chicago, Ill.

THERE is one particular night in camp which always comes to the fore when the pigeon-holes of memory are overhauled and dusted. The night itself did not differ materially from hundreds of others of equal beauty spent among the lakes and mountains of the Adirondack region, but from a very singular occurrence it stands alone among camping experiences, often among wilder scenes and wilder men; and this is the way it happened: Near the head of Fourth Lake, of the Fulton chain, is a small island which at that time, fifteen years ago, was occupied by the cabin of Fred Hess, guide, hunter and woodsman, and his family. On the eastern end of the island, and only separated by a few feet, lies a smaller one of less than a hundred feet in length, and on this my tent had been pitched for some days while I was investigating the aquatic life of the lake. Jack Shepard, my guide, had gone down to the Old Forge, at the foot of First Lake, for mail and supplies, and I had been alone for two days and one night. I had taken trout enough for supper and breakfast, and was boiling the tea-kettle and preparing to fry the trout for an early supper, when a volley of rifles and terrific yells came from the head of the lake. This was surprising, because few take rifles into the woods in early June, and most men who love the woods are silent in order to observe such life as may be stirring. Soon three boats put out, and with much argument the party came in my direction, two men in each boat, and it soon appeared that the dispute was concerning a place to camp, their guide, who had brought them from Blue Mountain, urging them to go down the lake where there was wood at hand, but they overruled him and landed, because, as one said, "there's a camp there now, and if it's good enough for them it will do for us."

To say that I regretted their decision is mild. They were a noisy lot of rude fellows, rarely found in the woods, and not at all to my taste. My tent was well back from the water and they paid their respects in this fashion: "Say, mister, how are you?" said the tallest of the five; "we just come up here f'um N' York to do a little shootin' an' fishin' an' have some fun. I'm Slim Jim, an' these 's me fr'en's. This is Patsy Bolivar, Corky Jack, Ikey the Mug, and Baldy Sours." I acknowledged the introduction and remarked that the place was a poor one for a camp because wood had to be brought from the main land. This had no effect in inducing them to move on, and they returned to the boats to unload. Their guide, George Chamberlain, soon had their big wall tent up and started some of them for wood and then he came to see me. I hailed him with, "Well, George, where did you catch that crowd?"

"Over at Blue Mountain. They wanted to go across to Old Forge and do their own rowing and camping, but no one would let them have boats to go alone, and they never could have found the carry at the Brown Tract Inlet, so I agreed to come along and take the boats back."

"Will they pay for the round trip, do you think?"

"Oh, yes, they're all right in that, and they pay well. They ain't as bad as they make out to be—but green? Well, I've had green men in the woods before, but nothing like this party. They are hotel bartenders on a vacation, noisy and trying to enjoy the woods, but you'd enjoy seeing them fish."

"Did they get any?"

"Not a trout. They had good rods and everything in good shape, but the man they call Baldy stepped on two split-bamboos and broke them, and one rod was splintered on a log by Ikey, who used it as a club on a bullfrog, but the frog got away, and there's only one good rod left, and that I took care of, for they broke the second joint of one before they got to the lake. The stage ran over it, I believe."

"Perhaps their coming here is not so bad, after all; they may relieve the monotony of camp by their freshness. I was afraid they were a different class of men."

"They're all right, only a little strange in the woods. Here they come with the wood, and I'll go get supper ready."

By this time the sun had gone down and the stars were out in all their glory; Aldebaran was glaring red in the eye of Taurus, above the chair of Cassiopea, and the voices of the night were beginning to be heard. Our camp was still, for the men were resting. There was no wind and frogs began their sonatas; a baritone opening with a slow movement, which was taken up in a higher key and run through the allegro, andante and adagio, when the smaller ones ran it into a minuet, all the while emphasized by a powerful basso profundo on the northern shore. It was one of the grandest of nature's musical efforts performed by her most versatile soloists and choristers! It was a night for a lover of nature to commune with her and leave all thoughts of man and his ways as though they did not exist, when the boiling over of the kettle roused me to the fact that things far below Aldebaran and the Pleiades needed attention.

I am, or was, an old duffer! How long that state had existed I have no idea, nor how long it lasts does not seem to be laid down in the cyclopedias. Neither am I aware of the precise characteristics of an old duffer, or what mental or moral traits entitle one to that exalted rank, which, of course, must be far above that of a young duffer. By reason of my gray hair and beard no one would suspect that I was a young duffer, and this is the way I attained the honor. Supper had been cooked and eaten, pipes smoked while listening to a fine male and female quartet at the permanent camp of a gentleman on the south shore, to the accompaniment of a well-fingered banjo, when the following conversation took place at the camp below:

"What you doin', Baldy?"

"Mixin' a sheep-herder's delight."

"Must be good! What do you put in it?"

"A thimble full of cayenne, five dashes of tabasco sauce, same of Jamaica ginger, three dashes of gin, new apple jack to taste and serve hot."

"Ever drink one yourself?"

"Oh, no! I never care for mixed drinks; got the prescription from old Col. Todd, of Texas, who always took plain whisky for his, but he said that down his way where they raised great lots of sheep it was a favorite with the men who were exposed to the night air, and it is what you need to-night. Never made any before, only once when I had a day off and went to Coney Island. I tried it on a man who wanted a warmer to break a chill

and I volunteered to make him one, as I knew the proprietor."

"Did you attend his funeral or only send flowers?"

"Come off! He's still doin' business at the old stand, a boss plumber, and he straightened right up after the drink, and you'd never see anything wrong about him, except that the setting had melted out of his diamond scarf pin and the filling in his teeth had disappeared. Here, take this one up to the old duffer while it's hot."

Then I knew that I was an old duffer! It was a revelation such as Burns wished for, and Baldy Sours held the mirror up that I might see myself as "ithers" did. The "sheep-herder's delight" turned out to be a very palatable hot toddy; "sweet, strong and plenty of it," and after smelling its fragrance I joined the party below and proposed long life to the concocter of the harmless beverage with the formidable name. From across the lake came Foster's good old song, "Come where My Love Lie Dreaming," and while the island party were rapt in the melody there was one whose memory drifted back to the time when the author of the song was a living friend and charmed the public with his "S'wanee River" and other melodies that still remain with us after the gifted writer of them is forgotten by the public; and while I was thinking of the evanescent character of popularity the song ended. A loon uttered its weird cry near the head of the lake and the frogs hushed their clamor at the uncanny sound. There was silence for a moment when Billy asked in a low tone: "Did you hear that?"

"Yes," answered Jim cautiously, "I wonder what it was."

"Maybe it was a deer," ventured Corky.

"Deer your granny! a deer don't make a noise like that. I've seen and heard lots of 'em in Central Park, and they call like a goat. I tell you that was a bear," was the assertion of Patsy.

"They say there's lots o' bears in these woods," said Baldy, "but I don't want to see any. We've got guns enough to kill a dozen bears if we didn't get too scared to use 'em, but I'll let the rest of you have all my bears." Then turning to me he asked: "Could a bear swim across the lake to this island?"

I assured him that bruin was a good swimmer and that several bears had been killed right where we were, and seeing the effect of this not only on Baldy, but on the whole party, the temptation to go further could not be resisted, and I added: "There was a bear on the island last night and it took my pail of butter, a loaf of bread and the trout that were laid out for breakfast."

"Did you wake up?"

"O, yes, he made a great racket with the butter pail pounding it on the rocks, for the cover was on tight. got up and threw a chunk of fire at him and he splashed in the water and swam off with the pail."

"Gee whiz!" exclaimed Baldy, "I wish I was in N' York that's good enough for me. I tell you this camping out is all well enough to read about; but luggin' a boat over the carries an' sleepin' on the groun' when you doan' know what kind o' snakes an' pinchin' bugs is under you an' bears a-comin' in the night, I don't see where the fun comes in. Was that a bear made that noise a minutt ago?"

"Yes, that was a bear," I told him, and at that moment the loon lifted its voice again like the wail of a lost spirit and there was a hush. The banjo on the main shore was resting and the frogs were quiet once more. "That bear is up at the head of the lake, where you launched your boats and fired off your guns. What were you shootin' at?"

"Nothing," said Jim. "Baldy thought if we fired our guns it would scare the bears away, and so we fired."

"That's where you were wrong. Never take guns into the woods in June, or at any time in summer; there's nothing to shoot, and they are a nuisance. When a bear hears a gun he knows that a man is about and there is chance to rob his camp when he is absent or asleep, and would advise you not to shoot any more."

"Tell him about the trout you caught, Baldy; show the professor the fish if you've got it yet."

From "an old duffer" I had suddenly become a "professor," and there were two reasons for it: one was that few fruit jars were in front of my tent containing specimens of newts, dobsons and small fishes that had died of alcoholism, and the other was a probable doubt of the propriety of using the older name when in the presence of the "duffer." Baldy went to one of the boats and brought forth a fish about a foot long, saying: "There it is, and the gang says it's a sucker; but our guide, Mr. Chamberlain, says it's a small salmon. He ought to know, but I'll leave it to you." That the fish was one of the species of the sucker tribe needed but a glance to determine, but a look from the guide was sufficient and answered: "No doubt Mr. Chamberlain is right, but the only name that science knows this species by is *Catostomus longirostris*. You will observe, Mr. Sours, that it differs from the trout in having the mouth underneath instead of being terminal, the lower lip being bi-lobed and tuberculated, the pectoral fins are long and reach to the insertion of the dorsal, while in the trout—"

"There! I told you it wasn't a sucker! Much obliged, Professor; these fellows think they know a lot about fish. Say! what do you fish for trout with? We bought a lot of tackle on Broadway; know Tom Conroy? Bet you do. Well, he's a nice fellow, but he put us up the queerest lot of stuff to catch trout with that you ever did see—a lot of poles like coach whips, some fiddle strings and then the hooks! look at these! and not a sinker! I've caught fish off the dock and I know what fishin' is, but Conroy thought he'd be smart and play a trick on us, but I'll give square with him yet, you bet!"

I looked the tackle over. One rod that the guide had cared for was a good ash and lancewood fly rod, the line were waterproof silk, the "fiddle strings" proved to be good silkworm gut, and the "hooks" were artificial flies of proper sizes and assorted patterns. "Well, these are about what I use," I replied; "what's the matter with them?"

He stood in the light of the camp-fire, his short, stocky figure casting an exaggerated shadow on the tent, and his bald head shining in the starlight above his good-natured face, looking at the artificial flies he had in his hand. After a moment he said: "Trout won't bite on the things, for I've tried 'em. I cut a pole in the woods and put a lot o' these flies on it and tied a bullet on for a sinker, an' fished more 'n an hour where a man took the trout with a worm a while before, and I never got a nibble."

NOTES AND COMMENTS.

OLD HICKORY made an effort the other day, and wrote me a short note. There were but eight pages of it (letter size), but it served to remind me that I had not done much in that way of late. I have always something which I would like to say in FOREST AND STREAM, but somehow or other it seldom gets written. I could give reasons, but instead will offer a few disjointed remarks:

Mr. Hough's correspondence is always entertaining, but I have taken special interest in the papers on trapping. I have done a little in that way in the old days, and my wife has a set of furs (in good order) made from the skins of fishers which I trapped in Maine, away back in the fifties. We used deadfalls a good deal at that time, but the fishers were taken in steel traps. The Boston furrier who dressed them told me they were the finest he had ever made up—they all went to Russia at that time.

I never trapped for a livelihood, and regard this calling as one of the hardest and most uncertain of employments. Those young fellows who are anxious to get their living in that way can do no better than read what Mr. Hough has to say about it in his recent articles in your columns.

I have read also with interest what he has said of snowshoeing. Nowadays I don't take any thirty mile tramps on maine, though I sometimes find them convenient to beat a trail through a snowdrift when I go out to inspect the trout-horse. I believe that your readers are not acquainted with this excellent animal (which his name it is Jo-Jo). Some other time I may enlarge upon this subject.

Yes, the caribou snowshoes are the best; but the genuine are often hard to get. They may be had by following a formula analogous to that recommended for obtaining pure port wine: "Go to Oporto, see it made, then sit on the cask all the way home."

To a man who for many years has been deeply interested in the subject of game and fish preservation, and has spent much time and effort in the hope to accomplish something substantial in those matters, there is something inexpressibly dreary in the reading of the programmes of the various "national associations" which have and will be organized in this interest. I wish they—or some one of them—might accomplish the purposes of their organization, but I hardly think they will. I suppose, however, that I should not be eligible as a member, for I sometimes fire sitting shots. In fact, about all the shooting I have done in the last five years was at sitting objects last spring, and yet I have long opposed spring shooting. However, the temptation (or whatever it was) was too strong, and I knocked 'em endways. The gun was my old 10-bore Parker, commonly called Aunt Hannah. Like Aztec, and for similar reasons, I am a "black powder fiend," and the charges consisted of 3½ drs. of the blackest kind of Hazard's Duck Shooting No. 4, with 1oz. No. 6 leaden shot. I am thus precise in detailing the constituent elements employed in the destruction of these cats because it seems to be the fashion. The distances were from 5 to 15 yds., and after the gun cracked there ensued a slight vibratory movement of the extreme end of the tail. I used the brand of powder named because I have shot it for more than forty years and know just what it will do under any circumstances, besides the shells were the last that I loaded for ducks some seven or eight years ago, and there have been very few ducks here since.

I shot the cats because they were after my song-birds in the shrubbery about my place, and they now sleep peacefully at the foot of my Cat-awba vines. KELPIE.

CENTRAL LAKE, Feb. 1.

P. S.—To-morrow is Candlemas, and bear and ground-hog are sure (so I am told) to be out looking for their shadows.

OUR CHRISTMAS NUMBER.

Editor Forest and Stream:

It has now been several days since I read the Christmas FOREST AND STREAM, and in its later numbers the many sincere compliments bestowed by its many contributors and readers. I have waited for my blood to cool, so that with a steadier pulse I might endeavor to put some of my appreciation into words to its credit.

As Byron says:

"Words are things, and a small drop of ink, falling like dew upon a thought, makes thousands, perhaps millions think."

I have written a good many words or things which have been printed and have gone—the Lord only knows where. Like most authors, I presume, I have enjoyed seeing that my words were considered worth putting into type and thereby being preserved, and have enjoyed conning them over myself chiefly for that reason. I believe writers generally feel a commendable kind of pride in this way—a kind of pride that none should be the worse for, and which is indeed the impetus to good writing, if it is not the essence of inspiration itself.

I say that I have written things which have been printed in various publications and which have gone abroad in the world, but I know of nothing I have sent adrift that has given me more pleasure than some of the not over carefully worded sketches printed in FOREST AND STREAM from my pen.

In my opinion, it is something worth living for to have a place with and even receive compliments from a corps of such men as contribute to these columns. I have read the FOREST AND STREAM for over fifteen years, and have been often amazed at the graphic and true character of its gleanings from nature everywhere, from the wilds and wildernesses of the world. That many of its pen pictures have been etched by the able and talented, the sensitive and refined, the rough, honest hands of backwoodsmen and those most intimate with the lore of woods and streams, no one who reads may doubt. Its columns contain engravings cut with the pen with all the art and precision to be found anywhere, pictures touched with all the tints and profusion of color in nature herself, and cruder sketches made in haste here and there that only need a little shading and retouching; but I will retract even that—they need nothing. They are natural and that is—perfect.

All in all, FOREST AND STREAM is a sort of natural inspector, or the chronicle of nature's doings in her far-away nooks and crannies, noting now and then where man and his arts come in collision with the infinite and invisible around him. It has patrols and scouts all over the earth, and is especially rich in resource in its own land and immediate realm.

It does not consider the rod and rifle, or guns, dogs and boats as mere implements for profit and pleasure alone, or that they are merely toys or playthings. They are but incidental conveniences or necessities that enable us to profit otherwise than in narrow or selfish channels; and in my opinion they are chiefly valuable as inducements which persuade us to get out of musty offices and edifices of boards, or brick, or stone and the realm of art, and back to, or within hailing distance at least of, nature and natural conditions. Nature is the source and end of all. We only deceive ourselves with art. Originally we all have to learn to like or bear the artificial, but after a while we have to school ourselves back to nature. Too large a portion of our populace is centered in cities and towns. Too many of us are "chained to business," and too many to something worse.

"God made the country, man made the town," is an old phrase. We will have to embellish it and append before the period, "with the devil's help." The couplet of Goldsmith's—

"Ill fares the land, to hastening ills a prey,
Where wealth accumulates and men decay,"

would read just as nicely and be even a little more explicit as follows:

"Ill fares the land, to hastening ills a prey,
Where towns accumulate and men decay."

All history will bear me out in this slight revision.

But, as usual, I wobble sometimes like a toboggan or a pair of Mr. Hough's skis on a rough tack. I intended to devote these words entirely to an unsolicited testimonial to the worth of FOREST AND STREAM; and I would like to eulogize a very long list of its contributors, but I would exhaust my choice phrases upon any name of a score that I know of. The Hallocks, the Houghs, the Arefars, the Robinsons, Coahomas, El Comanchos, Morrisies, Starbucks, Nessmuks, Shoshones, and the almost endless list who have contributed and contribute to these columns are of the fraternity of true sportsmen and they will grieve for no nobler title. They are men with all the higher and most elevated instincts and attributes.

They glean from the true field of the worthiest things within the reach of mankind, and they are magicians and conjurers even to those who have the same opportunities and experiences.

A yellow primrose by the river's rim
A yellow primrose is to them—
And it is something more.

May your staff of such contributors never diminish, and I believe it never will. Younger rambles and scouts will replenish the passing of the present generation and prolong the line until there will be nothing worth living for and men will quit the world. CHARLES L. PAIGE.

Natural History.

CALL NOTE OF THE PINTAIL.

BOSTON, Jan. 25.—Editor Forest and Stream: Replying to Mr. Fred Mather's query in last week's number as to the call note of the pintail or sprig, I wish to suggest that Mr. Mather must be unfamiliar with the bird in its winter home—the waters and marshes of the South—to have conceived the idea that it was mute. The writer made the acquaintance of this bird and several others of the duck kind on a ducking trip of four months' duration in the waters of Galveston Bay, Texas, last winter, and is now as familiar with the notes of all as with those of the robin or chickadee.

The drake sprig has a single note, a low-pitched whistle, not very loud, which I used to hear all day long (and sometimes in the night), mingled with the myriad cries of widgeons, teal, mallards, spoonbills, broadbills and a dozen other kinds. The sprig invariably utters this call note when he is approaching your decoys, but it is very noticeable that it is the note of the drake only; the duck has a quiet, modest quack. In fact, that is the case with nearly all ducks. The teal (greenwing) often utters a reedy, high-pitched whistle, not very loud, as they come in; but it will be found that the little drake is the author of it, his mate having a quiet little quack. The widgeon ("bald-pate" they call them there) has a lisping whistle, which may be imitated to perfection by whistling softly through the teeth; but this also proceeds from the drakes. A good gunner, familiar with all these birds, will call any of them without any artificial aid—"make an old duck ashamed of himself," as they say on the Texas coast.

It may be that the sprig doesn't have anything to say when he is in the North. Birds act differently in different sections. I surprised the Texans very much by telling them that the robin was a singer with us in the North.

If any one wonders why some of our songsters have been so rare the past year they should have seen, as I did, the ground strewn with bluebirds, robins, meadowlarks, yellow-hammers, even English snipe, that froze to death in the cold snap of last February, when over a foot of snow fell in Galveston, followed by extreme cold. These birds were gathered up and brought into the market by the bushel.

I was led to this region by Mr. Hough's accounts of the gunning there. Though I can't get away to repeat the trip the present winter, I certainly intend to next year, for we don't get anything in the North to compare with the duck shooting down there by the Gulf of Mexico, "but that's another story."

IPSARRAKA.

A Captive Eagle.

STAUNTON, Va.—Editor Forest and Stream: I have to report the capture of a large golden eagle about eighteen miles from this place. Weight about 20lbs., measure 7ft. tip to tip. The bird was caught in a bear trap baited with a fowl, which he had just caught and which he was caused to drop by being shot at with a rifle, but not hit. No effort was made to conceal the trap and he was caught in less than twenty minutes after trap was set. The bird is now in my possession alive and doing well.

A. E. DABNEY.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Couldn't get a worm; they say there's no worms in these woods, and the man brought in some for himself from North Creek. You can't make me believe a trout would bite at such dry fodder as that—no, sir!"

"The trouble with Baldy was that he didn't spit on his bait," said Slim Jim, sententiously; "he was in a hurry."

"If you had spit on it all the fish in the lake would have been killed," retorted Baldy, "but our guide took some trout before we got up yesterday morning, and he used some kind of a grub that he got out of a stump, and he let me try one, and that is how I got that fish that I showed you. What did you say its name was?"

"Catostomus longirostris is its full name."

"Say, would you mind writing that down for me? I want to remember that name and have it stuffed when I get home. I knew it wasn't a regular trout, for I've seen lots of 'em down to Fulton Market, at Blackford's, on the first of April, but these fellows tried to make me think it was a sucker. What's that?"

An enormous bullfrog, with a voice several tones lower than any that we had heard, opened his throat down by the boats and startled some of the party. A rustle of wings overhead as some wandering waterfowl hastened on and was lost in the night added to the surprise, and Baldy's question remained unanswered. The frog plunked into the water, and after a moment Patsy Bolivar remarked that he wished that there was a good hotel near, to which Ikey agreed and Corky thought the Bowery a much better place o' nights. "For," said he, "on the Bowery you know where you are, an' you know what all the noises are, an' there ain't no spooky things makin' you start. I don't believe I'll sleep a wink to-night. Say, Baldy, make us another o' them delights, cow-punchers, that's it? That's a good name for it in the woods, but it tasted like a common hot whisky, or what one of my patients from the South, who drinks peach an' honey in summer, would call a hot toddy, only it lacked the pinch of lemon peel to finish it."

"I didn't have all the necessities for a genuine sheepherder's delight, or you wouldn't want another until yer throat got well," said Baldy, "but I tell you we've got to go slow on the booze, for there's only two bottles left after that smash when you dropped your end of the boat on that first carry, and if anyone goes short it ought to be you and Ikey. We don't get any until we get through the woods, and I won't take any more on this trip myself."

Slim Jim raised up his head and said: "Stick to that, Baldy; there will be more for the rest, but make us a hot tod before we turn in; use half a bottle and that will leave a bottle and a half. We'll use the half to-morrow noon and have the full one for our last camp. How's that, boys?"

This proposition was approved and all agreed to go on short rations during the great emergency, yet there seemed to be grave doubts as to the expediency of letting Baldy sacrifice himself as he had proposed, because, explained Jim, "Baldy is fond of the old stuff, but never touches it except on his vacations, and then he sometimes makes up the deficiency, although he has been very moderate on this trip."

By this time it was evident that the guide's estimate of this party was correct, and that they were not the gang of toughs that I first thought, although a strange party to meet in the woods, and I began to feel at home and glad of the chance to study this strange form of life. The guide, like most of his class, had taken no part in the talk unless appealed to, and was evidently enjoying his novel experience. The night had worn on until the belated moon had risen, and by her waning disk it should be near 10 o'clock. The brew was finished, good nights were said, and all retired. My fire had gone out, but the night was warm, with just breeze enough to keep the mosquitoes off without a smudge; the black flies, which abound in June and had tormented the new arrivals so much until they consented to use the tar and oil, do not work at night, and I sat in my tent contemplating the grandeur of the night, watching the rising moon and the formation of a few fleecy clouds while alternately listening to the singing across the water and again to the magnificent chorus of the frogs. It was well worth while to live on such a night. Even a song of the concert halls of the vaudeville, softened by distance and the water, did not seem to jar upon the senses, or on the voices of the night. Perhaps it was a case where "Dischord ofte in musick makes the sweeter lay." Be this as it may, there was a sense of rapture in the scene and sounds; a small bird in the fullness of its life trilled a sonnet to his lady love in his dream, as a cloud drifted across the moon. The music of that night, the well assorted chorus of the frogs, the carol of the bird and the gentle lapping of the water on the rock blended in memory has often been enjoyed.

"God is its author, and not man; He laid
The keynote of all harmonies; He planned
All perfect combinations, and He made
Us so that we could hear and understand."

It was near midnight before I thought of lying down. The tired party below slept audibly when I crawled under the blankets and floated off into dreamland. Suddenly there was an alarm, a heavy splash in the water, a cry of "Bears!" and a volley of rifle shots. The commotion in the water continued, and just as the clicking of the repeaters announced readiness for another shot a voice between the boats cried: "Help! Don't shoot! It's me, Baldy Sours. O, dear! Help or I'll drown! Help!" Some one kicked the fire into a blaze, and they pulled poor Baldy out, dripping from his rim of hair to his feet, but hanging fast to the bottle from which he had been trying to extract an unnoticed and unrecorded nip, and as he stood there in his underclothing, with a sad look upon his usually cheerful face, a shout went up which startled the loon into a ghostly laugh that drowned the guide's remark about "two boats all shot to pieces," while from the opposite camp, which had been listening, came the strains of the banjo and the song:

"The twinkling stars are laughing, love,
Laughing at you and me."

Baird's Sandpiper on Long Island.

NEW YORK, Feb. 2.—Editor Forest and Stream: On Sept. 17 last I shot at East Hampton, L. I., a specimen of Baird's sandpiper. This is the specimen recorded by Mr. W. Vaughn in the Auk. F. GALLATIN, JR.

[No mention is made in Mr. Vaughn's note of the individual who killed this interesting specimen.]

Game Bag and Gun.

FIXTURES.

March 16 to 21, 1896.—Second annual Sportsmen's Exposition, under the auspices of the Sportsmen's Association, at Madison Square Garden, New York city. Frank W. Sanger, Manager.

THE YELLOWSTONE NATIONAL PARK.

ALTHOUGH the Yellowstone Park has been known to the general public for more than twenty-five years, and during that time has perhaps been more fully exploited in the periodical press than any other like area of the world's surface, yet no attempt has ever been made to write a complete historical and descriptive account of it. For the first fifteen years of the Park's history it was only imperfectly known; continually studied and explored, fresh discoveries were being made in it each season, and not enough was known about it for its history to be written. During the last decade, however, the investigations carried on in the Park have been rather about matters of detail than about its general features, and it might have been supposed that before this some historian would have taken up the subject of the people's pleasure ground and would have treated it from a broad standpoint. This has never been done. Articles in magazines, newspapers and Government reports have appeared at very frequent intervals. A large number of people deeply interested in the protection of the reservation have written about it at length from some special standpoint, and tried to interest the public in it; but it has remained for Capt. Hiram Martin Chittenden, of the Corps of Engineers of the United States Army, to write the Park's history.

For a number of years Capt. Chittenden was detailed by the War Department to take charge of the roads and bridges in the Park, and it was while engaged in this interesting service that he formed the idea of writing the history which has just made its appearance from the press of the Robert Clarke Co., Cincinnati. The volume is one of more than 400 pages, copiously illustrated by engravings drawn from all sources and giving the reader an excellent notion of very many of the natural features of the reservation. It is divided into three parts, treating respectively of the Park's history, its physical features and relation to the tourist, and its future. Besides this there are five appendices which are extremely useful, for they give (A) the geographical names in use in the Park, (B) legislation and regulations now in force there, (C) appropriations on account of the Park, (D) list of the Park superintendents, and (E) bibliography of the literature of the region.

It is extremely gratifying to be able to say that this work is admirably done, and that the volume is really worthy of its subject. Capt. Chittenden is certainly to be congratulated on the volume which he has given the public, which is likely to stand for a long time as the final popular authority of the region.

The name Yellowstone is very old. It was used by the Lewis & Clarke expedition, and even by David Thompson, who sojourned with the Mandan Indians on the Missouri River in 1797-98. The French trappers called it *Roche jaune*, and the yellow of the rocks and stones which form the river's bluff is certainly conspicuous enough to justify it this name. Mr. Chittenden gives a Minutari word translated as "rock yellow river," which he regards as the origin of the subsequent French and English names. The author calls attention to the fact, however, that the Crows called the stream Elk River, and the same is true of the Blackfeet and other tribes.

The theory was long ago advanced that the Indians who occupied the country about the Upper Yellowstone River avoided this region because they regarded it with superstitious fear and considered it the abode of spirits, and that for this reason little or nothing was ever heard of it from aboriginal sources.

It is doubtful whether there is any foundation for such a belief. The better explanation appears to be that given by the author, who thinks that as a matter of fact the country was unknown to the Indians, who did not visit it because, since it was snow-covered for much of the year, and was not a game country, there was nothing especial to induce them to enter it. A small band of Sheep Eaters did reside there, but they inhabited the rough peaks of the Absaroka range on the east side of the Park, and it is even doubtful whether they knew of the existence of the geysers.

The actual discoverer of the wonders of the Park appears to have been John Colter, who, before Lewis & Clarke had reached civilization on their return from their expedition in 1806, applied to them for a discharge, desiring to return to the mountains and trap there. In the course of the next few years he went up the Yellowstone River, Pryor's Fork and the Wind River, and crossed the mountains to Pacific waters. Thence he followed Snake River up, crossed over to the Yellowstone Lake, and passing through what is now the Park, struck across to Clark's Fork of the Yellowstone, and following it down left that stream and went over to the Stinking Water, and thence to his original starting point. The reports which he made on his return to civilization were not believed by those who heard them, and it was thought that the mountain man was trying to impose on the credulity of those with whom he talked.

Soon after this the trader and trapper began to penetrate the mountains in all directions. It was the beginning of the Western fur trade, and the young country was sending out into the wilderness its heroes, who braved the dangers from savage men and beasts, and the equal perils of cold and hunger in the mountains. Some of these men unquestionably penetrated the Yellowstone Park, but no reports of its wonders which they brought back had any endurance. A Mormon paper, published at Nauvoo, Ill., contained in its issue of Aug. 13, 1842, what is perhaps the best description of the geyser regions that appeared prior to the year 1870. It is brief, but faithful and free from exaggeration.

James Bridger, whose name will always stand in the first rank among the pioneers of the West, visited the Yellowstone Park and told true stories about it, but Bridger had a reputation for drawing the long bow and people laughed at his descriptions of the region just as earlier generations had laughed about the stories told by Colter. In 1860 Capt. Raynolds made a trip through the country giving rise to the tributaries of the Yellowstone

River, and made an almost complete circle around the Park. He tried to penetrate it, but was unsuccessful and was obliged by his orders to leave the region and to pass on north. About this time exploration and investigation of the mountains received additional impetus from the discovery of gold in Montana, and the ever busy prospector began to run over the mountains and to sink his holes in every valley. During this mining excitement some parties at least crossed the Park and the repeated confirmation of the old trapper tales was at last beginning to have its effect on the people living in Montana.

It was in 1869 that the Park was really discovered so far as the general public was concerned. The discoverers were David E. Folsom, C. W. Cook and Wm. Peterson, who saw most of the main features of the Park, and returning to the settlement after an absence of thirty-six days, told their friends some of the things that they had seen. They themselves were so astonished, however, at the marvelous things they had beheld that they were unwilling to risk their reputation for veracity by telling the whole story.

The discoveries of the expedition of 1869 led to the fitting out of that of 1870 known as the Washburn-Doane expedition, which with a small Government escort spent about a month traveling through the Park. It was during this expedition that Mr. Evarts was lost and was out for thirty-seven days alone in the mountains.

The men who composed this expedition were many of them persons accustomed to writing and they did all that they could to spread abroad a knowledge of the wonders of the National Park. Articles were written for newspapers and magazines, lectures were given and a general interest in the region was awakened. This resulted in the sending out in 1871 of two expeditions by the United States Government—one under charge of the United States Geological Survey, the other under the engineer corps of the army. Full investigations were made and excellent work done by both these expeditions, and following closely on this work came the proposition to set aside this wonderland as a National Park, which idea crystallized in the bill passed by Congress and signed by the President March 1, 1872. At last then we had a National Park.

Capt. Chittenden very justly gives to George Catlin, the great Indian painter, the credit for originating the idea of such a Park. It is true that the wonders of the Yellowstone were unknown in Catlin's time, nor did he define the territory which he proposed to have set aside for a park, but he did suggest that in some suitable locality of the West a large tract of land should be preserved forever as a "nation's park, containing man and beast in all the wildness and freshness of their natural beauty." Such an idea would probably have received no attention except for the discovery of this region about the head of the Yellowstone, where, as it seemed, all the wonders of the world were collected together in small compass. But the authentic accounts of the region appealed strongly to the imagination of Congress and induced that body to pass the necessary legislation. The example thus set has been followed by other countries, and it may be hoped that other national parks will be established here and elsewhere.

The history of the later explorations of the National Park and of military campaigns within its boundaries, and of the administration of the Park and the passage of the protective act which became a law in 1894, are treated in this volume, but are matters of such recent interest that they cannot be spoken of here.

In his second part Capt. Chittenden treats of the boundaries and topography of the Park, its geysers, hot springs, the fossil forests, its fauna and flora; of the Park as a health resort and of the region when it is covered by winter's snows. Considerable space is given to the description of the roads, hotels, transportation and the various tours that may be made in the Park, and the attractions to be seen on them. Of these chapters little need be said save that the author writes of a subject with which he is thoroughly familiar and gives advice which is well worth following.

His chapters on the Park's future are of great interest. Like most of those who know the region, he is bitterly opposed to the handing over of this great national possession to railroads or to mine owners, and he is equally opposed to changing the boundaries of the Park. Railroads will mar and even destroy the natural conditions, which are the great charm of the Park; they will cripple the tourist routes; they will destroy the large game and the Park forests. No railroad franchise should be granted in the Park, since to grant such a franchise will either create a perpetual monopoly or will turn the Park over to be grid-ironed in all directions.

The chief danger to the Park is from the greed of private enterprise, and until the people shall be taught that the Park belongs to the public and that any interference with the public's rights here will be strongly repressed and severely punished, individuals and corporations eager for gain will still try to obtain from Congress concessions and rights which Congress should never grant.

Capt. Harris, formerly superintendent of the Park, has well said that "in the unsurpassed grandeur of its natural condition it is the pride and the glory of the nation; but if, under the guise of improvement, selfish interests are permitted to make merchandise of its wonders and beauties, it will inevitably become a byword and a reproach."

We have spoken already of the admirable appendices of this volume, of which probably the one treating of the bibliography of the National Park is the most important. We presume that this is as nearly complete as can be made. The illustrations are numerous and of varying degrees of excellence. An excellent index and a large folded map close a volume which is of the highest interest, and which is creditable alike to author and publisher.

Snowshoes.

I HAVE had much experience in snowshoeing in Maine. I always found the caribou O. K. I would not accept moose, deer or cow hide under any circumstances. The next best thing to caribou is horse hide. It is a very fair substitute.

A caribou filling will not sag in wet weather, but instead will "strain up" and sometimes will twang like a bow string.

I have paid \$12 for a pair made by a Penobscot Indian in years past, and such shoes are first-class. I would not buy of any house in the trade, but would have my shoes made by an Indian.

HERMIT.

A BEAR HUNT.

THE FOREST AND STREAM is an ever welcome visitor, and it is with pleasure that its readers learn from it the many interesting incidents and experiences of those who enjoy hunting and find a real pleasure as well as healthful recreation in camp life in the woods. Although the writer has often participated in the pleasures of the chase, he has seldom reduced his excursions to writing, and it is with no little reluctance that he now ventures upon the task of relating the incidents of a bear hunt which occurred in 1890.

During the summer of that year, while engaged in locating and estimating pine timber tracts in Minnesota, my work required the penetration and exploration of extensive forest regions, and often for days and weeks at a time I was far removed from all signs of civilization. I was accompanied by a half-breed Indian, who acted as my packer and general assistant.

We carried one rifle between us, but gave little attention to hunting except to supply our immediate needs for fresh meat, this supply being mainly furnished by the small game, which was abundant and easily procured. Our luggage was no small load to carry on foot, and the one rifle was generally packed with other articles wherever it could be carried with the least inconvenience.

We often sighted game, however, and during one six weeks' outing I saw seven moose, three caribou, a bear and numerous deer. It would have been an easy matter to have shot some of the moose, as they were often very stupid and would stand and gaze at us for several moments before getting out of our way. On one occasion we suddenly came upon a large cow moose that at first acted as if she did not intend to allow any intrusions into her solitary domain. She faced us, and with glaring eyes shook her head as if really determined to make a charge upon us. She looked so formidable that the half-breed became alarmed and threw a dead limb at her, which succeeded in frightening her into a hasty retreat. I am of the opinion that moose are keen-scented, but at certain times they certainly act quite indifferently to the sight of man, and will often permit a near approach before taking to their heels.

About the middle of August our course led us into a section of country where we found bear signs very plentiful. As it was somewhat near the close of my work in the woods for the season, and as I had promised a couple of my friends to take a hunt with them after my work in the pine lands was completed, I concluded to make further investigations and acquaint myself to some extent with the immediate country about, and to locate the range of the several bears which, from the number of tracks and other signs, appeared to be holding an annual reunion in the neighborhood.

After making an extended circuit I found that the range of the brutes extended over a region between two lakes which were about three miles apart. About midway between the lakes was a narrow valley or gorge, through which bruin passed in going from one lake to the other. The tracks differed in size, and as near as we could make out at least three bears—one of them a very large one—were enjoying to their fullest extent the excellent food conditions afforded by a circumscribed area of a few square miles in extent, and they would probably not leave their present locality without cause at least for a few weeks. This appeared to be a very likely place to succeed in getting a shot at a bear, and I decided to return to this region with my friends at a near future date for the express purpose of hunting them.

Early in September I had finished my work in the pine lands, and arrived at Cloquet, where I remained a few days to complete my field notes and await the arrival of my friends George and Frank, whom I had written to join me at that point with their hunting outfits and big bore rifles in readiness for a sojourn in the woods. At the appointed time they were both on hand, full of enthusiasm and determination to undergo any hardship which a bear hunt might require of them. After a two days' journey my two genial companions, the half-breed and myself finally arrived to within a short distance from the bear range and established our permanent camp, which was to be our home until after our hunt was ended, unless we should find it advantageous to change our quarters.

The next morning we were off early and soon found tracks and signs as fresh as ever. The black brutes were still there, but how best to find them was an unsettled question. Not wishing to frighten them out of their present locality, we carefully and quietly still-hunted and watched for them in likely places for three successive days. The wary creatures appeared to do the greater part of their rambling and feeding at night and did not show up.

I had planned this particular bear hunt mainly for the pleasure of my two friends whom I had invited, and I began to fear that the affair would turn out to be an unsuccessful campaign. On the evening of the third day we talked the matter over after supper and finally decided to take a "drive" on the following day. We planned to all start out early, each prepared with a generous lunch prepared for remaining away from camp until night. The half-breed was to circle around to one of the lakes, I was to go on the other lake; we were then to zigzag toward each other with the hope of routing the game and causing it to pass through the gorge, where the other two hunters were to station themselves and keep a sharp lookout. After an early breakfast we all started out for the hunt. I was within a short distance of the lake to the north by daybreak and as I ascended a slight elevation I saw in the dim morning light several dark objects about 200 yds. to my left as they passed into a thicket. They were bears and were traveling very leisurely. They would probably soon lie down and something seemed to tell me that I would soon eat bear meat.

A light rain had fallen during the night and it was still cloudy. The leaves were moist and favorable to quiet walking. I never exercised greater caution in following game than I did on this occasion. After reaching their trail I followed it slowly, at times creeping and crawling along over fallen timber and through brush as noiselessly as possible and halting every few moments to listen and to look over every foot of ground. After following the trail for about half an hour, I was somewhat startled by seeing a large bear rise from his bed behind a log only a few yards ahead of me. He arose slowly. My rifle was ready. As he was turning his head toward me, I sent a

ball crushing into his skull which caused the bear to wilt down as limp as a rag, and I am of the opinion that he never fully realized what killed him.

After I shot, I heard the brush cracking further ahead as other bears scampered off through a thicket. As they appeared to be headed toward the other hunters, I fired a couple of shots to cause them still greater alarm, hoping that they would attempt to pass through the gorge where my friends were stationed and watching for them. After sticking and bleeding my bear, I marked the spot well and proceeded southward along the trail, blazing the trees to facilitate an easy return to the game. All at once I heard shooting in the gorge, and such a fusillade of rifle reports as rang out I had never before listened to in the pine lands. I hastened to the scene of battle and found that my companions had killed a she bear and her two cubs. They had wisely waited until the animals, which were traveling together, had reached an open place, near where they had stationed themselves, and then began the bombardment, which was so effectual that not one of the three bears escaped. The half-breed soon arrived, and all seemed to feel that the killing of four bears in one day by our party was more than ordinary success.

George and Frank were more than elated, and cheer after cheer rang out through the trees until the whole forest seemed to tremble for miles about. We spent the remainder of the day in skinning our game and in packing the pelts and choicest portions of the meat to our camp, not neglecting in the meantime to gratify our keen appetites with generous and juicy slabs of roasted cub. Feeling satisfied to let whatever other bears that might yet be present in the locality remain to enjoy their pranks, we bade farewell to the smouldering embers of our campfire and started homeward on the following day. In due time we reached civilization again. Although I had killed a number of bears before, I had never taken a more enjoyable trip, and as my friends departed with trophies of the hunt I almost regretted that it had not also fallen to their lot to have killed the large bear which had fallen from my own rifle, for it was one of the largest of its kind that any of us had ever seen.

ALBERT NEMIC.

MOOSE HUNTING IN MAINE IN 1850.

In 1850, before any laws were passed in the State of Maine for the protection of game, moose were very numerous, even more so than deer, in Oxford, Franklin and Somerset counties. They were frequently seen in summer time in lake and stream, and in winter it was a forsaken mountain that did not contain one mooseyard. The settlers of the wild regions depended on moose meat to supply solid food for their families. In the Rangeley Lake country especially was moose the prominent large game of the forest.

Deer were reported plentiful in the eastern part of the State, especially in Penobscot county, and hundreds of them were sent to the Boston market. I once saw a large storehouse in Boston packed solid full of deer carcasses, a great many hundreds of them, and venison hung outside every provision dealer's shop in the city. Caribou were not plenty and were considered migratory animals, roving through the vast wilderness of New Brunswick and Maine, some years flocking into the State in droves, then not showing up again for years.

Crust hunting in the deep snow late in winter was the common method of capturing moose, with dogs and snowshoes; but the caribou were exempt from annoyance of dogs, for it was futile to put a dog on the trail of a caribou. Caribou when started would settle on their haunches and leap like kangaroos, and even in 4 ft. of snow a dog had no business with them. But the moose was an easier prey, and in a favorable time could be secured in a few miles' drive.

In spring and summer time, on lake and river, many moose were killed; they took to the water to rid themselves of the myriads of flies and gnats that infested the forests in those wild regions in the warm seasons, and also to feed on the water plants abundant in the ponds and lakes of Maine.

And this reminds me of an incident in my hunting life in the year 1850 on Mollychunkemunk Lake, one of the Rangeleys, on the border of which lake I lived with my family twenty miles from a neighbor many years.

I started one day to go down the lake in my boat to get out to settlements for supplies, which I had to lug on my back through the woods and over the mountains on blazed lines. Within two miles of my house as I was paddling down the lake there was a bog of many acres covered with tall grass, through which a sluggish brook made its way. This brook was bordered with alder bushes, and as I was paddling along approaching this bog I saw the alders beside the brook waving as if some large animal was coming out toward the lake. I at once ran my boat ashore and taking my gun, which, by the way, was a single-barrel muzzleloader (for breechloaders were unknown in those times in the backwoods of Maine), and creeping along through the tall grass and scrub bushes toward the brook I soon got within range of the unknown animal in the alders, and just as he emerged from the tall bushes into the open bog I rose up from my cover, and there within 30 yds. of me stood a majestic moose who had just then lifted his head high in the air and gave a fearful snort and started on a run for the lake. I at once fired, the ball striking the moose on the gambrel and breaking the leg. He at once turned on me and came leaping on three legs swiftly toward me. I dove into the tall grass and crept along as rapidly as possible for a few moments, then carefully looking up over the cover I saw that the moose had stopped and was stretching his long neck in every direction looking for me. I then loaded my gun as quickly as ever I could under the cover and again rising up saw the moose wading into the water as if to cross the narrows. I walked along toward him as he made his way into the lake and when I reached the shore he heard me and turned partly round and looked toward me. He was then some 7 rods from me and stood broadside on in the shallow water, which came well up his sides. I aimed just back of his fore shoulders and fired. The ball skipped twice on the water beyond him and I thought I had overshot him, as he did not fall. I again loaded my gun and as I was ramming down the last wad the moose fell. I then ran to my boat and paddled out to him and cut his throat, but he did not bleed any. I then tipped my boat over on one side and filled it with water, sinking it under the moose; then standing in the lake, which was breast deep, I bailed out my boat in a short time, had my moose loaded and

my boat in trim and made my way up the lake toward my home, proud of my prize.

My wife was surprised at my sudden return home, but went with me to the lake and helped me dress the moose, which I found had bled inwardly, the bullet going through his vitals. Of the meat I salted some, put some in my ice house and smoked and dried some, and in this manner it supplied us with meat a long time. But it still seems queer to me that a bullet after passing through a moose should make two distinct skips on the water beyond.

J. G. RICH.

ADIRONDACK DEER.

Editor Forest and Stream:

There seems to be a general wish among sportsmen for a change in the existing law for the protection of deer in the Adirondacks, and I notice that many game associations have passed resolutions to be forwarded to the Legislature asking it to prohibit the hounding of deer; but I have failed to hear of any demand for a change in the law from the residents of the region in question.

An experience of many years in those mountains has enabled me, I believe, to form a very just estimate of the character of its inhabitants, and I think, without very many exceptions, the sportsmen (?) of those parts would really prefer an open season all the year round. I am equally confident that, were a law passed by the Legislature prohibiting hounding, more of it would be done than under the present statute, simply because the Adirondack people are strongly opposed to having such a law.

I know of a case where the law was openly violated some few years ago, and an arrest was made and a conviction was obtained much to the dissatisfaction of the people of the township in which it occurred. The violator could not pay his fine, so a contribution was made by the people with which to meet the amount of the fine and costs, and the culprit was discharged.

If the Legislature prohibits hounding, it must appoint five times as many game wardens as are now employed to enforce the laws, or hounding will become general, the season opening when you please and closing when you please, few arrests being made and still fewer convictions.

It is my belief that the open season for hounding should not commence till Oct. 1, for by that time the fawns are weaned and able to take care of themselves; and it should close Oct. 31. Still-hunting should not open till Sept. 15, and should end at the same time as the hounding season. Eight out of ten deer run to water by dogs in September are does, and "wet" ones at that, leaving an unweaned fawn to die from starvation and cold after the first hard frosts of October. Few are the dogs in the Adirondacks that will search out the bucks among the high ridges—where they await the hardening of their horns—and drive them to water. Not until Oct. 1, when this hardening process is accomplished, will the bucks leave their bachelor quarters and descend to the lower levels in search of the does. Were it not for the large preserves, where few or no deer are killed, the most skilled huntsman's efforts in pursuit of this game animal would be futile to-day in several counties. Let us have a good law enacted, but above all let us have provision made for its proper enforcement.

JOHN E. FORBES.

POTSDAM, St. Lawrence County, N. Y.—*Editor Forest and Stream:* I have been keeping track of the subject of Adirondack deer protection which is being discussed in FOREST AND STREAM from week to week, and as the time draws near in which legislation on the question will take place, I feel that I too must add a mite to the contribution.

My position is one that has been voiced by several articles in your paper and is this: stop hounding, stop jacking, and leave the season as it stands.

The greatest good to the greatest number should not, in justice, be lost sight of in any changes that may be made. Any arrangement that will give the deer an equal advantage with the hunter, and at the same time give all classes an opportunity to try their hand in the sport, would seem to me at least to best secure protection for the deer and justice for all classes.

I should like to see a list of those who are in favor of prohibiting both hounding and jacking, together with their argument therefor, laid before the Legislature.

Do away with these two methods in which the deer is taken undue advantage of, and we could hunt from Aug. 15 to Nov. 1 for years to come and still have a goodly supply on hand. This is no idle fancy or theory, but the opinion of hundreds of honest sportsmen, and statistics would go to support it.

I see that the game commission have formulated a law to lay before the Legislature in which they recommend that the season open Sept. 1. Now as far as giving all parties a fair chance is concerned, what would this change mean? It would mean that the great majority of teachers, as well as the great majority of parents who have to be at home during the school year, would be entirely shut out from participating in the sport, while the wealthy sports and nabobs (whose time is "any time") together with the guides and natives would have it all to themselves. It seems to me that the injustice of such a course should be apparent to the most biased mind.

It is self evident that to secure protection a sacrifice must be made, but the dish of sacrifice and sport should be served up to all alike. There is no justice in saying to one class, "Now help yourselves freely to the sacrifice, but do not touch the sport," and to another, "Eat your fill of the sport with just a tiny pinch of sacrifice as an appetizer."

Aside from the unfairness already mentioned, in shutting off August shooting there is another and perhaps graver feature to be considered. Already we deplore the number of deer killed out of season every year. In fact those of us who know much about the woods are aware that in some sections the deer killed illegally each year outnumber those killed legally almost three to one.

Now, game laws should be of such a nature as to command the respect and support of all to the greatest possible degree. Cut off August shooting and the result will be to create an extra inducement for illegal shooting, and that too by a class who under a just law would be least likely to violate it.

The many and frequent shifts and changes made in the game laws, and the inadequate manner in which the people at large are informed of the laws, is in itself enough to stimulate a certain disgust, and a lack of conscientious scruples in regard to their observance. To illus-

trate: In 1894 a man can step out at midnight of the 14th and shoot a deer with all impunity, but if he does the same thing before midnight of the 15th in '95 he is a criminal liable to fine or imprisonment; again a man can stand in a certain spot and shoot a deer driven before a hound, but if he should take a step or two to one side (just over the "dead line") and repeat the act he incriminates himself.

Granting that the hotel keepers and guides are the chief ones to be cared for in regulating the game laws (which, however, we do not believe), it seems to me that the fear of the summer and fall exodus to the woods diminishing if hounding and jacking are prohibited is more imaginary than real. Those who go to the woods for the sole purpose of deer hunting will doubtless go just the same, even if they have to try their hand at the only "fair way" of hunting deer, viz., still-hunting; and most of them will be much more in need of a guide than now. More than that, it will make many of our citizens more rugged, more skilled in woodcraft, and more proficient in the use of the rifle, which are factors of no small consideration.

Nor is there much doubt, if this course were adopted, that in a few years it would be just as easy to secure a shot still-hunting as it now is to secure one before a hound or under a jack.

It is all very well to have the different views published in the sporting papers, but I fear that very few of them meet the eye of our legislators. I should like to see all interested see to it that the representatives from their own districts are posted early in regard to the moves that are likely to be made. The game laws are usually left till the last minute and then shoved through with little or no consideration; at least it looks that way.

Hoping that a wise course may be pursued in the matter and good results obtained therefrom, I am

J. M. GRAVES.

DUCKS FOR THANKSGIVING.

CENTREVILLE, Jan. 14.—The day before Thanksgiving I made up my mind that I would like to have some black ducks for dinner next day if possible, so getting up at 2:30 o'clock in the morning, I got breakfast, fed and harnessed my horse and started for the marshes over at Barnstable.

When I started it was about as hard a storm as one going duck shooting could wish for, and it was rather lonesome driving down through the woods for six or seven miles alone; but the thoughts of the ducks down there were enough to "keep the bears off," as the children say.

Arriving at the stable, I put up the horse, got my boat and decoys ready and started out up into the marsh. As I pulled along the ducks were quacking all around me, and once in a while a bunch would get up from the grass when they heard me coming.

Stopping at the point I had selected, I put out my decoys, seven wooden ones, with a tame duck on one side and a tame drake on the other, then pushed my boat into the grass, covered her up well and lay down to wait for daylight to come.

In a few minutes my drake began to call, and looking sharp I saw a bird coming in, which I found by calling to be a brant. All my calling had little effect, for he wouldn't come "worth a cent." Just then a black duck came in and lit. As it was quite dark I thought I'd make sure of him and shoot him sitting, but when I fired he immediately left for parts unknown in spite of the way I pulled the other trigger.

I thought that was "rather hard on a feller," so when the next came in, which proved to be a pair, I thought to myself, now I will make amends for the last miss; so shooting at the one which I knew I would kill, I turned and let the other one have it before looking at the one I knew was dead. On looking through the smoke I saw both of the ducks going as fast as their wings could carry them.

I now began to think my dinner next day would look scarce as to ducks, but when one came down before the wind and I killed him dead and then a pair came in and I got them both, I felt better.

All the time I could see a great many brant flying around down the harbor, and was wishing some would come my way. Three sheldrake came in over the 'coys and I got two dead ones. Then a small flock of brant came in and lit on the water about a quarter of a mile from me, then jumped up and came right in when I called to them. They came straight for me until I rose to shoot, when they went into the air again just like ducks. I got one with the second barrel, missing with the first, as I was sure of getting two with the first.

After a little while a pair of whistlers came in; one lit; the other didn't. I killed the one that didn't, and the other one sat right there with the decoys as if I hadn't shot. About the time the shot struck the water a coot came around the point and lit right in range of the whistler. What could I do but shoot them both, as I had but one cartridge in my gun? I killed them both, as I thought, but as I was fighting with a shell that stuck, the coot got up and flew away, whence I do not know, as I've not seen him since.

One more black duck came down before the wind and was killed dead and that ended the morning's shooting, which being one of many, but entirely different from any, will be remembered as long as I shall live.

WM. F. HALLETT.

Timber Wolves in Canada.

PORT ARTHUR, Canada.—Timber wolves were almost unknown north of Lake Superior until three years ago an old trapper, who had some snares set to catch lynx, caught three wolves instead, one of which was almost black in color. A short time ago he caught two more wolves in the same manner. They are getting quite numerous in this district; they are supposed to have come from Minnesota in pursuit of deer.

On Monday two Indians were camped near Pigeon River, south of this place. They were alarmed to hear wolves howling in pursuit of a deer. They quickly put on their snowshoes, loaded their rifles and gave chase. The Indians had gone about 300 yds. from camp when they saw five wolves worrying a buck red deer, which was almost dead from fright. The Indians shot three of the wolves; the others escaped. The men cut the deer's throat, then returned to camp with their prizes.

J. E. N.

LONG ISLAND DEER.

Editor Forest and Stream:

Among the very many bills introduced at this session of the Legislature, designed for the amelioration of the condition of New York game birds and mammals, is one "authorizing the hounding and killing of deer in Kings, Queens and Suffolk counties on each Wednesday of the month of December."

Not having read this bill, I am of course unacquainted with its provisions, but would suggest that some provision be made for the removal of all non-combatants from the island on field days, or else provide that they be safely housed in shot-proof structures. This suggestion will not appear out of place when the many sad events of the season of 1894 are called to mind.

Owing to the somewhat depleted condition of the Kings county deer supply it would perhaps be well to cut off a portion of the hounding season for that county, say one or two of the several Wednesdays of December.

It would also be well to provide for regulating the speed of the Brooklyn trolley cars on field days, for nothing would be more distressing than to have a trolley car dash through the pack when "in full cry," or run down some unlucky sportsman who might be stationed on one of the choice Kings county runways.

The law should also provide that in the event of any deer being driven into Kings county waters, they be killed in the good old way with a club, and that the use of steam pile drivers and other deadly engines be strictly prohibited, also that the carcass of any deer killed in the waters of Newtown Creek be thoroughly fumigated before being placed on the market.

Of course these points may all be fully covered in the bill—bills amending our game laws are usually quite full and comprehensive—and my suggestions are merely offered in a friendly spirit, in the event of the provisions named having been omitted.

There are, however, persons very well informed on the subject who will tell you that the existing law relative to Long Island deer ought to be let alone long enough to give it a fair trial, also that should this bill become a law, Long Island deer—should there be enough to last that length of time—would be slaughtered during the whole month of December, but perhaps these people may be prejudiced.

S.

Trox, N. Y., Feb. 8.

Boone and Crockett Club.

THE annual meeting of the Boone and Crockett Club, which took place last week, Feb. 5, was an occasion of much interest. More than thirty members were present, among whom were: Hon. Benjamin H. Bristow, Gen. W. D. Whipple, Hon. W. Cary Sanger, Hon. Theodore Roosevelt, Archibald Rogers, Owen Wister, W. A. Wadsworth, W. A. Chanler, the African explorer; Winthrop Chanler, W. B. Devereux, of Colorado; Lewis Morris, C. Grant Lafarge, Madison Grant, De Forest Grant, H. A. Munn, Dr. J. West Roosevelt; Dr. W. B. James, Dr. W. K. Draper, Mr. Frank Billings, W. Milne Grinnell, Alexander Lambert, J. Walter Wood, Jr., Geo. Bird Grinnell, Dr. John Rogers, Alden Sampson, H. L. Stimson, Dr. J. L. Seward, Jas. L. Watson and other well-known sportsmen. The principal business of the meeting was the presentation of the reports of committees. The editorial committee announced the publication of the club's last volume, "Hunting in Many Lands," and the treasurer reported the satisfactory financial condition of the club.

The officers chosen for the ensuing year were: Hon. Benjamin H. Bristow, President; C. Grant Lafarge, Secretary; W. A. Wadsworth, Archibald Rogers, Winthrop Chanler and Charles Deering, Executive Committee; Geo. Bird Grinnell and Theodore Roosevelt, Editorial Committee.

The discussion after the dinner turned on the effectiveness of the Männlicher rifle, and Messrs. W. A. Chanler and W. B. Devereux, who had used the arm—the one in Africa, the other in Colorado—gave their experiences, which were listened to with close attention.

A Quail Shooting Limit.

NEWARK, N. J.—A letter on quail slaughter in Florida leads me to pay a tribute to Dr. C. S. Packard, of Welaka, Fla., a charming little village on the St. Johns nearly opposite the mouth of the wild and romantic Ocklawaha River. Dr. Packard is 60 years old and is still an ardent gunner and a better shot than most of his visitors from the North. Moreover, he can tire out the best of them upon a day's tramp. He is the owner of one of the best broken red Irish setters I ever had the pleasure of shooting over, a dog that never needs a word of caution and minds every gesture of his owner. A low whistle attracts his attention and he looks to see what his master desires. A wave of the hand will send him on down right, left or to heel.

Dr. Packard loves quail hunting too well to destroy the future prospects in his neighborhood when quail are reasonably plenty. He goes out frequently in season and invariably stops when he has killed six birds. He enforces the same rule upon any of his friends who may be visiting him and shooting over his dog. He says with sound reason that six quail are enough for any man to shoot in a day, and it speaks well for his skill with the gun to say that he carries all the shells for an afternoon's shooting in his waistcoat pockets, which are of the normal size. In fact, I never knew him to take out more than a dozen shells, and his usual quota is ten; but then he never starts out before 3 o'clock in the afternoon and usually gets his six birds within half or three-quarters of a mile of the house.

HARRIMAC.

In Virginia near Washington.

ALEXANDRIA, Va., Feb. 3.—*Editor Forest and Stream:* I send you a short article on woodcock, and where good shooting may be had, for the benefit of visiting sportsmen. Migratory birds arrive from the South about March 1, and breed here in March and April in swampy woodland around Alexandria. A great number of these birds can be found in Fairfax county, about six miles from this city, at a place the sportsmen here call the Double Ditches; good shooting may there be had at this fine game bird from July to September, excepting in a very dry season. The open season here is July 1 to Jan. 1. Good shooting may be had at the Big Dyke, two and one-

half miles from this city, on the line of the Mt. Vernon electric railway, in the last two summer months. Sportsmen here get fine shooting at flight birds from the north at Franconia and Long Branch, on the line of the A. F. R. R., from the middle of October to Dec. 1. I see no decrease in woodcock around here, they were more plentiful last fall than for a number of years. There is nothing to shoot at present; we are all waiting now for a flight of jacksnipe. Quail are almost exterminated in Virginia, owing to the severe blizzard of last February; we hope they will catch up again, as the Legislature of Virginia has passed a law protecting them in the State for two years.

CHIP.

A Tavern Club Caricature.

EVER since the announcement was made at the Tavern Club that each of the men was required to paint a portrait of himself or some other member of the club, the fun has been fast and furious, and the present exhibition is the outcome of the artistic efforts of the entire club. Of course some of the pictures are mere daubs, by men who never before held a paint brush, while others are clever in the extreme. One of the most noticeable is a sketch by R. Clipstone Sturgis, Esq., of his cousin Mr. Charles W. Sturgis, of Marlboro street, who is an enthusiastic sportsman. It is entitled the "Coot Hunter," and represents Mr. Sturgis in a frappe hunting costume, unshaven and unshorn, and sunburned to an appalling extent. His nose is an excellent match for Fair Harvard's banner, made so no doubt by too familiar sunbeams, not, as it has been unkindly suggested, by alcohol. Mr. Sturgis is opening a market basket, showing too clearly his noble game has not been brought from the forest primeval, but from a produce dealer's.—*Boston Courier.*

One of Secretary Lakey's Questions Answered.

Editor Forest and Stream:

I cannot answer all of the National Game, Bird and Fish Protective Association secretary's questions, but on one of them I feel sure I can turn pure and radiant light. It relates to the true sportsman, and Secretary Lakey asks, and I answer:

Q.—What is his chief delight?

A.—To read FOREST AND STREAM.

Contrary minds, no. The ayes have it.

DICK OF CONNECTICUT.

Camp-Fire Flickerings.

"That reminds me."

The Bell on the Moose.

NOSUTCHE-CHUNK-AMUG, Jan. 20.—*Editor Forest and Stream:* One of your correspondents asks information about the bell on the moose which I am able to give, being the one who put it on. This is how it happened: I had some years ago young cattle and an old cow running in a clearing on the other side of the pond, and having trouble in finding them when I wanted to salt them I thought I would put a bell on the cow, which was very tame. So one day in the summer I took a bell which was made for this use and fitted it with a strap and started across the pond in my boat. When about half-way over I discovered a moose swimming across and started in pursuit of it just for the fun of a race. The moose turned straight down the pond and after a long hard pull I caught up to him, a very large bull with the widest horns I ever saw, though not yet full grown. I caught hold of his tail and tied the painter of my boat to it, and so let him tow me for some distance. I thought I would like to mark him in some way, and it came into my head to put the bell on him; so I took it in my hand and crawled along his back to his neck, which I sat astraddle of, and reaching down around it fastened the strap after lengthening it with cord. It was a hard job, but I made out to do it after a while, and crawled back into the boat. When we were about 10 rods from shore I unhitched the rope, and the moose swam ashore, turned and faced me, and I think would have charged upon me; but when he shook his head the bell, now clear of the water, began to ring and put him in a great fright. He dashed along the shore for some distance and then stopped and listened, evidently trying to make out where the sound came from; then dashed away into the woods at a great pace, stopping every now and then to listen, as I could tell by the sound of the cow bell, till the noise of it died away in the distance. In the fall I hear it frequently, and at that time the cow moose got to know the sound of it and followed the bell in droves, as shown by the tracks, like a herd of cattle. One night I got a shot at him, but over-shot and only cut the cord that held the bell on the top of his neck. He is as much my moose as any wild well moose ever was any man's, but I have not got him. If any one wants proof of this story I can show him the bell with the strap and cord on it.

JAMES MONKHOUSE, JR.

Skinner's Great Sport.

SKINNER—"Did I ever tell you of the great sport I had on one of the little lakes up in Maine? No? Well, sir, in the course of half an hour I caught fifty trout, some of them twenty inches long, and all of them over a foot. But, as luck would have it, I lost every one of them overboard coming ashore."

Walton—"And I can swear to the truth of what Skinner says, for I saw him when he came ashore, and there wasn't a single fish in the boat."—*Boston Transcript.*

"Yes," said the meek-looking man. "I've no doubt you've had some great hunting experiences in your travels abroad."

"I have, indeed"

"Buffalo hunting—"

"Yes."

"And bear hunting—"

"Of course."

"Well, you just come round, and let my wife take you house hunting and bargain hunting with her. Then you'll begin to know what real excitement is."—*Tit-Bits.*

Sea and River Fishing.

THE ANGLER IN COLOMBIA.

Editor Forest and Stream:

It has always been an open question in my mind which sport was the best, shooting or fishing. In summer I used to decide mentally that fishing was the thing, all considered, but in fall and winter generally changed my mind, particularly if during my annual trip the ducks were plenty. Now that I am here in a perpetual summer it would be logical to suppose that my mind and gun were both at rest, but as of old my gun and rod are both in use, and my mind still perplexed. One of my old friends in Jersey puzzled over this same question for many years, but now, his sight having begun to weaken and the woods and fields having apparently grown to double their former size, he has definitely decided that fishing is the only real sport, and perhaps with patience I may one day bring myself to concur in that opinion.

Fish and game are both abundant here in Colombia, but among the former I recognize some old friends, notably the black bass, calico bass and the humble but succulent catfish, and I find that difference of latitude makes little difference in habits and tastes. Rivers here in the tropics grow longer year by year, the growth taking place at the big end, known in local parlance as "the bar mouth."

The bar is always shallow and the continual deposit carried down by the stream and washed back by the waves keeps the river banks growing, and mangrove trees spring up in the mud, and so, slowly but surely, the growth in length of the river itself goes on. Entering one of these streams from the lagoon, you pass through a long stretch of mangrove swamp. Here the water is brackish, and tide rises and falls. This is the home of the catfish, often weighing 15 to 20 lbs.

At high tide schools of mullet and "jacks" (a second cousin of the bluefish) often run in this reach of the river. Leaving the swamp and continuing the ascent of the river, we find that the stream above the swamp soon grows shallow, with deep pools and many riffles, and here in the pools under some old stump is the bass and also a species of trout.

A friend of mine (call him H.) has a plantation on Spanish Creek, and during August I was a visitor at his camp. One morning on visiting the commissary for supplies, we found our ham had fallen down from the rack and was almost destroyed by ants. It looked as if breakfast would be a slim meal, but H. said to me, "Can you fish?" I owned up, and in five minutes we were off. Our equipment was of the simplest: pole, cord and hook, and I certainly regretted not having my rod and reel. The pool he went to was full of tree tops, lying just as they had fallen when cut from both banks. In places I could hardly see any water. We dug a few worms and at it we went, and I am satisfied that had we wished we could have caught a barrel full of bass. In less than an hour we were back at camp with thirty-eight—or two apiece for all hands. They ran about $\frac{1}{2}$ to $\frac{3}{4}$ lb., one I am sure going all of 2 lbs.

For a week we kept this up, and when I came away I had not once wished for a new ham.

The bass bite at anything. The trout only at a small red berry that grows in the woods, and not very certainly at that.

Planters often get them by using dynamite, but this can only be done effectually when the water is low and clear—conditions, fortunately, rather uncommon.

Set lines baited with small fish are used for the jacks, and often a catfish is caught on one of them.

The little white perch about 3 to 4 in. long are very plenty and the sweetest of all fish, but too small for comfort, as about twenty-five of them make a mess for one man.

Many a fine string of bass have I brought in in time for breakfast, and I can assure you they are always welcome.

HUNT.

THE BEST LURE FOR TROUT.

Editor Forest and Stream:

Your correspondent, Mr. Forbes, gives an interesting account of an Adirondack pond very full of trout, but of which none can be caught unless under exceptional circumstances with any bait or fly tried by him, and he does not think 300 fish have been caught out of it within five years. He asks of your readers suggestions as to something better to try with, or explanations of the failure of the trout to take baits and flies usually successful. He further states that nearly all of the very few he has caught were taken late in the evening or early in the morning, when almost dark.

I believe from his statement that the trouble is not with bait or flies, but in the clearness and stillness of the water and the ease with which the trout can see the angler and his shadow in the water and every movement he makes at distances greater than any cast can be made. I have never known a trout to take any kind of bait or fly in any case in which it was certain that he could see the angler when the cast was made. I have known bass to do so in a few instances, but never a trout. Even in fishing mountain streams we find deep, still and glassy surfaced pools in sundry places, and we all know that to approach such pools carelessly and cast over them in daylight is merely time wasted. But I have demonstrated in many instances that the large trout in those pools will take any good fly after sundown and before dawn, when there is barely light enough to see the flash where the whip strikes the water.

I have demonstrated that by keeping entirely out of sight of the water and casting from complete concealment these same trout can be taken at high noon under the full blaze of a glaring sun. In order to accomplish this I have waded water up to my chin to approach the spot where I wished to place my flies on the water from behind a huge boulder in the stream, and have had rises at the first cast where all attempts to catch a trout by casting from the shore, either bait or fly, had uniformly failed, unless when nearly dark. I have constructed, a times, an artificial screen or blind in order to approach a pool of this sort and make my cast unseen by the trout and have succeeded in catching a number of fine trout in a full strong sunlight.

I could give a great number of incidents illustrating this principle which would, I suppose, interest Mr. Forbe

and others of your readers, but I cannot ask too much of your space. One incident I may venture to detail in brief which gave me amusement and satisfaction: I was in the habit of fishing a fine trout stream in company with a young man who lived on its banks and was a most successful angler. I had observed his methods very closely and soon became convinced that his art consisted in not frightening the fish by abrupt and demonstrative movements. He, like myself, always waded the stream when casting for trout, and he always cast as short a line as possible, but his movements resembled those of an Indian more than those of any white man I ever saw. He glided through the water with so stealthy a step as scarcely to produce a ripple, and knowing every pool perfectly he got to the best position to make his cast without alarming the trout, with astonishing skill and success. Standing for several minutes as motionless as a statue, with his eyes fixed on the spot where he intended to place his flies, he made his cast with less display of motion than any other man I ever saw cast a fly. I doubt if there is another man in the United States who can go to that stream and catch out of it as many trout in a week's fishing as he can.

On the day I speak of he and I agreed that we would fish along down the main stream together two or three miles, when he would cross the ridge and get on a fine tributary of the stream and fish down it to the confluence, and I should take the stream alone from the point where we separated, and whoever got to the mouth of the creek first should await the arrival of the other. He got there first, and lying down on the sandbar at the confluence of the two streams in the full blaze of the hot sun, after unsuccessfully trying the big pool at the junction of the streams, he went sound asleep in a few moments. When I came to the place I took in the situation, and resolved that I would repeat a maneuver which I had practiced successfully shortly before at that place. So I got over into the channel, from which the water had receded, and crawled along the sand out of sight of the pool until I got under cover of the sandbar on which the young man was lying asleep, and rising on my left elbow to a half-sitting, half-reclining posture, made my cast right across his body, and hooked and landed a very large trout, which I had just taken off the hook as he awoke, much astonished at what was going on while he slept. He said he had been there half an hour, and on his arrival had fished the pool with the utmost care, hoping to have a big one to show me when I got there. I would not tell him how I made my successful cast, and he said, "All right. I owe you one; but I was going to tell you a trick I know about the blue role, and now I won't tell you 'thout you tell me how you done it."

I have always considered this an excellent illustration of the general principle for which I contend, viz., that when game fish refuse to rise to the fly the reason is that the angler is seen by the fish before he makes his cast in the very great majority of all such cases. I believe if Mr. Forbes will fish his pond from sunset until dark he will get some trout as often as he does it. If he will try in the daytime when a good breeze roughens the water, he will probably invariably get some trout. If he will try artificial blinds along the shore from which to cast without the possibility of being seen by the fish; if he will bring to bear upon the problem all the arts and devices of the still-hunter to approach his game unawares, I believe he will be successful with any good bait or fly.

DR. M. G. ELLZEY.

FLORIDA FISHING.

MRS. MARY ORVIS MARBURY, author of "Favorite Flies and their Histories," is spending the winter at Sarasota, on the Florida Gulf coast, where her brother, Robert J. Orvis, is conducting the Palms. Under date of Jan. 28 she sends us a chatty letter, from which are taken these enticing paragraphs:

We found the place much pleasanter than we anticipated even, although before coming we had been told so much of the natural beauty and healthfulness of this locality. We began to be quite anxious on our journey down. The country in the northern part of the State seemed so dreary, and the sand in Jacksonville, where we stopped to secure some old servants, perfectly disillusioned me from all "Florida enchantments," as extolled in the guide books; but after leaving Jacksonville the country improved so in its aspect that my brother began to look more cheerful, and as it became more and more luxuriant and interesting he kept saying: "Now this is better, this is something like!"

Arriving at Tampa we viewed the luxury of the gorgeous Tampa Bay Hotel, in company with Dr. and Mrs. Henshall, then came on to our winter home, and very home-like it is. It really is free from the usual Florida drawbacks of deep sand, mosquitoes and general desolation of aspect peculiar to many parts of the State. My brother so far has had but little time for hunting and fishing. Christmas Day he went out with a friend and they shot forty-one quail, said they saw more than 200, but they were trying a young dog for the first time, and he was over eager and flushed many birds. Without poor Toddy they would have done better, but so much game turned the head of our Northern bred dog, who has been thankful to find two or three partridges of an afternoon in our Vermont woods.

The first tarpon of the season was caught week before last by Thal. Henson, a native fisherman. Mr. George Marsh, who has a place here, dined with us a few days ago and said he had seen many tarpon in the creek near his house. The "northerners" have been of such brief duration this year in this locality that the water has not become so chilled as many times, therefore the tarpon fishing promises to begin earlier and be better than last winter.

Mrs. Stagg and Mrs. Henshall have called upon me several times, coming in Mrs. Stagg's yacht, the Tarpon, from Tampa. When you advise your lady readers about coming South, if they intend going outside the fashionable hotels, you should suggest that for real pleasure in this country they bring with them one or more suitable outing costumes and a riding habit. The walks and drives in this vicinity are delightful, through open pine woods; but the sharp-pointed leaves of the low palmettoes are unpleasant to meet in low shoes and delicate stockings; therefore a pair of high shoes and canvas leggings that fasten with leather straps are almost indispensable to comfort. A moderately short skirt of canvas or duck, or any heavy linen or cotton, to be worn with shirt waists,

and a warm jacket; for in sailing or at any time, though it is warm when exercising in the sun, the cool breezes are often searching, and a snug coat important to health and pleasure. Your southern-bound sporting friends may all be informed on these points, but I was not, and have had the bother of sending for all these things. I noticed Mrs. Stagg wore often real boots, made like riding boots only with heavier soles; they were very pretty and quite the thing for many occasions. But if one does much yachting, it is of course courtesy to your host or hostess to wear rubber-soled shoes while on board. To complete an outfit a soft, snug cap for windy weather, a broad-brimmed straw hat and veil for sunny days, long-wristed chamois gloves, and a big pongee sun umbrella are all needed. With these one can enjoy many tramps, sails and drives that would otherwise be only tiresome and perhaps painful.

A few evenings ago I went out in a small rowboat with my brother, and we rowed into a big school of bluefish that were jumping in all directions. You felt as though you could wade out and catch them with your hands, they were so many and so near. They rose eagerly to the fly, and while the sun was setting we caught enough for our breakfast, all within sight of the house and sound of the tea bell, which interrupted our sport. As I write by an open window I can see the pelicans diving and the pretty gulls hovering over them, watching to seize their catch. The little herons are walking daintily up and down the beach, and I can hear the occasional splash of a jumping fish. The roses are in full bloom, and one may pluck great handfuls of them from the broad veranda. Away in the distance are the white sails of the fishing boats, and the sun, as the moments pass, is growing all red and gold, sending a flood of warm color across the water, touching every ripple with changing hues that glitter and glow with sunny life and delight. All this color and seashore life is new to me, and the air is so balmy, yet with the freshness of a June morning, that I feel I am having more than my share of pleasure as I read the letters from home relating tales of cold and chills.

MARY ORVIS MARBURY.

NARCOOSSEE, Fla., Hotel Runnymede, Jan. 17.—*Editor Forest and Stream:* I have fished in almost all the waters of this country and have made some fine catches of trout in the Yellowstone and waters of Montana and Idaho, and of bass and pickerel in Michigan and Wisconsin and many places noted for great catches. But the best fishing in America to-day is here. This section is filled with lovely lakes, with broad sandy shores, and not a stagnant pool in all the country, and it can well be called the beautiful lake region of Florida. Black bass are here in great abundance; the waters are alive with them; they are of a large size and run from 3 to 12 lbs. in weight. They bite rapidly and are full of fight. On Christmas in an hour's fishing I had all I could carry. To-day Mr. John Harmer, a well-known citizen of Philadelphia, and myself in one hour with common cane rods and artificial minnow caught twenty-five bass with an average weight of 2 lbs. I landed bass here as large as 8 lbs. and Mr. Harmer repeatedly caught two at a time by using two hooks. The waters here literally swarm with fish. Bait is easy to get; the banks are clean, and ladies and children fish here with no fear of wet feet or soiled clothes. ALEX. H. IRVIN.

BOSTON, Mass., Feb. 8.—F. W. Wardwell, of Boston, with a party of New York and Cleveland men, will leave in a few days for Florida and will devote a few weeks to blue fishing off the mouth of Indian River. They were down there last year and were so taken with the sport that they determined to repeat the trip this year.

C. D. Boss, of London, Conn., has gone to Punta Rassa, Fla., and will fish for tarpon in that vicinity. Mr. Boss is an enthusiast on tarpon fishing and has been at it for many years. It is his custom when on the fishing grounds to go out almost every day, and, as he expresses it, never leaves for home until he wakes up some fine morning and finds himself disinclined to go out fishing. He then concludes that he is unconsciously growing tired of the sport and packs up for his return trip. Not a bad method this.

F. H. Talcott, of Boston, has joined the band of winter fishermen and has been down to Lakeville, Mass., fishing through the ice. He came back with 27 lbs. of pickerel, and although willing to vote it cold work still thinks it pleasant enough to be repeated in the near future.

HACKLE.

Pennsylvania Association.

At the monthly meeting of the Pennsylvania Fish Protective Association at 1020 Arch street, Feb. 8, the question of establishing club membership by taking in the various fishing clubs throughout the State, with the idea of securing more concerted action on matters affecting the fishing interests, was referred to the executive committee with instructions to prepare and report at the next meeting an amendment to the by-laws providing for club membership. One hundred and fifty dollars was appropriated to the trustees of the permanent fund. The committee on reunion reported having selected March 26 as the date of holding the reunion in Wesley Hall, 1018 Arch street. A committee, consisting of Messrs. Burkhardt, Fitzgerald and Hartley, was appointed to procure a portrait of the late Frederick Brown for the Association room, and it was decided to appoint a counselor-at-law.

Considerable discussion arose over the proposed amendment creating a life membership and this finally passed, the fee being increased from \$30, the amount specified in the notice, to \$50. After its passage it was thought by some that \$50 was too much and a motion was made to reconsider, but was lost. Mr. Ingham gave notice that he would at the next meeting move an amendment making the fee for life members \$30.

Free Fishhooks.

ONE member of the House is in a regular stew just now. He is telling the story on himself:

"I was slightly surprised a few days ago to receive a letter from a constituent, as follows:

"DEAR JUDGE: Tim Dooley says that Government gives away fish to those who apply. I don't know if this is so or not; but if so I wish you would send me some. The only kind we get here are in half-pound packages, called boneless cod. And they are no account, and then they make you thirsty. If they give away any fishhooks I wish you would send me some, for the Major, Ransom Brown,

Judge Kaufman and I have planned to go fishing as soon as the weather opens up. You know they all worked well for you last time."

"For the sake of the joke I dropped into a sporting goods store and bought a tin box of hooks for \$1.50, sent it to my friend with a note saying that I was very glad I had some fishhooks still left from my quota, though there had been a great demand for them and the horse book. The supply of fish had run out, and the President had been so occupied with bonds and had Congress on his hands so long that our supply was exhausted. I regretted also that the ducks have been wild or could maybe have got some, but last trip Grover only got thirteen and he needed most of those himself.

"The result was fourteen requests for fishhooks within a week, and they are still coming. It is no use saying that Uncle Sam does not handle fishhooks, as here are the hooks and there is my letter, and if I don't send them every last man that I refuse will sharpen a knife for me next campaign, and if I do I will go broke. Don't fool with the granger."—*Washington Times.*

Salmon Off the Cape of Good Hope.

BOSTON, Feb. 3.—Mention has been made on occasions of catching salmon in the sea with a fly, especially on the California coast, and a few days since a friend sent me an account of some fine catches in Santa Cruz Bay, California. An old blue water captain who sailed for years to China and the East has told me more than once of taking salmon off the Cape of Good Hope. By accident he discovered he could catch salmon on certain banks situated from five to fifteen miles from the Cape with soundings of from eighteen to thirty fathoms. The fish were true salmon in all appearances with the exception of having white flesh. They were caught with a dail, baited with a piece of white rag, as bluefish are caught, and they would weigh from 10 to 20 lbs. Some fifty fathoms of line were used and a light breeze required. He stated he had caught them there on three or four occasions and plentiful enough to furnish the crew and cabin with all the fresh fish they needed, and on one occasion they salted down a barrel or two. My friend is familiar with the salmon and informed me he could see no difference in every appearance and their eating qualities save their having white flesh. Have you ever heard of "Cape salmon" before?

REIGNOLDS.

Business and Pickerel Fishing.

BOSTON, Feb. 7.—Maine lumber manufacturers and other producers in Maine have got into the custom of treating their Boston agents or receivers to fishing and hunting trips when they come down on business. F. A. Kimball has been down over the Bangor & Aroostook Railroad, among his lumber manufacturers. By one concern he was assigned a guide, to look entirely after his entertainment and business interests. A pickerel fishing trip was proposed to South Twin Lake. Such fishing, Mr. Kimball allows, he never saw before. They had five lines each—all that the law allows. They caught a great many pickerel, some weighing 3 or 4 lbs. Mr. Kimball is much pleased with the State of Maine, and particularly with pickerel fishing at South Twin Lake. He has an idea that the lake must be a jewel in the summer, with old Katahdin always in sight. They found the signs of deer very abundant in the woods they had to cross, but did not get a sight at one, though the lumbermen report seeing them very frequently.

SPECIAL.

Boston Smelt Fishers.

BOSTON, Mass., Feb. 8.—Fishing for smelt through the ice is a pastime which finds favor with some of our Boston anglers, and those who have indulged in the sport lately report excellent luck. The Weir River in Hingham and the Weymouth River generally prove very productive places for winter smelt, and are the chief points to which Boston fishermen go. One young man captured 40 lbs. in a very short time a few days ago, and they were beauties as to size and quality. The anchorage of the Nantasket steamers at Nantasket has also provided good sport during the past week. An acquaintance took 80 lbs. there on the turn of the tide a few mornings ago, and he estimates that fully 700 lbs. were taken that day at this place by all the fishermen present.

HACKLE.

Symptoms of the Fever.

AS SOON as I get things settled I've some trout notes I want to send you. Reading and writing and talking trout, and perhaps unwrapping tackle for a glimpse or two, are all we cranks who already feel the first burnings of the annual fever can do for relief. I hear that my favorite old stream in Connecticut is being thoroughly "posted," so my actual experiences this season may be very light.

B.

Fishculture.

Instructions for Transporting and Planting Young Fish.

By State Fishculturst A. N. Cheney, of the New York Commission.

BROOK, brown, rainbow and Loch Leven trout should be planted in small spring rivulets tributary to the larger stream intended to be stocked. From the rivulets they will work down as they grow into the main stream.

Lake trout should be planted among boulders or rocks on a shoal in mid-lake, very near to deep water, into which the young trout soon find their way. In the absence of such shoals with rocks to afford hiding places for the young trout, they may be planted on spawning beds when they are known.

In transporting young trout, if they come to the surface of the water in the cans, it is a sign of exhaustion, and the water should be frequently aerated by dipping it from the can in a dipper and let it fall into it again from a considerable height. It is safer to aerate the water placed in the cans at the hatchery than to add fresh water during the journey, the qualities of which are unknown. Should the water in the cans become warm, the temperature should be reduced by the addition of ice broken into small pieces.

If the water in the cans containing young trout should be warmer or colder than the water in the lake or stream at the time of planting the fish, the temperature should be equalized by mingling the two waters in the can before the fish are turned out, as marked changes in the temperature may kill the young trout.

Fish cans ordinarily hold about 5,000 trout fry, and not

more than three cans of fry should be planted in one year in a stream from six to eight miles long, and the fry should be well distributed throughout the length of the stream (by planting in rivulets as previously stated), as by bunching the plant there is danger of exhausting the food suitable for the young fish.

Fry or yearling fish should be planted as soon as received and never under any circumstances kept over night without constant watching and aerating the water. Trout are sent out by the State in the spring or fall, as transportation during the hot months is attended with great risk.

Applicants for fish should so far as possible ascertain the kinds and quality of fish food in the streams they desire to plant.

Caledonia Hatchery.

ALBANY, Feb. 8.—Assemblyman Kelsey has introduced a bill appropriating \$5,000 for acquiring certain lands and water rights on Spring Creek above the Caledonia fish hatchery, in Livingston county, for the protection of fish culture at the hatchery.

The Kennel.

FIXTURES.

BENCH SHOWS.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.
March 3 to 6.—City of the Straits Kennel Club. R. Humfrey Roberts, Sec'y, 6 Merrill Block, Detroit. Entries close Feb. 20.
March 10 to 13.—Chicago.—Mascoutah Kennel Club's bench show John L. Lincoln, Sec'y.

March 17 to 20.—St. Louis Kennel Club's show, St. Louis. W. Hutchinson, Sec'y.
April 20 to 23.—New England Kennel Club's twelfth annual show. D. E. Loveland, Sec'y.

May 6 to 9.—Pacific Kennel Club's fifth annual show. H. W. Orear, Sec'y.

FIELD TRIALS.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.

Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings Sec'y, Pittsburg.

THE U. S. F. T. C.'S TRIALS.

THE winter trials of the United States Field Trials Club began on Feb. 3. Much interest was manifested in the competition. The attendance of sportsmen was large and distinguished. Among the number were Messrs. F. R. Hitchcock, New York; Edw. Dexter, Buzzards Bay; J. L. Adams, Stanley Adams, Norwin T. Harris, St. Marc M. Mundy, and L. W. Blankenbaker, Louisville; E. E. Posey, General Passenger Agent M. & O. R. R.; J. R. Rogers, Jackson; J. D. Posten, Columbus, O.; P. M. Essig, Natchez, Miss.; J. M. Taylor, New York; W. L. Kidwell, Washington; J. L. Barker and Dr. C. I. Shooch, Racine, Wis.; J. T. Sergeant, Mason; W. B. Stafford, Trenton; C. D. Stuart, Benton Harbor; A. Raefle, N. Manchester, Indiana; and from Birmingham came Messrs. Ashford, Odum, Smith, and Dr. Chisholm and Dr. Ubank, and many others.

The judging was done by Messrs. A. Merriman, Memphis, and Theo. Sturgis, New York. The two judges, Mr. King and Dr. Grimstead, originally announced to judge with Mr. Merriman, could not attend. There were not many competent gentlemen present whose services were available, so the management decided to run the competition under two judges. Mr. Merriman had long experience.

As to the judging itself, some of it gave satisfaction, while other parts of it were not well received. Mr. Merriman kept the handlers in hand with admirable skill. He stopped in a great degree that most harmful feature of many competitions, scrambling for points. He kept the handlers together in a way that would be a profitable study for those judges who, not trying, think it cannot be done or who do not care to risk possible loss of popularity.

On the other hand, the general management of the competition was loose and thoughtless. Heats would often end more or less of a distance from where the wagons were, and much time in the aggregate was lost in sending for the wagons and waiting for them to be driven up, or in riding to them. There was available material for this work. It was inexcusable negligence. A very little competent effort would have avoided so much wearisome and purposeless delay. It will be noted that there is thus much waste of time between many of the heats. Again, in the first series of heats, nearly all the dogs were run an even thirty minutes. This limit was intended for a minimum time. It was not an arbitrary limit. The first series should be run till there are such positive differences that the judges can make for the second series their selections understandingly. By taking up the dogs at the expiration of thirty minutes, when nothing has been settled, requires that all the dogs shall be run over again, which was sometimes nearly done, and that extra running consumes unnecessary time and confuses the judgment more or less. There is nothing definitely determined as the competition progresses, and except in the case of the dogs of extraordinary merit the judgment is not very certain. The first series is a very important one and should be run till the judges know something definite of the dogs' merits.

Again, the rules were not always strictly observed. For some reason wholly beyond conjecture it was decided that the judges would not announce any second series, but instead call up the dogs brace by brace as they required them. A more stupid method could not be imagined. Men whose dogs were not to be called up were kept in waiting the same as those who would be called up, and there was not the opportunity for each to arrange in turn for the competition. Had the rule been followed, the common sense embodied in the rule would have been in action at the same time. Then the unfortunate blunder of Friday, when Komus was run as Von Gull, could never have happened. At least, such a blunder has never happened before. The rule reads as follows: "After the first series has been run through the judges shall announce which dogs they wish to see run again and the order of running them," etc. By violating this rule the judges placed themselves in as humiliating a position as if they were novices.

The grounds are excellent for the running of dogs. Unfortunately for the equity of the competition, some parts of the grounds contained abundance of birds, while

other parts had very few, and this important matter the judges seemed to heed not. The dogs were rated according to the results shown, whether there were birds or not.

In both stakes the pointers as a whole made a much finer competition and exhibition than did the setters.

There is one unfair matter which has been in practice for some years, and which all field trial managements should abate, that is, the leading of dogs on chain as close as possible to the competition, dogs which are to run in the following stake, and thus observe the finding of the birds and their whereabouts. Mr. Avent is the offender in this matter. No other handler favors or follows the practice. They wait till the competition begins before showing the grounds and birds to their dogs. And in this connection it may not be out of place to remark that kicking a dog in the head, as he did Cynosure, is not a part of skillful handling, nor a pleasing spectacle to the spectators, nor a good way to make the reputation of field trials.

A regrettable incident of the meeting was the cavalier manner in which Mr. J. L. Adams, vice-president of the club, was treated in the matter of his resignation. He sent in his resignation on Dec. 18. He received a reply from the secretary, informing him that it would be acted on at the annual meeting at West Point. On Sunday evening, Feb. 2, the club held a special meeting and Mr. Adams was not asked to attend. The secretary stated that Mr. Adams's resignation had been accepted. On inquiry, there was no record of it. On Feb. 4, two days after the meeting, Mr. Adams was notified that his resignation was accepted. This action engendered much unfavorable comment. To be deprived of his club rights before his resignation was accepted was a most arbitrary act.

The Pointer Derby.

The competition began with this stake. The work was exceptionally good, though the abundance of birds found on this day contributed materially to the good showing. They in fact were found too numerous at times to test the "bird sense" and searching qualities of the dogs. Nevertheless the competition was keen and good.

The running in this stake was managed skillfully and the decisions were accurate. Mr. Merriman cautioned the handlers at the outset against rushing and separating, the good effects of which were distinctly noticeable throughout the stake.

The dogs were run in the following order:

N. T. De Pauw's l. and w. bitch Sister Sue, N. B. Nesbitt, handler, with Charlottesville Field Trial Kennels' l. and w. dog Wrestler, C. E. Buckle, handler.

Charlottesville Field Trial Kennels' blk. and w. dog Nabob, C. E. Buckle, handler, with H. S. Smith's blk. and w. dog Rip Saw, J. H. Johnson, handler.

F. R. Hitchcock's l. and w. bitch Tory Jessamine, J. M. Avent, handler, with Charlottesville Field Trial Kennels' o. and w. bitch India, C. E. Buckle, handler.

Avent & Thayer's l. and w. dog Ridgeview Cash, J. M. Avent, handler, with H. K. Devereux's l. and w. bitch Virginia, Geo. Gray, handler.

Adams & Thompson's l. and w. dog Cracker Jack, J. H. Johnson, handler, with T. T. Ashford's l. and w. bitch Hattie D., D. E. Rose, handler.

This stake was for all pointers whelped after Jan. 1, 1894. Two forfeits of \$10 each and \$10 additional to start. Five prizes—\$150, \$125, \$100, \$75 and \$50.

India and Nabob, first and second respectively, ran excellently well. Their point work was very sharp and clean. They ranged in a satisfactory manner, were industrious, showed good judgment, and worked pleasingly to the gun. A rule was violated in not running them together for first and second place.

A remarkable feature of this stake is that the winners of first, second and third are all sired by that hero of many a field trial competition, Rip Rap.

Rip Saw and Tory Jessamine, third and fourth respectively, made a meritorious competition. Their work, though pleasing and commendable, was not so sharp nor so uniformly maintained as was that of first and second winners.

Sister Sue, fifth, began in a most promising way. Her first heat was excellent, but her work in subsequent heats gradually declined in merit till at the finish it was common.

Monday.

The weather was clear and warm.

First Round.

SISTER SUE AND WRESTLER were cast off at 8:53. Down 35 minutes. Sue cut out the work and had a decided advantage in every particular. She pointed two beavies nicely, and was steady to shot. Sent on in woods, Sue nicely pointed a single bird. Next she flushed one. Next Wrestler flushed an outlying single in corn, then stood and the rest of the birds flushed. On the scattered birds Wrestler secured a point; Sue a flush. The heat soon thereafter ended.

NABOB AND RIP SAW started at 9:35. Rip pointed a bevy in a growth of sedge and plum bushes, and Nabob pointed or backed. Each then made a point on scattered birds. Nabob pointed, held point, then moved on, came back and was cautious when the birds flushed. Nabob next pointed a bevy in open sedge. Next in heavy weeds he pointed birds, doing excellent work. Up at 10:13. Rip Saw ran a fairly good race. He pointed and backed steadily and showed good training.

TORY JESSAMINE AND INDIA started at 10:08. India pointed a bevy and was backed. As the bevy flew across the open field another bevy rose and flew away nearly in the same course. Following after the birds, India pointed a bevy in the open, which made the third bevy found within a few minutes and within a small space of ground. Jessamine drew by independently and pointed the same birds. On the scattered birds, Jessamine made three points in quick succession, they lying well. India pointed a single at the moment it flushed in woods. Jessamine at the same time in the open roaded to a flush on a single. Sent on. The dogs were separated for a while, and Jessamine pointed a bevy. Next, India made two good points on singles. Up at 10:45. Both were industrious and did good work, India the Superior. Both backed and worked well to the gun.

RIDGEVIEW CASH AND VIRGINIA were cast off at 10:49. Cash pointed a bevy; on the scattered birds he flushed one, then standing still he began to steady to a point, when several more flushed wild; he steadied to a point

and more were flushed close by him; it was sloppy work. Virginia pointed a bevy. Cash made two points on singles; next he made a point which proved barren. Virginia pointed a single. Virginia's work was the better. Cash's work deteriorated as the heat advanced. Up at 11:25.

CRACKER JACK AND HESSIE D. were started at 11:41. Hattie pointed a bird well and Jack backed indifferently. Sent on, Hattie nicely pointed a bevy in woods. Both pointed; those who saw this piece of work from the start said that Hattie pointed the birds first. Sent on, both got a point on the same bevy, the merit of the find and point being practically the same. Jack next pointed a bevy; Hattie backed well. Jack next flushed a single and was a bit unsteady. Hattie next made two good points. Up at 12:36.

Lunch next engaged the attention of the party.

Second Round.

SISTER SUE AND TORY JESSAMINE began at 1:39. Sue pointed a single. Jess roaded to a point on several birds. Sue pointed a bevy in weeds; sent on, next she pointed; nothing found. Up at 2:46. Both dallied in ranging at times and were lacking in good finish to their work. They lost some good opportunities to point.

INDIA AND RIP SAW were cast off at 2:54. India soon pointed a bevy. She made two points on singles. Sent on, she pointed a bevy and four good points on singles. She was ordered up at 3:15. Rip then ran alone two or three minutes, when he also was ordered up.

NABOB AND RIDGEVIEW CASH were started at 3:32. Nabob was first to point; then both roaded, Nabob locating and securing the point on the birds. Cash made two barren points and Nabob pointed a single. Cash pointed a bevy in very poor style. Cash apparently pointed a single and Nabob backed, but those who saw the first of it said the point was Nabob's. Cash made two more points to which nothing was found. His range was narrow, his manner was not merry and his work inferior. Nabob had the better of the heat in every respect.

HESSIE D. AND VIRGINIA ran from 4:40 to 5:10 without finding.

SISTER SUE AND RIP SAW began at 5:15. Rip pointed a bevy. Sent on, he pointed a single, after which he pointed some scattered birds. He next pointed in open sedge, Sue crossing in ahead close by; both roaded after the birds, which were running and scattering. One bird flushed wild ahead of Sue and two ahead of Rip. Up at 5:40. Sue was falling off in the quality of her work and ran poorly. Rip had the better of the heat.

The judges placed the dogs in the following order after the return to the hotel: India, Nabob, Rip Saw, Tory Jessamine and Sister Sue.

The Setter Derby.

There were twelve starters, drawn to run in the following order:

R. V. Fox's b., w. and t. dog Forzando, J. H. Johnson, handler, with W. W. Titus's b., w. and t. dog Sam T., owner, handler.

H. R. Edwards's b., w. and t. dog Harwick, Geo. Gray, handler, with Avent & Thayer Kennel's b., w. and t. bitch Feu Follet, J. M. Avent, handler.

F. R. Hitchcock's l. and w. dog Tory Fashion, J. M. Avent, handler, with R. B. Morgan's b., w. and t. dog Bob Taylor, Geo. W. Richards, handler.

P. Lorillard, Jr.'s, b., w. and t. dog Arapahoe, C. Tucker, handler, with Blue Ridge Kennels' b., w. and t. dog Domino, D. E. Rose, handler.

Manchester Kennel Co.'s b., w. and t. bitch Gleam's Ruth, N. B. Nesbitt, handler, with B. V. Sudbury's b., w. and t. dog Conor, J. H. Johnson, handler.

R. V. Fox's b., w. and t. bitch Accelerando, J. H. Johnson, handler, with H. B. Ledbetter's b., w. and t. dog Marie's Sport, Geo. Gray, handler.

This stake for setters had the same prizes and conditions as to age, forfeits and prizes as the Pointer Derby.

Tory Fashion ran a superior race and rightly won first. Harwick, winner of second, also made an excellent competition.

Marie's Sport, third, was faulty in his point work, often pointing on footscents and oftener pointing inaccurately.

Bob Taylor, fourth, should have been spotted out after his first heat, which abounded with errors. His later work improved, but aside from speed and range his work was not remarkable.

Accelerando ran fairly well, doing some good work on birds.

Gleam's Ruth, in my opinion, should have been third. She had fairly good range—neither extremely wide or close—and her point work was excellent, accurate and sharp. She was perfectly stanch till her handler walked up to her, when she would follow behind or at his side and help him on the way to the birds. It was a useful display of knowledge and training, far surpassing the senseless points which are held while the trainer beats out the ground all alone, then sends the dog on to do what he should have done at first. Gleam's Ruth is the very sort of dog which should be in the money and honors.

Tuesday.

The competition began a bit late. The weather was warm and cloudy. The quality of the work was ragged and sloppy, but two or three good heats out of the day's work relieving the monotony. There was abundance of opportunities for work on birds, but the general results were flushes, raggedness and lost opportunities. As a whole, it was far inferior to the pointer competition of the previous day. Owing to the absence of some dogs at the start they were not run in the order drawn.

First Round.

TORY FASHION AND BOB TAYLOR began at 8:40. Down 38 minutes. Bob's work was marked throughout by headiness and errors. He soon found birds, flushed and was unsteady and willful. Next he flushed part of a bevy, while Tory pointed the remainder of it some yards to one side. On scattered birds Bob pointed a single. Both were steady to shot. Tory had the advantage in every way. Bob's work was so full of error that he was not entitled to further running.

FORZANDO AND SAM T. were cast off at 9:30. Down 34 minutes. A bevy was seen to flush. It was followed. Some uncertain work was done by Sam. Forzando made a point so far as could be determined through the vista of brush. Forzando made two points on beavies. The work as a whole was ragged. Sam T. was not in form and For-

zando was erratic in his range, though he had a way of getting on birds. All the work was lacking in ease of finish and smooth handling.

HARWICK AND FEU FOLLET at 10:15 were cast off. Harwick pointed, moved on about 50yds. and pointed the bevy. Feu had crossed the trail a couple of times or more without recognizing the scent. Feu pointed a single. Harwick a single and a bevy. He showed good nose and point work, ranged intelligently, but seemed difficult to manage when ranging. Feu needed a deal of helping to make a good showing. Her performance was so inferior that she was not entitled to further consideration in the competition. Up at 10:50.

ARAPAHOE AND DOMINO began at 11:03. Domino failed to score on two bevs, partly through hard luck and a large part through his own fault. Next he flushed two birds of a bevy and stopped to wing, and soon the rest of the bevy flushed wild. On scattered birds Arapahoe pointed a single nicely. Domino flushed twice and pointed once, finding nothing. Arapahoe's opportunities were marred by Domino's errors. Both ranged fairly well, Domino headstrong and careless. Up at 11:34.

GLEAM'S RUTH AND CONOR were cast off at 11:44. A bevy was flushed and followed. Ruth made a good point on some scattered birds. Conor backed. Up at 12:36, with the advantage in favor of Ruth.

ACCELERANDO AND MARIE'S SPORT were cast off after lunch at 1:30. A flushed bevy was followed. Sport's point on a single was backed in a half-hearted way. Accelerando made two points on singles. Sport roared to a point on a bevy and Accelerando backed or pointed. The birds flushed wild. Up at 2:18. Accelerando showed but indifferent judgment in ranging. In speed, range and judgment Sport was much superior.

Second Round.

It was said that these dogs were not a part of the second round, but after the first round was run through it is difficult to imagine what round the second one was if it was not the second. Of the dogs kept in Feu Follet and Bob Taylor had no just claim to a second trial.

FORZANDO AND BOB TAYLOR were cast off at 2:45. Bob pointed a bevy well and Feu backed to order. Forzando made two good points on singles. Up at 3:38. The performance was a fair one.

HARWICK AND TORY FASHION ran the heat of the day, beginning at 3:43. The work was the first of the stake approaching field trial form. Harwick took a long cast, pointed nicely on a side hill, Tory backing prettily, both being plainly in sight, making a spectacular field scene. Sent on, Harwick found and pointed another bevy in woods, Tory backing nicely. Soon afterward Tory pointed a bevy and Harwick backed. Tory pointed once on a single. Harwick made two points on singles. Tory pointed a bevy in the open field and was inclined to unsteadiness when the bevy flushed, but steadied to order. Both dogs ranged well, with some advantage on the part of Harwick. Time 4:14.

GLEAM'S RUTH AND FEU FOLLET commenced at 4:29. Ruth pointed, moved on to locate the bevy; Feu was permitted to join in against the rules, and shared the point; both handlers shot when the birds flushed. The find and point were Ruth's. Feu next pointed; nothing found. Sent on, Ruth pointed a bevy which flushed wild. Sent on, Feu pointed; Nesbitt let his dog go by and take the point. Nothing found. The heat was being badly conducted. Sent on, Ruth wheeled prettily to a point on a bevy; good work. Next she pointed a single. The judge cautioned Mr. Avent. Feu pointed a single; Ruth backed. Feu made a good point, next a flush. Ruth made two points. At this juncture Ruth had beaten Feu, with a lot to spare. Ruth worked on her own judgment, while Feu needed a deal of coaching. They were then turned into the open to range a while. This heat ended the competition of the day.

Wednesday.

A heavy rain during the night having soaked the ground thoroughly, birds were not found plentiful. The heavy clouds of the morning broke away, then the sky again was overcast. Rain set in about the middle of the afternoon and stopped the work.

MARIE'S SPORT AND FORZANDO were started at 9. Forzando flushed two bevs. Sport pointed in woods, moved on about 30yds. and pointed again; nothing found. At the same time Forzando pointed a rabbit, which he chased. Each made a good point on scattered birds. Sport pointed; nothing to it. Up at 9:30.

ACCELERANDO AND BOB TAYLOR began at 9:30. Both pointed; nothing found. Accelerando pointed a bevy and Bob coming in to back pointed some outlying birds of it. On the scattered birds Bob pointed a single. Accelerando made three points on singles. Bob flushed twice. Each made a barren point. Up at 10:40. Both were industrious.

ARAPAHOE AND SAM T. were started at 10:54. Sam pointed a bevy, which flushed wild. Arapahoe made three points in succession, one of which was on a bevy. Sam flushed a single and chased it a short distance. Each pointed singles and each made a point which proved barren. Up at 11:37. Sam was speedy and dashing. Some days before the trials he had escaped on a self-hunt, which broke up his work to the gun for the time being.

The judges placed the dogs in the following order: Tory Fashion, Harwick, Marie's Sport, Bob Taylor and Accelerando.

The All-Age Pointer Stake.

This stake was for all pointers which had never won first in an all-age stake in any field trial in America. There were five prizes: \$150, \$125, \$100, \$75 and \$50. There were twelve starters.

W. N. Kerr's l. and w. dog Little Ned, Geo. W. Richards, handler, with Dr. G. Chisholm's l. and w. dog Komus, D. E. Rose, handler.

Charlottesville Field Trial Kennels' l. and w. dog Tippoo, C. E. Buckle, handler, with Furlough Kennels' l. and w. bitch Diana, J. Armstrong, handler.

Ashford & Odum's l. and w. dog Von Gull, D. E. Rose, handler, with P. Lorillard, Jr.'s, l. and w. bitch Rancocas Belle, C. Tucker, handler.

Tway & Haswell's black dog Jumbo, C. W. Tway, handler, with F. W. Dunham's l. and w. dog Elgin's Dash, N. B. Nesbitt, handler.

Westminster Kennel Club's l. and w. dog Sandford Druid, John White, handler, with Stoddard & Kidwell's b. and w. dog Tick Boy, J. B. Stoddard, handler.

N. T. De Pauw's l. and w. dog Jingo, N. B. Nesbitt,

handler, with H. K. Devereux's l. and w. dog Tamarack, Jr., George E. Gray, handler.

First was won by Tippoo, a pointer of remarkable merit in the competition. His range is wide and speedy, his point work accurate and sharp. As between him and Jingo the competition was very close. Jingo excelled in bird sense, in beating out his ground with judgment and in skill in handling his birds. He was lacking in the dash of Tippoo and did not have his speed in point work. He ran three heats on Thursday; Von Gull ran one. Von Gull went to his birds with a high nose and showed excellent capabilities, but he showed no work that entitled him to a place over Jingo.

By the blunder in running Komus with Diana instead of Von Gull, and the further blunder of not running him with Diana afterward, but with Jingo instead, the stake was carried over into Friday. All this leads up to the fact that Jingo was ill on Friday. He ran four heats, Von Gull two. In the competition with Rancocas Belle, he had no advantage of her whatever, excepting in the manner of pointing his birds, he carrying a higher nose. She found the bevy too, on which the points were made. Outside of first place the remainder is a jumble.

First Round.

LITTLE NED AND KOMUS began at 11:52. Komus pointed a bevy and Ned coming across flushed it. Ned pointed a bevy in woods. Next Komus made two good points on singles. Komus pointed. Ned backed and a bird flushed a short distance away. Up at 12:31.

The party went to lunch.

TIPPOO AND IGHFIELD DIANA started at 1:34. Both were soon found pointing the same bevy. On scattered birds each pointed a single. Sent on, soon Tippoo pointed a bevy and then twice on singles; Diana made a point and a flush on singles. Sent on, Tippoo found and pointed two bevs. He next pointed a single nicely and Diana backed. He made a good point on a single, then moved forward and flushed it. Diana pointed a single bird. Up at 2:03.

The next brace was called, but rain having set in, the competition for the day was ended.

Thursday.

Heavy rain fell during the preceding night. The grounds were muddy and heavy. Birds were found in fair numbers. Quite a lot of time was wasted in delays which could have been avoided. Toward midday the clouds cleared away.

VON GULL AND RANCOCAS BELLE were cast off at 10:17. Belle pointed a bevy in open sedge. On scattered birds each pointed a single, Von backing handsomely about 50yds. away. Von made three more points on singles. Belle two points more and a flush. Up at 10:50. Both ranged fairly well. Von carried a high nose and worked skillfully on his birds. The heat was very close.

JUMBO AND ELGIN'S DASH started at 10:53. Jumbo pointed a bevy stanchly and was steady to shot and wing. Dash pointed a bevy and was well backed. On scattered bird she pointed a single. He was far the better in range and speed. Up at 11:48. The heat was ordinary.

SANDFORD DRUID AND TICK BOY were started at 11:55. Tick flushed a bevy. The dogs were up 16 minutes while being taken to new ground. Tick pointed a single. Druid pointed a bevy and at the same time Tick pointed a single. Druid made three flushes in succession, two of them seemingly willful. Sent on, each made a point on a bevy in sedge. Up at 1:15. Both dogs showed good speed and fair range.

The running was suspended while lunch was served.

JINGO AND TAMARACK, JR., started at 1:57. Both dogs going at speed ran into a bevy and flushed it. Jingo pointed, moved on, located and pointed a single. Tamarack pointed and a single was flushed close by while the dog was moving on. Both had good speed and range. Tamarack narrowed his range toward the end of the heat. Up at 2:31.

Second Round.

The judges called up the dogs brace by brace, which made it a difficult matter to forecast their intentions, besides keeping many unnecessarily in waiting after they had no chance to win.

KOMUS (NOT VON GULL) AND IGHFIELD DIANA were started at 2:35. Diana pointed a bevy which flushed wild, and then pointed on the footscout of it. Komus made an indifferent back. Sent on, Diana pointed a bevy. On some marked birds Komus made a good point in open weeds. Sent on, he pointed a bevy in the open. Diana pointed a single in corn. Up at 3:18. Diana was the more systematic ranger. Rose made much noise in handling Komus. A somewhat annoying though ludicrous feature attached to this heat. The judges had called for Von Gull and Komus was run instead. The judges detected the error in the evening. In this heat the photographer of the M. & O. R. R., a most affable gentleman, attempted to photograph Komus on point, Mr. Stafford requesting Mr. Rose to not flush the bird till the photographing, taking a moment's time, could be done. Mr. Rose discourteously refused, with the explanation that he was not in the photographing business just then. The M. & O. R. R. had been extremely obliging to owners and handlers in making special rates and in extending courteous attentions. The company intended to have some large field trial views made and for that purpose the photographer was there. Aside from the direct discourtesy of the act, it is not a manner to enlarge its growth nor make it beloved by those who are gratuitously snubbed.

TIPPOO AND RANCOCAS BELLE were started at 3:24. Tippoo pointed nicely a bevy in sedge, and afterward made two good points on singles. Belle made a good point on a single. Up at 3:56. Both worked diligently and showed good range. Tip had a decided advantage in every respect.

JINGO AND TICK BOY were started at 4:05. Jingo pointed a bevy. Tick backed, then willfully broke his back, went ahead and flushed the bevy. Jingo remained steady under great provocation. The handlers were about 50yds. away at the time. In woods each made a point on a single bird. Down 15 minutes. Jingo was the better in range, judgment and bird work.

TAMARACK, JR., AND SANDFORD DRUID were started at 4:26. Each made a point on a bevy at the same time. Sent on, Tamarack pointed a bevy. On the scattered birds they pegged points at a rapid rate. Tamarack made five points on singles, and near the close of the heat he made another point on a bevy. Druid made six points on singles and one flush. 5:04. Both dogs ranged fairly

well. Druid was difficult to handle. Tamarack had the better of the heat.

JINGO AND TIPPOO were cast off at 5:17 and gave a most excellent exhibition of good field work. They beat out their ground with judgment, ranged wide and fast, and their bird work was a masterpiece, taken as the performance of two dogs in a competition. Jingo pointed a bevy, which flushed. Tippoo pointed a single. Jingo pointed a single and Tippoo backed. Jingo roared with extreme caution in woods to a point on a bevy. In woods, Jingo pointed; Tippoo backed; nothing found. Tippoo drew quickly to a point on a bevy in woods; Jingo made game at the same time and pointed. The point work on scattered birds was now fast, sharp and accurate. Tippoo made four single points and Jingo made three. Tippoo was quicker on his birds and went to them with a higher nose. Darkness ended the heat. Time, 5:52.

Friday.

The weather was clear, cool and pleasant in the morning. In the afternoon, clouds overcast the sky. The temperature became oppressively close and rain threatened. It set in in the night and fell heavily.

The mistake of the previous day in running Komus instead of Von Gull with Ighfield Diana took an unexpected turn when the judges announced that Von Gull was to run with Jingo. To correct the error, the proper way would have been to run Von Gull with Diana, as originally intended. The first mistake was awkward enough, but it was still further aggravated by a greater one. Von Gull had been called to run with Diana. By a combination of mistake and inattention he did not do so. The proper way then to have corrected the error was to run the brace as it had originally been called to run. It was indeed a very loose manner of conducting a stake.

Mr. Avent's dogs were in evidence to the fore led on chain, as they had been in days before and trials before. His dogs were to run in other stakes and therefore were out of place when led over the grounds in that manner.

JINGO AND VON GULL started at 8:14. Both dogs ranged wide and fast, Von the more dashing in his manner. Von pointed a bevy in corn; Jingo backed. Von made two points on singles. Jingo pointed and nothing was found to it. Jingo was suffering from bowel trouble and fell off in range, speed and interest in his work toward the close of the heat. Up at 8:49.

TIPPOO AND TAMARACK, JR., were cast off at 9:10 and run three minutes to comply with the rule which requires first and second to run together.

The judges then announced the winners as follows: Tippoo, Tamarack, Jr., Von Gull, Jingo and Ighfield Diana.

The All-Age Setter Stake.

This stake had eleven starters, which were run as follows:

C. M. Power's b., w. and t. dog Revenue, W. W. Titus, handler, with F. R. Hitchcock's b., w. and t. bitch Tory Dotlet, J. M. Avent, handler.

Philip M. Essig's b. b. bitch Maud E., owner, handler, with D. F. Schoolfield's b., w. and t. dog Joe Bowers, W. W. Titus, handler.

Norvin T. Harris's b., w. and t. dog Tony Boy, D. E. Rose, handler, with R. V. Fox's b., w. and t. dog Tony's Gale, J. H. Johnson, handler.

Norvin T. Harris's b., w. and t. bitch Cynosure, J. M. Avent, handler, with Hobart Ames's b., w. and t. bitch Lady Mildred, D. E. Rose, handler.

P. M. Essig's b., w. and t. dog Rod's Top, J. M. Avent, handler, with W. H. Beazell's b., w. and t. dog Harold Skimpole, Geo. E. Gray, handler.

F. R. Hitchcock's lem. and w. dog Tory Fashion, J. M. Avent, handler, a bye.

The prizes and conditions in this stake were the same as in the corresponding stake for pointers.

Tony Boy made an excellent competition. His endurance, as shown in the heat with Tory Dotlet, stood the test, while Dotlet was thoroughly tired.

Tory Dotlet, second, was about two or three classes inferior to every dog placed after her. She lacks judgment in ranging and her "bird sense" is ordinary.

Tory Fashion, third, Lady Mildred, fourth, and Tony's Gale, fifth, are all well-known performers.

The fact of the matter is that the 30-minute limit, the inconclusive running of the first series, made the placing of the dogs largely a matter of guesswork. There were not the decisive results which are attained by running on common-sense lines instead of arbitrary time limits. The decisions were made on too meager data.

First Round.

REVENUE AND TORY DOTLET were cast off at 9:54. Revenue pointed a bevy and made four points on singles. Dotlet, called in to back Revenue's bevy point, pointed the same bevy; she also made a single-bird point and one flush. Each backed and were steady to shot. Both ranged well, Dotlet some of the time out of bounds. Down 30 minutes.

MAUD E. AND JOE BOWERS started at 10:43. Both ranged well. One of the handlers flushed a bevy, and on the scattered birds each pointed a single. Down 30 minutes. The bird work was light, though the dogs worked diligently, Joe in particular beating his ground out well.

TONY BOY AND TONY GALE started at 11:20. Tony Gale pointed a bevy at the same time Tony Boy pointed an outlying single of it. He also pointed a single and made one point to which there was nothing found. Tony Boy pointed an outlying single of a bevy and also two or three other singles and made one flush. Both dogs worked well and diligently. Their range was wide and conducted with fairly good judgment. Down 30 minutes.

CYNOSURE AND LADY MILDRED were cast off at 11:57. Cynosure pointed a bevy and made three points on singles, one of which she flushed while being coached with the whistle, and she pointed one on which her work was marred by the same overdoing. She pointed two or three times, apparently on footscout. Not pleasing her handler while working on birds, he gave the little bitch a brutal kick in the head, which partially upset her and made her yelp, but she amiably went on with her work. Mildred made three points on bevs, four points on singles and one barren point. Both were steady to shot and wing and back. Down 35 minutes.

Lunch was next in order.

ROD'S TOP AND HAROLD SKIMPOLE started at 1:24. Each had good speed and range, but their point work was not equal to their opportunities. Harold made three points

on bevy. Down 55 minutes. Top made one point, which he left when he heard his handler's whistle.

TORY FASHION ran a bevy. He was started in on marked birds. Sent on, he roaded, pointed, went on and flushed the bevy. He then took a long cast after the scattered birds on forbidden ground and pointed them. Sent on, he pointed a bevy and next made a point on the scattered birds. He ranged well. Down 32 minutes, beginning at 2:23.

Second Round.

Six dogs were retained in this round.

TONY BOY AND TORY DOTLET started at 3:08. Down 59 minutes. Dotlet after the heat was half over was very tired, and her range had gradually lessened. Tony Boy was going strong and ranging wide at the finish. He was brought in to back one of Dotlet's bevy points, when he independently joined in the point, and she did the same when called in to back his point on one bevy. He made a good find and point on a bevy, and also pointed two singles well. He flushed one single. Dotlet made a good find and point on a bevy, and a point on scattered birds.

REVENUE AND TONY GALE were started at 4:14. Down 40 minutes. The heat was light in point work. Much ground was beaten. Revenue appeared to be out of form, as he was going heavily and not up to his first heat. Tony Gale worked diligently. He made a point on two singles. Mr. Titus withdrew Revenue after running 36 minutes.

LADY MILDRED AND TORY FASHION started at 5:05. The handlers rode horseback in this heat. Tory pointed a bevy, one single, and made one barren point. Lady made five points on singles, three of which were indifferent, and she made two points which were worthless. Down 32 minutes. They ranged well.

A COON HUNT IN THE SNOW IN OLD VIRGINIA.

IN December of 1892, when the whole country was covered with snow, my brother Walter and I, in talking over matters one day, conceived the idea of taking a trip to Virginia, to visit one of our old friends in the country, Mr. S., and to take a coon hunt in the snow. We were not long in making up our minds, and arranged to start a few days later. After getting together our traps, rifles, etc., off we started, reaching the old plantation without a mishap. Our friend was delighted to see us, and we at once proceeded to get into trim for a hunt. We had just been in the country a day when Tom S., son of our host, came unexpectedly upon the scenes. This settled the much-talked-of affair immediately, as Tom was as fond of hunting as we were ourselves.

The snow was at least 12 or 15 in. deep, which indicated at once that we were to have a glorious time, and as our host's old dandy—Coleman—had been reconnoitering the whole of the day before to find out where the best hunting grounds were, and had just returned, informing us that "I never see so many coon tracks before in all my born days," we knew that our most ardent hopes were about to be realized. So that night old Coleman was instructed to have his two dogs, Ranger and Jack, ready early the next morning for the fray, and after other minor details were looked after we repaired to bed to dream of the "free wool" that would fly the following day.

By 5 o'clock in the morning we were all astir. Both Ranger and Jack, whom Coleman had brought over, seemed to know by instinct what was coming, as they kept up an incessant yelping and howling until we started.

At 6:30 we were off. The sun was just peeping over the snow-clad trees on the banks of the adjacent river, causing them to resemble myriads of sparkling diamonds.

COLEMAN AT HOME—"B'ILING THE POSSUM."

There were six of us altogether, as Mr. C., a jolly old farmer from the neighborhood, came to Mr. S.'s the night before to join us. We were all armed with sixteen-shot Winchester rifles, .32 cal., with the exception of our host and Coleman. Mr. S. had a five-shot Winchester repeating shotgun, with which he claimed he could down an elephant, although he had on several occasions stood and looked with wondering eyes at a nimble buck which had been made to leave unwillingly its lair, by the wary huntsman with his hounds, forgetting entirely that his trusty Winchester was in his hands until the game was out of range. It is unnecessary to explain to the huntsman the cause of Mr. S.'s bewilderment on these occasions. Coleman was armed with an old Springfield "musket," as he termed it, and an axe.

Well, we had in a few minutes gotten over to the river and started up through the woods, Coleman leading the way to his coon tracks. As soon as we got pretty well into the woods we let the two dogs loose. They started up the river bank at full tilt, as though trying to see which could scent game first. We had perhaps traversed about half a mile of the woodland when Ranger began to yelp, a sure sign that game was near. In about twenty seconds later, off the dogs bolted. We could see from the slight elevation we were on down into a ravine ahead of us and

in which direction the dogs were running. Suddenly Tom S., who was slightly in advance of the rest of us, raised his rifle and fired twice in rapid succession, and in looking in the direction of his aim we saw the coon (for coon it was) going over the hill ahead, with Ranger and Jack in hot pursuit.

Tom's rifle had not done the execution he had expected. He exclaimed as we got up to where he was, "Confound the luck! those two shells were the old ones I reloaded and failed to crimp the bullets tightly in; I was afraid that I would miss."

"Well, there is no use in crying over spilt milk," we all exclaimed. "Let's be after those dogs or they will be entirely out of hearing in a few minutes." So off we started on a dead run through the deep snow, which greatly impeded our progress as a matter of course; but after we had kept up our gait for a quarter of a mile, we heard the dogs baying. I said, "Now, boys, we'll have it!"

In a short time we came up to where the dogs were at the foot of an immense pine tree—a coon's haven usually in this section, as the pines are so tall and thick it is impossible to see anything in the tops of them. The dogs

TREED.

were running around the tree, jumping upon it, scratching and biting madly at the bark. I told Tom S. to go on the lower side of the tree next to the river, while the rest of us scattered around on all sides to see if we could get a glimpse of his coonship. Old Coleman, who had been shading his eyes and peering up into the thick branches of the pine, suddenly called out, "Here he, boss! here he! I see his eyes a-blinkin'." I went over to where he was and in looking in the direction he indicated I could just see the coon's head; he was lying close to a large limb at its junction with the body of the tree about 60 ft. from the ground. Raising my rifle I fired. My bullet, however, only struck the limb he was against, as I could see from the flying bark, and only served to make him change his position slightly. Just as he moved, Walter, who was on the opposite side of the tree from me, spied him and fired. Almost at the crack of the rifle down he tumbled. When we got to where he had fallen he was quite dead, the ball having entered his head on the right side and gone entirely through. Walter was very much elated to have bagged the first game.

After we had stood around discussing for a few moments what direction we should now take, and after watching old Ranger and Jack nosing the coon and growling at each other as to which should have possession of it, we started off again, following, as before, the meandering course of the turbulent stream below us. We moved along in silence for some time, expecting every moment to see the dogs make a break for game in some direction, but in this we were disappointed to a certain extent, as we had perhaps traveled a mile from the point where we had killed the first coon before anything of interest happened.

We were all beginning to get pretty well tired out by this time tramping through the snow, when suddenly old Coleman, who was slightly in advance of us, dropped to the ground as though he had been shot, looking back as he did so and beckoning us to stop. There was a little rise of ground some 50 yds. ahead of us which cut off our view, and we could not see the object of Coleman's precaution. We knew, however, that his keen and hawk-like eye had discerned something in the way of game, and our only trouble was to get the dogs in. They had gotten behind us and were coming up the hill as we stopped. As they trotted along in the path that we had made through the snow, we did not have much trouble in catching them, as they came up to where we were. Tom S. caught the collar of Jack and Walter caught hold of Ranger. As soon as Coleman saw we had the dogs secured he waived his hand to us to keep still, and he crawled along through the snow until he reached the little hillock ahead of us, where he could get behind some holly bushes which entirely obscured him from anything that might be in the ravine below.

He had been crouching for fully a minute behind the bushes as though he were inanimate, when just then he slowly raised his musket and let drive. With the report of his piece up flew a flock of about twenty wild turkeys. We saw then what had caused him to so suddenly drop in the snow. The turkeys evidently did not know from which side they had been assailed, and being so frightened they flew in our direction and within gunshot of

Mr. S., who was equal to the occasion; picking out a big gobbler, he banged away and down it came with a thud in the snow. His aim, though, had been rather too low, and he had only broken one of the gobbler's wings, and as soon as he touched the snow he started to run and we had to turn the dogs loose before we could catch it. Old Ranger soon ran it down, however.

As soon as we had secured Mr. S.'s trophy we turned our attention to Coleman, who was just then coming up to us with one of the largest gobblers we ever saw. He was a monster. We afterward weighed him and he tipped the scales at 24 lbs. Coleman was so excited he could scarcely talk, but when he regained his equanimity he blurted out: "Boss, I sure did knock him dat time. When I peeped from behind dat bush and saw dis here old gobbler a-lookin' as doe he done specked somethin' was wrong in de air, I thought he looked big as a elephant, but; I jest knowed ole Betsey (this is what he called his musket) would lay him out. She neber fails when you p'int her in de right d'rection."

Mr. S.'s turkey was much smaller than Coleman's, but still it was quite a large one. We now had quite as much game as we could carry between us, and we took turns at carrying the two turkeys and coon. Our exercise by this time commenced to tell upon us; we were all beginning to get pretty hungry and tired, and as it was nearly 12 o'clock we decided to eat our lunch before proceeding further. Picking out an old fallen hickory, after brushing away the snow, we seated ourselves and set about enjoying our cold dinner and to spinning yarns.

After eating our lunch, which we were not long in doing—it being too cold to keep still for any length of time—we were about to continue our journey, when Coleman (who had sneaked off with the dogs), just as Mr. C. was in the midst of relating an amusing account of one of the many turkey hunts he had taken a few years back, came up, holding by the tail a tremendous possum. The dogs had found him in a hollow stump down near the river and Coleman had captured it alive. "What are you going to do with him, Coleman?" I asked. "Lor! boss," he replied, "we just gwine to hab de finest time you eber hearn tell of, eatin' dat 'possum' and drinkin' 'simmon beer." (The colored people in the South take ripe persimmons in the fall and winter, and after mixing them with the siftings from wheat flour—using a little water to make the mass stick together—make immense cakes of them, which they bake in a large oven. After they are sufficiently cooked they then put the cakes into a barrel of water, letting it stand for a week or two, when a beverage is secured of which they are extremely fond.) And as he said it he smacked his lips as though he had already begun his contemplated feast.

We now moved on, and soon had another coon treed, this time in a tall gum tree with but few branches where he could not shelter himself. We told Mr. C. to try his hand at this one, and he soon had him bagged, firing only one shot at him. It was now impossible for us to carry all of our game. We were getting more or less tired from our tramp, so we sent Coleman over to a neighboring colored man's house to ask him if he would not take our game home for us. Coleman soon returned with this man, and after telling him he could take one of the coons for his trouble, we were off again.

We now left the river, as Mr. S. insisted upon our going over to a body of woods surrounding a large mill pond not very far distant from where we were, as he thought we would find more game there. We had just gotten

THE CROWE.

into the edge of the woods when the dogs began to cry. They were running from us very rapidly, and owing to the snow we could scarcely keep within hearing of them. However, we soon heard the deep bass voice of old Ranger, treeing.

Making our way in the direction of the sound as rapidly as possible, we soon came up to where the dogs were, at the foot of an old hollow gum tree with the top broken off. About 30 ft. from the ground we could see an opening into the hollow. We were satisfied the coon was inside, as old Ranger never gave a false alarm, but how to get him out without cutting the tree down was the question. Presently Tom S. said, "If one of you will hold my rifle I'll try and climb the tree and run a stick down into the hollow and see if I cannot make the coon or whatever it is come out."

Then old Coleman, hearing him say this, remarked: "Boss, you better be keerful how you climbs up dar, 'cause a coon when he find he cornered like dis am gwine to be mighty savage, and he might took a notion to bite you if he comes outen dat hole."

Tom, however, paid no attention to what Coleman said and, handing his rifle to Walter to hold, he started to climb the tree. Mr. S., who had heard what Coleman said, did not want Tom to go up the tree and said, "Don't go up that tree, Tommy." Mr. C. was getting excited by

this time, and so he yelled at Tom to go on up—and then they had it. The spectacle was ludicrous in the extreme. Mr. S. would tell Tom not to go and Mr. C. would tell him to go on up, and there was Tom clinging to the tree for several minutes, not knowing what to do. Finally, though, he paid no attention to either his father or Mr. C., and began to climb again. He managed after a hard struggle to reach the hollow. By this time Mr. S. and Mr. C. had quieted down. I threw Tom a long stick I had cut and he began to push it down into the hollow. Soon we heard a great growling and snapping in the tree. Tom had touched the occupant with the stick and he did not like to be molested in that manner. Tom kept punching at him for about five minutes when, with a sudden growl, the coon, as it proved to be, ran out of the hollow and up the tree. He came so close to Tom and so suddenly that he almost caused him to let go of his hold, he was scared so. We now thought we would like to see the dogs and the coon have a fight. So we tried in every way to get him down from the tree. First one of us and then the other would shoot at the limb he was on, in this way trying to make him jump down, but without success.

Finally Tom's father put in his gun a shell loaded with bird shot and, going off some distance from the tree, fired directly at the coon. This was too much for him, and running out to the end of the limb he jumped to the ground. As soon as he touched, Ranger and Jack were upon him, and then they had it hot and heavy. Above the fuss of the growling, snarling and snapping, every now and then one of the dogs would yell as the coon fastened his teeth in him in some soft spot. First the coon would be on top and then the dogs. After they had fought for a few minutes in this way the coon made a sudden spring, knocking old Ranger down and jumping over Jack's back, made for the pond, which was in sight and only frozen around the edges. We would not shoot at him, as we knew he was just trying to get to the water, which is a coon's stronghold when cornered. They can whip, usually, several dogs if they are allowed to get into water. As soon as the coon got to the edge of the pond he looked back as though to see if the dogs were following him. Seeing that they were, he swam out into the pond about 20 yds. from shore and turned around, apparently awaiting the attack from the dogs. By the time he had turned the dogs were in the water right after him, and now we had an exciting time. The dogs would swim around the coon, attacking him whenever they could see an opening. Just as old Ranger tried to seize him from behind, while Jack was barking at him in front, the coon suddenly turned and grabbed old Ranger by the ear. What a yell he gave! one would have thought he had been killed. We let them fight in this way for about ten minutes, when the dogs were so completely used up that we instructed Coleman to kill the coon; so, going to the edge of the pond and taking aim at his head, when the dogs were at a little distance he fired. His aim was true, and with a few struggles the coon was dead. We now sent Coleman around to the mill not far away to get a boat, so we could get the coon out, and after we had secured him we started for home, as it was then growing late. On our way back the dogs freed a coon and a possum, both of which we bagged. I also shot a pheasant on the wing with Mr. S.'s gun.

When we got home we found that the old darky had faithfully performed his mission and all of our game was there. We had killed four coons, two possums, two wild turkeys and a pheasant. We all said that we had never had a finer hunt in our lives, and we then agreed that the next winter we would, if possible, try our luck again. We stayed in the country for three or four days longer, when we left our host with much regret to return to our city duties.

R. S. POLLARD.

Fox Terriers and Docking.

WELLESLEY, Feb. 2.—*Editor Forest and Stream:* The inclosed letter, stating the views of the American Fox Terrier Club concerning docking, is being sent to all the delegates of the A. K. C.

H. H. HUNNEWELL, JR.,
Sec'y pro tem A. F. T. C.

AMERICAN FOX TERRIER CLUB, Worcester, Mass., Feb. 1.—DEAR SIR: At the coming American Kennel Club meeting in February there is a resolution coming before the Club which prohibits the docking of tails and the cutting off of dew claws.

Docking vitally affects the American Fox Terrier Club, and we strongly protest against this resolution. In favor of docking, we will say the following:

First—Fox terriers have been docked ever since they have been classed as a distinct breed, the earliest pictures of fox terrier taken in the very beginning of this century showing docked tails.

Second—A fox terrier with a long tail gives the impression of being an entirely different type of dog from the short-tailed one. Occasionally (not often) one sees a fox terrier with a long tail, and one is always impressed with the lack of breeding he shows, and also how much smartness and alertness—imperative characteristics of the breed—he loses by reason of his long tail.

Third—Fox terriers' tails vary in length and style of carriage, and if the rule preventing the cutting of tails were adopted it would completely destroy the uniformity of the breed. In appearance the dog would be changed from a very smart looking animal to a very inferior looking one.

Fourth—In order to improve our strains in this country we must occasionally import terriers from England, and as the English Kennel Club has not adopted any measure prohibiting docking of tails, and is not not likely to do so, the dogs imported to this country from England would, in consequence, be barred from the bench by reason of their docked tails; thereby depriving the importer from having his dog known and seen by other breeders, to the detriment of the best interests and improvement of the breed.

With regard to the cruelty of the practice: We, who have been docking for many years and are best capable of judging, fail to see wherein it lies. The tails are cut when the puppies are so young—being from a week to ten days old—that they can scarcely notice it in the least, the bone being at that age very soft. A puppy will sometimes give a slight squeal, but before it has been placed by its mother's side seems to have forgotten all about it. There is little if any bleeding, and the tail heals in an incredibly short space of time. Never, we might add, has a

terrier puppy, to our knowledge, been made ill or died or been in any way inconvenienced by an operation. All this shows that the amount of cruelty is infinitesimal and hardly worth considering, especially when such a great advantage in appearance is obtained.

In regard to the cutting of dew claws: We admit it to be a more painful operation than docking, and one that takes longer to heal; but, as that affects all breeds of dogs as much as the fox terriers, and as every one knows that a great deal of future trouble and suffering is prevented by cutting the claws off—especially when they hang very low, as is often the case—we will not dwell on the subject, feeling confident that humanity now dictates the practice and always will.

We hope that you will give this matter your careful consideration, and, realizing how vitally it affects the breeders and owners of Terriers, will conclude to give us your support in defeating a resolution to prevent docking and cutting dew claws,—a resolution the first provision of which might be the death blow to the American Fox Terrier Club. We are yours most respectfully,

JOHN E. THAYER, President,
AUGUST BELMONT,
W. RUTHERFORD,
CLARENCE RATHBONE,
H. W. SMITH, Sec'y.
H. H. HUNNEWELL, JR., Sec'y pro tem.
Governors of the American Fox Terrier Club.

Special Car for the Show Circuit.

Editor Forest and Stream:

The Mascoutah Kennel Club has been making every effort to arrange for a special express car for the accommodation of exhibitors, leaving New York soon as convenient after the close of the W. K. C. show, and make the circuit, returning to New York. The plan proposed was that each club interested should contribute proportionately and defray half of the cost of the car, the other half to be made up by exhibitors, thereby giving them the advantage of less than half the usual express charges; Spratts to manage the business, exhibitors to make application to them for space, etc. But Detroit has refused to contribute anything for the purpose, consequently the Mascoutah Kennel Club and the St. Louis Kennel Club have arranged to have a car leave New York a week after the close of the W. K. C. show, in time to arrive in Chicago the Monday preceding the opening of the show there; after that going to St. Louis, and returning to New York. This, of course, will deprive exhibitors expecting to stop in Detroit of the advantage of low express charges from New York there, or in fact from New York to Chicago.

This arrangement will be carried out providing the car can be filled in New York with dogs for Chicago and St. Louis shows. The usual charge on a crate of 60 lbs. to make the circuit would be \$10. The estimated cost to exhibitors for the same size crate is \$5, on a crate say about 3 × 3 × 2; a crate twice that size would be charged more in proportion, but the same ratio of saving would exist. This estimate is based upon crates, not dogs, no matter how many dogs there would be in a crate. It simply requires a certain number of crates to pay the expenses of the car. The car will be heated and ventilated, and two attendants to look after the dogs, which alone is worth more to the owners than the money saved in charges. The first plan was to have Spratts fit out a car, and the same car continue on the circuit, but the express company could not afford to lose the use of the car for two or three weeks, as the car would have to remain in each place about a week without earning anything.

The St. Louis Kennel Club and the Mascoutah Kennel Club have done all that can be done for the benefit and saving to exhibitors, to say nothing of the comfort of their dogs. There have been many complaints about excessive express charges, etc. The matter is now in the hands of the exhibitors to avail themselves of the benefit, and they will have no one to blame for excessive charges but themselves if they do not see fit to take advantage of this proposition.

Field Trial Champion Association.

THE F. T. C. A. held a meeting on the evening of Feb. 8 in response to a call of President Dexter, the purpose of which was to consider the rules and to set a time for the drawing of the stake. It was carried that entries close on Sunday night at 8 P. M.

Then came a discussion as to what was meant by the definition of eligibility. The matter was defined on the club's entry blanks as follows: "For pointers and setters that have been placed in any public field trial. Entries close Jan. 1, 1896, except for dogs qualifying after that date and before the trial is run." Both the letter and the spirit of the rule are so plain that those who run may read. Dogs which qualified before Jan. 1, 1896, were barred if they were not entered by that date. They suffered no hardship, for they had their opportunity to enter. Under the strained construction of the rule it gave two opportunities to some dogs to enter, besides the advantage of knowing what all the entries were. In plain terms, under the published contract, dogs which had qualified after Jan. 1, and had not done so before, were given an opportunity to enter and start.

The following motion smoothed matters and was carried: "All dogs qualifying after Jan. 1, 1896, shall be eligible to start irrespective of previous winnings." This is a strained interpretation, as it is an entirely different statement.

All of which was illegal, as it was not within the jurisdiction of the Association to take such action at an Association meeting, for the rule on this matter is explicit, as follows: "The management of the meeting for the annual championship field trial shall be intrusted to the directors of the Association, and with them lies the interpretation of all rules. They shall decide upon all matters not provided for in these rules."

The directors did not take the action, as a directors' meeting was not called. It is therefore illegal and void.

Continental Field Trials Club.

INDIANAPOLIS, Ind., Feb. 8.—The annual meeting of the Continental Field Trials Club will be held at Battery D, in Chicago, Ill., Thursday, March 12th, at 2 o'clock P. M. Business of importance will come before the meeting for consideration, therefore a full attendance is desired.

P. T. MADISON, Sec'y-Treas. DR. N. ROWE, Pres.

In the Matter of Delegates.

THE next meeting of the A. K. C. will undoubtedly be an important one, therefore all clubs should endeavor to be represented at it.

The acceptance of the office of delegate carries with it more than a perfunctory assent to a club's request to represent it, and more than silently sitting in a chair through a club meeting. Representing a club properly is not fully done by merely answering the roll call and subsequently reading one's name in the report of the proceedings. A delegate owes it to himself, to his club, to all of the clubs of the A. K. C., that he be informed on important questions of the day, and on the constitution, by-laws and rules of the A. K. C.

A delegate who declares that he does not know what is the jurisdiction of the A. K. C., or whether it has any jurisdiction at all in certain matters, confesses ignorance of the duties of the office he professes to fill. As a delegate he should know the jurisdiction of the A. K. C. It is his duty to know it and also related subjects. A delegate who is groping aimlessly in the dark, or who grasps at any flimsy evasion to avoid going on record, is about as efficient as a delegate as a wooden Indian is as an organic being.

There are many questions before the A. K. C. which require the exercise of moral courage and fearless action. If a delegate cannot bring himself to a point to act with determination and directness, he should hesitate to accept an office which he cannot efficiently fill.

A delegate who asserts that he does not know, that he is in doubt, that he has a timorous feeling respecting results, and so on *ad infinitum*, should have all such matters settled in his mind before the meeting. He should know what to say and how to act. He does not cut a dignified or pleasantly impressive figure airing his inefficiency in solemn council, if inefficiencies there be.

It is possible that the doings of the individual delegates may be subjected to a closer scrutiny at the coming meeting of the A. K. C. than commonly is bestowed on such matters. The manner of club representation is worthy of careful notice, for if a part of the machinery is useless the results must be more or less short of what is desired.

National Beagle Club of America.

A QUARTERLY meeting of the National Beagle Club of America was held at the rooms of the American Kennel Club, 55 Liberty street, New York, Monday, Feb. 3. The members present were Hermann F. Schellhass, H. L. Kreuder, J. W. Appleton, George B. Post, Jr., A. Wright Post, John Bateman and George W. Rogers. The new officers for the coming year installed were: President, Hermann F. Schellhass; First Vice-President, J. W. Appleton; Second Vice-President, George B. Post, Jr.; Third Vice-President, John B. Lozier; Secretary, George W. Rogers; Treasurer, George Laick; Executive Committee, A. Wright Post, John Bateman, N. A. Baldwin, and officers.

Joseph Lewis, of Moodus, Conn., was nominated as one of the official judges in the place of George B. Post, Jr. Messrs. Mifflin Wharton, Islip, L. I.; W. C. Duff, Philadelphia, Penn., and C. F. Lewis, New York, were elected to membership. Messrs. J. W. Appleton and A. Wright Post were appointed committee on special prizes, and on pedigrees, W. S. Clark, Linden, Mass.

The Futurity Stake that was proposed at the club's last field trials has been placed in the hands of a committee comprising Messrs. J. W. Appleton, George W. Rogers and H. L. Kreuder, who will formulate plans to be submitted at the next adjourned meeting, which will be held at Madison Square Garden, Feb. 19, 8 P. M.

GEO. W. ROGERS, Sec'y.

FEBRUARY 3.

Westminster Kennel Club.

THE entries for the Westminster Kennel Club Show in Madison Square Garden next week beat the record with a total of 1,610, or 204 more than last year's. The classes are represented by these entries: 19 mastiffs, 159 St. Bernards, 11 bloodhounds, 40 Great Danes, 4 Newfoundland, 18 Russian wolfhounds, 6 deerhounds, 22 greyhounds, 17 foxhounds, 6 Chesapeake Bay dogs, 92 pointers, 59 English setters, 55 Irish setters, 38 Gordon setters, 148 spaniels, 111 collies (rough-coated), 3 collies (smooth-coated), 86 poodles, 8 Old English sheep dogs, 73 bull dogs, 7 French bull dogs, 73 bull terriers, 81 Boston terriers, 2 Basset hounds, 26 dachshunds, 45 beagles, 151 fox terriers, 40 Irish terriers, 22 Black and Tan terriers, 13 White English terriers, 6 Dandie Dinmont terriers, 18 Bedlington terriers, 35 Scottish terriers, 7 Skye terriers, 7 whippets, 15 Yorkshire terriers, 9 toy terriers, 21 pugs, 59 toy spaniels, 8 Italian greyhounds, 2 schipperkes, 20 miscellaneous.

United States Field Trials.

WEST POINT, Miss., Feb. 10.—*Special to Forest and Stream:* The Champion Stake was commenced this morning in pleasant weather and in the presence of a large attendance of sportsmen. There were ten starters: Jingo, Topsy's Rod, Delhi, Cynosure, Tony Boy, Harold Skimpole, Tippoo, Count Gladstone, Strideaway, Terry's Gale and Lad o' Rush; the latter drew the bye in the first round. The stake will probably be finished on Wednesday.

B. WATERS.

Death of the Beagle Speedie.

MILWAUKEE, Feb. 7.—Dr. A. White's beagle bitch Speedie, that won first in Class B and championship in 15in. class at Northwestern trials, is dead. Speedie was kept at Columbus, Wis., by a friend of the Doctor, when his barn caught fire and the bitch was burned with the other contents. Mr. Hough spoke very highly in his report of trials about her.

LOUIS STEFFEN.

Eastern Field Trials Club.

GREENFIELD HILL, Conn., Feb. 8.—A meeting of the members of the Eastern Field Trials Club will be held in Madison Square Garden Feb. 20, at 3 P. M.

S. C. BRADLEY, Sec'y.

"The Singing Mouse."

MR. HOUGH, through his medium, "The Singing Mouse," writes poetical rhapsodies on various topics. The river, the mountain, the mill, are all poetically treated. The thoughts are happily expressed, and the make-up of the book a most dainty one. All along the margins of the pages run the little pictures.—*New York Times.*

POINTS AND FLUSHES.

The following is a copy of a letter sent to Mr. W. B. Stafford, secretary of the U. S. F. T. C., by Mr. George J. Gould: "I should be glad to donate to the United States Field Trials Club two cups or plates, and in order to make them of more than passing or yearly interest, I desire that they shall not become the property of anyone until won three times, not necessarily nor desirably in succession, nor by the same dog. If the winners from time to time desire possession of the trophies, satisfactory security should be exacted for their safe keeping and return. It might be well to give a diploma for each time they are won, and keep the trophy on exhibition until some one becomes the actual owner or owners, but that I will leave to the discretion of the officers of the club. I offer the trophies under the following conditions and restrictions: Derby trophy—The winner of the Pointer Derby and the winner of the Setter Derby to run a final trial for the trophy, the heat or heats not to be shorter than one hour and a half. All-Age trophy—The winner of the Pointer All-Age Stake and the winner of the Setter All-Age Stake to run a final trial for the trophy, the heat or heats not to be shorter than two hours. The judge or judges to insist on thoroughly broken dogs. My reason for wishing the heats of the above length is a desire to encourage the breeding of dogs that have good staying powers combined with all other necessary qualifications of a good field dog. I consider the thirty or forty minutes racing dog utterly useless as a field companion and therefore do not wish to encourage their breeding. I would not consider a Derby entry worthy of merit that could not work one hour and a half, or an all-age dog that could not work four or five hours."

At the Dog Show FOREST AND STREAM will be located in box number 6, near the Madison avenue entrance to the Garden.

The following clubs will hold their meetings next week at Madison Square Garden, during the show: Metropolitan Kennel Club, Wednesday evening, Feb. 19; on Thursday, Feb. 20, the list is as follows: Irish Setter Club, 1 P. M.; Eastern Field Trials Club, 3 P. M.; American Spaniel Club, 4 P. M.; Gordon Setter Club, 7:30 P. M. The A. K. C. will also hold a meeting during the dog show week.

Yachting.

The Dunraven Inquiry.

LORD DUNRAVEN'S AFFIDAVITS.

THE full report of the evidence taken before the special committee is so voluminous, forming an octavo volume of 590 pages, that it is impossible to publish all of it, interesting as it is. We give this week the affidavits offered by Lord Dunraven in support of his case, with the evidence of his principal witness, Mr. Glennie. Mr. H. Maitland Kersey declined to testify for business reasons. After the examination of Lord Dunraven, as given in part last week, the inquiry continued:

Mr. Askwith—I propose now to put in affidavits, sworn in England, from various members of the crew of the Valkyrie, commencing with Mr. George Lennox Watson, the designer of it, and also to examine Mr. Arthur Glennie, the commodore of the Royal Portsmouth Corinthian Y. C., upon the same points.

Mr. Choate—I do not know how far the committee will receive mere affidavits. Of course it gives very little opportunity for us to put them to the test. If they come at all, they will have to come for what they are worth. Perhaps the committee has not considered that question yet.

The Chairman—I think we should receive them, subject to the consideration, of course, that you have just mentioned.

Mr. Askwith—Of course we were unable to bring over a dozen witnesses from England. These affidavits have been sworn in England and vided by the United States Consuls in various towns where the witnesses resided.

The Chairman—Who is the first witness?

Mr. Askwith—George Lennox Watson, of 108 West Regent street, Glasgow, yacht designer.

I, George Lennox Watson, of 108 West Regent street, Glasgow, yacht designer, do hereby solemnly and sincerely declare as follows: 1. I am a yacht designer, carrying on business at Glasgow, and have been a designer of racing yachts for nineteen years, and during that time have had great experience in all matters connected with the trim, measurement, sailing and management of racing yachts.

2. On Sept. 6, 1895, I went on board the Defender as representative of the Valkyrie at the time that she was measured. Her crew were in position and all arrangement of weight had been completed for the purpose of measurement. I then examined the Defender very closely. I clearly saw a little aft of amidships a hole just below one of the runners. The hole appeared to be the outlet of some pipe and to be about 1 1/2 in. in diameter. At the time the vessel was measured the waterline cut the outlet of the pipe. I further observed the position of the bobstay bolt with regard to the waterline. It was the same distance above a plate landing as the plate landing was above the water. The Defender at this time was lying true in the water and I immediately pointed out these marks with great care to Lord Dunraven.

3. I was not present on the Valkyrie or the City of Bridgeport on the morning of Sept. 7, previous to the race, and I therefore had no opportunity of inspecting the Defender. I attended at the Erie Basin as representative of Valkyrie on the afternoon of Sept. 8, when the yachts were remeasured by order of the Cup committee. Valkyrie was placed in position for official measurement first and her crew, including Lord Dunraven, were placed in position. She was then measured and I placed load marks on her forward and aft in conjunction with Mr. Hyslop and Mr. Herreshoff. I afterward assisted at the measurement of Defender when Mr. Herreshoff put like marks on her. The result of such measurement was that both boats came out practically at the same length as that on which they had been previously measured. On the occasion of the remeasure I again observed the sides of the vessel and the pipe hole and marks which I had previously noticed were then in the same position with regard to the water as they were when I saw them on the 6th.

4. During the evening of Sept. 6 the wind was blowing strongly and was rising. There was every appearance of there being heavy weather next day. It was not till early in the morning of the 7th that the wind suddenly dropped, leaving a still very considerable sea running.

And I make this solemn declaration conscientiously, believing the same to be true, and by virtue of the provisions of the Statutory Declarations Act 1835.

GEORGE LENNOX WATSON,
G. L. WATSON.

[SEAL.]

Declared before me this ninth day of December, eighteen hundred and ninety-five, at Glasgow, Scotland.

PETER H. WADDELL, Notary Public.

Mr. Askwith—The next affidavit I will offer is that of Thomas White Ratsey, of Cowes, in the Isle of Wight, sailmaker.

I, Thomas White Ratsey, of Cowes, Isle of Wight, England, sailmaker, do solemnly and sincerely declare that:

1. I am a sailmaker, carrying on business at Cowes, Isle of Wight, England, and have carried on such business continuously for twenty-nine years. During that time I have had great experience in all matters relating to the sailing, measurement and management of racing yachts.

2. I was sailmaker for the yacht Valkyrie, and, acting under the directions of the Earl of Dunraven, I went to America in August, 1895, to be present at the American Cup races.

3. Upon my arrival in America I occupied a cabin on board the City of Bridgeport, upon which vessel I remained during the greater portion of my stay in America. I therefore had many opportunities of observing the yacht Defender.

4. I was on the City of Bridgeport on the 6th September, 1895, when the yachts Defender and Valkyrie were measured in the Erie Basin. I carefully observed the Defender, my object being to see the level at which she floated in the water, and on that day I noticed that the Defender appeared to be floating much lighter than she floated upon occasions when I had previously seen her. I have no doubt of the fact, and so certain was I at the time that I immediately communicated to the Earl of Dunraven, Mr. Glennie and Mr. Watson, my con-

viction that the yacht Defender was floating lighter than upon previous occasions. I did so because I thought it was right the fact should be communicated to Lord Dunraven and Mr. Glennie, and particularly Mr. Watson, who was to attend on board the Defender as the representative of the Valkyrie upon the occasion of the measurement of the Defender.

5. I carefully observed the Defender when the measurement took place, and I distinctly saw that the l.w.l. intersected the outlet of a pipe as nearly as possible amidships. I also distinctly observed a line of bronze plating, and also saw the position of the bobstay bolt, and I was present when Mr. Watson pointed out these marks to the Earl of Dunraven.

6. On the night of Sept. 6, 1895, I slept on board the City of Bridgeport, and retired to rest about 11 o'clock P. M. At that time the Defender was lying about 300 yds. from the City of Bridgeport, and the Valkyrie was also lying about 300 yds. from the City of Bridgeport.

7. At about 5 o'clock A. M. on the morning of Sept. 7 I was aroused by Mr. Glennie to look at the Defender, and I got up. At that time the Defender was not lying alongside the Hattie Palmer. I then observed the Defender with very great care, and I saw without any doubt whatsoever that at that time she was lying lower in the water than she had previously been.

8. In consequence of my observation I and Mr. Glennie got into a boat and rowed up to the Defender to look at her closely. At that time she was lying true on the water with no list either port or to starboard. We both looked for the marks we had previously seen and we saw that the bobstay bolt and the line of bronze plating were considerably nearer the waterline than when I saw the Defender measured in the Erie Basin, and the pipe before mentioned was nowhere to be seen. I then returned to the City of Bridgeport.

9. I again carefully observed the Defender shortly before the race on Sept. 7. At the time I so observed her the Hattie Palmer, which had previously been alongside her, had left her; the Defender was then lying floating as nearly as possible in the same trim as when I saw her in the morning, and she was floating several inches lower in the water than when she was measured in the Erie Basin.

10. At about 9 o'clock on the said Sept. 7 I saw Lord Dunraven row to the Defender and put Mr. Henderson on board as representative of the Valkyrie during the race. I then saw Lord Dunraven row round the Defender and return to the Valkyrie. Shortly after the race the Defender was taken hold of by her tender and towed up to Bay Ridge and the Valkyrie after waiting some time was towed to the same place.

11. On Sept. 8, the following day, an order reached the Valkyrie that the yachts were to be remeasured, and I was present on Sept. 8 when the yachts went into the Erie Basin and the crew were placed in position and everything prepared for the measurement of the Valkyrie, but a delay of two hours occurred before the official measurer came to measure the Valkyrie. So soon as the Valkyrie was measured she was moved away and the men on board the Defender were placed in position for the remeasurement of that yacht, but I did not see the Defender remeasured.

And I make this solemn declaration conscientiously, believing the same to be true, and by virtue of the provisions of the Statutory Declarations Act 1835.

Declared at Cowes, in the Isle of Wight, this sixth day of December, one thousand eight hundred and ninety-five,

Before me,

H. C. DAMANT,

A Commissioner to administer Oaths in the Supreme Court of Judicature.

Mr. Askwith—The next affidavit is by William Wardley Cranfield, sailing master.

I, William Wardley Cranfield, of Rowhedge, in the county of Essex, England, sailing master, do solemnly and sincerely declare that:

1. I have been employed as sailing master on racing yachts for fifteen years and have been sailing in racing yachts for twenty-two years, and have had great experience in yacht racing.

2. I was master of the Valkyrie in America during the Cup races in September, 1895. I arrived in America on Aug. 18, 1895.

3. I was present and saw the Defender towed into the Erie Basin a day or two after the last trial race, and this was the first time I had an opportunity of carefully looking over her at close quarters. I paid great attention to her waterline and trim, and I saw that from the inspection I then had of the Defender no pipe hole was then visible in her port side.

4. I saw the Defender again on Sept. 6 in Erie Basin before she was measured. I then carefully observed her as to her waterline, and I saw that she was very much lighter and had the appearance of a ship going to be laid up. I then observed a pipe hole on the port side amidships, and the waterline just cut it on the lower edge. I saw the pipe hole distinctly, and there is no doubt whatever of the fact that it was plainly visible just above the waterline.

5. I again saw the Defender lying inside of Sandy Hook on Sept. 7, before the race, and in my opinion she was much lower in the water than she was when I last saw her. I was not near enough to see the pipe hole, but I am convinced that she was lower in the water.

6. I again saw the Defender when she was measured on Sept. 8, and I then again saw the pipe hole on the port side in the same position on the waterline as when I saw her on Sept. 6, and I make this solemn declaration conscientiously, believing the same to be true, and by virtue of the provisions of the Statutory Declarations Act 1835.

WILLIAM W. CRANFIELD.

Declared at No. 8 Ely Place, Holborn, in the County of Middlesex, this tenth day of December, one thousand eight hundred and ninety-five, before me,

(Signed)

WM. JAKES, JR.,

A Commissioner to Administer Oaths.

Mr. Askwith—The next affidavit is of Edward Sycamore, sailing master.

I, Edward Sycamore, of Brightlingsea, in the county of Essex, England, sailing master, do solemnly and sincerely declare as follows, that:

1. I have been sailing master of yachts for fourteen years, and during the last twenty years have had great experience in yacht racing.

2. I was assistant master of the Valkyrie in the Cup races in September, 1895, and arrived in America in August, 1895.

3. I saw the Defender in the Erie Basin a day or two after the last trial race, and I then carefully observed her at close quarters with a view of looking at her waterline and her trim. No pipe hole was then visible on the port side above the waterline.

4. I next saw the Defender on Sept. 6 in the Erie Basin before she was measured, and I then observed a pipe hole in her port side amidships, the waterline cutting it on the lower edge. It was distinctly visible. I also observed that she was very much lighter than when I saw her on the previous occasion.

5. On the morning of Sept. 7 I again saw the Defender, but I was not near enough to see the position of the pipe hole, but I distinctly saw that the vessel was much lower in the water than when I saw her upon Sept. 6.

6. I again saw the Defender in the Erie Basin, where she was lying for remeasurement. I saw her both before and after she was measured, and I clearly observed the pipe hole on the port side in the same position as to the waterline as when I saw her on Sept. 6.

And I make this solemn declaration conscientiously, believing the same to be true, and by virtue of the provisions of the Statutory Declarations Act 1835.

(Signed)

EDWARD SYCAMORE.

Declared at No. 8 Ely Place, Holborn, in the County of Middlesex, this fifth day of December, one thousand eight hundred and ninety-five, before me,

(Signed)

WM. JAKES, JR.,

A Commissioner to Administer Oaths.

Mr. Askwith—The next is the affidavit of Mr. Arthur Glennie, which I propose to take in the same way as I did Lord Dunraven's, reading it as a part of his evidence, asking him some further questions upon it.

1. Arthur Herbert Glennie, of 15 Devonshire street, Portland Place, in the County of London, England, Rear-Commodore of the Royal Portsmouth Corinthian Y. C., do solemnly and sincerely declare that:

1. I am a yacht owner and have taken an active part and a great interest in yacht circles for the last fifteen years.

2. On the invitation of the Earl of Dunraven to be present on the Valkyrie during her contest with the Defender in September, 1895, I went to America, arriving there on Aug. 14, 1895, and stayed during my visit in America on board the City of Bridgeport.

3. On Sept. 6, 1895, I saw the Defender and the Valkyrie in the Erie Basin for the purpose of measurement. I distinctly noticed that the Defender was floating very light, and remarks of this fact were made by those on board the Valkyrie. I carefully looked at the Defender and I distinctly saw a pipe hole on the port side, amidship; and that the water came up high enough just to cover the lower edge of the pipe hole, but leaving the whole of the pipe hole clear.

4. After the yachts were measured they were towed down to Sandy Hook, the Valkyrie going first and the Defender coming later, taking up her position about 300 yds. ahead of the City of Bridgeport.

5. On Sept. 7 I got up about 5 A. M. and looked at the Defender through a pair of opera glasses, and I was very much struck when I clearly perceived that the Defender was much deeper in the water than when she was measured. I thereupon without any delay awoke

Mr. Ratsey and he and I at 6 A. M. got into the gig and rowed to the Defender. We rowed around the Defender, inspecting her carefully, and I saw distinctly that she was at that time much deeper in the water than when she was measured. I looked for the pipe hole before mentioned and it was then covered by the water and could not be seen. In addition to this the vessel looked much deeper.

6. From my knowledge of yachts and of all that pertains to them, I was then and am still quite convinced that the Defender was much deeper in the water at that time than when she was measured. We returned to the City of Bridgeport about 6:30 A. M. I then woke Lord Dunraven and told him of the condition of the Defender as I had just seen her.

About 9 o'clock I, with others, went on board the Valkyrie and Lord Dunraven steered the gig to the Defender to put Mr. Henderson, his representative, on board that yacht. Lord Dunraven told me before he started that he would go and look for himself, and when he returned he told me he had not the slightest doubt that the Defender was much lower in the water than when she was measured.

7. Mr. Latham Fish, the American representative, came on board the Valkyrie about half-past 9 and I saw Lord Dunraven talking to him. I did not hear the whole of the conversation, but I heard Lord Dunraven say that he would put him on board the committee boat directly the race was over, and Lord Dunraven, directly after I had seen him in conversation with Mr. Fish, told me he had put the whole case before him and asked for the vessels to be taken charge of directly after the race until they were remeasured.

8. After finishing the first match both vessels were towed to Bay Ridge for the night. The Hattie Palmer went alongside as usual.

9. Both yachts were remeasured on the Sept. 8, and when the Defender was in the basin for remeasuring I saw the pipe hole showing above the water in exactly the same manner as it did when the Defender was first measured, and the yacht appeared to be at that time in exactly the same trim as when she was first measured.

And I make this solemn declaration conscientiously, believing the same to be true, and in virtue of the provisions of the Statutory Declarations Act 1835.

Declared at No. 7 Ely place, Holborn, in the County of London, this fifth day of December, 1895,

A. H. GLENNIE.

Before me,

GEO. READER,

A Commissioner for Oaths.

Arthur Herbert Glennie, called as a witness: By Mr. Askwith:

Q.—I would like to ask you a few further questions. You were on the Valkyrie when you were going down to the first race? A.—Yes.

Q.—And Lord Dunraven gave you the conversation that he had with Mr. Latham Fish? A.—He told me that he had had a conversation with Mr. Latham Fish, and had told him everything about everything; but what time of the day it was I do not know.

Q.—Did he say anything to you about what he had asked Mr. Latham Fish to do with regard to taking charge of the yacht? A.—Certainly. He told me he had told him everything and asked him to put it before the committee.

Mr. Rives—This is not exactly evidence.

Mr. Askwith—No; legally, I suppose not.

Mr. Choate—I do not know how far it could be heard without objections. I assume that it is not evidence at all.

The Chairman—It is not legal evidence, of course.

Mr. Rives—I suppose we will take it for what it is worth.

The Chairman—Yes.

Mr. Askwith—It is, of course, conversation, taking place without other parties being present, but there have been a good many other conversations of that kind.

Mr. Rives—I only called your attention to it, that it is not of very much value, of course, in determining the question.

Mr. Askwith—It is an endorsement of Lord Dunraven's statement, that, according to his view, which he published in the pamphlet, he had very earnestly brought before Mr. Fish his desire for charge to be taken of the yacht and for remeasurement.

Q.—In regard to one of two questions that were put to Lord Dunraven, are you certain that on the Sunday when the remeasurement took place you saw the pipe hole showing above the water in exactly the same manner as you did when the Defender was first measured? A.—Exactly in the same condition.

Q.—Of course you indorse every word in this affidavit. Have you any further statement to make upon it? A.—No.

Q.—In your opinion you have no doubt whatsoever that the Defender was more deeply immersed upon the day of the first race than she had been at the time when she went to be remeasured? A.—Not any.

By Mr. Choate:

Q.—When you returned from the Defender that morning it appeared that you, as your affidavit says, wrote Lord Dunraven. That means "awoke," I suppose? A.—Awoke.

Q.—And told him the condition of the Defender as you had just seen her, that is, you told him that the water pipe or outlet pipe could not be seen, did you not? A.—I told him that in the opinion of Mr. Ratsey and myself the boat did not appear to be floating the same as when she was measured.

Q.—Is that all you told him? Did you not tell him that the water pipe had disappeared? A.—I may have.

Q.—Did you or not? I want to get at, if I can, just what Lord Dunraven learned from you, and of course believed before he started to look at the Defender. Did you not tell him that the water pipe, which had been plainly visible when she was measured, had disappeared? A.—I should think not. I doubt it. I said—I told him straight that in the opinion of Mr. Ratsey and myself, who had been to the vessel, she did not appear to be floating the same.

Q.—Is that all you told him? A.—As far as I know.

Q.—Let me read your affidavit, or a part of it: "We rowed around the Defender, inspecting her carefully, and I saw distinctly that she was at that time much deeper in the water than when she was measured. I looked for the pipe hole before mentioned, and it was then covered by the water and could not be seen. I awoke Lord Dunraven and told him the condition of the Defender as I had just seen her." Did you not tell him that the water pipe— A.—I may or may not. I should think not. I think I told him generally.

Q.—You simply told him that you found her much more deeply immersed than she was before? A.—In my opinion that she looked more deeply immersed.

Q.—Did you measure the extra immersion? A.—No; I did not gauge it at all. I should not dream of doing it.

Q.—Why not? A.—Because it would be very hard to gauge. The bronze plating showing, and the ends of the pipe hole, and the general appearance of the boat struck me; but I should not attempt to gauge the amount of immersion.

Q.—You mean you did not think you could rely upon your naked eye to do that? A.—Individually, no.

Q.—I have heard that you are described as rear-commodore of the Royal Portsmouth Corinthian Y. C. You are an experienced yachtsman, are you not? A.—For an amateur, yes.

Q.—You think it would require a very remarkable faculty of vision, do you not, to determine 3 or 4 in. difference of immersion on two observations of a yacht? A.—It is a matter of opinion. Some people might have keener eyes than others.

Q.—Do you know of anybody but Lord Dunraven whom you think could do it? A.—I should think that many an expert could do it.

Q.—You think it is attainable by sufficient practice? A.—I should think so, sir.

Q.—At what date did you arrive in America? A.—On Aug. 14.

Q.—Your affidavit says that from your arrival you stayed during your visit to America on board the City of Bridgeport. Did you go right on board of her that day? A.—No; I was on board the Bridgeport from the moment she was ready.

Q.—About when was that? A.—On the Saturday evening, Aug. 17.

Q.—So that you were here some days before? A.—I was here on the evening of the 14th and the 15th and 16th.

Q.—Did you meet Mr. Kersey after your arrival? A.—I did.

Q.—How often did you see him from that day until Sept. 6? A.—I saw him for the first three days in New York—the first two days and a half that I was in the town—and I forget what day he came on board the Bridgeport to live. He ran down occasionally. I saw him naturally very often.

Q.—Had the trial races all been sailed? A.—No; I saw I think it was the second one. I can explain what the race was. I believe it was the second one. When they were stopped—

Mr. Glennie—In what way?

Mr. Choate—About her in any way.

Mr. Glennie—As regards what?

Mr. Choate—About her ballast.

A.—Nothing at all.

Q.—Did you receive any intimation before Sept. 6 that an attempt had been made by the Defender in the trial races, and might be made in the Cup races, to increase her ballast? A.—Certainly not.

Q.—No intimation of any kind from any source? A.—None whatever that I am aware of.

Q.—And then, when you first saw her, your mind was entirely free from any prepossession on the subject? A.—Absolutely; yes.

Q.—When did you first see the Defender? When she sailed in the second trial race? A.—No, in the dock, when I first arrived in the dry dock.

Q.—That was before she sailed the second trial race? A.—Before she sailed the second trial race.

Q.—I suppose you saw her during that race? A.—Yes.

Q.—And there was a third trial race, was there not? A.—Yes.

Q.—And you saw her on that race? A.—Yes.

Q.—You say in your affidavit that you distinctly noticed on Sept. 6 that the Defender was floating very light? A.—Yes.

Q.—Do you mean by that very light as compared with what you had seen her before? A.—No, not with what I had seen her before, but her general appearance.

Q.—I would like to get your idea of what you mean by stating that you noticed the Defender was floating very light? A.—My idea was this: that when she came into the dock instantly there was general conversation among our leading men, the sailing master and assistant sailing master and others; a general conversation: "How awfully light she looks."

Q.—"Awfully light?" A.—Cranfield said, "Yes, she looks very much like our vessels going up on the slip in the winter taking out any spare stuff there was to take out more or less water." And I made the joking remark, "There is no telling what she will do. Mr. Herreshoff is an extremely clever man, but she looks extremely light." That was the speaking all through.

Q.—She looked as if she had no ballast then? A.—Oh, certainly not; she looked as if she were extremely light. She looked as if she was extremely high in the water.

Q.—Did you go aboard of her? A.—Never.

Q.—You say that on that occasion—on Sept. 6—you carefully looked at the Defender from the City of Bridgeport? A.—From the City of Bridgeport and the Valkyrie.

Q.—How far away were they respectively from the Defender when you so looked from them at the Defender? A.—A very few feet. The Bridgeport was at the tail end of the little jetty at the dock, and the Defender was with her starboard side alongside the quay, where there was a ship that had been burned with jute. A very few feet.

Q.—Which side of the Defender was toward the dock? A.—The starboard side.

Q.—Then it was her port side that you carefully looked at? A.—The port side, where everybody practically at the same time called attention to the pipe hole and the bronze.

Q.—You did not row up to her from the City of Bridgeport or the Valkyrie at all? A.—No.

Q.—Was the Bridgeport lying at all outside of her or on the same line on the dock? A.—The Bridgeport would have been practically at right angles to her.

Q.—At right-angles to her? A.—Her nose facing the Defender's nose, like that (describing).

Q.—At the corner of the dock, or what? A.—One alongside of the pier here, and the Bridgeport alongside a little jetty, if I am not mistaken.

Q.—How about the relative position of the Valkyrie at that time, when you looked from her? A.—The Valkyrie was practically alongside the Bridgeport. You could walk from one to the other.

Q.—Could you tell the size of that pipe? A.—In my mind at home, I carried it away as about the size of a two shilling piece. Of course, I can't guarantee accurately what it was.

Q.—That would be about in.? A.—I suppose about that.

Q.—And was it circular? A.—Yes.

Q.—Did you see two pipe holes? A.—No, one.

Q.—You, of course, formed no judgment as to what her w.l. was, independent of the measurement?

Mr. Glennie—In the dock?

Mr. Choate—On Sept. 6, before the measurement was announced? A.—No; I thought she would be getting very near the dimensions of the Cup racing boat.

Q.—90ft.? A.—90.

Q.—But you could not rely much on your eye for that? A.—No; she looked a very deceiving boat indeed—looked a very small boat.

Q.—What do you mean by saying she looked a very "deceiving" boat? A.—She looked a very small boat, carrying an enormous amount of canvas.

Q.—You did not get the idea that she was a deceiving boat?

Mr. Glennie—Toward the end?

Mr. Choate—At that time?

Mr. Glennie—What way do you mean?

Mr. Choate—Any way.

Q.—What started you up so early on Sept. 7? A.—It is my usual hour for getting up, if not before.

Q.—I understand you were then 300yds. away from the Defender? A.—I should think it must have been really less than that. It was a great deal too far off to see without the opera glasses properly.

Q.—You say, "The Defender coming later, took up her position about 300yds. ahead of the City of Bridgeport?" A.—Yes, sir. It is a wee bit difficult to estimate the distance.

Q.—That was about where she lay from the time she took up her position until you looked at her through the opera glasses? A.—Yes.

Q.—You do not know of any change of position? A.—No.

Q.—Where was the Valkyrie at that time? A.—The Valkyrie was on the port bow of the Bridgeport. Here would be the Bridgeport and here would be the Valkyrie and here would be the Defender (describing).

Q.—Which was the nearest to the Defender, the Valkyrie or the City of Bridgeport? A.—The Valkyrie.

Q.—How much nearer? A.—I should think about less than half way.

Q.—Lord Dunraven has put it, I think, at 200yds. That would be about your judgment? A.—That would be about it.

Q.—And from neither, in your judgment, could this pipe hole be seen, even with glasses? A.—I did not attempt to look for it with a glass, because I considered it too far.

Q.—What did you look at with the opera glasses? A.—It was the general appearance of the boat, and I did not make up my mind or form any definite opinion until I had waked Mr. Ratsey.

Q.—After waking Mr. Ratsey did you come to a conclusion and make up your mind? A.—We both of us came to a very decided conclusion.

Q.—That she was deeper in the water than she had been when measured? A.—The remark that we made to each other was that she looked really quite a different vessel.

By Mr. Rives:

Q.—Was the sun up at this time, at 5 o'clock? A.—We did not go at 5. I turned out at 5. We did not go until 6.

Q.—When was it you first saw the Defender that morning? A.—I turned out at 5 and had my tea. I dare say possibly it would be about half-past 5.

Q.—The sun would be about rising at that time? A.—I should think so.

By Mr. Choate:

Q.—From the City of Bridgeport, after you had waked Mr. Ratsey, did you form a conclusion, after talking with him, before you got into the gig? A.—No definite conclusion, no. That is the reason I got into the gig. I would not commit myself.

Q.—And in your judgment, from the City of Bridgeport at that distance, no definite conclusion could be drawn? A.—It depends upon the eye of the person looking.

Q.—It would require a capable expert, would it not, to determine definitely from the City of Bridgeport, 300yds. off, a difference of three or four inches in her immersion? A.—I do not say anything about three or four inches. She looked a different vessel.

Q.—Are you sure it was the same vessel? A.—Yes.

Q.—How close to her did you go in the gig? A.—Quite close, comparatively. About as far off as—half again as far off as the window, perhaps.

Q.—Did you row around her? A.—No, sir, not around. Along the port and ahead, before going back.

Q.—How near to the port side did you go? A.—I should think, roughly, about twice as far as that window from where I am now (indicating).

Q.—You did not come in actual contact with her? A.—No.

Mr. Rives—How was the boat heading at that time? Lying head to the westward?

The witness—I forget what the westward was. More to the north, I think; more towards Brooklyn. That would be north would it not?

Lord Dunraven—That would be south.

By Mr. Choate:

Q.—Was her starboard side toward the City of Bridgeport? A.—Yes.

Q.—Did you row around her stern or around her bow, or both? A.—Beginning on the port side, we rowed practically from the stern, on the port side, and then straight ahead for a few yards and then home again.

Q.—Did you row the whole length of her port side? A.—Oh, yes.

Q.—And around again to the starboard side? A.—No.

Mr. Choate—You must have got on the starboard side to get back to the City of Bridgeport?

Mr. Glennie—Why?

Q.—Did you not say the starboard side was toward the Bridgeport? A.—No, head on.

Q.—Down there at the Horseshoe, where she lay that morning—

Mr. Rives—At this time the boats were lying head to the northward, according to Mr. Glennie.

Mr. Glennie—Whichever way it was, they were lying the same.

Mr. Rives—And subsequently when Lord Dunraven saw them, the boats had swung so that they were lying head to the westward.

By Mr. Choate:

Q.—What sort of weather was it there, as you remember it? A.—Perfectly smooth when we went alongside.

Q.—Perfectly smooth? A.—Perfectly smooth.

Q.—You did not observe the ripple that Lord Dunraven spoke of? A.—There is a difference in the baur of the morning. There was practically no ripple then, when we went out; no ripple and no swell.

Q.—And no lifting? A.—No.

Q.—You formed no judgment as to how much her waterline had

been extended beyond what it was at the time of the measurements on Friday, did you? A.—No, I have not committed myself in any way. It is very difficult to gauge the depth. The thing I went by most was just the general appearance of the vessel, and no pipe hole.

Q.—Did you form any opinion as to how much she was immersed? A.—I have on one or two occasions said that I considered that she was immersed about an inch and a half, but I have not committed myself.

Q.—You say you formed what opinion you did, not from determining the degree of her immersion, nor the length of her load waterline, but from the general appearance of the vessel. What did you observe except the water pipe? A.—First of all the water pipe, which would bring practically 1½ in. there; and then Mr. Ratsey and I both thought she was trimmed more by the stern.

Q.—You observed nothing about the bobstay iron? A.—In the dock it looked very high.

Q.—Did you look at it as you rowed around the Defender in the morning? A.—The whole vessel looked as if she were lying deeper.

Q.—I asked you if you observed particularly the bobstay iron? A.—Not particularly.

Q.—Did you observe the bronze plating? A.—Yes.

Q.—What did you observe about that? A.—I observed that the whole way along there appeared to be less of it.

Q.—Then you gave Lord Dunraven no particulars whatever, because you did not observe them, except the disappearance of the pipe? A.—Not because I had not observed them, but because he was going to look himself. He told me he was going to look himself.

Q.—You did not tell him about the pipe then? A.—Not that I am aware of.

Q.—Did you see Mr. Fish when he came on board? A.—Yes.

Q.—Was he in your sight until he left the boat? A.—Not if he was down below and I was on deck.

Q.—How much of the day did you see him? A.—I cannot say really.

Q.—How many times did you see him in conversation with Lord Dunraven? A.—I really cannot say; several times.

Q.—Did you see him writing? A.—No.

Q.—Did you see Mr. Kersey bring him a piece of paper? A.—Not that I remember.

Q.—Were you present at the remeasurement on Sunday? A.—Yes.

Q.—And I understand your testimony to be that you saw the pipe hole just as you did on the Friday? A.—I considered the vessel looked identically the same.

Q.—Lying very light? You thought she was floating very light? A.—I say, identically the same.

Q.—Did you not see some lead put into the Defend at the Basin? A.—No.

Q.—Or into the Valkyrie? A.—I saw Valkyrie's lying on the floor. I never saw the Defender's and never knew that they had any put in until just lately.

Q.—Do you know how long the Hattie Palmer lay alongside the Defender at the Hook? A.—No, only by hearsay from our second mate.

Q.—Was it your second mate who gave you the information that she lay there until 1 o'clock in the morning? A.—That is what he told Mr. Ratsey and myself; or until midnight, or sometime—I think he said 1 o'clock.

Q.—Do you know how long she lay alongside at Bay Ridge the night after the race? A.—No, sir.

Q.—I suppose you did not regard it as any of your business to do anything about this difference between the Defender, as she was when remeasured and as she was on the race? You had no function to perform? A.—Not the slightest.

The Chairman—Anything further from Mr. Glennie?

Mr. Askwith—No, I have no further questions to ask.

By Mr. Rives:

Q.—Where did the Valkyrie go that night of Saturday? Was she at Bay Ridge? A.—She went to Bay Ridge.

Q.—Did you see the Defender up there? A.—I won't be certain. I think the Defender lay a little bit ahead of us.

Q.—Not far off? A.—Not very far.

By Mr. Whitney:

Q.—There was a pretty light wind at the first race, was there not? A.—The first race was a light wind and the remains of a sea which left a nasty swell.

Q.—Had you seen the Defender carrying her sail in any heavy weather before in the trial races? A.—Yes; the day that she broke her mast, I believe, or they were afraid of her mast. I heard something of that kind.

Q.—What did you think of her stability and ability to carry sails? Mr. Glennie—What did I think about her?

Mr. Whitney—Yes.

A.—I thought she was a beautiful vessel.

Q.—I mean as to that point. I will ask you this question: What effect do you think, as it afterward turned out, the deeper immersion would have had in regard to her speed on day of the first race?

Mr. Glennie—The deeper immersion than what?

Mr. Whitney—Than her true line?

A.—I should think that no boat would sail better on a deeper immersion than her true lines. The question is: What are the true lines?

Q.—In light weather like that—you assume that she was below her measured line and the lines on which she sailed in subsequent races, do you not? A.—I do not assume that she was below her proper line at any time.

Q.—I thought you did, below the line at which she had been measured—do you not? A.—Not necessarily below her proper line, sir.

Q.—She certainly was entitled to race on the lines in which she was measured, was she not? A.—Certainly.

Q.—I understand you to suppose that in the meantime she had had ballast put in? A.—I do not know that she had.

Q.—So that she was lower, or at all events was lower in the water than when she was measured? A.—She looked lower in the water.

Q.—What effect on that day, as it turned out, do you think it could have had upon her speed? A.—Oh, I really do not know.

Q.—Would it have increased or decreased her speed? A.—It is very hard to say.

Q.—Do you think it would be an advantage or disadvantage to forge through the water, on that day with the same amount of sails, with a larger hull? A.—I should think very likely, with a heavy swell, the slight extra weight might be better, possibly.

Q.—Is that your judgment? A.—Well, I really do not know. My judgment does not go for much.

Q.—I was only asking for your judgment as a yachtsman? A.—It is a pretty hard question to answer, sir.

Q.—You would not like to express an opinion. Mind you, I suppose the idea of additional ballast is to give more stability in heavy weather is it not? A.—Certainly.

Q.—You thought, as the wind blew that night, it was going to be a heavy-weather day? A.—So they told me.

Q.—Did not that condition arise from that? A.—I had been so deceived by the weather ever since I had arrived that I would not express any opinion, because every time they said it was going to blow it turned out to be a calm.

Q.—Judging by your statement that all night there was a promise of heavy weather the next day— A.—It would be so in our country. It looked as if there was to be a breeze, and very heavy, and it was not the fact.

Q.—Did you not think from that fact that they were going to get more stability by putting in heavier ballast? A.—I never gave the thing a thought.

Q.—Did you form in your own mind an opinion as to how this deeper immersion had been caused? A.—No, I did not. I did not know what to think. We have had trouble in England, and sometimes it has been water, sometimes it has been not taking the gear out, sometimes it has been a little extra lead. There have been forty and one ways.

Q.—Did you form any idea how much must have been put in her to cause the immersion that was caused? A.—No; I am told that—my estimate would have been, roughly, I suppose about six tons.

Q.—Then you did form the opinion that after she was measured on Friday six tons were imported into her and taken out again before the measurement on Sunday, did you not? A.—I suppose it will have to be answered yes.

Q.—And you could believe that in this way a fraud had been committed? A.—I do not know about the word fraud. I am sorry to say that these things have happened in England; and that is the reason of putting on external marks in England.

Q.—It must have been intentional in your judgment? A.—It would hardly have got there by itself.

Q.—It must have been carried in? A.—Not necessarily carried in.

Q.—Do you know whether, when you made your observation, the bedding had been taken off the Defender, when you went down at 6 o'clock in the gig? A.—No.

Mr. Askwith—In obtaining as much information as we can to lay before this commission, I have here various affidavits of the crew of the Valkyrie, which I do not think it is necessary for me to read at full length. What they go to show is that until 11:30 the Hattie Palmer was lying alongside the Defender, and work was going on upon Defender throughout the night; that a knocking, and apparently movements of different kinds were going on upon the Defender. That was what was noticed from the deck of the Valkyrie.

Mr. Choate—During what time do they say? Up to what hour? A.—During the time that the Hattie Palmer was there beside her.

Mr. Choate—What time do they give—up to what hour? Midnight or morning?

Mr. Askwith—Perhaps it would be more simple, really, to read

them. The first is of William Russell, Sidney street, Brightlingsea, yachtsman.

I, William Russell, of Sidney street, Brightlingsea, in the County of Essex, England, yachtsman, do solemnly and sincerely declare that:

1. I am now in the service of Mr. Walker, the owner of the yacht Ailsa, lying at Fay's Yard, in the town of Southampton, as an A. B.

2. In September, 1895, I was an A. B. on the yacht Valkyrie in America.

3. I was on watch on board the Valkyrie from 8 to 10 o'clock in the evening of Sept. 6. During that time the Hattie Palmer was alongside the Defender, and I saw lights during the whole of that time passing between the Defender and the Hattie Palmer.

And I make this solemn declaration conscientiously, believing the same to be true, and by virtue of the provisions of the Statutory Declarations Act 1835.

WILLIAM RUSSELL.

Declared at the Town and County of the Town of Southampton, this tenth day of December, one thousand eight hundred and ninety-five,

Before me,

E. T. WESTLAKE,
A Commissioner for Oaths in England.

Mr. Askwith—The next one is the affidavit of Luther Gould, yachtsman.

I, Luther Gould, of Silcott street, Brightlingsea, in the County of Essex, England, yachtsman, do solemnly and sincerely declare that:

1. I am now in the service of Mr. Walker, owner of the yacht Ailsa, lying at Fay's Yard, in the Town of Southampton, as A. B.

2. I was second mate of the Valkyrie in America in September, 1895.

3. On the night of Sept. 6, 1895, I was in charge of the anchor watch on board the Valkyrie. I took charge of the watch at about 8:30 or 9 o'clock and remained in charge of that watch till about 5:30 on the morning of the 7th. I did not turn in before 12 at midnight on the 6th. I went on deck at intervals up to about 5:30 on the morning of the 7th.

4. I observed the Hattie Palmer lying alongside the Defender at about 10 o'clock, and she remained alongside until about half past 11 that night, and a light was passing between the Defender and the Hattie Palmer until half past 11 that night.

And I make this solemn declaration conscientiously, believing the same to be true, and by virtue of the provisions of the Statutory Declarations Act 1835.

LUTHER GOULD.

Declared at the Town and County of the Town of Southampton, this 10th day of December, 1895, before me,

E. T. WESTLAKE,
A Commissioner for Oaths in England.

Mr. Askwith—The next one is John Clark, able seaman:

I, John Clark, of 1 Williams Walk, Colchester, in the County of Essex, able seaman, do solemnly and sincerely declare as follows:

1. In August, 1895, I went to America as one of the crew of the Valkyrie.

2. On the night of Sept. 6, 1895, I went on board the Valkyrie about 6 o'clock, and was at various times between 6 and 10 o'clock on deck, and I saw the Hattie Palmer lying alongside the Defender. At 10 o'clock I went on duty in the anchor watch until 12 o'clock, and during those two hours I was on deck continuously.

3. From about 8 o'clock that evening until about half past 11 I saw from time to time a light passing between the Defender and the Hattie Palmer. At about half past 11 the Hattie Palmer left the Defender and made her anchor about 100yds. from the Defender.

4. After the Hattie Palmer had left the Defender, and up to 12 o'clock, when I went below, a light was moving about the deck of Defender, and I heard men moving about on her deck.

And I make this solemn declaration conscientiously, believing the same to be true, and by virtue of the provisions of the Statutory Declarations Act 1835.

JOHN CLARK.

Declared at No. 8 Ely Place, Holborn, in the County of Middlesex, this 10th day of December, 1895, before me,

WM. JAKUES, JR.,
A Commissioner to Administer Oaths.

Mr. Askwith—The next is the affidavit of William Henry Green, able seaman:

I, William Henry Green, of West street, Wyvenhoe, in the County of Essex, able seaman, do solemnly and sincerely declare as follows:

1. In August, 1895, I went to America as one of the crew of the Valkyrie.

2. On the night of Sept. 6, 1895, I went on board the Valkyrie about 6 o'clock, and was on the deck at various times until 10 o'clock, when I turned in.

3. I was on duty in the anchor watch from 2 o'clock, when I relieved Roper, until 4 o'clock.

4. Between 2 and 4 o'clock I was on deck continuously, and I saw a light moving about the deck of Defender during my watch; I also saw men moving about and heard the sounds of knocking on board Defender.

And I make this solemn declaration conscientiously, believing the same to be true, and by virtue of the Statutory Declarations Act 1835.

The mark of

X
WILLIAM HENRY GREEN.

Declared at 8 Ely Place, Holborn in the County of London, this 10th day of December, 1895, I having first truly, distinctly and audibly read over the contents of this declaration to the declarant, who appeared perfectly to understand the same and made his mark thereto in my presence.

WM. JAKUES, JR.,
A Commissioner for Oaths.

Mr. Askwith—The next is that of Edward Roper, able seaman.

I, Edward Roper, of Chapel street, Rowhedge, in the County of Essex, able seaman, do solemnly and sincerely declare as follows:

1. In August, 1895, I went to America as one of the crew of the Valkyrie.

2. On the night of Sept. 6, 1895, I went on board the Valkyrie, about 6 o'clock, and was at various times on deck until about half past 8, when I turned in. I saw the Hattie Palmer lying alongside Defender.

3. At 12 o'clock I went on duty in the anchor watch and relieved John Clark. I remained on duty and was on deck continuously from 12 till 2.

The Hattie Palmer was then lying about 100yds. from the Defender.

4. During my watch, viz., from 12 till 2 o'clock, I saw a light moving about the deck of the Defender and men moving about, but I could not see what they were doing.

And I make this solemn declaration conscientiously, believing the same to be true, and by virtue of the provisions of the Statutory Declarations Act 1835.

EDWARD ROPER.

Declared at No. 8 Ely Place, Holborn, in the County of Middlesex, this 10th day of December, 1895, before me,

WM. JAKUES, JR.,
A Commissioner to Administer Oaths.

Mr. Askwith—That is the information that Lord Dunraven is able to give to this commission. He takes the attitude that it is now impossible for this complaint of his, made at the time, to be verified; that he has given what assistance he can, and has come to America to give such assistance as he can in the matter. He does not take the position of prosecuting any person or of proving any more than simply the nature of his complaint, and that he reiterated, on Nov. 9, a complaint stated on Sept. 7, and not then examined. And any assistance further that we can give in the course of the inquiry, of course we have taken the position that we shall give; but we do not propose to go into the question of attempting, without evidence, which we cannot now obtain, to attack the statements which we have no material to properly investigate. We must leave investigation to the Committee, with such assistance as we are able to give them.

Mr. Rives—Between now and to-morrow morning could you and the other gentlemen mark on one of the charts there the points where the Defender anchored during the night of Friday, and also the points where the race started and ended on Saturday? We would like to get your judgment about that.

Mr. Askwith—What time on Friday?

Mr. Rives—Mark on the chart the anchorage of the Defender on Friday night, and also the point where the race ended on Saturday. There has been some question as to the distance she had to tow up, and so on. I think there would be no dispute about that, but if you could mark it on the chart and show it, it would be an advantage.

Lord Dunraven—You want us to mark the position of the vessels as they lay in the Horseshoe?

Mr. Rives—As they lay in the Horseshoe and also the point where the race ended on Saturday. A question has arisen as to the distance you had to tow up. We would like to have it so that it could be agreed upon by all parties, where that was.

Lord Dunraven—The race ended at the Lightship?

Mr. Rives—No, not on Saturday. It ended about 3 miles northeast of the village of Seabright. It ended where it started.

Lord Dunraven—Yes, that is so. We will do our best to do that.

Mr. Askwith—I will inquire of Lord Dunraven and Mr. Glennie as to the positions.

Lord Dunraven—We will endeavor to do so.

Then the opening of the defense, as given last week, followed.

YACHT DESIGNING.—V.

BY W. P. STEPHENS.

[Continued from page 80, Jan. 25.]

MATTER is found in three different forms, of a solid, a liquid and a gas; and the naval architect is compelled to take cognizance of all, the solid being the vessel herself; the liquid, water, being the medium in which she floats; while the gas is the propelling power, either directly in the form of wind (air) on the sails, or more remotely in the steam or other vapor which animates her engines. It will be directly in order to consider briefly the medium before attempting to deal with the body which floats and moves in it. In a solid the force of cohesion is stronger than all the repellent forces, and therefore the body does not easily change its form. In fluids the attractive and repellent forces are either in equilibrium, producing liquids, or inelastic fluids; or the repellent forces are wholly in control, producing gases or elastic fluids. To the scientist and investigator water is what is termed a "perfect" fluid, the attractive forces of cohesion and the repellent forces of heat being in exact balance, so that the particles of the fluid move upon each other with absolute freedom. To the yacht designer, however, in his actual practice, it is not a "perfect" fluid, as the cohesive forces are very slightly in excess, and it possesses the quality of "viscosity," or, in plain language, stickiness, due to the presence of foreign substances—solids. While the viscosity of salt water is greater than that of fresh, both may to all practical purposes be considered as perfect fluids so far as the friction of their particles upon each other is concerned; were it otherwise the Gulf Stream and other ocean currents would be impossible; the law of tides, which has been reduced to exact mathematical formulae, would also be impossible, and many of the established laws of physics would be overturned. While friction does exist to an appreciable extent between the water and solid bodies immersed in it, but little exists between the particles of the water itself. Water, then, is a fluid, incompressible and inelastic, and of course capable of imparting equal pressure in every direction. The weight of a cubic foot of fresh water is 62.39lbs., and a ton measures 35.905 cubic feet. Salt water weighs 64.05lbs. to the cubic foot, and a ton measures 34.973 cubic feet. The weight of fresh water equals the weight of salt water multiplied by .9740. In all ship calculations the weight of fresh water is taken at 62.25, and of salt water at 64lbs.; while the former is estimated at 36ft. and the latter 35 cubic feet to the ton.*

The whole subject of the mutual relations between a perfect fluid and a solid body immersed or submerged in it or moving through it (or, as the assumption commonly is, of the fluid moving by the fixed body) is a most fascinating one, and has engaged the attention of some of the most eminent scientists of this century, such as Prof. W. J. Macquorn Rankine, John Scott Russell, the late William Froude and his son and successor, R. E. Froude; and the "form of least resistance" has been sought almost as eagerly as the philosopher's stone by the alchemists of old. While many important and practical truths have been obtained and much has been done to advance the science of naval architecture, the form of least resistance has not yet been discovered, and only the most general deductions have been reached on many important points.

As far as the actual advancement of yacht designing is concerned, the matter for regret is not the failure to discover the form of least resistance or the exact degree in which water, fresh or salt, falls short of the attributes of a perfect fluid, but rather that the most absurd and misleading theories have been so generally prevalent until recent years among the men in whose hands rested the progress and advancement of designing, the practical builders. These theories, most of them directly contradicted by the elementary laws of physics as taught to boys in the public schools, have been seriously advanced as unassailable arguments for the old-time skimming dish model and against the introduction of greater depth and more effective systems of ballasting in yachts. The worst of these, as well as the most widely prevalent, was that which accepted the mere increase of hydrostatic pressure due to increased depth of submersion as influencing the "dynamical conditions incidental to motion" of a submerged plane.

Through the fall and winter of 1881 the wonderful victories of the deep cutter Madge over the shoal New York yachts was the absorbing topic of dispute among yachtmen, builders, sailors, fishermen and longshore characters in general; and the writer has had many a bout over the vexed question with those who believed in extreme light displacement and draft—of a vessel entirely on top of the water. The general theory of resistance then accepted, not only by ignorant fishermen and boatmen, but by successful builders, was about on the same high plane of intelligence as that of savages as to the nature of an eclipse—that some great fish was about to swallow the moon. As formulated to us at different times, accompanied by the familiar saying, "the nearer the sun the faster she goes," it was of this nature: the upper layer of water, to the depth sailed in by the average yacht or smack, some 4ft., was water pure and simple, with no resistance; the next layer going downward, say a foot depth, was as viscous or "sticky" as strong brine, the next foot was as stiff as molasses, the next as stiff as black mud, and beyond that, where the broad lead keel of the cutter must force its way, the water was a body of great but unmeasured density, sufficient to retard the speed of any deep yacht. These varying densities, according to this theory, were all due to the increase of hydrostatic pressure with the depth. The performances of Miss Madge showed that something was wrong with this beautiful and ingenious theory of resistance, as she cut the deepest strata with her broad lead keel more rapidly than the sharp, thin centerboards of the sloops could divide it; but even such proof failed to convince her opponents. Indeed it was a hopeless task to reason with a man who instanced the established fact of the blood gushing from the mouth and ears of a diver at great depths as an argument against the speed of a cutter drawing 8ft.

The subject of resistance, in its entirety, is one that pertains to naval architecture rather than to yacht designing, and we shall touch on only a few of the most important and strongly established facts; those who wish to pursue it further will find it fully and ably discussed by the

authors named later on. As to the viscosity of water, fresh and salt, no reliable data has yet been given to the world, and no specialist has yet devoted himself to the subject. That salt water is decidedly more viscous is generally recognized, as is the fact that greater speed is obtainable in fresh than in salt water, whether partly immersed or fully submerged. In all investigations it is assumed, as already stated, that the water is a perfect fluid.

That the hydrostatic pressure increases with the depth is quite true, the rate of increase being directly proportional to the depth, as in the following table:

PRESSURE OF WATER AT VARIOUS DEPTHS.		
Depth in Feet.	Pressure per Sq. Inch.	Pressure per Sq. Foot.
1	0.43lbs.	62.32lbs.
2	0.86lbs.	124.64lbs.
3	1.30lbs.	186.97lbs.
4	1.73lbs.	249.29lbs.
5	2.16lbs.	311.61lbs.
6	2.60lbs.	373.94lbs.
7	3.03lbs.	436.26lbs.
8	3.46lbs.	498.58lbs.
9	3.89lbs.	560.91lbs.
10	4.33lbs.	623.23lbs.

As far as the motion of a fish or a yacht through the water is concerned, this increased pressure has no effect whatever, nor should it have, as it is balanced, or the same in all directions; if the yacht is pushed astern by a pressure of 623lbs. on the fore end of her keel, she is at the same time pushed ahead by the same amount of pressure acting on the other end of the keel. The rudder turns as freely at a great depth as at the surface, the greater pressure still being balanced on its two sides. Contrary to a generally accepted idea, pressure has no effect whatever on the friction of the water upon the solid, which is the same at all depths. As a matter of fact, so far from the resistance being in any way increased by deeper immersion, it is materially diminished by the change from a partial immersion, the body being just at the surface of the water, and the complete submersion to a considerable depth; a much higher speed being possible under the latter condition, owing to the entire absence of one element of resistance, wave-making.

The idea formerly accepted, that there was a direct resistance proportionate to the greatest area of transverse section, and called head resistance, has been rejected in view of the demonstrations of Scott Russell and Rankine, and it is now positively known that there are but three elements of resistance:

First—Skin resistance, or that due to friction.

Second—Eddy-making resistance.

Third—Wave-making resistance.

There is, it is true, a small element of resistance due to the viscosity of water, not in the form of friction, but of resistance to change of shape of the particles as they pass by the hull; but this only comes into play in the case of small models moving at slow speeds. In the actual vessel it need not be considered, nor need the "air resistance" of the air on the hull and upper works.

The method generally followed in investigating the phenomena of resistance and friction between a perfect fluid and a floating solid is as follows: The body, of a symmetrical, fishlike form, pointed at both ends, is conceived as submerged to a considerable depth, and not as in motion through the fluid, but as stationary, the fluid flowing past it on all sides. At some material distance ahead of the body the water flows in parallel streams or lines, of normal velocity and pressure; but as the numerous streams approach the head of the solid they are deflected from their straight course, with a consequent loss of velocity. As they near the head of the solid, however, the velocity begins to increase, and continues to do so until abreast of the greatest breadth, when the velocity is greatest and the pressure least; from this point the velocity decreases as the tail of the solid is neared, until at a more or less remote distance the stream lines become perfectly parallel again, and with their normal pressure and velocity. It is capable of demonstration that the variations of velocity and pressure are inversely proportional, the one decreasing as the other increases, and *vice versa*. By this method of investigation, involving what is called the "stream line" theory first enunciated by Prof. Rankine, many important facts have been discovered. These assumed conditions, it will be perceived, differ widely from those found in actual practice, in which the water is not a perfect fluid, the surface of the solid is by no means free from friction, and the solid, being only partly immersed, the water in contact with it is subject to the pressure of the air on its upper surface, a constant pressure; in place of the pressure of adjoining stream lines, which, as has been noted, constantly varies with the velocity. This interchange of velocity and pressure which takes place about a completely submerged body finds expression about the actual ship in a new form; the pressure about the bow, for instance, is now unbalanced by equal pressure from adjoining stream lines, and as soon as it exceeds that of the atmosphere, 15lbs. to the square inch, it becomes visible in the form of an elevation of the surface of the water or of waves. Interesting as this portion of the subject is, we can barely allude to it here, as it is entirely too extensive to be discussed at length.

It is to the elder Froude that we are indebted for nearly all the facts now in the possession of naval architects concerning friction, the results of long and elaborate experiments conducted by him under the auspices of the British Admiralty. The special experiments on friction were made about 1870 by the towing in an experimental tank of boards $\frac{3}{4}$ in. thick, 19in. deep and of varying lengths up to 50ft. The results are summarized in the following table as quoted from Taylor's "Resistance of Ships."

LENGTH OF SURFACE OR DISTANCE FROM CUTWATER.												
Nature of Surface.	2ft.			8ft.			20ft.			50ft.		
	A	B	C	A	B	C	A	B	C	A	B	C

Column A gives the power of the speed according to which the resistance varies. Column B gives the mean resistance in pounds per square foot of the whole surface for a speed of 600ft. per minute. Column C gives the resistance in pounds at the same speed of a square foot at the distance from the cutwater stated in the heading. It will be observed that the resistance of the last foot in length in each of the four examples is decidedly less than

the mean resistance per square foot for the entire plane, a circumstance attributed by Mr. Froude to the fact that a certain amount of motion in the direction of the plane had been already imparted to the water about the end of the plane by the preceding portion. The value of the "coefficient of friction," as determined by Mr. Froude, is dependent on:

1. The nature of the surface of the solid.
2. The nature of the fluid, varying directly as the density for small variations, such as between salt and fresh water.
3. The length of the surface, decreasing as the length increases.
4. Temperature, decreasing as the temperature increases.

The coefficient of friction is entirely independent of the pressure of the water and the depth below the surface. This is a point which we would impress upon our readers, and another is the conclusion of the elder Froude, which is now generally accepted, that the friction upon the immersed skin of a vessel is equivalent to that upon a flat rectangular surface of equal length in the line of motion and area of equivalent to the vessel, and moving at the same speed.

Another important point that is not as generally known as it should be is that while in bodies moving at the surface of the water the bow should be longer than the run in the proportion of 3 to 2, in bodies which move entirely under water, such as the lead bulb of a modern yacht, the bow should be the shorter and blunter, about two-fifths in place of three-fifths of the whole length, as in fishes. This same fish form, with a bow but two-fifths of the length, is also the correct one for the cross section of any projection or brace moving entirely under water.

The researches of the Froudes are detailed in the various annual volumes of the "Transactions of the (British) Society of Naval Architects" since 1860; other valuable works of reference are:

- "Resistance of Ships and Screw Propulsion," D. W. Taylor, Naval Constructor, U. S. N.
- "Manual of Naval Architecture," Sir Wm. H. White.
- "Yacht Architecture," Dixon Kemp.
- "Ship Building, Theoretical and Practical," W. J. M. Rankine.
- "Forms of Fish and Ships," [Prof. R. H. Thurston, Trans. Soc. Nav. Arch., 1887.

YAMPA'S VOYAGE.—III.

New York to Gibraltar, 1895.

ON landing at the steps at the Custom House, we all found it rather hard work to walk, as we had been on the jump for so long. Knocked about the town for a while and then went to see the American Consular Agent, Señor Moreria, who is also Consul for Hawaii. There is a very large emigration from the Azores to Hawaii. While we were there a steamer left for Hawaii loaded with emigrants. All the friends and family connections of the emigrants came down on the Custom House wharf to bid them farewell, and the crying and screaming could be heard for miles.

On arriving on board Yampa again found she had been moored alongside of a dirty little Portuguese bark. She was just about large enough for one to sail on the lake in Central Park. We were securely moored with 1½in. chains, capable of holding the largest ship afloat. At night we went ashore and saw a play at the Opera House. As it was in Portuguese we found it rather tame, but the 400 of Ponta Delgada who occupied all the boxes were very interesting.

Next morning we hired a boatman for \$1 a day to do all the ferrying to and from Yampa, so that the crew would not be kept from their work. T. and I started to take the terrier ashore for a run; but the boatman said it was against the law and that we would have to get a permit from the Custom House before we would be allowed to land the dog. Went to the Custom House and they refused to issue a permit. From there we went to the American Consul and in fact pulled all the wires we could; but it was no go. The dog was quarantined on board ship during all our stay at Ponta Delgada, and all because years ago a dog from some vessel had gone mad on shore and bitten several others.

Crew at once started in giving the ship a general overhauling. We had two boat builders on board for several days fixing our life boat. Spent about eight days altogether straightening things up, etc. Also gave her a new coat of white outside, which improved her appearance wonderfully. We also fitted out with fresh provisions, water, etc. Everything was very cheap and fruits and flowers galore. Oranges, for instance, were 40 cents a hundred and delicious. There are several beautiful country places on the island that belong to rich Portuguese. St. Michael's is really worth visiting and the climate delightful.

Feb. 9.—Turned out this morning at 8 A. M., fine N. W. wind blowing, but rather cloudy. At 9 A. M. the pilot, with a gang of about twenty boatmen, came aboard to unmoor us. They were about the slowest people in the world, and the pilot, who was bossing the job, only seemed to have one idea at a time, and when that was carried out by the whole twenty, when two could have done it, he would think of something else and all hands would rush off to do that. As our second mate remarked: "They weren't fit to feed chickens." By 10:30 A. M. we were ready and started out under forestaysail. Soon after we set jib. When we were clear of the breakwater the pilot shook hands all around, and wishing us "bon voyage" departed.

There was quite a sea on outside the harbor, as it had been blowing from N. W. for a week.

At 11 A. M. set maintrysail and headed her for Gibraltar. At 11:15 A. M. put bonnet on squaresail and set it—we were dead before the wind, so downed headsails. Crew started in at once to rig life lines and coil away hawsers, etc.; also got both anchors on deck and lashed them to the windlass. Unrove chains and sent them below and put the plugs back in the hawsepipes. We were rolling quite a bit and the pup was seasick again. It rained a little off and on in the afternoon and set in rather thick. At 3 P. M. wind hauled more to the south'ard and we set jib, which steadied her somewhat. At 5 P. M. wind shifted to W. S. W., so we downed squaresail and set forestail and topsail. It started in to clear up soon after and we had a chance to see the sunset. T. felt rather squeamish and did not turn up for dinner, so I had mine alone.

* Wherever the word ton is used throughout these articles the "long ton" of 2,240lbs. is to be understood.

On deck soon after; a beautiful night and moon out in all its glory. Wind increased somewhat, and at 7:30 P. M. we clewed up and furled foretopsail. Sea still very rough, but we are doing 11 knots. At 10 P. M. it clouded over and started to rain again. At midnight it was still blowing and raining hard; Yampa under maintrysail, foresail, forestaysail and jib and doing from 10 to 11 knots; sea increasing all the time.

Feb. 10.—Wind continued about the same all early morning and sea picking up all the time. Rained a little off and on, and wind rather squally. Turned out at 8 A. M.; wind still W.S.W. and blowing quite fresh. Yampa under maintrysail, foresail, forestaysail and jib, and doing fine work. T. turned out as bright as a lark this morning, and ate a large and elegant breakfast. Rather a hazy morning and looks like rough weather. At 10 A. M. wind moderated somewhat, and we put foretopsail on her, which sent her along much easier. The sea was still running very high and we shipped one or two over our weather quarter, but they were not heavy enough to do any damage. At 11 A. M. we sighted an Italian bark heading E.N.E. and rolling like a log. She was under very easy canvas, and from the course she was steering was probably bound for England. No chance for a sight to-day, and we are working on dead reckoning. Wind continued about the same all afternoon, and we were doing about 10 knots all the time. Went aloft to look for "chums," but nothing in sight. Took a trick at the wheel for an hour or so. Did it for exercise, and got enough to last me for a week.

At 5 P. M. weather looked very bad, so we clewed up and furled foretopsail and made everything snug for the night. We have been making a very fast run. At 8 P. M. we had logged 360 miles from Ponta Delgada in 32½ hours, an average of a small fraction over 11 1-5 miles an hour, which is very fine work for a sailing vessel. It started in to clear off about 9 P. M., and by 10 P. M. the clouds had all disappeared, and the moon came out and made it almost as bright as day. Wind hauled more to the westward about 11:30 and gradually slackened up.

Feb. 11.—Wind kept gradually decreasing all the morning. At daylight we put foretopsail on her, which helped her along considerably. Sea had also gone down somewhat during the night, and we were slipping right along. At 8 A. M., on the change of the watch, we downed maintrysail and set whole mainsail. At 8:30 set maintopsail. Had a splendid sight at the sun for longitude. Crew spent all morning reeving off new chafing gear, etc. T. and I spent most of the morning making some more sand bags for the lifeboat. At noon had another good shot at the sun, and our position was lat. 35° 37' N., lon. 15° 48' W. Wind hauled a trifle to the southward about 1 P. M. It has been an ideal day, and all hands have been going about without coats on. Took a trick at the wheel for an hour or so, then went aloft and helped reeve off some chafing gear on the foremast head. At 4:30 P. M. took an azimuth and also a sight for longitude. Wind continued about the same all evening and sea was smoothing down all the time. The moon rose about 7:30 and made it almost as bright as day. Wind slackened up a bit about 10 P. M., but we were still logging about 8 knots. We are still carrying both topsails and hope to make a good run by noon to-morrow. At midnight wind hauled more to the westward and sea was smoothing all the time.

Feb. 12.—During the early morning wind hauled more to the northward and slackened up a bit. Had carried full sail all night and averaged 7 knots. Wind backed around again to due W. and was becoming lighter every minute. Spent morning doing some splicing, sewing, etc. At 10 A. M. set the weather part of squaresail, which helped her somewhat. Sea is fairly smooth now, but wind is so light that we roll around a good lot. Got a good sight for latitude at noon, and our position was lat. 35° 39' N., lon. 12° 30' W. Wind hauled dead astern at 12:30 P. M., and we downed foresail and forestaysail. Put bonnet on squaresail and set it. Sighted a bark about 1 P. M. off the lee bow. She was bound to the eastward, and we were overhauling her fast. As we neared her we saw that her foremast had been carried away just below the hounds. She sent up international code signal F. G. H. (what is your longitude brought up to the present moment?) and hoisted Norwegian colors. We jibed over and stood toward her. She proved to be the Columba, of Christiansand. We luffed up alongside her and told them the latitude and longitude, and also offered them assistance, but she was only ten days out from England and had plenty of provisions and water. When her skipper found out we were bound for Gibraltar he asked us to report him on our arrival and if possible to send a tug out for him, as he was bound to Gibraltar to make repairs. We promised to do so, and after saluting each other we continued on our way.

As we were going about 4 ft. to the bark's 1 ft. we soon had her out of sight. At 3 P. M. another chum hove in sight, she crossed our bow on the starboard tack within 200 ft. She was the Russian bark Chieftain, of Abo. We talked with her captain while she was within hailing distance. She was bound to Pensacola, Fla., in ballast. At 4:30 P. M. took an azimuth and also a sight for longitude. Wind now becoming very light. At 5:30 clewed up and furled maintopsail and downed mainsail to keep it from slatting. Set maintrysail. Another beautiful night; moon rose about 8:30 and wind died out completely. At midnight we were still becalmed and rolling about under maintrysail and squaresail.

Feb. 13.—Not a breath of air until 7:30 A. M., when a light breeze sprang up from S.S.W. Downed maintrysail and squaresail and set full sail. Got a sight for longitude at 8:45 A. M. Sea is very smooth to-day and the air is as balmy as June. At 10 A. M. we sent out the flying jib and bent it on. First time it had ever been set and it looks like a good sail. Wind was so light all morning that we brought the Winchesters into play again and managed to kill numerous bottles. At noon took the altitude of the sun and our position was lat. 35° 58' N., lon. 10° 37' W. Wind increased soon after noon and we were slipping along at a 7-knot gait all afternoon. Wind died down somewhat with the sun and it was 8 P. M. before it started up again. On deck until midnight. A beautiful clear night, but a very heavy dew falling. We are doing about 6 knots.

Feb. 14.—Carried the same sail, and wind was steady until 4 A. M., when it hauled a trifle more to the westward. Sea still as smooth as glass. Turned out at 8 A. M. Another fine day. Wind hauled to S.W. by W. about 9:30 A. M. and we set jibtopsail. At 10 A. M. set fisher man's staysail and we then began to get a move on

Crew started in to straighten things up a bit. Stowed trysails in the lazarette and coiled away spare lines, etc. At 11:30 sighted two steamers ahead of us, and both bound our way. We kept picking them up every minute. Had a good sight at noon, and our position was lat. 36° N., lon. 7° 15' W. If wind holds out we will be in Gibraltar to-night.

Breezed up a bit about 1 P. M., and we are now doing about 11½ knots. At 2 P. M. we had passed one of the steamers, and were bringing the other down to us very fast. At 3 P. M. we had passed her and were going about 13 knots. Sighted Trafalgar Point off the lee bow at 3:30 P. M. An hour afterward we sighted Cape Spartel. Kept on going like a race horse, and at 5:30 P. M. we dipped to a French man-o'-war that was coming out of the Strait. She returned our salute. At 6 P. M. we took in maintopmast staysail and jibtopsail. Then got all our ground tackle ready. At 6:30 clewed up and furled both topsails. We were going through the Strait like a torpedo boat, and at 7 P. M. were abreast of Tarifa Light. At 8 P. M. we downed foresail, gybed over, and stood into Gibraltar Bay after giving Pearl Rocks a wide berth. At 9 P. M. we were abreast of the New Mole, and rounded up and let go the mainsail. Stood inside the breakwater under forestaysail and jib, and picking out a good berth next H. M. S. Gleaner, we let go the hook at 9:15 P. M., and our voyage across the ocean was ended.

W. IRVINE ZEREGA.

Tarpon Springs Y. C.

TARPON SPRINGS, Fla., Feb. 2.—*Editor Forest and Stream:* While you of the frozen North cling close to the base burner, with brief, shivering glances through frost-covered windows where the eye finds nothing more inviting than snow or ice, we of the sunny South are enjoying balmy breezes, bright sunshine and sparkling waters.

Hard, isn't it? We pity you, but we are so driven with hunting, fishing and boat sailing that we've only time for a single tear.

Have had some quite cool weather, but now 'tis simply grand. Not an hour of the twenty-four but can be comfortably enjoyed in the great outdoors. To be sure we feel the hard times, but fish are plenty, deer and turkey to be had for the shooting, and the waters of bayou and bay with their ripple of gladness challenge for a sail.

Verily, our lines are cast in pleasant places. By the way, speaking of deer and turkeys, Johnny Bailey, one of our local guides, last week shot and killed three deer and three turkeys with four shots. How high was that?

But boat racing just now seems to interest the boys more than anything else. We have two new boats this season: a Boston cat, the Fawn, built by Hutchins, and the Mermaid, built by an amateur. The Mermaid is something like the Gobiin, and is of the following dimensions: 20 ft. over all, 15 ft. w.l. and 8 ft. beam; slip. rig. She has proved quite fast, and promises to make sport for the boys this winter. She spreads 480 ft. of canvas, and carries it well. Just now the Tarpon Springs Y. C. are laboring over new sailing rules.

The club have a fine fleet of boats and deserve some plain and fair sailing rules, but they can't seem to get at anything that will suit everybody.

I wish FOREST AND STREAM would devise some rules that would fit sawed-off catboats, long overhangs, limited and unlimited sail area, bouncers, sharpies, tuck-ups and catamarans. Can't you do it?

The way it is now, the man who gets beat kicks at the rules. The man who comes in ahead is perfectly satisfied.

It don't matter to me, for I'm not a racer, but I like to see peace in the family. But we all have trouble, even our Mr. Hough has some one pitching into him, but then I have been looking for him to have trouble ever since he told that Kekoskee fish story.

Well, I thought I had something to say when I started out, but really I've forgotten what it was.

Very unfortunate ending to the Dunraven affair, that's what we all think here. That's the worst of all racing, the beaten man always thinks he is ill used, but that is human nature.

TARPON.

Just How It Happened.

"Hon. E. J. Phelps, Chairman, and Members of Investigation Committee, New York Y. C.:

"GENTLEMEN: I have received a cable message from Mr. Bennett directing me to inform your committee that he was very much astonished and annoyed at the *Herald's* premature publication of the investigation evidence, and he greatly regrets it.

"As soon as he was apprised of the publication he telegraphed to the city editor of the *Herald*, who had just arrived at Nice from New York, expressing his surprise and disapproval. His explanation is that several reporters had been detailed from the commencement of the case, and they had been instructed not to touch upon anything the club could find objectionable, but one of the reporters must have accidentally obtained the report late at night, and in the absence of the editor usually in charge of such matters it was unfortunately printed. Respectfully yours,

"GARDINER G. HOWLAND,

"General Manager, New York *Herald*."

This lucid and satisfactory explanation, which completely exculpates the *Herald* from an intentional wrongdoing, incidentally bears proof to the magnificent organization of the *Herald's* establishment. Though this voluminous report, covering nearly 600 octavo pages, was only obtained by a reporter "late at night," and in the absence of all responsible heads, a carefully prepared abstract was printed, covering four full pages of the *Herald* and illustrated by nineteen portraits of the special committee and others connected with the inquiry; and this not only in time for the city edition, but for the out-of-town, which goes to press considerably earlier.

Ogdensburg Y. C.

THE St. Lawrence River from Kingston to Ogdensburg has long been noted for its racing men, but the once popular racing skiff has recently fallen into disuse owing to the expense of racing and the large crews required. The Spruce-Ethelwyn races were watched with deep interest by the yachtsmen of Ogdensburg and other towns on the river, and since last fall the idea of establishing the same class has been under discussion. It has just taken definite form in the organization of the Ogdensburg Y. C., which took place on Wednesday evening, Feb. 5, the following officers being elected: Pres., Hon. E. A. Newell; Com., S. Gilbert Averill; Vice-Com., Wm. F. Post; Regatta Committee, Capt. D. H. Lyon, Messrs. Geo. Hall, A. R. Porte, F. Chapman and J. G. Fraser; Finance Committee, Hon. E. A. Newell, Messrs. S. G. Averill, E. L. Strong, J. A. Seely and S. Wilson.

Arrangements were made to hold an international race for half-raters at Ogdensburg some time during the first week of July next, and a vote was passed to offer a \$500 challenge cup, to be called the Ogdensburg cup, to be raced for annually. It is expected that those half-raters now being built in Canada for the purpose of entering the trial races of the Seawanhaka-Corinthian Y. C. will also compete for the Ogdensburg cup, and the owners of Ethelwyn have signified their intention of entering, and the English challengers for the Seawanhaka-Corinthian Y. C.'s cup will be invited to enter the race. There are several new half-raters being built on the St. Lawrence River. The race is open to all amateurs, and will be governed by the Seawanhaka rules.

Rifle Range and Gallery.

New York Police Revolver Practice.

DURING the first five weeks of practice at the police school for instruction in revolver shooting, under the supervision of Sergt. Petty, 1,660 men have gone through the mill. Of these only about 1 per cent. have scored 65 out of a possible 75 on the 100 yds. Creedmoor target at a distance of 10 yds. This record needs no comment, showing as it does in such startling relief the inefficiency of the force as marksmen and their vital need of training. Six months hence it will be interesting to compare these first scores with those made after practice under the efficient coaching which the men receive. Too much cannot be said in praise of Sergt. Petty's intelligent management of all the details. To cite a single instance, he has saved the city already several hundred dollars in the cost of ammunition. All the cartridges used are loaded at the range by the officers in charge, and the cost per thousand is so small that if given here few would believe it. Ninety per cent. of the lead is saved and remoulded into bullets, which, owing to this economy, cost the Police Department less than 8 cents per thousand. With the appliances now in use, a number of

which are original with Sergt. Petty, two men load 3,000 cartridges in less than two hours, a supply sufficient for two days.

Thirty-two thousand rounds have been fired since the opening of the school, Dec. 30.

At the recent civil service examination for promotion Mr. Petty stood fourth on the list among nearly 100 roundsmen examined, with a credit of 92.65 per cent., and he was one of the first promoted to the rank of sergeant.

New York Rifle Club.

NEW YORK, Feb. 5.—The New York Rifle Club has held two shoots since the commencement of the year. The first one was held on Jan. 26, the second was held this evening at the club's headquarters, 219 Bowery. The two best scores made by the members present on each evening, together with his score on the target of honor, are given below:

	Jan. 26.	Honor Target.	Feb. 5.	Honor Target.
D Crocker.....	244 240	65	241 239	67
Wm Uhler.....	243 240	71	242 241	67
R J Young.....	242 241	67	245 243	73
E B Barker.....	236 233	66

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Feb. 19.—NEWARK, N. J.—One hundred target handicap race, under the auspices of the South Side Gun Club.

Feb. 21-22.—ROCHESTER, N. Y.—Tournament of the Rochester Rod and Gun Club; targets; team match, Rochester versus Buffalo, on Feb. 22. E. D. Hicks, Manager.

Feb. 21-22.—MEMPHIS, Tenn.—Winter tournament of the Memphis Gun Club; live birds and targets.

Feb. 22.—ROCHESTER, N. Y.—Return match at targets between teams of the Rochester Rod and Gun Club and the Audubon Gun Club of Buffalo.

Feb. 22.—MARION, N. J.—All-day shoot of the Endeavor Gun Club; targets.

Feb. 22.—MAPLEWOOD, N. J.—All-day shoot of the Maplewood Gun Club; morning—live birds; afternoon—targets.

Feb. 25-26.—ELIZABETH, N. J.—Sixth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.

Feb. 27.—DUNKLEEN, N. J.—First tournament of the New Jersey Trap Shooters' League; League team race at 2 P. M.

Feb. 27-28.—DAVENPORT, Ia.—Forrester Gun Club, live birds and targets, open to amateurs only. J. F. Kroy, Sec'y.

March 18-21.—BAYCHESTER, N. Y.—Tournament of the Cobweb Gun Club; targets and live birds. F. L. Train, Captain.

March 24-26.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap, at live birds at Elkwood Park; \$1,000 guaranteed in the main event, all surplus added.

March 31-April 2.—ELIZABETH, N. J.—Target tournament under the management of Neaf Appar and C. C. Hebbard.

April 14-16.—CHARLESTON, S. C.—Tournament of the Interstate Association, under the auspices of the Palmetto Gun Club.

April 14-17.—ATCHISON, Kansas.—Thirteenth annual open to all, and second annual manufacturer's amateur tournament; \$1,000 added money and manufacturers' prizes. Lou Erhardt, Sec'y.

April 20-24.—HOUSTON, Texas.—Twentieth annual tournament of the Texas State Sportsmen's and Game Protective Association. J. Emmett Haney, Manager.

April 21-24.—OMAHA, Neb.—Nebraska State Sportsmen's Association's annual tournament; \$1,000 added to the purses. Frank S. Parmalee, Sec'y.

April 22-24.—WELLINGTON, Mass.—Tournament of the Boston Shooting Association; targets. O. R. Dickey, Manager.

April 28-30.—JOPLIN, Mo.—Annual Owl Shoot of Kansas and tournament of the Missouri Trap Shooters' Association; also open-to-all programme; \$1,000 added to the purses. W. G. Sergeant, Sec'y.

April 29-30.—BIRMINGHAM, Ala.—Interstate Association's tournament, under the auspices of the Birmingham Rod and Gun Club.

April 30-May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

May 5-6.—BEDFORD, Ind.—Annual tournament of the Bedford Rod and Gun Club. R. B. Braxton, Sec'y.

May 5-6.—ALGONA, Ia.—Annual tournament of the Algona Gun Club.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; \$2,000 added money.

May 12-15.—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, \$2,000 added money.

May 12-14.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co. R. S. Waddell, Agent.

May 20-24.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

May 22-24.—MISSOULA, Mont.—Annual tournament of the Montana State Sportsmen's Association, under the auspices of the Missoula Rod and Gun Club. Will Cave, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 28-28.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club; nobody barred; targets. Royal Robinson, Sec'y.

May 30.—CANAJOHARIE, N. Y.—Tournament of the Canajoharie Rod and Gun Club; targets. Chas. Weeks, Sec'y.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 1-6.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. B. Meyers, Sec'y.

June 3-4.—NATCHEZ, Miss.—Interstate Association's tournament, under the auspices of the Gaillard Sporting Club.

June 8-13.—BUFFALO, N. Y.—Thirty-eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 9-11.—DAVENPORT, Ia.—Annual tournament of the Iowa State Sportsmen's Association. R. B. Cook, Sec'y.

June 10-11.—FAROO, N. D.—Second annual tournament of the North Dakota State Sportsmen's Association; targets; \$500 added money. W. W. Smith, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlain Cartridge and Target Company. Targets thrown free; \$770 in cash also added to the purses.

June 23-26.—PITTSBURG, Pa.—Tournament of the Pittsburg Gun Club; targets; \$500 added money.

June 30-July 2.—WOPSONONOCK, Pa.—Fourth annual tournament of the Altoona Rod and Gun Club; targets. W. S. Bookwalter, Sec'y.

July 22-23.—PORTLAND, Me.—Interstate Association's tournament, under the auspices of the Portland Gun Club.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Aug. 4-6.—CHICAGO, Ill.—Tournament of the Du Pont Smokeless Powder Company. E. S. Rice, Mgr.

Aug. 26-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

402 SECURITY BUILDING, Chicago.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, SATURDAY, FEBRUARY 22, 1896

VOL. XLVI.—No. 8.
No. 318 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page v.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream one year and the set of four pictures, \$5.
Forest and Stream 6 months and any two of the pictures, \$3.
Price of the pictures alone, \$1.50 each; \$5 for the set.

Remit by express money order or postal money order.
Make orders payable to

FOREST AND STREAM PUB. CO., New York.

RECREATION AND THE BUSINESS HABIT.

LONG occupation in business day after day, week after week, month after month, which passing away make the procession of the years, at last becomes a habit, inflexible and dominant. The habit of work cuts out its own channel through life, and the slave of it, following the narrow course of habit, misses much of the beautiful, ignores the recreation of his physical and mental well-being, acquires false estimates of humanity and perceives but little of the embellishments and refinements of life.

A man who has a business habit to the exclusion of all other habits sees largely but one side of human nature—the coldest side—the side which is incessantly commercial and striving for material gain. In the competition of business there is no place or time for diversion or the play of the finer sentiments. Buying and selling, working and paying, with the constant undercurrent of care which links the responsibilities of to-day with the possibilities of to-morrow, are serious occupations and exclude all else from the mind. It is proper that it should be so in actual business. The serious problems of life deserve serious consideration and attention. The mistake is in making life all serious without relaxation. It is not inherently all seriousness. It should not be all grim and hard and laborious. Nature has her serious exactions, but she is also profuse in the beautiful and pleasing. The earth is in beautiful dress, colored in a profusion of delicate tintings and shadings, blending exquisitely and never out of harmony. The flowers, beautiful in themselves, have pleasing odors. The birds, animating the stillness of the air, have sweet songs which please the ear—in short, in nature there is everything to afford wholesome pleasure to the senses and health to body and mind. There is that in the air, in the woods, in the waters, from which man can derive new life, new inspiration and a better understanding of nature and of his fellows.

The habit of business excludes all these. It holds the devotee to the sordid of life. Everything is then rated according to its commercial value, or having none, it has no value at all.

The slave of the business habit comes to think in time that he cannot leave his business without ruin supervening. No one, he thinks, can manage his business but himself. Obnoxious competitors must be watched. The business world would suffer by his absence or inattention. These and many other excuses he has. But the material lessons of life teach us every day that the world at large misses but little or not at all any one man, no matter how exalted.

There are men who love the sports of land and water, and who were ardent in their practical sportsmanship till they convinced themselves that business cares excluded all recreation. As year after year passed business theory grew into business habit and they drifted further and further away from healthful recreation, the enjoyment of the beautiful in nature and faith in their fellow men. The gun and dog and rod and boats were left to wear out in inaction.

There are homely yet healthy sentiments of the masses brought forth from the wisdom of long experience, yet so trite that they are self-evident truths. Of these none is more valuable than that "All work and no play makes Jack a dull boy." Jack at work is in a narrow channel;

Jack at play is in the midst of nature and his best development.

Break up the business habit. Take out the old gun from its case or the fishing rod from its forgotten corner. Put the one to your shoulder or cast a fly with the other, and you will be living pleasant parts of life over again. Take the old dog afield and see his youth return. Have the duck boat repaired; overhaul the decoys. Do not permit the tents to mildew. Swab out the rifle and look through the sights. See if the canoes need mending. If one can do these things without feeling a thrill of the old spirit returning, then the business habit is chronic and the patient is in a bad way.

When the impulse is on, resolve to go forth again in the proper season into the fields and forests, or on the waters, and enjoy the sports so bounteously provided by generous nature. Resolve to go and go.

The business habit enslaves men of wealth and men of talent more than any other class. The business habit gradually eliminates all else but business. It becomes a dominant master, cruel, merciless and exacting. It wears its victim out before his time. Old age comes at middle life, and youth is so short it is hardly recognized before it is gone. Break up the business habit when it is masterful and life is made both wider and longer, besides being more beautiful, more ennobling, and more worth living for one's self and for others.

FREE SEEDS AND FREE FISH.

WE notice that the galleries of the United States Senate are being treated to perfervid oratory on the great question of seeds or no seeds. As everyone knows, Secretary Morton, acting under the advice of the Attorney-General, has refused to send out the customary quota of seeds which Congressmen have been accustomed to regard as one of their perquisites. When this seed business was started by President John Quincy Adams, it was intended to be for the introduction into this country, for distribution and experiment, of valuable seeds not known here. From this original purpose the distribution has long since diverged and undoubtedly has involved a squandering of the public moneys for the private benefit of individuals.

But now that the Senators are discussing the seed distribution by the Secretary of Agriculture, it might be well for them to investigate also the distribution of public fish to private waters by the United States Fish Commission in compliance with senatorial demands. The Washington Times had a funny story, which we printed last week, of a Congressman who was importuned by one of his constituents for free fish, and who, apparently not having been let into the fish trick, did not understand the reasonableness of his constituent's request; but sent him some fishhooks instead. This proved to be a serious mistake, for the gift to one was quickly followed by requests from others who thought that, as stalwart members of the party, they too deserved free fishhooks. There is no more reason under heaven why a Senator or a Congressman should give to a constituent a free lot of fish which have been raised at public expense than that he should distribute fishhooks bought with funds appropriated from the United States Treasury. The expenditure of public money for such private purposes is dishonest in principle, and an imposition on the people. It ought to be stopped short off.

SNAP SHOTS.

The so-called National Game, Bird and Fish Protective Association held its annual "convention" in Chicago last week. A report of the affair is given in another column. There were ten persons present; whether all of them were members does not appear. There was as usual some wrangling over petty affairs, while nothing whatever was done of national scope; and as usual the two or three enthusiasts who have banded themselves together as a "national" body improved the occasion to scold at everybody else who would not take hold and boost their enterprise. The reason for their being left so severely alone they ascribe to game protective apathy. That is humbug. The true reason is that no sane man has any confidence in their mode of effort, in their wrangling and inconsequent "proceedings," in their Alaska duck-egg fakes, in their pretensions, powers, practicabilities or possibilities. The scheme is not one that appeals to common sense; there is nothing in it to deserve the serious attention of men who really want to protect game and fish.

Under the present law New York has a Board of Fish-

eries, Game and Forest Commissioners, made up of a president with a salary of \$5,000 a year and four others with salary of \$1,000, the entire salaries and allowed expenses making an aggregate of \$18,900. A bill has been introduced to readjust the salaries and the expense account thus: Five Commissioners, each \$2,500, \$12,500; for expenses, each \$800 (limited), \$4,000; one assistant secretary, \$1,800; expenses secretary (limited), \$200; total, \$18,500. The proposed amendment drops the secretary, retaining the assistant secretary, and provides that one of the Commissioners shall be designated by the board as secretary without extra compensation, who shall devote his whole time to the duties of his office while so designated. It also abolishes the office of assistant fishculturist. The measure comes from the present Commissioners themselves; and they have filed with the Legislature a brief setting forth their reasons for recommending the change.

The work of the consolidated Commission is now divided into five departments, and these are under the charge and control of committees who through their chairmen manage the respective interests. The five committees have to do with Forest Preservation and State Lands; Hatcheries, Fishculture and Game; Shell Fisheries and Licenses, Executive and Financial Affairs, Legislative Affairs. It is represented that there is a growing amount and detail of work in each of these several departments. The demands of the office are so constant and absorbing that all the five members of the board have actually and necessarily spent from eighteen to twenty days of every month in the performance of their duties. "All of the members," says the brief, "have been and must be working members, and no one will claim that one has done or must do more than another. In view of the foregoing facts, we think it both just and proper—especially as it can be done without extra expense to the State—that a readjustment of salaries be made which shall fairly and equitably recognize and compensate for services rendered by each and all of the Commissioners, and at the same time add to the efficiency of the service."

These claims appear to be reasonable. The readjustment would not increase but would decrease the total expense, and it would provide a fairer scale of recompense. The present scale of salaries, by which the president of the Commission receives \$5,000 a year, has always savored of a job; it is to the credit of the present incumbent of the office if he does his best to earn his salary, but it may be questioned whether he actually does or even could possibly earn five times as much as any other member.

And now comes a man from Michigan who asks us to tell him whether it is truly sportsmanlike to go moose hunting when one employs a guide to lead him to the fateful spot and to call up the game to its doom. There is more than one way of looking at it. If the moose hunter sets out alone, selects his own calling station, lures his own moose, shoots it and brings it out, he performs a feat which is more skillful than it would be merely to shoot when the guide nudges "now." And if one secures his game by still-hunting without having recourse to the deceptive call, so much the higher must we reckon his grade in the degrees of woodcraft.

But to know the moose country, to acquire the art of calling, to go into the wilderness alone and unattended, and to gain the trophy of the hunt unaided, all these require long practice, and practice means time. The art of hunting is not to be picked up in a day. The masters of the craft are not those whose life work lies in other fields, and whose hunting days are few, brief and far between. For most of us moose hunting is only one of the incidentals of life, not a steady business. If, when the long looked for opportunity does offer, we must do it all by ourselves, without the assistance of those who make hunting their occupation, most of us would necessarily despair of ever seeing a wild moose, and by no possibility save that of pure chance could we ever get within rifle shot of it. If we win our moose at all we must have professional help, and if to employ help is, as some claim, to put us outside of the ranks of sportsmanship, we shall be obliged to make choice of the empty credit of being a true sportsman, or on the other hand of the more substantial and on the whole more satisfactory gratification of having a moose head to show our friends and tell tall yarns about.

The Sportsman Tourist.

UNCLE LISHA'S OUTING.—XIII.

"The wild duck, as he scuds along,
Seeth thine eye of black,
And cries with shrill, despairing tone,
"Do n't shoot, old boy, I'm coursing down;
I know you, Cousin Jack!"

"HERE'S another duck o' your'n," Sam addressed the stranger as the other boat drew near. "You 'pear tu git ev'ry bird 'at you 'pint at."

"No, not quite," said the gentleman, for such he was, and a handsome one too, with keen black eyes and finely cut features and an easy graceful bearing. "I've heard of men who did that and heard them tell of doing it, but I never saw them do it. But you'd better take this bird, you're quite welcome to it."

"No, thank ye," said Sam, "me an' this man's a-gittin' more shots 'an we c'n 'tend tu. My, you'd ortu seen us make the feathers fly up the East Slang." Sam felt that open confession might ease his soul.

"Don't you tol' him, Sam," Antoine whispered hoarsely. "Oot we shem 'nough for had we an' de dauk know it?"

"Wal, go ahead, mister," said Sam, and the other boat took the lead.

"He hain't got him no gre't of a paddler," Sam remarked as he watched the clumsy propelling of the larger craft, paddled now on one side, now on the other. "I sh'd like tu put him raound a spell."

There were ducks enough scattered among the wild rice to afford fair shooting, though the great flocks had returned to their daytime haunts, the dusky ducks to float on the wide waters of the lake or to bask on its rocky shores, whither the teal accompanied them, while the wood ducks congregated in the embowered lagoons of Lewis Creek, the South Slang and Goose Creek. There, in listless enjoyment of seclusion, they swam lazily in the shallow pools, checkering the green scum of floating duck weed with a network of water paths, or sat in sleepy rows along the mossy trunks of fallen trees, oftener disturbed by a swooping hawk or prowling fox or mink than by man, the enemy and destroyer of nature.

Sam marveled at the celerity with which his rival made his shots, only missing often enough to prove that there was no magic in the skill which Sam expressed admiration of, in spite of the humiliation of seeing himself so far outdone.

"By the gre't horn spoon, he's a buster!" he exclaimed, as two ducks, rising at once on either side of the channel, responded to a double shot with folded wings and a downright fall. "But I sh'd like tu try him a hack with a rifle."

"Oh, t'under, Ah'll tol' you it was jes' he's gaun," growled Antoine, contemptuously. "F Ah'll had gaun sem lak dat Ah'll show you, me."

"I s'pose his gun does ha' suthin' tu du with it, but I swan I b'lieve arter the ducks git him l'arnt, they'd jest faint away and tumble daown if he p'inted a stick at 'em."

Sam and Antoine ran the canoe among the rushes under the willows of the lower landing alongside the craft of the sportsman, who had preceded them by twenty minutes and was now at the foot of the cliff with his boatman making preparation for dinner, the first plucking a fat young wood duck, the other gathering dry fuel out of the abundance of driftwood.

"Naow, mister," said Sam, as he fed his admiring eyes on the handsome English guns whose like he had never seen before and his fingers itched to lay hold of, "why don't ye come up tu aour fire an' cook your dinner? It'll save ye a lot o' fussin', an' Joseff 'll be mighty glad o' them feathers you're a-wastin'. He come a-feather huntin', leastways he's a-savin' of 'em for tu keep his wife good natured. Fetch your stuff right up where it's handy cookin' an' we'll put a couple o' extry 'taters in the kittle for ye."

The stranger was drawn to Sam by the attraction of one honest sportsman to another and therefore nothing loth to accept the invitation. Carrying the half-plucked duck in one hand and one of the guns in the other, and followed by his man carrying a covered basket, he climbed the steep path with his host in the lead.

They found the camp untenanted, for Uncle Lisha and Joseph had not yet returned from a land expedition along the shore in the direction of the Slang bridge, upon which they had set forth with the intention of stalking ducks in the pond holes of the marsh or lying in wait for incoming flocks.

Antoine soon had a fire blazing on the stone hearth, which he shared with the guest in the preparation of the two dinners. The gentleman now proved himself a thoroughly accomplished sportsman, for when his end of the fire sank to a glowing bed of coals he broiled his neatly dressed duck as skillfully as he had killed it, and its delicate aroma asserted itself above the grosser odor of Antoine's cookery. When the double meal was served he made two-fold return for the acceptable potatoes in dainties from his basket, and when all were so well fed that necessity of providing another meal seemed too distant to be worth thinking of, he passed around cigars that were more fragrant than roses. While all but he smoked them with the awkwardness of unaccustomed use, he half won Sam's heart with well-told tales of his shooting adventures in all parts of the country, and completed the conquest by interested listening to Sam's stories.

When Sam hinted he would like to paddle him up the South Slang the offer was gladly accepted. So the two set forth in the sportsman's boat, leaving his boatman and Antoine to amuse themselves as they would, an arrangement to the liking of both, as it gave Antoine an opportunity to ask many questions, he being tormented with an itching curiosity as much as any Kankee ever was, and the boatman, a lazy fellow, would as lief be paid for doing nothing as for earning his money.

Sam plied his noiseless paddle with right good will up the narrow channel, whose brown waters here and there turned sharply in its almost currentless course to long curved or straight reaches that ended in other turns among the rice and sedges. Now there would be a stillness that was absolute but for far-removed sounds of farm life or the skyward scream of a hawk, a mote of bronze slowly circling as if adrift in an eddy of the upper air; or, nearer, some unseen stir of life among the rushes, the slow scratch of a weed against the boat's side or the

smothered gulp of a disturbed mud fish beneath the prow. Then the silence was broken suddenly enough to startle the steadiest nerves when splashing and fluttering, squeaking or quacking in wild alarm, wood duck or dusky duck tore its way upward through their tent of sedge or rice-stalks. Then the ready gun made its quick selection, puffed out its smoke and thunder, answered itself like an echo with a second report, and two ducks dropped back limp and lifeless within the circling wavelets of their own uprising, while the echoes rebounded between the wooded shores, and far and near frightened ducks arose, bitterns took wing with guttural squawks, rails set up a clamorous cackle, and for a few moments the marshes were alive with noisy commotion. Then, while the echoes died in the distance, the ducks settled again in the marsh further before or behind the boat, the babble of the rails ceased, the last wads were driven home with a diminuendo of hollow thuds, and after the sharp click of the recapped locks the silent boat moved on into a new silence again and again to break it. Now it slid under the low span of a bridge, now came to the mouth of Goose Creek, almost closed between its jams of floating bog that undulated with the boat's wake with a faint rustle of sedgy swells. As the craft squeezed its way up this narrow water path, here closed by a movable island of bog that was swung aside like agate to give them passage, there crowded by a tangled jungle of button bush, the hunters saw in trodden ooze and the windrows of shed plumage evidence of the throngs of waterfowl that made this natural fortress their nightly resting place. There were now only a few stragglers—early to bed or late to rise—one of whom, cut down at long range, they had infinite trouble to retrieve by wading over the treacherous bog.

In one place a woodcock had bored the muddy margin with his long bill and chalked it with his sign, which was scarcely noted before he sprang with a twittering whistle and was cut down with a snap shot of the alert sportsman. Then for the first time Sam had an opportunity to admire and closely inspect what had until now been but an elusive, vanishing myth, and wondered why his new friend should float more over this little bird than over a great duck. Yet he himself had just declared that he would be prouder to kill a wild goose than to kill a bear, as much to the astonishment of the other.

They followed the crooked labyrinth of Goose Creek till it forked into two branches, both too narrow to give passage to anything bulkier than a duck or muskrat. They made their way back to the Slang, which from this point to its source was the eastern boundary of a large tract of primeval forest, a level sameness of gloomy ever-green woods.

Where the channel parted in two unboatable tributaries, one coming out of the cold heart of the forest, the other from the sunny bosom of the fields, the Indians had made their camp. A number of stretched muskrat skins were hung about it, the thin smoke of the spent fire drifted up among the hemlock boughs, the canoe was drawn up to the bank with its two paddles stuck in the mud beside it, and the two Waubankees, full heirs of their wild forefathers' laziness, were pottering indolently over some piece of handicraft.

"They're a-makin' a canew," Sam said, after watching them a little; "want tu go an' see haow they du it?" and his companion assenting, he turned the boat inshore.

The Indians were aware of the approach of visitors, but gave no sign of it when the boat ran alongside the canoe and the occupants stepped ashore, nor till they had come close to them, where they were kneeling on a patch of hard trodden bare earth. Then Sam's old acquaintance turned his good-humored face to them a moment and greeted them with a low-spoken "Quiee," but his sullen companion did not lift his eyes from his work.

The top frame and gunwales and cross bars of a canoe lay on the leveled piece of ground, and the Indians were driving stakes at the ends and at the interstices of the cross bars. Having accomplished this, they filled and lighted their pipes and deliberated upon the next step to be taken in the task, conversing in the soft, low tones of their own language. At last he of the sour visage picked up a hatchet and went into the woods, which unfolded him out of sight in their shadowy embrace as if he belonged to them. It did not seem likely that the white men were to see more of the art of canoe building to-day, and so Sam's friend bought a couple of bows and a half a dozen arrows for his two boys; waiting till Tocksoose finished the last with a crooked knife they re-embarked and set forth down stream as the shadows of the hemlocks were crawling up the eastern bank.

"Now, Lovel," said the sportsman, "I want to show you that I can handle a paddle too, so give it to me and you take my gun and see how it suits you."

Sam was as happy with the beautiful gun in his hands as a lover with his sweetheart and fondled it with as much delight, sighting it on various inanimate objects and trying again and again the smooth elastic movement of the locks. An awkward splash of the paddle, that was for the most part fairly well handled, startled a duck to flight at long range, and Sam pottering a little over his aim made a clean miss. At the report, one nearer, but dozing over his crop full of wild rice, floundered to flight through the rent bower of sedges. Sam covered him neatly, but his finger found the wrong trigger and there was only a hollow snap of the empty barrel. Yet he kept his wits enough to make a second trial and the big dusky drake came down with a downright splash that told of sudden and merciful death.

"A good shot," was the sportsman's commendation as he turned the boat's prow into the weeds, but Sam was not very proud of it after a bad miss and a worse blunder.

"The's a'most tew many trickers for my fingers," he said as he retrieved the dead bird with an oar. "The gun can't du it all, if it is an almighty good one. It wants the right man behind it."

"It's got a very good one there," the gentleman said, "All the trouble with him is he has learned to shoot a rifle too well to cut loose without half taking sight, as we shot-gun fellows do."

So few ducks had come in since the up stream passage of the hunters that it was scarcely worth while to be on the watch for them, and they both paddled leisurely down the channel, chatting as they went, while the one smoked his fragrant cigar, the other his satisfying pipe.

"How would you like the life of our red brethren back there?" the sportsman asked.

"Wal, they don't appear tu be fretted much," said Sam.

"No, they're contented; food enough for to-day and a few pipefuls of tobacco; rich with a hundred muskrat skins. Perhaps it's the happiest life a man can lead, and perhaps the happiest is the best."

"Wal, no," Sam dissented. "It'll du well 'nough for a play spell naow an' ag'in; but it hain't jest the sort o' life for a stiddy business, leastways not for white men. O, I d' know, if a man hadn't nob'dy but himself and things hadn't gone jest right with him, but not if the's anyb'dy 'at he cares for. I hev wished I was an Injin, but I don't naow. An' I've tried it tew, for a fortni't runnin', up t' other Slang. An' it beats all haow easy a man settles daown tu that way o' livin', an' I b'lieve a man's consid'able like a tame fox—onct he gits loose he gits wild ag'in mighty easy. I feel it a-comin' on every time I git int' the woods, some sight or some smell 'at you can't sca'cely see ner smell a-wakin' up suthin' that's b'en asleep sence the Lord knows when. 'T wa'n't in my father, an' I do' know's it was in my gran'ther, only as he hed tu hunt some for a livin'. 'T ain't no wonder 'at you can't tame an Injin so 't he'll stay tame, wi' a hundred generations o' wild blood a-rarin' up in him wus 'n we c'n guess. An' 't ain't none tew easy for us tu quit livin' that way arter bein' in 't a spell. Why, it's jelluk leavin' the hum 'at I was born in an' reared in tu clear aout from a camp 'at I've stayed in a week, an' if I come acrost it arterwards it makes me feel sort o' lunsome." He blushed through his sunburns and laughed a little bashfully at his confession of weakness, but the smile on his companion's face was sympathetic.

"Yes, we've got a drop of the old wild blood in us," the latter said, "and for my part I'm thankful for it, and I don't take greatly to folks who haven't got it or are ashamed of it. Of course it won't do to let it get the better of us all the time, for there isn't much bread and butter in it, but it isn't best to smother it out. It's good sauce for the bread and butter."

"No, it won't du," Sam said with a sigh of resignation. "A man 'at don't du nothin' much but hunt an' fish an' trap is lieber tu be a pooty shif'less creetur; clever an' good natured mebby, but turrible shif'less. Like's not I'd ha' be'n one of 'em myself if it hadn't ha' be'n fer hevin' a good woman, not tew sot, but reason'ble in goin' ag'n it. As a gin'al thing women folks 'pears tu be kinder unfavorable tu huntin' an' haoun' dawgs an' sech, an' I d' know but they was made so a puppus tu keep us kinder in baounds. Then ag'in the's women 'at it's enough tu drive a man off int' the woods tu git red o' their everlastin' hetchelin'."

His companion laughed and began to speak, but stopped with a sudden cautionary "Shh—there comes a flock of teal," as he bent low and turned the boat close behind a tall bunch of weeds. "Give me my gun," he whispered, and just as he got it in his hands the swift-winged little ducks came like a flash, following the channel as if it was a road, till at sight of the boat they swerved away and upward from it. The ready gun sprang as quickly to the shooter's shoulder, and as it touched it spat out its double report and six dead and wounded birds tumbled out of the thinned ranks into marsh and channel in a rapid succession of splashes.

When the game was picked up the hunters went on to the mouth of the Slang, where the boat was run into the tall weeds to await the evening incoming of the ducks. The flight was already begun, giving as frequent shots as a reasonable man could desire, and much more difficult for an unpracticed hand than when the birds were flushed from the marshes.

From the moment when a flock first became visible, like a dark thread drifting up from the horizon of wooded shores beyond the Bay of the Vessels, then became a chain of motes, and the first faint sibilation of hurrying wings dawned on the hearing, till it grew loud and emphatic, and every advancing form became a distinct bird, there was time enough for nerves to be steadied and gun to be ready, but not to find an easy mark in the strong-winged fowl, sweeping past with the impetus gained in two miles of flight with a favoring breeze. Not every one of the sportsman's shots brought down its bird, for now and then there was an unmistakable miss, and sometimes when a chance was taken at long range the pellets could be heard pattering against the thick plumage, yet the stout bird swept on in uninterrupted flight.

The shooter showed neither impatience when he made an ineffectual shot nor exultation when with more frequent occurrence the stricken bird came down in a curved slant and plunged through weeds and water to its last alighting. After a while he gave the gun to Sam, who profiting by instruction and experience made some shots good enough to afford consolation for the bad ones, and then they quit their ambushade and paddled down to the landing under the willows.

The last sunlight was on the eastern mountains and the sportsman made haste to depart on his homeward voyage, he and Sam parting with a mutual desire for further acquaintance and future days of sport together.

"Say, Sam," Antoine whispered eagerly, bursting with news he could scarcely contain till the others were out of hearing, "you'll a'n't ast it, did you? You'll a'n't know who he was, a'n't it?"

"No," said Sam, "I didn't ask him no questions." "Wal, seh, bah gosh, he was be de biggest l'yer dey was in Vairgenne. Dat feller tol' me."

"Git, aout Antwine," said Sam, "he hain't no liar. He's about so nice a man as ever I see."

"O, Sam, a'n't you on'stan' Angleesh? Ah'll a'n't say he lie, but he big l'yer. He goin' be judge, prob'ly gov'mer, mebby."

ROWLAND E. ROBINSON.

Florida Fishing.

HAWES PARK, Fla., Feb. 14.—We wish as Northern tourists to report the catch of fish in this part of Florida, and for this week a party of four in less than one hour, while at Callalisa Creek on North Indian River, took with hand lines on the 14th forty-seven sheephead, all of good size, average weight 3 to 4 lbs. each. There has been very good fishing of all kinds until the cool weather of the past few weeks, but now as the water is warmer the fishing is good again. Fifty-two whiting were taken by three yesterday at Mosquito Inlet near New Smyrna. Sea bass, trout and drum are taken daily and in good quantities. The above are not the best catches we have had this season, but are for the week past. There is plenty of good fishing on this river at present.

H. P. KITTREDGE, DR. A. G. DURGIN,
FRED R. CRANE, J. WALTER BRADLEE.

THE FARMER'S BOY.

It is probably true that a large proportion of the most ardent and enthusiastic sportsmen are those whose boyhood days were spent upon the farm; whose early associations were with the woods and fields, and whose recreations were largely found in hunting and fishing.

Led by inclination or the force of circumstances to the large towns, confined to sedentary occupations and deprived for the greater part of the year of open-air freedom and exercise, men find that although the cords which bound the boy to his country home were very elastic when he pulled away, later in life they become tense and tug at the heart.

Echoes and whisperings of the old days come back to the city man at his desk or counter, in the crowded streets, or amid the whir of machinery. The odor of a flower, the note of a bird may bring the past all back to him; the subtle influence will be potent, and, a bare-footed boy, he will again drive the cows to pasture through the dew of the morning. Again the bubbling song of the bobolink or the clarion call of the blue jay will be borne to his ears; again the odor of the fresh-turned soil or the smell of the ripening corn will greet his nostrils; and yet again visions of summer fields rippling in the heat, or still autumn woods, whose leaves are falling "at the jarring of the earth's axle," will appeal to him and draw him—ay, drive him—to the meadow and forest once more.

In the sparsely settled farming districts of the North one is apt to find his sympathy and commiseration going out to the children whose homes are in these lonely and seemingly unattractive places. Remote from towns and villages, and compelled through scant comradeship to rely upon their own resources for enjoyment, it would indeed appear that their isolation and homely surroundings were things to be regretted. But if we knew all that these little people know, perhaps we would find that they have less need of pity than ourselves; they are very close to nature, and nature takes care of her own.

The first messages of spring are given to the farmer's boy. The mild south wind which softens the ice and sets the meadow brooks to overflowing also causes his spirits to thaw and overflow. It is to him that the first bluebird calls out her sweet and cheery welcome, and it is his sharp ears and eyes that discover the pioneer robin in the top of the tall maple. In his brown fist he brings home the earliest spring flowers, blue violets, anemones and adder's-tongues. The pussy-willow blooms for him before others see it, and all the creeping, crawling and flying things report their advent to him before the rest of the world is aware of their arrival.

It is not always he who travels furthest that learns the most. The intelligent boy who has spent a dozen years or more on a fifty-acre farm, almost every square foot of which he has worked over with hoe, or axe, or scythe, gets to have a very thorough knowledge of a large part of the earth's surface, even though he may never have crossed the limits of the county in which he was born. Being for the most part mechanically employed, his faculties are alert to what is going on around him. He sees the wild creatures in all their moods, surprises them on their most furtive errands and sooner or later draws their secrets from them.

The strange and beautiful forms of vegetable life hiding in the wildest nooks and most secluded corners are sure to come under his notice; and though he may not always know the names of the weeds and shrubs and flowers he sees, yet he is on more than speaking terms with them, recognizing them as friends and acquaintances and perhaps attaching to them a quaint but appropriate nomenclature of his own. He is familiar with their salutary or baneful properties and can tell you where to find the balsam for your wounds and the puffball for your cuts. He knows the value of the thoroughwort and the leaves of the poplar, and when to prescribe choke-cherries. He steers his city cousin clear of the dogwood, poison ivy and nightshade, but shows him that he may safely browse on sumach berries, sassafras, black birch and slippery elm. He can take you to the field where the spearmint grows, the shady spot where the pungent tansy flourishes and the marsh where the sweet flag can be found. He includes partridge berries, sorrel, hollyhock cheeses and "ladies' tobacco" in his bill of fare, and isn't afraid to sample some of nature's unknown dishes. He believes that dogs eat grass for good and sufficient reasons, and although he has never discovered why cats rub themselves in valerian he gives them credit for knowing what they are about, and is convinced that if we were as wise as the cats and dogs we could find a cure for every bodily ill in the plants that grow in the fields and by the wayside. Who shall say that he is not right in this belief?

What rich and varied opportunities for observation may be discovered in the typical Northern farm, with its meadows of grass land through which the alder-skirted trout brook threads its devious way; its bit of swamp, luxuriant with willows, cat-tails and rank, sword-like grasses, home of the redwing, the frog and the dragon-fly; its ancient orchard, beloved of orioles and woodpeckers, dispenser of June fragrance and conservator of autumn flowers; its upland pasture, wild garden of the mullen, the thistle and the sweet fern, haunt of the plover and the red fox; and finally, oak and yellow birch, with here and there dark pines and hemlocks, the sentry-boxes of the crows.

Into the shadows of this forest the farmer's boy steals with trumping heart to take his first lessons in hunting; and when before the antique muzzleloader his first red squirrel falls he experiences the same thrill of excitement and exultation which in later years accompanies his successful shot at deer or moose. Here the gray squirrel with many a jerk of his broad tail squawks his alarm or derision, the downy owl flits noiselessly through the shades, the hermit thrush thrills the woods with his melody, and the slim weasel, a "lean and hungry Cassius," steals on his bloodthirsty errand. The mother partridge with unning ventriloquism calls her scattered brood, the great ivory bill sounds his reveille on the dry limb and utters his wild and far-heard cackle, chipmunks scurry among the dead leaves and a hundred birds with tinkling throats proclaim the joy of living.

All these glimpses into the book of nature are granted to the farmer's boy. He is always on the ground and what he misses one day he finds the next. The home of the flying squirrel in the hollow stub, the night hawk's nest upon the rock, the swamp orchid, the mud-turtle's egg, the wild pigeon's roost, he knows where to find them

all. His occupation and his inclination lead him to them; and thus, by slow accretions, he gathers a rich store of knowledge concerning this wonderful out-of-door life—

"Knowledge, never learned in schools,
Of the wild bee's morning chase,
Of the wild flower's time and place,
Flight of bird and habitude
Of the tenants of the wood;
How the tortoise bears his shell,
How the woodchuck digs his cell,
And the ground-mole sinks his well;
How the robin feeds her young,
How the oriole's nest is hung,
Where the whitest lilies blow,
Where the freshest berries grow,
Where the ground nut trails its vine,
Where the wood-grape's clusters shine;
Of the black wasp's cunning way,
Mason of his walls of clay,
And the architectural plans
Of gray hornet artisans!—
For eschewing books and tasks,
Nature answers all he asks;
Hand in hand with her he walks,
Face to face with her he talks,
Part and parcel of her joy."

And this knowledge is not lost or forgotten, but becomes more distinct and permanent with the lapse of years. It shapes itself into pictures of the old familiar scenes, and these are some of them:

A spreading butternut tree standing in the stone wall, with its tropical looking foliage and clusters of nuts; an apple lodged in one of its forks by an epicurean red squirrel.

A shapely wine-glass elm in the pasture, its bark near the ground rubbed smooth and shiny by the necks of cattle; a golden robin's graceful hammock swinging from a long pendulous bough; way station where twice each year the birds of passage stop to rest and take council.

A line of gray old ledge on the ridge of the farm, type of permanence and immutability; seamed with rims of shining quartz, edged with sweet turf close nibbled by the sheep and covered with the fine embroidery of the lichens.

An old rail fence, "the squirrels' highway," cross-stitching the fields, crooking its elbows now on this man's land and now on that, with a magnificent disregard of surveyors' lines, its angles and deep corners, protected from the scythe, furnishing safe harborage for the milkweed, the golden rod and the elderberry.

The farmer's boy has seen and loved these things and they have become a part of him. He may not for a time appreciate them or realize their import; but sooner or later they take on their full value, the more surely if they are no longer at hand. With rod or gun he goes back to them, not alone to hunt and fish, but also to satisfy a craving for the open-air sights and sounds which he, of all men, is best fitted to enjoy. ARTHUR F. RICE.

WITH THE BOBO BEAR PACK.—IV.

Educating the Pack.

In the evening after the killing of the big bear two men from a camp of still-hunters about a mile or so away came over to our camp and said they had seen a fresh trail of a bear and cub near their camp that afternoon. This was in the direction of the blue cane ridges, where the first successes of the hunt had been had, but it was much less distance from our camp. Accordingly Capt. Bobo decided to make the hunt over in that direction the following morning.

Fincher Bobo left the party on this next morning, Wednesday, and the field party was smaller that day than any during the entire trip—only Capt. Bobo, Mr. Beard, Mr. Money and myself, with some of the colored contingent. We fooled around a long time over the country where the old bear trail had been seen, but got no strike. Then we went down to a water hole where some bear sign had been seen two days earlier, and here some of the young dogs jumped a deer, which was seen by Mr. Beard and Mr. Money as it passed through the open woods. This deer lost us over an hour's time before we could get the dogs off. When at last we headed the pack the hunt broke up and resolved itself into a general dog-whipping bee. As fast as the delinquent hounds could be caught they were taken to a convenient sapling, and while one man held the forelegs firmly, one on each side of the tree, so that the dog could not bite or get away, another industriously plied a tough branch over his wriggling anatomy. The dog would begin to howl before the whipping began, hound fashion, only to redouble his vocalization after it was well under way; so for half an hour, while the serious business of educating the bear pack was going on, we had more music than we cared for. The trouble was caused by a few new dogs which had just been put into the pack, and which had always been run on deer before. The ravages of the chase make constant renewals of the numbers of the Bobo pack a necessity, and hence the history of the pack is one long series of breaking in, there rarely being a dozen dogs at once which are considered first-class bear dogs.

Tribulations.

We had nothing but trouble all that day, and the dogs acted in a most puzzling manner, opening repeatedly, but running for hours without making out anything. Once there was a long, determined drive made by the bulk of the pack, including a few good ones, the course being back toward the cane ridges earlier mentioned. Afterward we believed that this was really a bear trail, possibly made by a cub, but at the time we thought it was another deer. Capt. Bobo, Mr. Money and myself rode hard for two miles to head the pack, and at length got in front of them in some open woods. We could see them coming full cry, about twenty of them, well bunched together and going a good clip, now with heads up and now with noses down, all apparently very positive as to what they were about. Yet we beat them all off, or at least all we could, and started back again, Capt. Bobo wondering "what had got into the dogs." To make a long ride short, we spent the day on such false starts, and got up no bear, so that that night again Bobo rode home singing very loud, apparently very happy and therefore really very much discontented. I really don't know what Bobo would do if he lived in a country where a

man hunts all day for a rabbit and is elated if he sees a track. With Bobo nothing less than a bear a day, or maybe more, is satisfactory. For my own part, I thought we were having pretty good hunting, though I did want awfully to get to kill a bear, lest my friends should think me an absolute duffer to go out on so many chases and never get a shot—one's friends not always knowing the value of plain luck in a bear hunt. "It looks like you'd have to stay till February, sure enough," said Bobo. "The luck's turned against us. I don't reckon we ever will kill another bear now."

But fortune was kind to us that day in bringing back into camp Capt. Boney Leavell, whom we met out in the woods that day, accompanied by Uncle Joe, the faithful old gray-headed negro bear hunter, whom I have earlier mentioned as one of the population of the Leavell plantation for two generations. Capt. Leavell mourned the departure of his friend, Col. Dick Payne, because he had no one who could fight the war over with him again so well; but none the less we all had a pleasant evening in camp around the fire together. Uncle Joe had rheumatism. In common with all the colored bear hunters we saw, he seemed to think that about the best thing for rheumatism was half a tumbler full of straight whisky, taken internally. This may have helped Uncle Joe's rheumatism, but it never changed in the least the benign and venerable expression of his countenance.

The Luck of the Last Day.

On Thursday the sun rose fair, and we made an early start, not going this time toward the Hurricane and cane ridge country, but trying again the country where we killed the big bear two days before. Ill luck seemed to attend us, for though we got an early strike the run ended in nothing, and Capt. Bobo anathematized his pack as having degenerated into a lot of deer dogs. We spent nearly the whole morning trying to get the pack into line, and never did know for certain what they had up. About noon our party was joined by Mr. Kimerer, the timber owner earlier mentioned in these articles. He had brought down five or six friends from his timber camp to join in a hunt with the Bobo camp. I counted the long line of horsemen as we rode along, and found that, including the four negroes, Bill, Pete, Sam and Uncle Joe, we had fifteen rides in the field, all willing and anxious to kill a bear. My own time in camp was getting short, and as I said above, I wanted to shoot one bear simply for the sake of being able to say I had done so. The chances for a shot on that day were not brilliant for any one man, unless it was Bobo, but nevertheless I tried to figure my chance as one in fifteen, and for the rest relied on the FOREST AND STREAM luck—which same luck it was that brought Mr. Burnham, of the FOREST AND STREAM staff, the moose that he went after last fall, and which, I am convinced, will bring any member of the FOREST AND STREAM family anything he really starts out to get.

After we had at length by hard riding assembled the pack again, about noon, it was decided to leave those hunting grounds and go over toward the Hurricane again, it being plain that the bears of the entire region were having an awful shaking up, which made it uncertain about getting a start without a long ride over a lot of ground.

The Starting of the Bear.

As we approached our old hunting ground we began to fall into a long series of blue cane ridges separated by long and narrow sloughs, all of which made down to the cypress swamp at the edge of the Hurricane. Our party being too large and hence too noisy for successful bear hunting (where intent listening is one of the essential arts), Capt. Bobo divided us, sending the greater part down one of the sloughs, while the rest of us went on across the heavy ridges and along the persimmon sloughs to work out a strike. From that time till 10 o'clock that night I never saw any of the other party again excepting Capt. Leavell and Mr. Beard at one time and for only a moment. With Capt. Bobo, after we had ridden the heavy cane for a mile or so, there were only myself and the four negroes, Bill, Pete, Sam and Uncle Joe. At about 2 o'clock we found fresh bear signs in a little wet slough and the dogs went off at cry, though the pack separated. We rode over a heavy ridge into another slough and then, on the slope of the next ridge, in very heavy cover, and not more than 150 yds. from us, we heard the unmistakable change of tongue into a savage roaring, which told us the bear was up and the dogs close to him.

In View!

"Ride—ride on down the slough, hard as you can!" cried Bobo to me. "You'll head him as he crosses if you hurry!"

I rode on down as fast as I could, in company with Sam. But here was where my ignorance of bear hunting stood me in bad stead. The dogs were coming angling toward the slough, and when I got to where I thought they would break cover I did not ride any further, but kept looking toward my right into the cane, watching for the bear to come out. At that instant I saw Sam fooling with his gun, which had got caught in a grapevine, and which he was trying to get to his face. "There he goes!" he exclaimed, and this was the first I knew what it was about. While I was waiting for the bear to break cover near by he came out about 60 yds. ahead of us and sprang across the narrow slough. Sam said he could have killed him if he could have got his gun free, but I don't think he could, and I know I couldn't have done so had I seen the bear, for the glimpse was only for 20 yds., through trees and cane, and the horses were plunging, and there was no time to dismount.

Gone Away!

But the chase was now on, after a bear which the negroes all said was "Beeg bah—beeg ez a mule!" And the chase was headed right back the way we had come. While Sam, Pete, Uncle Joe and myself were trying to get below the pack down our slough, Capt. Bobo and Bill rode directly back across the ridges and were soon out of hearing. In five minutes not a whisper of the pack could be heard. It seemed sure the chase had gone toward the other half of the party, and that if they did not kill the bear would be lost in the Hurricane.

The Art of Bear Hunting.

Now ensued some mighty good bear hunting on the part of my sable companions. They did not need any one to tell them what to do, but went ahead confidently. We rode half a mile or so and then stopped to listen,

soon found that the younger boys relied a great deal on Uncle Joe's judgment, and it was proved a dozen times during that day that, though Uncle Joe was old and would not ride faster than a walk, he had the best and keenest pair of ears in the entire party. We rode into a slough and all took off our hats to listen, each turning his head slowly about, and hotly chiding any horse that dared to stir a leaf or munch a bit of cane. (The good bear horse will not bite a cane leaf all day, and will stand motionless when his rider is listening for the dogs.) Presently Uncle Joe, without saying a word, laid out his hat, arm's length, in the direction where he heard the dogs.

"Sho', man, dat's toreckly oppersite."

"No, no; dat ain't right!" murmured the others.

For my part, I could hear nothing whatever of the dogs. But Uncle Joe's hat kept on pointing, his bald, gray-fringed head a little inclined, his quiet features showing just the least little bit of a benevolent interest. I can see him now, in that wild woodland picture, motionless, his arm pointing steadily and silently, the other black faces looking at him eagerly and in question, but each straining his own ears hard as he could to catch the faint whisper which Uncle Joe was positive he heard—over there somewhere, a thousand miles away.

Busy Times.

At length there were murmurs of surprise and of assent, though I confess it still remained all Greek to me. All except Uncle Joe spurred off directly back toward the slough where we first made the start. The bear had made a wide and fast circle and gotten back of us, crossing the ridges higher up and not going for the Hurricane at all. It was every one for himself now, except Uncle Joe. He jogged along on his mule, apparently undisturbed over anything. At last the voice of the pack came to us clearly, and apparently the chase was coming right toward us. Then ensued some of the hottest riding and most exciting moments of the whole hunt. We broke heavy cane for a quarter of a mile, back and forward, edging in ahead of the dogs all the time. At length I found myself with Sam and Pete in the middle of an arm of the dreaded Hurricane, a horrible network of fallen logs, briars and vines. It seemed certain the pack would break into this a little way above us, and we rode there—how, I could never tell, but somehow. Then the pack turned back again, or part of them did. One big-voiced dog, which I took to be Jolly, kept on baying in one place, and part of the pack seemed to be near him, so that I thought the dogs had treed; but Sam and Pete said no, and off we went again to resume our breaking cane across the ridges. We crossed one series of ridges six different times, and it seemed to me that every time we crossed I lost a negro. I have a suspicion they didn't want to be bothered by ignorant white folks just at that time. Anyhow, at length I found myself all alone in the middle of the Mississippi Delta, a bear hunter on my own hook. But by the time a fellow has heard the hounds close up a few times the only thing he thinks about is how to get to the bear, not how to get home.

I hunted by myself for a while and didn't get any bear and at length concluded the dogs had gone back, entirely away from our series of ridges. So I rode back, trying to find a slough which would take me up that way. I knew that if the bear came down our way either Sam or Pete would kill it, but the dogs did not seem to be running any one line in particular and I thought they had turned back. At last, after puzzling over the uncertainty of bear hunting for quite a while alone, I rode out into a big dry bayou bed, which I followed at full speed for a mile or so. Then I saw a quiet, white-headed figure jogging calmly along ahead of me, and who should it be but Uncle Joe, who was the nearest man to the pack at that very moment and who hadn't ruffled a hair on himself or his mule all that blessed afternoon, while the rest of us were killing ourselves!

"I heahs 'em, sah, right ovah thah," said Uncle Joe, cheerfully. "They're comin' acrost above hyah a leetle way. I reckon if you ride up thah right fast you'll git to kill the bah."

So far, so good; but though I did ride up there right fast for half a mile the bear did not come out. Again there was a turn back into that same mysterious bit of country, about a mile square, where the dogs had been working at full cry for over two hours.

I stood and listened and at length heard the crackle of cane and the voice of some one shouting. I answered and a moment later Capt. Bobo and Bill came out into my bayou.

Mysteries of the Chase.

Capt. Bobo was wild. He didn't know what to think. He said the pack was bewitched, gone crazy. In all his life he had never seen them act so. "I don't know what they're after, I'm sure," he said. "My old bear dogs will be trailing along right out in the open woods on a cold trail apparently, and then all at once they will jump in together and boo! boo! they go, just as if they saw the bear right at them. It's been that way all the afternoon. I can't tell a thing about what they mean or what they are doing and I feel like killing the whole pack. Listen at them! There they go, three different packs and not one running bear, I'll bet a dollar! I never saw anything like it."

Bobo was so mad I was afraid he would begin to sing before long and I didn't want him to do that, so I tried to divert his mind with pleasant speculations. After a while we all rode back the way we had come from last. It was now after 5 o'clock and almost dark.

Narrowing the Circle.

The reader may imagine, if he cares to, that the vagaries of the Bobo bear pack were transpiring that evening on a bit of heavy country about three miles from where the larger of our two field parties had been left that afternoon. Of that portion of the party only a few ever heard the pack at all, and no one of these was ever really in the hunt for very long. After Capt. Bobo and Bill left me at the start, those of us left behind on the ridges, myself, Pete, Sam and Uncle Joe, were really in the hunt more than anyone else. To these colored hunters the glory of the day belongs, for they insisted all along that the dogs had bear. When I got lost from all these I had made a long semi-circle about a mile and a half. When Capt. Bobo started on his back track we made another arc on this same circle, back toward the cane ridges again. Inside of this circle somewhere the dogs were working. Thus I had in all ridden nearly

three-quarters of the way around the dogs when we next stopped. Here we were joined by Pete and Sam, who had come across the mooted territory by a slough not so far over as my bayou. And finally, about 5:15 in the evening, we were joined by Uncle Joe, who came jogging in on his old mule from somewhere or other, somehow or other, very tranquil and unconcerned.

Our section of the field party was now all together, and our last stand was now made in a little open glade just at the edge of the heavy cane country where the mysteries of the chase were going on. We were about six miles from camp, in the middle of the wildest and roughest of that wild country. It was dark.

But the Dogs Bayed on.

"It's no bear, that's one thing sure," said Capt. Bobo. "The bear don't live that my dogs wouldn't have run to a standstill before this. I don't know what's the trouble, but it's no use fooling. Call in the dogs."

All hands now blew long and hard to call in the pack, but we only got a few, and none of the good ones except, I believe, old Henry, who had come back long before and not gone away far. Sam and Pete shook their heads and still insisted the dogs had bear, and that they could hear old Rock. As the last resort Sam was told to fire off his Winchester a few times—the one thing to which the dogs will always go. But even this did not bring in many of the pack, and still Sam and Pete murmured objections—which Capt. Bobo himself would not have needed had he not been so disgusted with two days of unsatisfactory running.

It was now quite night, and as the wilderness grew still and moist in the heavy, frosty dew of evening, all sounds became more distinct. At last we heard, all of us, and unmistakably, faint but positive, and not changing in location, the baying of the Bobo bear pack, denied for the moment by their master, but not to be denied of their prey. There was the owl! owl! of a deep-mouthed dog, which I think was old Jolly; and there was a chorus of other voices, and it was stationary!

Treed!

The murmurs of Sam and Pete broke out into words: "Dat's him! Dat's ole Rock in dah, sah, Cap'n. Ole Rock he ain't never open on nothin' but bah! Dat's bah, sho'hs yo' bohn, sah! Yes, sah!"

And then old Uncle Joe took off his hat and laid it out on the air at arm's length in the direction of the faint baying of the dogs.

"I reckon hit's done treed, sah," said he. For an hour Capt. Bobo's face had been sour and long. It had been a bad day, and he wasn't happy. But as he listened to the baying of the distant dogs his face shortened about 1 ft. and he looked a shade more comfortable, though he still insisted the fool dogs must be baying a coon. "Don' yo' nevah b'lieve it—dat ain't no coon!" said Sam, "Dat's bah!"

The Canebrake at Night.

"Come on, Hough!" said Bobo, suddenly. "We'll mighty soon find out what it is." So saying, he rode straight into what seemed a jet-black wall of braided wire fences.

Here was where the Bobo of it came in. Those boys might catch him on an off day, when he had quinine or disgust in his head; but no man on earth can ride cane with Bobo, the bear hunter. This night he was riding a big mule, his hunting horse, Bob, having been lamed by a cane stab the day before. This mule was also a daisy. It was pitch dark, and one could not have seen much had it been daylight, for we were in the thickest thicket of the whole region. Yet the mule with lowered head plunged into the wall of cane, and it broke and swayed and yielded. There was a vast crushing and crashing mass of black just ahead of me, out of which came a voice not of complaint, but of irate resolution. Bobo was riding cane! For my part, all I had to do was to keep close up, so as to not to be shut out by the folding doors of cane. We both were much mauled by briars and vines and limbs of trees and stems of cane, against which there was no protection in the dark. I suppose it was an awful ride. Perhaps it took us a quarter of an hour, and perhaps we rode a quarter of a mile or less—the sound of the pack could not be heard very far in such cover. But the main concern was that every moment the baying of the pack grew louder as we rode on, and remained at the same place.

The Bear in Sight.

At last we got within about 150 yds. of the dogs, whose music was now exceeding good to hear. Bobo silently got down, and motioned to me to also dismount and tie my horse. The four negroes were now a little way back of us in the cane. No one was talking now.

Bobo crept on ahead of me through the dense black cane. At about 50 yds. from the dogs he stopped, drew me to him and pointed. Away, far up, 75 ft. above the ground, up a giant tree which sprung up out of the heart of the jungle of cane, I could see a big black object, as big as a pumpkin, but sort of sharp pointed, apparently growing out of the trunk of the tree. Then, as I looked more closely, I could see, very indistinctly in the black shadows on the further side of the tree, the curve of a shadow which seemed to be blacker than the other shadows. Then I knew that what I saw was a bear, standing over a limb which forked on the far side of the tree, his hindlegs lower than his front ones. What in my first glance I took to be a pumpkin up in the oak tree was the bear's head, looking calmly and happily at the dogs, each of which was trying to jump 75 ft. high.

Bear Shooting by Dark.

Bobo and I slipped on in, up to the very foot of the tree. At this time the moon was just beginning to rise, and though it was on the wrong side of the tree for us, it brightened up the sky so it made a fair background. The cane stood 25 ft. high about the tree, and down there everything was black as a pocket. As I looked up, I could see the bear's head plainly, hanging over a big limb; but as we came up, he swung his head over the limb uneasily, as if to move higher up the tree. I could not see his body then, and for the moment was deceived, thinking the bear's head was the body of a coon. I whispered to Bobo, "Coon?" but he hissed back, "Bear!" and at that moment I saw the outline of a bear's body against the sky. I threw down the lever of my rifle to put a cartridge in the chamber, and at once went into action.

"Wait till the boys get here," said Bobo, in a low tone

of voice. "Don't shoot!" I suppose he feared I might cripple the bear, and that it might come down and give us a bad time in the cane in the dark. But I did not feel disposed to take any chances about those boys, who appeared to me mighty liable to begin shooting at my bear as soon as they saw him. So for once, and the only time, I deliberately disobeyed orders. While Bobo was telling me not to shoot, I was busy drawing a sight on the bear. I drew it as fine as I could, then raised the breech a little more for luck, knowing that I could not see into the sights. Then I turned her loose.

The Death of the Bear.

There was a long stream of fire in front of my eyes, and then the smoke settled down in the moist air. I heard Bobo exclaim, "You broke his back!" Then I stepped clear of the smoke and fired carefully again, and yet again—the last shot I knew needlessly. There was a rattle of shots from the cane 40 yds. away, where the colored boys were coming up, and Bobo fired a shot at the bear while it was falling.

The bear was, so nearly as I could tell, standing upon a limb of the tree thicker than a man's body. My first shot killed it at once, and it sank down on the limb, its legs clinging and then relaxing just like those of a squirrel killed in a tree. It then toppled and fell off the limb, and came down, whirling over in an entire somersault as it fell, and striking the ground with a most excellent, pleasant, squ'shing sound, like 400,000 four-bushel sacks of beans.

"Good Lord A'mighty, dog-gone!" cried Bobo, in his regulation war whoop, which he utters at the close of every bear chase. "We killed a bear!" This always apparent joy and surprise, as if he had never seen one killed before, and you should have seen his face! No longer stern and dour, it was wreathed in a hundred smiles. Bobo was happy in the only way he ever gets really good and happy. "So you've got your bear," he said, "and I'm mighty glad of it. I wouldn't have missed this for \$100. I knew you'd get your bear before long. We've had a long, hard day of it, and I'm glad we didn't go home beat."

"I tole yo', ole Rock—" began Sam. "Oh! you go on away about old Rock!" said Capt. Bobo, good-humoredly now, "you go on and cut up the bear, and let's get out of here if we can."

Expansive Bullets on Bear.

The bear was stone dead when it struck the ground, as Bobo and I found at once when we rushed in to keep it from injuring the dogs, which swarmed on top of it as soon as it fell. We were curious to see the nature of the wound, as we had discussed at times the merits of the rifle I was using—a .45-70-405 Winchester, with the bullet made expansive by means of copper cylinder (just plain, factory-loaded ammunition, from the U. M. C. Co., with no frills or crimps on it). This gun I found not a very good one to carry in cane, because it is too long and heavy, but I found it a very good gun to kill bears with, at least in the dark. My first shot did not break the bear's back, as Bobo thought, and had it been from one of the .44s or .38s would not have knocked the life out of the bear, as it did. The bullet struck low down in the paunch of the bear, about midway—not a very good place to shoot a bear in the daytime, but good enough in the dark. It ranged forward and upward, tore the lungs open, but did not touch the heart, and passed clear on out the other side of the animal, breaking three ribs in bits on the far side, and leaving a hole into which the bottom of a teacup would go easily. This bear weighed perhaps 300 lbs., but it was killed by the shock as though it had been a squirrel. I am no believer in small bores, nor should I think a solid bullet desirable for any bear, if the big Government bullet can be had expansive. There is enough lead left to give plenty of penetration of a most ragged and direful sort. You muss a bear up a good deal when you shoot him with this kind of a load, but you immediately get what good meat there is left to him.

Bobo had never before seen the action of an expansive bullet, and he was surprised to see what it done in tearing and crushing effect. He said he had never known any bullet could tear such a hole. The second shot, so nearly as we could tell, struck by mere accident within half an inch of the first one. This bullet, following nearly in the path of the first one, did not open so much, and left a hole about an inch across some three inches from the main wound on the far side. This may possibly have been only a fragment of the first bullet, though probably not. My third shot we could not trace and it no doubt was a miss, fired just as the bear fell out.

"I 'specks I done killed dis bah," said Bill, as we started to skin the animal. "I done shot him right squah in the head. Yo'll find my bullet right in his head, shore." We did not find Bill's bullet in the bear's head, but we found some one's bullet in the opposite extremity, it having struck in the ham and ranged a third of the way up along the muscles of the back.

Not so Much Glory.

So I could say, I presume, that I killed a bear. But there was small glory in the mere killing of it. I should say that potting a bear out of a tree—even in the dark—was not so exciting as killing a quail on the wing. A quail is a startling and ferocious bird till you get used to him, and may well frighten a fellow; but a black bear up a tree, with a pack of dogs to tackle him if he comes down—I can't see the elements of much sporting glory in that sort of a situation. Your friends insist you must kill a bear; and so you must, or pass for a duffer. You do kill him, and then you feel as if you really were a duffer! When it comes to that sort of bear killing, the chances are so much against the bear that you can't help pitying the poor, black, woolly coward up the tree. It is a small feat in sportsmanship to merely blow a hole through him. Indeed, that is not the sportsmanship of the bear chase at all. The shot that kills the bear is the last and perhaps one of the least stirring incidents of the chase. The sportsmanship has been in the ability to ride and keep with the dogs and to know what they are doing; and the sport has been in this attempt, combined with the luck of the field, pitted against the speed, strength and cunning of one of the largest animals pursued as game. Poor Cuffee! There's a lot of fun in him, but one could wish he were not such an errant coward. Over the mangled remains of the Cuffee that I slew, albeit I admit I am glad I did it, I can raise no paean of vain glory. It is true, we

at the death were six out of fifteen starters, but if I had been alone all the time I should have been out of the chase, no doubt; and at the close the bear could have been killed ahead of me by any of the others, had not all held back to give me the shot. I was simply the beneficiary of Uncle Joe's ears and Capt. Bobo's courtesy. So it may be seen I could not claim much glory.

The Theory of the Chase.

I imagine that Capt. Bobo takes one of his greatest pleasures in bear hunting in the watching of the different dogs coming on in the art of bear chasing. He and the colored men were talking all the time while we were dressing our bear about such and such a young dog that was going to make a good one. Bad Eye was voted a great one, being found fast to the bear's neck when we got there. I much misdoubt Bad Eye is going to come to an untimely end one of these days. Old Rock was fierce as ever, and Dollar was there, and Ronco and Jolly, and all the others gathered in somehow. Jolly was surely baying at another tree about a hundred yards off when we came up, though he came to us when we fired. Afterward we thought that probably this was a cub that had treed and that the cub theory would explain the odd actions of the pack that afternoon. The bear we killed was a female and was nursing cubs which must have been about 8 months old, as big as dogs, and mighty fat and glossy. I am glad the poor little brutes were big enough to take care of themselves, since I killed their mammy. I am quite sure I heard dogs baying at a tree that afternoon about 4 o'clock and it is possible that this old bear and a pair of cubs had made all the trouble.

A Ride in the Dark.

We skinned and divided out our bear by light of a tiny fire of dry cane stems. Then we began to think about getting home. At first we thought we should stay all night where we were—with no water since morning—but Capt. Bobo thought we could make it in.

"If we can get back to that slough where we stopped to listen before we came in here," said he, "we can ride down that slough till we come to the big bayou and then we can ride up the bayou till we strike a trail that will take us to camp. Will your mule take us back the way we came in, Bill?"

Bill's mule was one much famed for sagacity in such matters, and Bill expressed confidence in its wisdom to pilot us out of the wilderness. So we turned our backs on the vast oak tree where the bear was killed—a grand tree it was, at least 7ft. through and perhaps 100ft. or more in height—and sought for the winding trail through the cane we had made coming in. The cane had closed in again like water behind us, and we could see no trail at all; but Bill's mule led us out unhesitatingly through the blackness, and we found in due course the slough, and the bayou, and the secret, dark and midnight trail from the bayou to the camp. And at the coming home Uncle Joe was there with the rest of us, jogging along peacefully on his mule, with no sign of weariness or discontent on his benevolent face. We found all the rest of the party in camp before us. We slept, some twenty men in all, that night in camp.

Adieu to the Delta.

One bear was all I wanted to kill on the hunt, and I was quite willing some one else should have the pleasure of killing the next. Moreover, my time was growing short. Accordingly on the next morning Mr. Money and I left camp for home, from which I had been absent a week and two days—time which had passed away very swiftly under such pleasant and eventful surroundings. I disliked to say good-by to my Southern friends, for the only unpleasant thing about your visit to the South is the time when you have to say good-by. Capt. Bobo I cannot thank enough for his courtesy, and I hope he will live to see plenty of sport yet in his beloved Delta country—a country whose richness is its own worst enemy, since eventually it must attract the covetousness of men perhaps not so fit to occupy it as those who now claim it as their homes and as their hunting grounds.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

THE DUKE, THE COCK AND THE BEAR.

Being a Sportsman's Fable—with a Moral.

BY HENRY M. KIEFFER.

THE Duke was not a real, foreign duke with an antique title, in search of complaisant financial support. On the contrary, he was of pure American blood, having received his title from his fellow sportsmen by way of courtesy, as it were, and in just recognition of his eminent erudition on all subjects pertaining to the sports of forest and stream.

The Duke was not originally one of our party. We fell in with him on the way—took him on the wing, as it were—that is to say, on the cars. We had just settled ourselves comfortably in our seats in the smoker, piling our traps on the seat in front of us, when the Duke, having with the keen scent of the sportsman noticed our guns and equipment, came up smiling from the other end of the car, where he had been seated, and entered into conversation. He was a short, thickset man, rather florid in complexion, and, as we soon found, quite an authority on all kinds of game fowl—especially on pheasants, and more especially still on woodcock. When he found we were bound for the mountains and after pheasants, and that a woodcock were a possibility, and that there was even suggestion of an occasional bear in our hunting grounds, he begged the privilege of joining our company—a privilege which we readily granted. "But," he remarked, as we climbed out of the cars at our destination in the mountains, that "he was sorry there was not a better prospect of woodcock."

As we mounted the buckboard for our six-mile ride across the country, and rode along in the crisp, cold air of that October morning, sniffing the scent of the fragrant pine woods through which our road lay, the Duke continued his learned disquisitions on all manner of game, and on woodcock in particular, the haunts and habits, methods and manners of the bird being as familiar to him, apparently, as to a cyclopædia.

"And, gentlemen," said he, "one peculiarity of the woodcock that renders him an admirable species of game or a good shot is that you've always got to take him in full flight. You'll never see him light on a bush or tree

or sitting on a log. No, sir; not he. He's altogether too wise for that. He keeps close to cover, don't ye know, and covets the low places, and you've always got to take him on the wing or you don't get him, don't ye know."

Hawkins, the driver of our buckboard, however, ventured to insist that he had sometimes seen a woodcock sitting on a log; in fact, had seen one in that disputed position that very morning as he crossed the swamp, and he'd show the gentleman the place by and by, if he cared to see it.

This roused the Duke, who declared it must have been a pheasant that Hawkins had seen, or perhaps an owl.

And this put the driver on his mettle, as if, forsooth, he, who had 'lived in these woods ever since he was knee-high to a grasshopper, didn't know a woodcock when he saw one; in fact, didn't know the difference between a woodcock and an owl! Bah! Hereupon the driver removed his quid, consulted his tobacco box for a fresh supply of patience and forbearance and vented his feelings in an extra flourish of his whip on the off horse.

"All right, my friend," said the Duke, with an evident effort at conciliation. "Of course I won't take it on me to say that a woodcock never did sit on a log, only that I never saw one do it, and that the books say they never do it; but you just show me one in that remarkable situation and I'll knock under."

The rest of us took no part in the discussion, being only ordinary sportsmen, with no pretensions whatever to the science or the literature of the subject in hand, and claiming to know but little beyond our own personal observation and experience. Still, as we rode along, one could not help the reflection that to be a real good companion on a hunt one should not be away out of sight of his friends in the matter of information. These people who know just everything about hunting and fishing are far from being the most companionable. Between a cyclopædia and my friend Tom Toole, the woodchopper, I'd choose Tom every time for a tramp through the forest or a fish down the stream.

Well, to make a long story short, we had enjoyed two days of rare sport with the birds, and had bagged some and missed more, and strange to say, the Duke's score of the latter category was unusually high, a fact which he accounted for by laying the blame on his gun. However, as we were not inclined to be critical, but with the large-heartedness of amateur sportsmen accepted his own explanation of his want of success as being perfectly satisfactory, the Duke kept in good humor and continued his learned (and often labored) disquisitions on game of all kinds, their habits and their habitat, as we tramped through the woods or sat by the glowing fire in the open grate at our hotel, recounting our experiences and spinning our yarns when the day's sport was done.

One evening, as we were on our way home and were nearing the hotel, having emerged on the only public road running through that wild country, we heard the rumble of the wheels of Hawkins, the driver of the buckboard, who had dared so stoutly to discuss the habits of the woodcock with the Duke on our way from the station a few days before. As we were trudging along the road Hawkins overtook us.

"What-luck, boys?" queried he, cheerily.

"Not much to-day, Johnny."

"Didn't see any woodcock settin' on logs and waitin' to be knocked over, anyway," said the Duke, who was tired and irritable.

"Didn't, didn't ye?" said Hawkins with a smile. "Well, I did then, an' if ye'll come with me I'll bet I kin show 'em to ye now."

"Bet ye \$10 ye can't!" challenged the Duke.

"Keep yer money, man," answered Hawkins, elevating his shaggy eyebrows, "I don't want yer money. I only want to show ye woodcocks a-settin' on a log, that's all."

"Well, lead off, then," said the Duke, "I'm just dyin' to see 'em."

Hawkins dismounted, tied his team to a scrub pine by the roadside, and led the way into a thicket. The ground was low and marshy, and, as it was getting toward night-fall—an hour when woodcock are almost likely to be stirring abroad—the Duke's incredulity was subject to some small discount, the more so as Hawkins was so provokingly positive.

"They were in here yesterday," said Hawkins, "just about this time too, an' I wouldn't wonder if they'd be here again to-night." Then, as he parted the brush carefully ahead of him and peered through, he waived his hand and said in a loud whisper:

"There they be now, sure as guns! Two of 'em, a-settin' on a log waitin' fer ye! See 'em!"

The Duke, gun in hand, and all ready to shoot, stepped up and looked and looked, but apparently had difficulty in making them out. When the rest of us broke cover and bent our visual organs on the unusual sight, we all burst into a loud laugh; for the two woodcocks were there, sure enough—only they were of a peculiar species, being of that sort ordinarily designed for the small bung of a wine cask or cider barrel—cedar spigots, that is to say, or wooden-cocks, which had been carefully placed erect on a moss-covered log, and they were big ones too!

The grunt which the Duke now gave made us all fairly start, as if a wild boar had shown his tusks and were blowing his bugle to the charge. And, judging by the speed our friend the Duke now made for the hotel, one would have thought the boar, or even something more formidable, had suddenly given him chase. And the way Hawkins rolled on the ground and laughed was enough to scare all the sylvan deities out of that "neck o' woods" forevermore.

The Duke didn't make his appearance the next morning, nor was he with us hunting that day. When we returned in the evening he had already retired. As we sat about the blazing fire after supper joking and telling our yarns Hawkins came in, and having cautiously searched the four corners of the room with his eye he asked:

"Where's the Duke?"

"Don't know. Ain't seen 'm to-day. Not visible to the naked eye."

"Eclipsed, I reckon," said Hawkins with a comical emphasis on the last syllable. "Guess he's readin' up on woodcocks! Ye see," continued he in that most enjoyable but most indescribable tone of the native mountaineer when he is speaking philosophically. "Ye see, there be woodcocks and woodcocks. Some woodcocks are made out o' wood and some isn't. Them as is, sets on logs; them

as isn't, doesn't. That stands to reason. Any man with half an eye kin see that. Haw! haw! haw! Land sakes, boys, but didn't he grunt when he seed them two woodcocks a settin' up there on that old log as big as life, don't ye know, haw! haw! haw!" And Hawkins went off into another apoplectic fit of laughing, coughing, sneezing and blowing his nose that was wonderful to witness.

The Duke did not put in an appearance at the breakfast table the next morning, a circumstance that gave rise to inquiries as to whether he might not be meditating suicide by starvation, if not even by some more violent methods.

Shortly after breakfast, however, our attention was diverted from the Duke by the discovery that another of our company was missing. "Where's Abe? Where is our genial dealer in hats, caps and gentlemen's furnishings? What ho, Abel!" But Abe (his other name, gentle reader, will appear in due time) had somehow very suddenly and very mysteriously vanished, disappeared or "absquatulated," as "mine host" ventured to suggest.

Well, we couldn't find him, and we weren't going to wait for him, that was all, and so, when all our arrangements had been made for the day's tramp (and, as every amateur sportsman knows, that is a process which consumes no small portion of the morning hours), and we were about setting forth without our lost companion, my old acquaintance, Tom Toole, the woodchopper, who was engaged in peeling bark down in the swamp about half a mile from the hotel, came running up to the porch, all out of breath and his eyes fairly sticking out with excitement, yelling like mad at the top of his voice, "A bear! a bear!"

We questioned Tom closely, but he told a straight story. We grabbed our guns, loaded up with buckshot, the best we could do, for there wasn't a rifle in the party except the Duke's—he had two or three guns with him—and in our excitement we were half-way to the scene of action before we were aware that the Duke was coming up behind us on the double-quick, shoving shells into the magazine of his rifle as he ran.

"A bear! a bear!" said he. "Scissors and buttons! that's the game for me! But, where is he, boys, where is he?"

"Down here in the swamp, up a tree too, the man says. We'll have a heap o' fun knocking him off the tree, and don't you forget it."

When we at last came to the place, all out of breath and so trembling with excitement that I question whether more than 20 per cent. of us could have hit a barn door, Tom Toole called out in a loud whisper:

"There he is! There he is! Up that tree, there; see 'm? Look out!"

All hands now got ready to shoot, when, grinning like a monkey, behold! on the limb of a tree appeared our missing comrade Abe—whose surname was Bare, retail dealer in hats, caps and gentlemen's furnishings!

"A. Bare, at your service, gentlemen," said he, with his best and blandest business smile. "Hats, caps and gentlemen's furnishings. What can I do for you to-day, gentlemen?"

"Come down off that tree an' take a good lickin', that's what you can do!" said Sam.

"Guess I won't come down then."

"I've a blamed notion to shoot ye," snorted the Duke. "I'm tired of this eternal foolin'—"

And away he went through the brush, grumbling something about a "deuced pack o' confounded idiots."

I've never seen the Duke since. This time he "absquatulated" for good. He sulked in his room all day, and had left the hotel for parts unknown by the time we got back from the day's hunt.

And a few days thereafter, when we were on our way to the station, being homeward bound and feeling good and happy over our week's sport, it was something great to hear Hawkins, the driver, in mountain vernacular, which the effort to reproduce in cold type fills me with despair, expatiate on "dukes, an' woodcocks, an' bears," their different varieties, habits and peculiarities; how "some sets on stumps an' some climbs trees; but you've got to know t'other from which, gentlemen, an' not get 'em mixed, don't ye know; haw! haw! haw!" And then he'd laugh till the very horses would stop to listen, and once even a lonely mule in a field we were passing, hearing the racket going by and doubtless thinking some of his kind must be in the company, joined in the chorus both long and loud. And as for the moral, why, ask Hawkins or—the mule.

EASTON, Pa.

DEER ANTLERS.

Editor Forest and Stream:

Inclosed please find my check for \$4, being amount due for my subscription for 1896. I hope to be able to send a similar check for many years to come. I inclose you a clipping from a Bellefonte, Pa., paper giving a correct description and showing something unique in the way of antlers. Hoping it may be of interest I remain

J. A. MELSEHIMER, M. D.

The Gazette's notes read: Two weeks ago we published an article in the Gazette, stating that Robert Mann had shot a buck that had twenty-three prongs. Not having seen the deer ourselves we doubted the statement, but published it as a communication, signing Clarence Daley's name to it, as he had sent it to this office. We were accused of prevaricating from all sides and had almost come to the conclusion we had lied, when on Wednesday of last week John A. Daley, of Romola, entered our office with the identical head. We promptly had a photograph taken of it, which we forwarded to an engraving house to have a cut made with the above results. There are positively twenty-three well-defined prongs to the antlers—twelve on the right and eleven on the left. Three prongs the size of a spike-buck's come out at the base of each horn. Only ten points on the right antler are visible—owing to the position the camera had to be placed to take in both antlers. The main point on the right antler appears to be broken off, which is not the case, but it is due to the shading of the picture. The dimensions are as follows: Length of antlers 26 in., spread 16 in., longest prong 11 in., circumference of horns at head 6½ in., circumference at broadest point 8½ in., number of prongs on right antler 12, number of prongs on left antler 11, weight of head with horns 15lbs., weight of deer 238lbs.

The animal was shot by Robert Mann on Burns Run, Centre county. The editor of the *Gazette* has sent the head to Charles Eldon, taxidermist, Williamsport, for mounting, who writes under date of Dec. 2: "It is without doubt the finest head, considering points, I have ever seen. It is simply magnificent."

Ohio Pheasantry.

At Celina, Ohio, is located a pheasantry. This pheasantry is the property of Ohio and became such through the efforts of the Ohio State Fish and Game Commission. It is the first case on record where any effort has been made by a State to propagate any kind of game birds for the public. On account of a very low appropriation the Commission could not go into business to any great extent, but the success attained the past year will clearly show that this bird can be raised in large numbers in confinement, and when raised and released in the woods and uncultivated ground of the State it will thrive and do as well as our native pheasant.

The birds at this hatchery were confined in a space of 100ft. square, and on this account a great many young birds were lost that would have become full grown if they could have had a proper place to run. At this hatchery are confined at present 50 old birds and about 325 young birds hatched this season. With a liberal appropriation next year, the Commission can raise 10,000 of these birds with what stock they now have on hand. The Legislature will be asked to pass a law to prohibit the killing of this new game bird, and also the native pheasant, or ruffed grouse. The Commission has also released a dozen of these birds on Rattlesnake Island, and, although it is very hard to get the correct number raised there this season, it is fair to estimate that at least 75 birds are there. The name of this acquisition to the game birds of Ohio is the ring neck and mongolian pheasant. In the State of Oregon, where this bird was placed by Judge Denny, of Portland, only a few years ago, the birds are as plenty as were the native pheasants here a few years ago.—*Crawford County (O.) News*.

Razor-billed Auk on Long Island.

NEW YORK CITY, Feb. 12.—*Editor Forest and Stream:* I have in my possession a male razor-billed auk (*Alca torda*), shot on Montauk Point, L. I., Feb. 7, 1895, during a snowstorm.

FIXTURES.

March 16 to 21, 1896.—Second annual Sportsmen's Exposition, under the auspices of the Sportsmen's Association, at Madison Square Garden, New York city. Frank W. Sanger, Manager.

NATIONAL ASSOCIATION.

CHICAGO, Ill., Feb. 13.—The annual meeting of the National Game, Bird and Fish Protective Association was held last evening at the Sherman House, this city. The question of credentials was not urged. There were only ten men present, namely, the president, Mr. M. R. Bortree; the secretary, Mr. A. L. Lakey; the treasurer, Mr. W. H. Thompson; the attorney, Mr. F. S. Baird; the Illinois game warden, Mr. Charles H. Blow; the Michigan game warden, Mr. Chase S. Osborn; Mr. Jas. V. Barnum, of Prairie du Chien, Wis.; Mr. J. C. Burkett, of Chicago, and two representatives of the sporting press. The constitution says that ten "delegates" shall constitute a quorum for the transaction of business; so the meeting was called to order. Reading of the minutes was dispensed with. Several new members were admitted. Calling of the roll of members was omitted.

Under head of reports of standing committees, Mr. F. S. Baird reported for both the executive and law committees, speaking of his work with Mr. Bortree in the Kewanee freezer case, and reading his draft of a proposed amendment to the Interstate Commerce laws, which latter has been previously published in *FOREST AND STREAM*. Mr. Thompson moved the report be accepted and a copy of the bill and a circular letter of indorsement be sent each member. No second came at once to this, and some discussion ensued, Mr. Osborn, of Michigan, enthusiastically claiming that so good a report and so good a measure deserved something more than mere adoption. At this juncture it developed that no member of the law committee had labored on the draft of the bill except Mr. Baird, no other member having had interest enough in his duty to contribute assistance. Mr. Baird made some comment on the conduct of certain gentlemen, and said he had done alone what no one would help him do. The objector would not be appeased with this, but insisted that Mr. Baird's bill was faulty, and that it should be put before all the members of the law committee, and submitted for approval to all the members of the Association before it should be allowed to go before Congress. (There was evidently a nebulous idea in his mind that Congress would at once pass in its crystalline entirety any bill which had gone through this process of preparation). There was evident impatience at this waste of time in idle talk. Mr. Baird said it was now or never for this bill, and that if any such dilatory and circumlocutory process were gone into it would mean the loss of a year's time at least. The *FOREST AND STREAM* representative moved that a printed copy of Mr. Baird's bill, together with a circular letter of its indorsement by the Association and a circular letter suitable for individual indorsement by members for transmission to their respective members of Congress, be inclosed to each member of the Association. Mr. Thompson seconded this. Wrangling among the little national body still continued. At 10:15 o'clock Mr. Thompson arose with disgust and said he had to leave to catch his train home. He tossed on the table his brief treasurer's report (which showed a balance on hand of \$35 34) and started to leave, saying he was sorry the Association found nothing better to do than rake up the past and wrangle over unimportant quibbles. Mr. Thompson was besought to remain half a minute, and the question for the twentieth time was called for. On vote the Hough-Thompson motion was carried, the matter of the printing being referred to the law committee, with the president and secretary added, said committee being further instructed to "take all proper measures to push said bill in Congress."

The president, Mr. Bortree, suggested action against the

iniquitous New York game law, which kept an open market the year round to swallow up Western game. Mr. Osborn, of Michigan, moved that a committee of three, Mr. Bortree to be chairman and to name his associates, be appointed by the president to memorialize the New York Legislature for a change in the statutes now standing so that the New York selling season shall be limited. This was carried. Kalamazoo, Mich., was chosen for the next annual meeting. Some talk was had of going to Waco, Tex., for the next meeting, the Mayor having sent an invitation which was supported by a letter from Mr. M. B. Davis, of that city. The date of the next annual meeting is to be fixed by the officers of the Association and announced duly. Mr. Barnum thought that Chicago would be a good place, if the date could be set for the week of the big dog show. Mr. Bortree thought Chicago was a poor place for a meeting at any time.

In the election of officers Mr. M. R. Bortree, of Chicago, was continued as president; Mr. A. L. Lakey, of Kalamazoo, Mich., was continued as secretary; Mr. W. H. Thompson, of Wauzeka, Wis., was continued as treasurer. The law committee will consist of Messrs. F. S. Baird, of Chicago; Blair Lee, of Washington, D. C.; De Forest Paine, of Detroit, Mich., and two others, to be appointed later. The executive committee for 1896 will be Mr. F. S. Baird, of Chicago; Mr. Chase S. Osborn, of Sault Ste. Marie, Mich.; Messrs. J. C. Burkett, E. Hough and G. W. Strell, of Chicago. The finance committee will be selected later. On Mr. Barnum's motion the addresses of the president and secretary were ordered printed and sent to the members. The president, Mr. M. R. Bortree, then read his annual address at the request of those present, and the meeting then adjourned. During the evening Warden Blow found occasion to speak somewhat of ancient history, and liberally roasted Mr. Mott, of the law committee. Warden Osborn, of Michigan, spoke entertainingly of game and fish protection in his State. As State game and fish warden he has charge also of the great lake fisheries. Mr. Osborn remarked that he had destroyed \$60,000 worth of illegal nets and gave other data of a work which has been of great interest and value.

Comment.

A few things seemed to be proved by the 1896 meeting of this national association. One of these is that Chicago is the poorest place possible to hold such a meeting. Chicago men are too busy and will not attend protective meetings. Still further proof also is offered of the general apathy in the matter of game protection. An annual national meeting which calls out only ten men is of course not truly national, and there can be but little weight in such news as it can create under the assumed character of a national quality. Yet the spirit which animates even a less body of men may be of a sort which, rightly directed, may be worthy of a national emulation—a spirit of unselfish interest in the protection of our disappearing game. Some few individuals have that spirit, and when that is established, it matters not under what name it goes, for it is good under any name and on any line of effort. We shall never see a truly national body of such men joined together under any name or under any plan, because there are not enough of such men; but the work of the few who will work unselfishly is none the less worthy of commendation.

I make bold to say—without discourtesy intended to any others—that the national association for 1895 has consisted of just two men, M. R. Bortree and F. S. Baird, of Chicago. It is all very well to speak of the benefits of "agitation," but agitation looks to results, to execution, by some one, somewhere. The trouble with national associations has been that they left the when and the where and the how of this executive part of the agitation too charmingly indefinite. They left it still a question of "some one else." Just this much could be said of this national association to-day, were it not for the personal efforts of Mr. Bortree and Mr. Baird, and it is out of these efforts that has come the only real news of the association for the year—the prosecution of the Kewanee freezer case, and the drafting of the proposed Interstate Commerce law amendment. Both of these gentlemen have preferred to tack the long name of a national association to their individual work, and I see no reason why they should not be humored in this, though the actual truth still remains that they have done this work individually, without instruction, unselfishly, and at their own expense, under difficulties and discouragements, and certainly without much loyalty of sportsmen behind them. In doing this they have had a curious kink in their minds. They thought the National Game, Bird and Fish Protective Association was an honor to them. The truth is, they are the honor to the National Game, Bird and Fish Protective Association. The latter deserves credit just in so far as it can produce just such men. Mr. Bortree and Mr. Baird are a peculiar pair. They have always been friends and have always worked together in protective matters. Mr. Bortree is what they call a "crank" on protection. If we had more such cranks we might perhaps some day have a real national association. Mr. Baird has given readily and gratuitously his services as an attorney whenever a game case was to be fought. These two men have made mistakes, like everybody else, and sometimes perhaps they have made the mistake of mistaking their friends, but it none the less remains true that they have been almost the entirety of the amateur or sportsman protective effort of Chicago for the year. As to "agitation," they have been two among others. As to execution, they have been the "some one else" to whom all amiable but aimless agitation of the national sort usually is helplessly turning. Now, there is your National Game, Bird and Fish Protective Association as it really is on its executive side—and the executive side is the only side which ever has any real news in it. The "agitative" side, consisting of speeches and resolutions, has no news value whatever. It is nice to see one's name in a newspaper, but, to use the blunt speech of the populace, that cuts no ice in game protection.

I take so much space in mention of these facts—the only real news of the association—because, being here in Chicago, I have heard comment on the editorial criticism made by *FOREST AND STREAM* upon this association. *FOREST AND STREAM* editorially hit the nail on the head, as it always does. *FOREST AND STREAM*, as already becomes apparent, had gotten at the facts of the case and taken its position without any grotesque gambolings intended to decoy a few possible subscribers within reach of its counting room.

E. HOUGH.

909 SECURITY BUILDING, Chicago

HUNTING IN MANY LANDS.*

Two years ago the Boone and Crockett Club, an association of big-game hunters, issued the first of its publications, a handsome volume entitled "American Big-Game Hunting." We have now to welcome the second volume of the club, under the title which heads this article. The first of these volumes, as implied in its title, confined itself to the large game of this continent, and the articles which it contained, with one or two exceptions, had to do with little else than the actual pursuit and capture of game. It was a good book, its chapters were well written, enthusiastic and full of life, but the volume now in hand is better than its predecessor. In this one much attention is given to the big game of America, but there are in addition accounts of hunting in other continents—in Africa, in China and Tibet—written by well-known explorers who are members of the club, and possessing an exceptional interest for men whose use of the rifle has been confined solely to the North American Continent. The present volume is larger than its predecessor. It covers a broader field, and in its literary excellence it fully maintains the high standard set by "American Big-Game Hunting."

"Hunting in Many Lands" contains fourteen articles that are signed by members, two that are editorial, and some matter personal to the club and its members. The first article is by Mr. W. A. Chanler, the young African explorer whose splendid work about Mount Kilimanjaro is so well known. It deals with many sorts of East African game, from elephants down to small antelope, and paints not a few graphic pictures of the difficulties encountered by the African explorer who has to deal with great bodies of uncivilized negroes.

Following this is an admirable sketch full of local color from the pen of Mr. George H. Gould. It describes a trip into Lower California in search of mountain sheep, and incidentally tells much of that wonderful desert and of the people who inhabited it when the white men came. It is admirable not only from its descriptions, but as a piece of pure English. One of the remarkable events which it records is the killing of two mountain sheep by a single ball. The head of the largest ram secured by Mr. Gould is singularly symmetrical and handsome, and is spoken of in the article in the volume on "Horn Measurements" as "on the whole the finest head of which we have any record." It measures 42½ in. in length and has a girth of 16½ in.

In a Canadian moose hunt Mr. Madison Grant gives a vivid account of the difficulties and discomforts to be passed through by the hunter who starts out into the Canadian wilderness to track down the moose. These are the things often forgotten or omitted by men who write on big-game hunting, but they are the touches which give life to the picture.

Mr. Elliott Roosevelt's article, "Hunting Trip in India," possesses exceptional interest for all the members of the club and for its author's many friends from the fact that he is no longer living, the account having been written by Mr. Theo. Roosevelt from his brother's diary. It tells of hunting in the jungles, and also of work done on the high slopes of the Himalayas in Cashmere. The story is given with great simplicity, and the incidents show unconsciously how keen a sportsman and how plucky a man the hunter was.

It is a far cry from India to Manitoba, but in the next article Mr. D. M. Barringer tells us of a dog sledging trip made in winter after moose and caribou into the country lying between Lake Winnipeg and Lake Winnipegosis. This trip, of course, was made on snowshoes and in the face of the bitterest cold, the thermometer going as low as 45 and 50° below zero. Much curious information about travel in the far north is given.

From Manitoba we are carried across the sea to Russia, in the long and interesting article on wolf coursing in Russia, from the pen of Lieut. Henry T. Allen, who for several years was military attaché at St. Petersburg. The account of Russian hunting methods and of the dogs will prove extremely interesting to all persons who take pleasure in the use of greyhounds in this country.

One of the most admirable articles in the series is Mr. Alden Sampson's "Bear Hunt in the Sierras." It is charmingly told, is full of excitement, and withal contains much interesting information about the forests of the Sierras, and the way in which they are being destroyed by the sheep and the sheep herders.

The ascent of Chief Mountain, a deservedly noted peak of northwestern Montana, is well described by Mr. H. L. Stimson, who, with two companions, one of them a member of the club and the other an Indian, accomplished the feat of reaching the summit, something which no civilized man had hitherto achieved. Mr. Stimson is full of enthusiasm for the mountains and happily describes the country, the peak and its difficulties. He gives most charmingly an ancient legend of the Piegiens, which tells how once before this mountain had been climbed by an Indian, who was about to take his medicine sleep; and singularly enough, when these climbers reached the peak of the mountain, they found there, half buried in the weathered debris of the rocks, in a place to which no four-footed animal could possibly have climbed, a very old buffalo skull, just such an one as tradition said the Indian had carried with him.

Mr. Caspar W. Whitney, whose writings are well known, and who some years ago prospected for gold in the mountains near the Rio Grande, tells some exciting stories about the mountain lion, with which he has had large experience. This animal is one that few hunters know very much about.

Perhaps the most important chapter, because it treats of the country that is least known to any of us, is Mr. Rockhill's "Big Game of Mongolia and Tibet." He describes most of the large mammals of this country, of which he has an intimate knowledge, obtained during his explorations among the Mongols; but the conclusion that he draws is that Corea, Mongolia and Tibet are not countries for the sportsman, and that unless one has some other hobby to take him there, he would better seek his fun in some more accessible quarter of the globe.

Mr. Theo. Roosevelt's paper on "Hunting in the Cattle Country" is full of facts and experiences which when pondered will be useful to the young hunter. He writes in a chatty, interesting way, and does a good deal for science too when he urges upon members of the Boone

* "Hunting in Many Lands." The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt and George Bird Grinnell. Vignette. New York: Forest and Stream Publishing Company, 1895, Price \$2.50.

and Crockett Club and big-game hunters generally the importance of putting down their experiences of game, of noting the changes which take place in the habits of animals, the causes tending to their decrease and other matters of interest. Almost any hunter can pick up in conversation with persons who have resided long in the country where he may be information of real value, and these matters, if recorded, are often of very great interest to students of science.

Mr. Roger D. Williams, who is well known as an old-time follower of the sport of wolf coursing, gives in this volume a long paper on the subject, which will still further recommend the volume to lovers of the greyhound. There is a great deal that is interesting in his account of wolf chasing, and he gives a detailed description of the first trial of barzoi—the Russian wolfhound—in this country.

Mr. Charles E. Whitehead's paper on game laws is in a measure historical and is full of useful suggestions looking toward the protection of game. His long experience in connection with the New York Association makes him speak with authority on this subject.

The last of the signed articles in the volume is by Capt. George S. Anderson, the superintendent of the Yellowstone National Park, and is entitled "Protection of the Yellowstone National Park." It briefly sketches the history of the Park from 1871, when the Barlow and Hayden expeditions entered it, up to the present time, but, of course, the greatest space is given to what has occurred there since he took charge of the Park. He describes the capture of some of the poachers and makes recommendation looking toward the preservation of game and the punishment of those who offend against the regulations.

One of the most interesting papers in the book is the unsigned contribution entitled "The Yellowstone National Park Protection Act," which gives in small compass the history of Park legislation, and tells of the good results of protection, and of the manifest comprehension by the wild animals within the Park of the fact that they need not fear man. Examples are cited of the absolute tameness of bears, and on the whole a paper is made up which is of the greatest interest.

Up to a year ago there had never been any authentic measurement of horns of American game in this country; but, at the Exposition held in the Madison Square Garden in May last, a committee of the Boone and Crockett Club measured the few heads exhibited, and the measurements are published in this volume. There are only one or two especially large heads among them, but the measurements give us a starting point; and it is to be hoped that from this time forward heads will be measured, so that after a while we shall have a series of records which will be of value.

This is the last general article in the book. It is followed by the text of the Yellowstone Park Protective Act, by the constitution of the Boone and Crockett Club and a list of its officers and members. The whole makes a volume of 447 pages. It is handsomely illustrated by half tones and sketches, all of them of much interest. Among these we may mention especially two pictures of Chief Mountain, picture of a mountain ram from life, a comparison of the heads of the Rocky Mountain and Polo's sheep, drawn to the same scale, so as to show the difference in the spread of the horns; two or three pictures of Tibetan animals, a number of pictures of game in the Yellowstone Park, and two or three bearing on wolf coursing.

The make-up of the book is handsome, the typography well done. It has a rubricated title-page with a vignette, and a dark red cloth binding is ornamented with a silver stamp of the fine mountain sheep head killed by Mr. Gould in Lower California.

On the whole, the volume may be said to reflect great credit on the club. Messrs. Theodore Roosevelt and George Bird Grinnell were the editorial committee under whose charge the work was prepared.

CALIBERS FOR GAME.

FREDERICTON, N. B.—*Editor Forest and Stream:* I was pleased to see in your issue of Feb. 8 that Col. Cecil Clay took the part of Tiam. I always thought that Tiam was used pretty badly by some of the writers in our paper, and some of them, according to their own story, had never been in Tiam's position, and could not tell whether he had acted in a sportsmanlike manner or not. I know Tiam by reputation and I think he knows more about moose-hunting than some of his critics.

I would like to say to Cecil Clay that I enjoyed his letter very much, and I agree with him that the killing of the animal is the least enjoyable part of a hunting trip, but still I think he is a little hard on Mr. Irland. Mr. Irland did not say that a man was insane who went after moose with anything less than 100grs. and an ounce ball. What he did say was that he expected to hear of some one going after a moose with one of these new crochet needle guns, meaning one of the new .30cal. rifles.

Brother Clay has been very fortunate in his moose hunting; remarkably so, I should say, and I think others will agree with me.

He has had success with his .44-40 and is satisfied; so would any one be under the same conditions. Still I do not think that he will get many big-game hunters to recommend the .44-40 for moose. Moose and also bears have been killed with .22s, but such arms are not usually taken for that game.

He also spoke of his '73 model .44-40 as a light gun. I think it weighs about 9lbs., which is as heavy as a .45-90; and many will agree with me that the .45-90 is the better gun. He has used the .44 with success and likes it; that is all right; but our friend A. H. asked for opinions on the best gun for moose. And I think I will have more agree with me than with friend Clay.

Another writer in a late paper advises A. H. to get a shotgun. Now that is very good for the brush, but what about the long shot out on the barren or on the lake in winter? The shotgun would be useless there. All the English gun makers have guns double-barrel top-snap action, which do as good shooting as a rifle up to 150yds., and make a good pattern with shot at 40yds. They can be had in any bore from 20 to 4. One of these would be far superior to a shotgun for big game—a 16 or 12-gauge being as nice a size to take to Maine as a man could have; a good grouse or duck gun, as well as a first-class moose gun for close range, they use both round and conical bullets, solid and express.

Brother Clay is also a little astray when he says that he would only take a .50-110 or a .45-90 to a 500 or 600yds.

target match. Perhaps he judges these guns by the old 1,000yds. sight on the old .40-60 and .40-65 Winchester. The .50-110 is intended for 200yds. work or less; the .45-90 is good on a pinch up to 300yds., nothing more. If he wants to get a gun to do good work up to 500 or 1,000yds. he will have to look elsewhere than to either of the above named. This I have from the Winchester people themselves.

I had the same ideas about my old .40-60 Winchester; it was fitted with a 1,000yds. sight, taken to the range, tried, and found wanting. I wrote to the makers and they informed me that the last 800yds. on that sight were for looks—not use.

As for shooting grouse on the head, as doubted by Dick, it can be done as well with a .45-90 as with a .44. Last fall I saw five shot with a .45-85, and only six cartridges used; all shot in the head. How is that, brother Dick?

To the rest of friend Clay's letter I agree.

Don't have your moose called. Still-hunt him fair and square; and when you shoot him do it with a gun so big that he will not run a quarter of a mile, or 300yds. or less; drop him where he stands; if possible, do this part of your hunting as humanely as possible, and you will do about right.

A friend of mine over north met a hunting chum on the caribou barrens fall before last; the chum had a .44; he said he had seen a good many caribou that fall; had shot at a good many, in fact, but had only got three. My friend was over that ground all winter and spring. He came across eleven dead caribou which his chum had shot, and which of course were useless and made food for foxes. I don't think that would have happened if his chum had used a bigger gun. Certainly not so many would have been lost.

Cecil Clay can stick to the .44.

BLUE NOSE.

IN FOREST AND STREAM of date Jan. 11 I notice A. H. asks what caliber rifle he should obtain for shooting large game. The selection of a gun for this purpose will depend to some extent upon the kind of game he expects to shoot and the nature of the country in which he will hunt for it. If his hunting should be done in the dense forests and thick undergrowth of the North or South, particularly the latter, it is essential that a rifle of large caliber be selected, and as but one shot will generally be had at game before it is out of view—and that a necessarily quick one—there will be no time for adjustment of sights, hence the value of flat trajectory, soft bullet and large caliber, that the shock or "stopping power" may be great, and the game if wounded may not escape from the hunter to die a lingering death. For this kind of shooting accuracy in a rifle can be dispensed with to a great extent so as to gain other features of greater value.

If, however, hunting is done on the plains, plateaus or in forests which may be considered as comparatively open so that a view of the game may be had for some distance, then it is essential that the rifle be caliber sufficiently large to kill at a distance, with as flat trajectory as can be obtained with a reasonable amount of accuracy, for shots may be taken at 200 and even 300yds., although the vast majority will be at much less distance, and one would be foolish to try a shot at such long range unless it be impossible to get nearer.

For deer and antelope hunting in fairly open country I should not use a smaller caliber than .40, and for elk, moose and bear .45 or .50 would be the proper arm, and also serve for the former animals as well. The .45 and .50 should also be effective in very thick cover.

If a repeating rifle is chosen, a cartridge will have to be selected which is adapted to it, but there are a number of good cartridges and loads for hunting large game that can only be used in a single-shot rifle. However, the former is considered by the majority of hunters of experience to be the best of the two for hunting, as several shots quickly taken gives one more chances of bringing down his game. Almost everyone has his individual taste in such matters, and some hunters have a horror of the clumsy repeater, preferring a single shot shooting a large load, and they say they either kill their game clean or kill it dead, all of which is true. The owners of a repeating rifle generally have a tendency to shoot recklessly at game, at least not as carefully as the users of the single shot, who know what a miss generally means to them. Let A. H. decide on this matter for himself.

Of the .40 calibers, the .40-65 and .70 Remington, Marlin, Winchester and Sharp are good; have excellent accuracy, but rather high trajectory for a rifle used exclusively in hunting. The .40-82 Winchester has flat trajectory, is powerful enough for deer, etc., but the accuracy is not so great as the others named, though sufficient for hunting purposes.

Of the .45s the .45-90-300 and .45-70-330, 350 and 405 grain bullets are good hunting charges for most any large game to be found in America. The former has very flat trajectory, good accuracy and very powerful, though it has rather a light bullet for hunting our largest game. Still it is one of the most popular among sportsmen. The .45-70-330 (Gould) has moderate trajectory, very good accuracy, the 350 nearly the same, and the 405 bullet, which can be used in the same rifle, should be available for the largest game and at the longest range at which it can be killed. The Winchester .50-100-450 is of course a very powerful gun and may be used for hunting the grizzly bear and such dangerous animals, but even for this it has very little superiority to the .45-70 and is inferior in many other ways.

Of the modern small caliber rifles shooting high velocity ammunition I have little to say under this head, as I do not consider such an arm practicable for hunting, one reason being that such rifles and ammunition were designed to serve a different purpose than that of a gun for game shooting.

If A. H. should select a single-shot rifle, I would advise that he select the .40-90-370 Sharps straight of the .40 calibers, and of the .45s a gun chambered for shooting the Sharps .45-100 grains powder and from 350 to 500 grains lead. This rifle should have a shotgun butt and checkered rubber butt-plate, pistol grip, not over 30in. barrel (round), and may have a matted rib and checkered trigger; fitted with Lyman's sights.

If he should select a repeating rifle, this is about what I would order: Round barrel, 24 or 26in., $\frac{1}{4}$ magazine, shotgun butt and rubber butt-plate, fitted with Lyman's sights, caliber .45-70, taking the U. S. Government cartridge, but would use the 330 (Gould) or 350 grain bullet for hunting, and he can use the 405 grain bullet when required,

Reload the shells with some good strong powder, and I think he will have all he desires. This is undoubtedly an ideal gun for large game and has many advantages which I have not space to describe, but which A. H. will no doubt, in time, discover for himself.

W. H. DAVENPORT.

CHICAGO.

[The Sharps rifle is no longer on the market.]

ABOUT SOME SITTING SHOTS.

I HAVE read with interest the various opinions expressed by your correspondents as to what constitutes a true sportsman, and see no reason to modify the opinion I gave in your columns last fall, namely, that the true test of sportsmanship lies in the motive which prompts the act. For about half a century I have practiced wing shooting, and have been called a good shot. During that period I have fired at game comparatively few sitting shots, yet it is a fact that among these were some of which I felt particularly proud.

On one occasion, late in the season, when the birds were scarce, wild and strong of wing, I was seeking for game upon an Illinois prairie with which I was totally unacquainted. I had no dog, had fired no shot for months, and was about to leave the grouse country. I needed a few birds. I say "needed," but this does not necessarily imply that I should have suffered for the want of food had my expedition been unsuccessful. The gun I carried was a very strong-shooting muzzleloader.

After an unsuccessful travel of some miles, I saw a little grove of large cottonwood trees, perhaps half a dozen in number, among which were a few patches of low brushwood. Toward this spot I bent my steps, thinking to find a rabbit or a bevy of quail, but none of these rewarded my efforts. While standing near the trees a few prairie chickens came sailing past, intending to alight upon the branches. Two of these fell to my double shot as they passed my stand, and I dropped the butt to load; but as I did so, I saw another grouse coming from the same direction as had the last.

This bird alighted on a tree at very long range, and was hidden from view by numerous twigs. Certain of its position, I kept my eye upon the spot, lest it might change its place unawares, and "felt" a charge into my left-hand barrel. The old gun cracked, and the bird came down—dead. I am sorry that I did not pace the distance.

I now had all the game I needed, and sought no more.

Had I moved two steps in the direction of that grouse, it would have flown instantaneously, in which case I might have stung it with a stray shot, but the chances against killing it would have been as a thousand to one.

About five years ago I shot my last partridge (grouse). There were few of these left, but I heard the bird start from the ground in spite of a high wind which was blowing at the time, and followed the sound some thirty rods, when, looking across an open glade in the forest, I saw for the first time the bird near the top of a tall hemlock some thirty odd yards away, and ready to fly. Now, there may be one among those who read FOREST AND STREAM who would have felt that there was a chance of getting that bird in some other way than by shooting it where it sat. I did not so feel, and I wanted that bird, for there was no chance of getting another. I shot it.

Perhaps these things were unsportsmanlike, but I will tell you what did make me feel decidedly mean, and I have not forgiven myself for the shooting of my last duck. This, too, happened some four or five years ago. I was paddling down a river, hardly thinking of game (for it was then nearly as scarce as now), when a duck arose well in advance of the boat and flew across the marsh. I dropped my paddle, caught up my gun, and cut down the bird by a snap shot at very long range. It was a shot which would perhaps have rejoiced almost any of your high æsthetic sportsmen law-givers, but to me it was most unsatisfactory, and the only excuse I could offer to myself for having killed that bird was that there was little time for thought of consequences. I ought to have held my fire as often before under like circumstances, for the poor bird fell into a cat-tail swamp, where mortal man could never find it without a retriever. I had no dog, and—that's all.

KELPIE.

The Buck that Got Away.

AN old abandoned logging road, moss grown, rotting and silent.

A hurrying brook, icy cold, clear and swift, singing a forest chant as it turns and twists, gurgling as it disappears under a rotting log carpeted with moss, silent where it bubbles up again.

A long vista of forest isle, cool, damp, moss-hung and silent save for the mystic sighing that comes from the unmoved pines, the waiting silence of the unblown forest.

Tree trunks, more beyond them and still more until there is nothing but tree trunks to see and the eye is lost.

A figure, silent, watchful and careful, treading, slowly walking on and on, further up the log way, further up the stream.

A gleam of steel that glints in the spaces where the light struggles down through the moss-hung tangle of the cedars and the pines.

A muffled roar of wings in rapid flight, a swift-moving brown ball of feathered lightning, then a roaring, echoless boom, the sound of exploding powder and—a dead pheasant smoothed, admired and laid away in the coat pocket.

A silent, watchful figure strolling on.

A crackle in the thickness of the mossy cedars.

A halt, a cautious, silent peering, a searching, careful look.

The carved image of a lordly buck graven 'mid the green.

A silent, quick exchange of shells, a quick but steady aim, the booming roar of a "scattergun."

A crash among the cedars, a waving branch or two. Chug, chug, chug, fainter and fainter to the figure standing under the smoke wreath, the bounding thump of the retreating buck.

A study of a deep fresh trail, a look of disappointment and a set of unstrung nerves.

A silent figure strolling back again, listening to the singing of the glad brook.

A resolve to go again and a buck that got away.

EL COMANCHO.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Proposed New Jersey Seasons.

THE BOARD OF FISH AND GAME COMMISSIONERS OF NEW JERSEY.—Mt. Arlington, N. J., Feb. 14.—*Editor Forest and Stream*: I take the liberty of inclosing for your consideration a schedule of open seasons for fish and game in New Jersey as suggested by the Board of Fish and Game Commissioners:

For the Northern Game District—Woodcock, Oct. 1 to Dec. 10; partridge (commonly called ruffed grouse), Oct. 1 to Dec. 10; gray, black and fox squirrels, Oct. 1 to Dec. 10; hare and quail, Oct. 25 to Dec. 10; European pheasant, European partridge, European grouse, Oct. 25 to Dec. 10.

For the Southern Game District—Hare and quail, Nov. 15 to Jan. 1; partridge, Nov. 15 to Jan. 1; gray, black and fox squirrels, Nov. 15 to Jan. 1; European pheasant, European partridge and European grouse, Nov. 15 to Jan. 1; woodcock, Nov. 15 to Jan. 1.

For the whole State—Gray snipe (commonly called English or Wilson snipe), months of March and April, and also between Aug. 31 and Dec. 10; grass or upland plover and dove, Aug. 10 to Sept. 10; reed bird, rail bird or marsh hen, Aug. 25 to Dec. 10.

Black bass, May 30 to Dec. 1; trout, April 1 to July 15; pickerel, May 1 to Feb. 25; Eel pots and baskets for the catching of eels allowed all the year. Birds, game and fish may be removed from the State in possession of the persons who may have lawfully captured the same during the open season. H. P. FROTHINGHAM, Sec'y.

Long-Distance Telephone.

A GOOD many stories are told of the strange uses of the long-distance telephone. The day the line was opened to Merrill, Wis., a Chicago man, hunting in the northern woods, came into town and learned of the innovation. He went into one of the "sound-proof" booths and had himself put into communication with his family. As they had a telephone in the house, the task was a small one. He chatted with his wife, told her a fish story at which she might smile without embarrassing him, since he could not see the sign of incredulity; talked with his boy and girl, and then called for "Gyp."

"Gyp" was a setter, a great family pet, which had been left behind because of an accident which rendered him lame. "Gyp" was called to the telephone, and he stood on a chair, his forefeet on the back, and his mistress held the transmitter to his ear.

"Hello, Gyp!" called the master from Merrill. And the dog in Chicago picked up his ears and whined. The master whistled cheerily, and the setter barked directly into the receiver. He knew his master's voice, and the whistle as well; and the master cheered him by ready laughter at the prompt and eager reply.

It was worth the \$2.50 it cost.—*Tacoma, Ledger*.

The .38cal. Revolver.

ROCKVALE, Col., Jan. 26.—*Editor Forest and Stream*: I notice in your issue of Jan. 25 an account by E. H. R. of a .38cal. pistol bullet being flattened against a darky's skull.

In the western portion of this State, which is still at times a trifle fuzzy, white men are sometimes the victims of gun play, but I have never heard of a fatal wound being made with a .38cal. six-shooter. The bullet from such calibers nearly always glances from the skull or ribs.

I once killed a calf with a .38cal., but will never do so again. The first shot struck just behind the ear, ranging slightly forward, but the only effect was to make the poor animal shake its head. The second shot was square in the forehead and produced about as much effect as a pebble from a boy's catapult. The third shot struck right inside the ear and ended the trouble. Next day I traded the .38 for a .44.

EDW. F. BALL.

Chittenden's Yellowstone Park.

OUR review last week of Capt. Hiram M. Chittenden's Yellowstone Park failed to mention the price of the work, which is \$1.50. The full title of the volume is: The Yellowstone National Park, Historical and Descriptive. Illustrated with Maps, Views and Portraits. By Hiram Martin Chittenden, Captain Corps of Engineers, United States Army. Cincinnati: The Robert Clarke Company, 1895.

Sea and River Fishing.

TWO ANCIENT ANGLERS.

Ninety Years Old and Still Fishing.

RECOLLECTIONS OF DANIEL WEBSTER, GENIO C. SCOTT, ARTHUR W. BENSON AND OTHER ANGLING WORTHIES.

It has become an axiom in physiology that "as long as a man can do anything he can fish," and there is record of quite a few superannuated anglers like F. E. Spinner, of U. S. Treasury fame, and Arthur W. Benson, late of Brooklyn, who actually died in their skiffs of old age, fast to their lines. But although the lives of these good men were long and phenomenal and well on in the eighties, there are others living whose years have exceeded theirs. We have in mind two eminent anglers, now verging on ninety, who have long been known in literary and scientific circles, and whose usefulness, virtues and genial *bon homie* have held the regard of their fellows for three generations. They are: Samuel C. Clarke, now of Marietta, Ga., and Isaac McLellan, of Greenport, L. I., own cousins, and both natives of Newton, Mass., born in the selfsame year of 1806. Clarke is 90 years old in this February and "old Isaac" 90 in the May following. Mr. McLellan has written *l'envoi* in verse for nearly every leading sportsman's journal that has been started since 1873, and within the nineties has issued a volume of "Poems of the Rod and Gun," which includes most of his effusions of the last half century. Many earlier verses appeared in the *New York Journal of Commerce* previous to the war. Mr. Clarke was foremost in the ichthyology of the South Atlantic waters up to 1878, following up assiduously the work begun by Bartram and continued by Holbrook until 1862, and his notes on fishes have occupied prominent place in all treatises official and unofficial up to and including the crowning work of Prof. G. Brown

Goode, of the Smithsonian, entitled "North American Fishes," which was published in 1891. Year after year he used to winter on the east coast of Florida, until at last the growing crowd drove him out in 1887, when he retreated to the hills of north Georgia, "where," he says, in a letter dated in February of that year, "I can at least have solitude and quiet, the best comforts for an old man." Mr. Clarke's youngest brother, T. C. Clarke, aged 68, is president of Jekyll Island Club, and a famous bridge builder known throughout the United States and Canada.

Both of these venerable men are bearing their great weight of years with grace and cheerfulness, and with apparent vital headway enough to carry them to the end of the century, if not to the round period of 100 years of life. Writing on Jan. 3, 1896, with a nervous energy little impaired by time, the ancient angler of Greenport writes as follows:

"GREENPORT, Suffolk County, L. I., Jan. 3, 1896.—*Dear friend Hallock*: I have just received your good letter of 30th Dec. I am right glad to hear from you. My health is quite good, though on the 21st next May I shall reach 90 years, if the good God so permits. The weight of so many years presses very lightly upon me. I have laid aside forever my guns (and my pen also), but enjoy some fishing in Long Island Sound. I inclose my latest photograph. Ever yours truly, ISAAC McLELLAN."

Two years earlier, under date of Jan. 24, 1894, he writes, still defiant of Time, the Reaper: "I am quite strong and hearty yet, and could walk, row or handle a gun and rod about as well as ever."

Mr. Clarke does not hold up as well, but he drives a vigorous quill with firm hands. Writing on recent date he says:

"MARIETTA, Ga., Dec. 19, 1895.—As for myself, I have been confined to my room for many months with rheu-

ISAAC McLELLAN.

matism and other maladies incident to old age, the worst being failing eyesight."

But he adds:

"I would like to have a good fish talk with you."

The ruling spirit is invincible.

Mr. McLellan has always been an enthusiastic fowler and gunner, and kept up his duck shooting until he was 87 years old! Did Emperor Wilhelm of Germany bear arms more bravely? But it was not for lack of vigor that he quit shooting, but because there was no game to shoot, for, referring to the circumstances, he says, apologetically, in his letter of January, 1894: "Three years since I gave away my old muzzleloaders, which I had used more than thirty years constantly, thinking I should have no further use for them. Indeed, the shooting in this region is almost worthless—only some quail on land and coots on waters of Peconic Bay and Long Island Sound." And in respect to fishing he adds: "Nor in some years has there been any good fishing here. Still, if at any time you would like to try it, I should be very glad to see you. I would prefer to be by some lake, river or big pond, where I could daily catch a few fish, even without the use of boat."

This is business!

Again, in April of the same year he wrote with a *con amore* which showed what ardor animated him: "We hope for better fortune when June comes in, and if the fish should reach these shores at that time, I shall enjoy the sport, and would then be delighted to have you for company."

Lapsing into reminiscence, he writes: "The best snipe shooting I ever had was at my friends', the Taylors', plantation on the eastern coast of Virginia (peninsula), near the water, and not far from Eastville and the Cherry-stone Landing. I often think of old days and former old friends, remembering our interviews in your dear father's building, whence the *Journal of Commerce* issued, and also remember our deer hunt at the Blooming Grove Park Association. I deplore the loss of my kind old friend, Genio C. Scott, at all times. I never can replace him. I recollect I introduced you to him when you wished to join the New York Sportsmen's Club in 1857. I declined it myself, but my late brother, Dr. F. M. McLellan, did join it, and often gave me an account of it. I was a member years ago of the Boston Sportsmen's Club, the first, I think, that ever was formed there. We had nice rooms in Boston and a club house on Scarboro River, near Portland, Me."

Dropping back to the year 1887, he writes on April 27:

"I am happy to say that my health is perfectly good. I have never had any serious ailment except some malarious troubles. I pass my winters here, and then migrate to some quiet spot by woods and waters. * * * My

cousin, Sam. C. Clarke, and I began our fishing life together when boys, first fishing in a brook which ran through our grandfather's meadows (Gen. Wm. Hull) at Newton, Mass. We also fished together off the bridges and wharves of Boston for flounders, eels and smelt. Then Sam had great and various experience at many places, such as in Massachusetts waters, in Canada for salmon and trout, and in Illinois for black and rock bass, etc., near Chicago, and in the Fox and Lake rivers. In later years he fished for many seasons in Florida waters, taking sheepshead, bass, pompano, etc., and trying for the big tarpon. He wrote me lately that he had no fishing in Georgia, the nearest stream being twelve miles distant. I fished often with G. C. Scott in waters near New York for striped bass, etc. We also fished together at South Hempstead, L. I., in the creeks and trout ponds of that region. His favorite place for trout there was at Massapequa Pond. He fished with fly and I with bait, and the catch was about equal. I went with him on a fishing tour to Sodus Bay, in north part of New York State, fishing for pickerel and muscalonge, and his success with the former was very good. Scott had successful experience in salmon fishing in the rivers of Canada, but I did not accompany him there. I helped him in preparing his 'Fishing in American Waters,' and passed one day and night with him at his home in Williamsburg while the book was in progress. We read over the manuscript and proofs together each evening. I wrote for him the poetical pieces. The book was very successful, and after his death the copyright was sold to the American News Company, who issued a third and cheaper edition of it.

"I may also mention Daniel Webster, whom I met almost daily, as I lived at Marshfield, Mass., his summer home, for two or three years. He had a little sloop which he kept in Green's River, near his house, and in this he enjoyed many days of good fishing, which consisted chiefly of cod, haddock, mackerel and blackfish (tautog). His two sons, Fletcher and Edward, often went with him. They also enjoyed the drop-line, and also used the rod and reel for tautog. Mr. Webster greatly enjoyed the sport, but was an impatient angler, and if the cod did not begin to bite soon he would say to his skipper (Nat Delano, with whom I boarded), 'Up killick, Captain Nat, and try another place.' When he returned to shore he had his wagon waiting for him, into which he put his fish in a big box prepared for it. There would be perhaps forty or fifty fish which he used on his own table; but most of them he distributed among his many tenants of his farm-houses. Mr. Webster was also an earnest trouter, fishing in company with Mr. Harding, the artist, and others. Sometimes he would go for trout on Long Island and at Sandwich, head of Cape Cod, and various other places, where he was a welcome guest. I know of no good trout brooks at Marshfield."

At the age of 86 McLellan was still versifying, although he says, in 1890: "I have almost wholly laid aside my pen." Nevertheless in the spring of the following year he penned the following stanzas, the last of any length he ever wrote, "suggested," he said, "by a recent work admirably descriptive of the pleasures of salmon fishing," thus far surpassing Tennyson in years and keeping pace with the indefatigable Gladstone in his literary work. The lines have never been published:

SALMON FISHING.

A veteran angler! None so skill'd

To cast the fly in limpid brook,

To lure the starry-spangled trout,

Quick-springing to the feather'd hook;

Skill'd in the ocean surf to cast

The humming line in seething foam,

Skill'd the swift bluefish to secure,

Or sea bass where the billows comb;

But nobler task was thine to take

The lordly salmon as they break.

Ah, few so skillful to relate

The joys that on the angler wait.

The angler hath his glorious fight

With tarpun where the surges roar,

And vast his triumph, vanquishing

The striped bass by rocky shore.

But ah, what pæans bard may sing

In capture of the salmon king!

Our angling author far hath roam'd,

Lov'd well o'er nature's charms to muse,

Where pure, refined delights enchant,

Where nature opens her loveliest views;

With transport 'mid sublimities

Of mountain steeps his way hath been,

Rejoicing where great rivers sweep,

And where green valleys smil'd serene.

By Florida's undimpled stream

Or where St. Lawrence pours its tide;

And by the sandy Labrador,

By Minnesota's prairies wide,

He roam'd, enamored by the spell

That nature on each scene bestow'd;

There pausing oft to cast the line

Where brooks or ocean currents flow'd;

Skillful to seal the salmon's fate,

Skillful with pen to celebrate!

ISAAC McLELLAN.

Isaac McLellan has strong religious convictions and a comfortable hope in the decline of life. Writing on April 5, 1894, he says: "I anticipate the future with little fear, hoping for a happy hereafter in the eternal world. If one has a fairly clear conscience I think such a person need not apprehend future pains and miseries. I think each person in the future will be judged and rewarded or punished according to the deeds done in the body. The good and faultless will continue to be good and faultless, and the evil ones will suffer pains in reflecting on past evil deeds, and it is to be hoped that in course of time they will improve in spiritual things, in mind and feeling."

Mr. Clarke's reminiscences are quite as interesting as his cousin Isaac McLellan's. "There were three of us cousins," he says, "of about the same age—Isaac McLellan, John McKesson, of New York, and myself, all born about the year 1806, when Jefferson was president. [McKesson died about a year since.] I was born that year in February under sign pisces. What says Lowell? 'Born beneath the fishy sign, of constellations happiest!' I am the oldest of the three by a few months. Of all my old angling friends I think cousin Isaac is the only one left. Judge S. P. P. Fay, of Boston, was a prominent man and angler

in my youth. He had an English fly rod which on his death came into possession of my friend and relative Harry G. Sargent, who gave it to me. Compared with modern rods it was a cumbersome weapon, weighing perhaps a pound or more, 15ft. long and heavy enough for salmon. I took it West with me and killed many big pike and black bass with it. It was burned in the Chicago fire with all my tackle and guns. Dr. Bethune was one of my contemporary anglers. Arthur Benson, of whom you speak, was a great sportsman and a worthy gentleman who passed his winters in Florida, where I have fished with him at Mosquito Inlet. He was troubled with gout and rheumatism, but would have himself carried by his boatman and placed in his boat, where he would fish all day for black bass in the St. John's River. I have known him to go deer hunting and kill his game when he had to be lifted into the saddle.

"I have the records of all my Clarke ancestry in Massachusetts, from 1620 down, six in number, and five of them were fishermen or sailors, probably both. I think that Cousin Isaac and I must have inherited our sporting tastes from an uncle, Capt. A. F. Hull, as neither his father nor mine were sportsmen. Capt. Hull was an ardent angler. He was killed at the head of his company at Lundy's Lane in 1814. The last time I saw him he came to our house in Newton, bringing to my mother, who was his sister, a fine string of trout caught in the brook that ran through his father's farm. The next day he went to the front, and was killed not long after. I think the sight of those trout made a fisherman of me, and I never rested till I had learned how to catch trout. My four brothers have all been afflicted with the same malady, which is more or less developed among all the Clarks. Ever since I spent a day on the Nouvelle River in Canada, and made the best string of big trout that I ever killed, I have believed that the sea trout (*Salmo canadensis*), from their salmon-like traits and behavior, should have a name of its own, whatever the professors may say. Since I came to Marietta, Ga., in 1879, I have been only once to Florida. My time is much occupied in gardening, which is the favorite pursuit of old men.

"My old guide, Pacetti, writes me from Mosquito Inlet that since the building of a railroad to New Smyrna (in 1886) the region is infested with nets and seines and other devices, which will before long depopulate the Florida waters. I think I shall try the east coast again next winter, and then lay by rod and reel. Last August (1887) I went to Ashland, on Lake Superior, and finding no trout fishing there I went to Lake Gogebic, where I killed my share of black bass, ten or twelve of a morning for three days, by fishing early; but trout in the river would not take fly or bait. The weather was too hot, 87° at noon, and I became homesick, which was natural enough at the age of 81. So I returned to my own cool piazza and hammock. That was my last outing. I killed my first salmon (24lbs.) in 1871. I was then aged 65.

"My first writings on sporting topics were printed in the *American Sporting Magazine*, published in Baltimore in 1825 or so by John S. Skinner. The work is now rare. I had a bound copy which went up in the great fire. Afterward I was a contributor to Porter's *Spirit of the Times* under the pen name of Weston Fisher, and to its successor, Wilkes's *Spirit*. Then came your *FOREST AND STREAM*. In my youth all the angling books we had were Walton, Davy's "Salmonia," Prof. Wilson's delightful articles in old *Blackwood*, and a few old English books; nothing American until Frank Forrester began to instruct the ignorant natives in his ignorant manner, for he knew little or nothing about the fishes of the United States, that is, as they are now known from Maine to Florida, and from New York to Alaska.

"I have heard old anglers express their doubts whether any trout in America ever weighed over 2lbs. I think I was among the first to write about the black bass, muscalonge and other Western forms. That was about 1848-9. With their opportunities American anglers ought to be the best in the world, and I think they soon will be, if they are not now. Compare the numbers of species of European game fishes and those of America: what Englishman has the chance to try conclusions with a tarpon? But I find now that to read about the new and wonderful things is all that now remains for me, who am left 'superfluous on the stage.'"

The foregoing memorabilia are collated from correspondence which covers the past seven or eight years only. The latest of these, taken chronologically, and dated Dec. 19, 1895, says: "I do not desire to be written up. I have done nothing to distinguish myself from others, except perhaps in living to be nearly 90—and for this I deserve no credit, it being involuntary on my part—and I have no photograph with which to illustrate such a paper. Almost all of my old fishing companions have gone before me, and there are few, if any, who know me now."

This is as pathetic as the plaint of Gen. Lew Wallace's "Prince of India."

Such instances of consanguineous longevity are rare indeed.

CHARLES HALLOCK.

Eel Bay and Lake of the Islands.

Editor *Forest and Stream*:

I wish to second the suggestion of R. M. Hartley in the *FOREST AND STREAM* of Feb. 8, as to the convenience and value of a canal through the isthmus between Eel Bay and the Lake of the Islands. I have no longer a personal interest in such a communication between these two portions of the same waters, for after visiting the 1,000 Islands for some thirty years I have become a back number. But I have camped several seasons on the shores of each bay, and have tramped across the isthmus several times, in preference to being rowed either to Clayton or Alexandria Bay, thus materially shortening the distance home, which is quite an object when night is coming on and you feel chill and stiff from a day's exposure while duck shooting.

Twenty-five or thirty years ago Eel Bay and Lake of the Islands were two of the best locations for late ducking that I ever found between Cape Vincent and Chippeway Bay. When I get to thinking or writing of the delightful days and weeks I have spent among the 1,000 Islands, other things are forgotten. But to return to the canal. Judging from the current that runs between Wells and Hill islands, which forms the dividing line between the United States and Canada, there can be no question about a canal being kept free from filling up, but instead the continual flow would deepen and broaden the channel.

The ground is low much of the way, so that the exca-

vation would be comparatively inexpensive, compared with the advantage to boatmen, sportsmen and tourists. My recollection is that there would be but little if any rock cutting required in a nearly straight line from water to water.

Canadian shippers could unaided well afford to build a ship canal through this narrow neck of land, provided they could have the free use of it for their vessels up and down, as it would considerably shorten each trip and avoid several points of rather difficult if not dangerous navigation along their present route. Of course such a canal would be of but little value to American shippers, as they have a fairly good channel on their own side. But to summer residents and visitors of whatever nationality it would be a very convenient, useful and much valued improvement.

J. H. D.

POUGHKEEPSIE, N. Y.

NEW JERSEY POUND FISHING.

ASBURY PARK, N. J., Feb. 13.—*Editor Forest and Stream*: Under date of July 12, 1895, I said in your columns that the pound men would receive a setback unexpected and from a source unanticipated this coming winter. In relation to this I received many inquiries. To the man up a tree the prediction was an easy one. Heretofore all efforts to secure legislation against that system have been by individual effort or through fish protective associations. On Tuesday our Commissioners introduced a bill more stringent than any that has yet been presented, and they will urge its passage. The measure provides a season in which it may be lawful to set pound nets within three miles of the coast, provided, however, that the owner or owners of such nets shall first secure a license from the Commissioners upon the payment of \$100. That

S. C. CLARKE.

they shall furnish to them the distance of such projected pound to the nearest inlet and pound then erected or in course of erection. That the leader shall not begin at a point nearer the beach than 1,000ft. at low water mark. The meshes in the leader shall not be less than 4in., and those of the pocket or heart not less than 3in. The pockets or hearts shall be let down at 12 o'clock noon on Saturdays and kept down continually until 12 o'clock noon of the following Monday, so that all fish may have free egress therefrom.

To men who are at all familiar with pound fishing the importance of each of the foregoing provisions is apparent. That a wail should go up condemning the restrictions was to be expected, and that the fight will be bitter there is no question, provided that it can be moved from the hands of the committee on game and fisheries in the lower House; that body presents an anomaly of having as its chairman a member who is largely interested in the pound fishery, and, like all the pound men, is strongly opposed to fish protection of any sort. However, we shall see what we shall see, and be thankful if we get any relief.

The history of pound fishing is black with evil. Nowhere has it been pursued unrestrictedly without leaving in its wake extermination of food fishes, and bringing poverty and consequent misery upon the poor fishermen who are unable to embark in the costly enterprise. Years ago the salmon rivers of the Pacific coast were placed under protection in just the manner prescribed in the section which provides that two days each week shall be given to free passage of all fish.

It may not be generally known, but it is a fact nevertheless, that quite a number of pompano have been taken in the pounds the past two seasons. It may be that with less net obstruction along our coast we might have this delicious fish with us as a perpetual summer visitor in the near future. Certainly it cannot be claimed for them that they are more of a tropical fish than is the Spanish mackerel, whose aversion to cool waters is well known.

Summed up, the pound fishery is a gigantic trust or monopoly, trading in one of the most potential factors of life at all times, controlling the market price of the same and barring all poor men from their fair share of catch and profit.

LEONARD HULIT.

Game Laws in Brief.

The *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

Hon. Emery D. Potter, Sr.

TOLEDO, O., Feb. 14.—The death of the Hon. Emery D. Potter, Sr., which occurred at his home in this city on the morning of the 12th inst., removes a striking and picturesque character from northwestern Ohio. A native of Rhode Island (born 1804), his early years were spent in Cooperstown, N. Y., where, under the tutelage of John A. Dix and Abner Cook, Jr., he was admitted to the bar. In 1834 he removed to Toledo, when what is now the city of that name was only a collection of semi-isolated villages. His history is a long and varied record of public services—postmaster and collector of customs at Toledo, presiding judge of the thirteenth judicial district of Ohio, member of the State Senate and twice chosen to represent this district in Congress, he has left his monument in the statute books of both State and nation.

During the travels incident to his life on the judicial circuit in the early forties, Judge Potter had a wide experience in the vicissitudes and hardships of pioneer life, and no doubt developed the taste for outdoor sports which was always so strong a characteristic of his career. He was an enthusiastic lover of the rod and gun, a thorough sportsman in the best sense of the word, but he was more than this, he was a patient and intelligent student of the secrets of wild life everywhere, and in his later years no man in the State did more to develop and educate a proper public sentiment for the protection and propagation of the fish and game in her borders. As a member of the Ohio Senate in 1873-75 he was largely instrumental in procuring the passage of the law providing for the propagation of food fishes at the expense of the State, and as superintendent of the Ohio hatcheries under that law he was mainly instrumental, through his personal management, in making that policy a success.

During the last few years Judge Potter has lived quietly at home, until quite recently maintaining his physical and mental faculties to a remarkable degree. He was not a demonstrative man, and rarely spoke or wrote of his knowledge of matters of wood and stream unless called out by some special issue. It is a matter of no small regret, now that he is gone, that some of the younger men had not beguiled him of the vast accumulation of early experiences and the lore culled from nature's books, which is now largely buried with him.

JAY BEEBE.

New Berne's Fish Fair.

THE East Carolina Fish, Oyster, Game and Industrial Association will hold its ninth annual fair at New Berne from February 24 to 29 inclusive. This association has done much to promote diversified farming in Eastern North Carolina, and among its members are some of the most successful agriculturists, stock raisers and fruit growers in the South. It has prepared a large premium list, which will doubtless insure an unusually extensive exhibit.

New Publications.

THE STORY OF THE INDIAN.*

THIS is the first volume in a series which is designed to tell the Story of the West by portraying its typical figures, the Indian, the explorer, the trapper, the soldier, the miner and the railroad builder. Some of these types have disappeared. The Story of the Indian is a story of the past; it has to do with phases of life which belong to the old regime and a with people which no longer exists. For the Indian concerning whom one must write in such connection was the wild dweller of the plains, a being quite distinct from the reservation Indian of to-day. The historical character waiting to be pictured, and the one worthy to be pictured, was neither the unsubdued enemy of the frontier settler nor yet the dependent ward of the nation; but he was the primitive inhabitant of the plains, who lived, before the advent of the whites, in a country which was all his own, and who followed Indian life in Indian fashion. This is the type and this is the period of which we know least, but concerning which there is manifested a growing desire for knowledge. As the era of frontier warfare recedes, and as we outgrow the long time conventional attitude, which is one of hostility, toward the savage, we shall be the more interested to learn what manner of men they were who held the land before us, how they lived, what motives controlled them, and what philosophy cheered them.

To describe the North American and to tell the story with life and spirit and realism were a task only for one who himself has known the Indian, who has had his part in the wild life of the plains, who has dwelt in the lodges, sat with the chiefs in council, joined in the buffalo hunt and gone with the war parties against the enemy. He must have studied the savage with the rare insight which comes of a sympathy rarer still. The Indians must have been very real to him, if he would make them real to us.

The first thing to be said of the "Story of the Indian" is that it comes from the pen of one thus qualified to write it. Mr. Grinnell's acquaintance with the Pawnees, the Blackfeet and other tribes was begun when they were yet living as their fathers had lived before them the nomadic life of the plains; when they depended on the buffalo for subsistence; when they went to war one tribe against another, and when in all essentials they were as yet the real Indians of the West. The acquaintance then begun and the friendship established have been continued through a quarter century. The period has been one of transition from the roving life of primitive days to the reservation system of the present. It has been a period of perplexities and of hardships not few for the savage in his slow progress toward civilization. During all this time the interest of Mr. Grinnell in his Indian friends has been constant and unwavering; on occasions more than one it has proved to be of practical advantage to them in a large way; so that to-day, by reason of what he has done, for them and in a measure not to be overestimated, these tribes are further advanced toward attainment of the civilized methods of self support. It would be needless to say that in addition to the familiarity which he has acquired with their ways, Mr. Grinnell possesses also the implicit confidence of the people whose

* THE STORY OF THE INDIAN. By George Bird Grinnell, author of "Pawnee Hero Stories," "Blackfoot Lodge Tales," etc. The first volume in the Story of the West Series, edited by Ripley Hitchcock, 12mo. Cloth, \$1.50.

benefactor he has been. Without such confidence one may not hope for a revelation of the true character of a people. That the author of the *Story of the Indian* has penetrated to the realities of Indian life and character is manifest on the volume's every page.

The book is marked throughout by the stamp of genuineness. It is written at first hand; this quality gives it dignity and importance, and enlists our interest at the very beginning. There is here that charm of truth which characterizes Borrow's books about the Gypsies, a faithfulness of portrayal like that which has given Catlin's pictures place among the treasures of the National Museum.

The scenes described, Mr. Grinnell tells us, are those which he has seen with his own eyes; but there was no necessity to assure us of this, for there is in the book itself abundant evidence of the comprehensive and minute knowledge which could have been acquired in no other way than by a long personal experience. The first chapter shows the master hand in its picturing of the round of life as it goes on in the prairie village through the summer day. A charming picture it is of the circle of lodges on the river bank, with the people gathered in the shade; some of the men smoking, chatting or sleeping, and others engaged in the noisy stick game; the women tanning hides, sewing lodges and preparing food; the children romping through the camp in their boisterous play; while apart from the village are seen the motionless figures of men praying or meditating or sentineling the camp. Later in the day the hunters return from the buffalo hunt and the women bring in the meat; then comes the night with its feasts. It is all sketched with a firm hand; the picture is wonderfully graphic and real, because drawn from the life by one familiar with its every detail. Take a single paragraph—and it is but one of many which might be cited—as an illustration of the detail which gives the life to the pages:

As darkness settles down over the camp the noise increases. The shrill laughter of the women is heard from every side, partly drowned now and then by the ever-recurring feast shout. From different quarters comes the sound of drumming and singing, here from a lodge where some musicians are beating on a *parfiche* and singing for a dance, there where a doctor is singing and drumming over a sick child. Boys and young men are racing about among the lodges, chasing each other, wrestling and yelling. In front of some lodge, in the full light of the fire which streams from the open doorway, stand two forms wrapped in a single robe—two lovers, whispering to each other their affection and their hopes. Dogs bark, horses whinny, people call to each other from different parts of the camp. The fires shine through lodge skins, and showers of sparks float through the smoke holes. As the night wears on the noises become less. One by one the fires go out and the lodges grow dark. From those where dancing is going on or a party of gamblers are playing the noise and light still come, but at last even these signs of life disappear, the men disperse and the silence of the camp is broken only by the occasional stamp of an uneasy hoof or the sharp bark of a wakeful dog.

We have space here only to indicate the scope of the volume. A very full knowledge of Indian life and customs may be gathered from the chapters which describe his Home, Recreations, Subsistence, a Marriage, the War Trail, Fortunes of War, and Prairie Battlefields; Implements and Industries. There is a vast fund of curious and extremely interesting information respecting the savage interpretation of natural phenomena, with an exposition of the religion of the Indian, and his beliefs regarding his creation and a future life. As here described, the Indian is shown to have been in his way quite as religious as other men, and more than many others was he given to prayer for divine assistance in his enterprises; for instance, while it was not customary for the white hunters to pray for help in the hunt, the savage hunter regarded a preliminary invocation as essential to his success, and it was never omitted.

The chief purpose of the book is to present the humanity of the Indian, by which is meant the quality of being human. "We are apt to forget," says the author's preface, "that these people are human like ourselves; that they are fathers and mothers, husbands and wives, brothers and sisters; men and women with emotions and passions like our own, even though these feelings are not well regulated and directed in the calm, smoothly flowing channels of civilized life. Not until we recognize this common humanity may we attain the broader view and the wider sympathy which shall give us a true comprehension of the character of the Indian."

In this design of showing us the Indian as a man Mr. Grinnell has succeeded admirably. The volume will take its place with the two previous works from the same pen as the most faithful portraiture we have of the American Indian. We may be grateful that one so equipped was found to write the "Story of the Indian." By giving us such a book the author has put under new obligations both those who shall read it and those of whom it is written. We have alluded to Mr. Grinnell's practical services in behalf of the Indians; among them we are to count the writing of the three books which bear his name, for in these volumes he has presented their humanity—their human nature—as it has never before been shown. This of itself must be reckoned a service of incalculable advantage to a people who cannot hope to be treated justly until they shall be understood.

Scientists are just now telling us of the newly discovered *x* rays of light which by their wonderful properties pass through solid substances, illuminating that which is within, and by the aid of photography revealing it to our eyes. What the arc light and the camera are accomplishing thus in the material world an author who has the gift may do with the subject of which he writes; he may show us the heart of things. The insight, the discernment and the sympathy which have given us this book have pierced as rays of light through the ignorance, the prejudice and the hostility which have hitherto enveloped the real Indian and concealed him from our view, and have shown him forth, revealed to us as he is. Mr. Grinnell's study of the North American savage, carried on through many years of close association with him in his home life, has discovered in him more than that warlike savagery which has been the only characteristic seen by most writers, and he shows us the man of nature, a merry companion, a devoted friend, a kind husband and an affectionate father; but always a savage.

The book belongs with the permanent literature of American history. When we shall seek to know the Indian we shall not turn to the records of the War Department, the archives of the Indian Bureau, nor to the files of an irresponsible press, but to these books written by George Bird Grinnell.

FIXTURES.

BENCH SHOWS.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.
March 3 to 6.—City of the Straits Kennel Club. R. Humfrey Roberts, Sec'y, 6 Merrill Block, Detroit. Entries close Feb. 20.
March 10 to 13.—Chicago.—Mascoutah Kennel Club's bench show John L. Lincoln, Sec'y.
March 17 to 20.—St. Louis Kennel Club's show, St. Louis. W. Hutchinson, Sec'y.
April 20 to 23.—New England Kennel Club's twelfth annual show. D. E. Loveland, Sec'y.
May 6 to 9.—Pacific Kennel Club's fifth annual show. H. W. Orear, Sec'y.

FIELD TRIALS.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.
Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings Sec'y, Pittsburg.

MY DACHSHUND.

I HAVE a dog I love full well,
He's not quite three feet long—
Unto the moon
He sings a tune,
He has no other song.

A dachshund by his pedigree,
He wears his legs quite short;
Though they are bowed,
He walks pin-toed,
And style is not his forte.

All other dogs look down on him
(Because they stand more high),
And when he plays
He runs sideways,
His tail aimed toward the sky.

His hindlegs move with greater speed
Than do the forward ones,
But just the same
They never catch
No matter how he runs.

He has the greatest appetite;
He's downed all he could get
Each night and morn
Since he was born,
But he's not filled up yet.

And every one at his expense
Some joke is forced to tell—
I do it too,
But though I do,
I love my dog full well.

NEW YORK.

J. B. BURNHAM.

THE FIELD TRIAL CHAMPION ASSOCIATION'S STAKE.

THE interest in this stake brought out a full attendance of field trial admirers. Some of them were enthusiasts of the earlier field trial days, gentlemen who had not attended a field trial in years.

The judging was in charge of experienced gentlemen: Messrs. W. S. Bell, Pittsburg; J. D. King, Jackson, Tenn., and A. Merriman, Memphis. It is regrettable that such experienced men should have brought the stake to an absurd conclusion.

The irregularity in the numbers of birds in different parts of the grounds seemed to be ignored by the judges in establishing their data and in making their award. Dogs which ran and made a good showing where birds were abundant and which ran in the early morning and late evening hours when the conditions were favorable, and dogs which ran on barren grounds in the midday hours, were rated according to their performances regardless of whether opportunities or conditions were alike. There was no attempt made to establish a reasonable equity or even any equity at all. Apart from any matter of equity, considering the competition as a competition, the judges' decision was not a true and just result of the competition. The award was a forced award. There was absolutely nothing to justify it. It was arrived at with laborious awkwardness and perversity of competition. The dogs which ran in the final were not the brace evolved legitimately by the competition, and their wretched work, the worst done by any brace in the stake, was not a legitimate conclusion of the stake.

Good dogs were given but a part of the showing which they merited, while less deserving dogs were given much more opportunity than they merited. The line of compe-

tition did not accurately bring the best dogs forward; it gradually frittered to an absurdity. There seemed to be an independent disregard of the work, whether good or bad, and of the purposes of the trials.

In the constitution of the Association is the following canny satire on the judges' efforts: "The Field Trial Champion Association is established for the purpose of demonstrating more fully the field qualities of the pointer and setter than can be afforded in the running of the regular stakes of the various field trial clubs; and also to give the prize winners in the different stakes an opportunity to compete directly against each other, and to determine definitely a champion field trial winning pointer or setter of the winners in America." Had the judges every hour or so read this proclamation of the club's mission, they might have known what they were engaged for, and might if they so pleased have acted accordingly. They would perhaps have realized that it was a competition of all the dogs in the stake instead of a part of them, and that it also was to determine which dog was the best.

When the judges' award was announced at lunch, Mr. Seale called for "Three cheers for Count Gladstone!" A cold silence was the response. Not a cheer was uttered. In the group of sportsmen no one seemed enthusiastic. The award was an outrage to the competitors, a blow to field trial interests, an affront to the intelligence of all beholders. When the final heat ended so ridiculously, the judges should have called up Tony Boy and Jingo or some others.

It is very probable that there was an absence of unanimity in the judges' estimates and choice of dogs in the running. Indeed it is safe to say that the decision was not arrived at without much disagreement on the part of the judges before the award was made. Their debates were long and earnest, and their manner implied that they were not alike convinced. If there was a dissenting judge these strictures do not apply to him.

Thus three eminent judges, or at least such of them as were responsible for the decision, finished a stake in a manner as foreign to the purpose of the stake as it was foreign to rule, justice and common sense. Their experience makes the mistake the more inexcusable. Three earnest men with a smattering of field knowledge would have done better; they could have done no worse.

The judges were not equal to the occasion in any part of the stake. After running eleven dogs two hours each, they took nine into the second round. Of the two left out, Cynosure should have been retained in the competition, and moreover of those kept in several should have been left out. It was a confession of incompetency or a lack of independence, or gross unconcern, was this running of all the dogs over again except two. But the judges said they had plenty of time; that is, till the last heat was run, then they did not have so much time to run further.

Thus a competition which promised so much and was organized with great labor and expense and which excited so great an interest was ended in a solemn absurdity by eminent judges.

The stake was intended as the highest exposition of field trial competition, the finished work of successful dogs made famous by many trials. It was expected to show what field trials had done in producing a champion dog. It might also show what the highest type of a practical working dog should be. The final heat was very much what champions should not be. From beginning to end, from the effort as to how to misinterpret a rule to the finish of the stake, there was much that could have been improved.

There were a large number of sportsmen in attendance, among whom were Messrs. G. O. Smith, Wheeling, W. Va.; H. K. Spencer, Chester, Ill.; Ned Fay, Florence, Ala.; E. B. Coe, L. M. Levering, Baltimore; F. A. Grider, Scot Thompson, H. W. Simmons, Winona, Miss.; W. H. Hammond, Theo. Sturges, New York; R. D. Morgan, Peter Lest, Capt. Bond, J. N. Seale, S. D. Gorham, Jackson, Tenn.; W. H. Beazell and Reid Kennedy, Hempstead, Pa.; S. B. Cummings, Pittsburg; B. W. Colwell, Cherry Creek, Miss.; W. B. Robinson, St. Louis; R. E. Hinchey, De Soto, Mo.; J. D. B. DeBow and Capt. J. H. Dew, Nashville; R. B. Morgan, Gibson's Wells, Tenn.; G. R. House, Trenton, and many others.

The running of the Field Trial Champion Association's first stake began on Monday, Feb. 10, on the grounds of the U. S. F. T. Club at West Point, Miss. The eleven starters were run in the following order:

Avent & Thayer Kennels' b., w. and t. setter dog Topsy's Rod (Roderigo—Topsy Avent), J. M. Avent, handler, with N. T. DePauw's l. and w. pointer dog Jingo (Main-spring—Queen III.), N. B. Nesbitt, handler.

Charlottesville Field Trial Kennels' l. and w. pointer dog Dalhi (Rip Rap—Queen III.), C. D. Buckle, handler, with Avent & Thayer Kennels' b., w. and t. setter bitch Cynosure (Roderigo—Norah II.), J. M. Avent, handler.

N. T. Harris's b., w. and t. setter dog Tony Boy (Antonio—Laundress), D. E. Rose, handler, with W. H. Beazell's b., w. and t. setter dog Harold Skimpole (Whyte B.—Nettie Bevan), Geo. E. Gray, handler.

Charlottesville Field Trial Kennels' l. and w. pointer dog Tippo (Rip Rap—Monterey), C. E. Buckle, handler, with Avent & Thayer's b., w. and t. setter dog Count Gladstone IV. (Count Noble—Miss Ruby), J. M. Avent, handler.

E. O. Damon's b. and w. pointer dog Strideaway (King of Kent—Pearl's Dot), Geo. E. Gray, handler, with R. V. Fox's b., w. and t. setter dog Tony's Gale (Antonio—Nellie G.), J. H. Johnson, handler.

J. L. Adams's l. and w. pointer dog Lad of Rush (Rush of Lad—Topsy L.).

Count Gladstone, the winner, is well known to those who are interested in field trials. It would be a pleasure to say that he won on an excellent performance, thoroughly beating all competitors. He did not do so. The character of his work is mentioned in the heats which he ran. He was not entitled to run in the second series after his first heat; his second was mixed, some good work, some sloppy; his final was very poor. It is needless to repeat in detail the faults of his running. As a champion stake the manner of its conclusion will probably depreciate its value. It will carry little weight with the public further than the mere dry record. As a champion Count is one now in fact no more than he was before the contest.

Monday.

The weather was clear and cool in the morning. The afternoon was oppressively warm. Birds were in abundance in parts of the grounds, in others scarce. This

feature of the bird supply disturbed the equity of the competition not a little. On this evening the U. S. F. T. Club gave a dinner to the land owners and other guests.

JINGO AND TOPSY'S ROD were cast off at 8:06. They had the best part of the grounds to run over in that they contained the greatest number of birds, and they further had the advantage of the morning hours, all of which contributed greatly to their good showing as compared to that of the other dogs. Rod cut out quick and sharp work in ranging, finding and pointing, and in the first half of the heat he seemed to have the matter all his own way. Jingo was running as if he felt stale, and there was an absence of dash and enthusiasm in his work. Toward the latter part of the heat he was going better and did work enough on birds to make a close race in finding and pointing. Rod stopped to a flush on a bevy in woods. The dogs were started to find the scattered birds and Rod pointed another bevy. Jingo backed. On scattered birds Jingo made two good points. Rod made two points, and one to which there was nothing. Jingo was next to find and point a bevy. Sent on, Rod pointed a bevy and Jingo joined in the point a moment later. Sent on, Rod pointed an outlying single, then roaded on a few yards and pointed the rest of the bevy in a plum thicket. Sent on, Jingo pointed a bevy. Jingo pointed a single bird in matted grass, Rod backed, and before the bird was flushed Rod was sent on to search for birds. Next, Rod pointed, then roaded on to a flush on a bevy. The handlers were instructed to shoot over no more points, instructions which were little heeded. Rod pointed a bird and was steady when the gun was fired. He next made two points on singles and one flush. Next he pointed a bevy in a plum thicket, and sent on he flushed a few remaining birds. Next he pointed a single and was steady to shot. Jingo held his point a long while on a bevy while handlers and judges were walking up to him. Rod roaded and pointed; nothing found. Jingo pointed a bevy in the open field. Rod next made three points and Jingo four points on singles. Next both pointed the scattered birds of a bevy or it was a new bevy. Thus toward the last of the heat Jingo made a favorable showing on birds as compared to Rod. The latter had the advantage in dash and speed in point work. Each backed well and was steady to the gun. Jingo, five bevies, six singles. Rod, five bevies, two flushes on bevies, ten singles, three flushes on singles and two false points.

CYNOSURE AND DELHI were cast off at 10:20. Cynosure pointed; Delhi backed; then a few yards further on both roaded quite a distance into woods, Delhi securing the point, Cynosure backing. The find was Cynosure's. Sent on, Delhi pointed; nothing found. Cynosure pointed three times on scattered birds. Cynosure pointed a lark. Sent on, and during the heat Cynosure pointed four more bevies and flushed one; she pointed three more times on single birds and flushed once, and made one point to which nothing was found. Delhi pointed two more bevies, made three points on scattered birds and one flush, and one point which was barren. Each backed well and was steady to the gun. Cynosure was the better ranger and had an advantage decidedly in her favor when the heat ended. She was well entitled to further trial.

Lunch was eaten and the running was resumed.

TONY BOY AND HAROLD SKIMPOLE were started at 1:13. Harold pointed three bevies, one of which Tony Boy flushed, and he made three points on scattered birds. Each made a point to which there was nothing found. Tony made four points on scattered birds. He was much the wider ranger; in fact, he ranged too wide at times, and at the end of the heat, after having run over a great deal of ground, he was running strong. Skimpole maintained a narrower but more uniform range, well sustained to the end, and had a decided advantage in finding.

TIPPOO AND COUNT GLADSTONE IV. were started at 3:18. The heat was difficult to manage. The handlers were separated often, the dogs were kept to the course with difficulty, and there was a general lack of finish in it as a whole. There was a good deal of handler following dog instead of dog working to his handler, and the exhibition was far from what would be expected in a champion competition. Both dogs, though they started very keen and strong, were very weary at the finish and had practically ceased to search. Many times the dogs were separated, working on different ground. Count's style was inferior. Count pointed three or four bevies, made five points on scattered birds, flushed three times, once excusably, and made one point to which nothing was found. Tippoo made four points on bevies, two of which he flushed, one excusably, and he made two points on scattered birds.

Tuesday.

The day was fine and favorable for good work in every way. The irregularity in the bird supply was still apparent in its effects on the competition. One end of the grounds contained an abundance of birds, other parts a moderate supply, and again other parts contained hardly any. The work of the day was hardly up to the form which one would expect of a championship competition. The attendance was good and the interest undiminished.

STRIDEAWAY AND TONY'S GALE began at 8:21. The latter was not working up to his form of the all-age competition. Both ran a fairly good working race. The dogs behaved very well to shot and wing, and backed well. The finding of Tony Gale was the better, and he seemed to have a slight advantage in judgment in beating out the ground. Tony Gale pointed six bevies, one of which flushed wild. Strideaway pointed six bevies, two of which were marked down. Three bevies had been marked down during the heat, and the bevies pointed were more than the dogs found. Tony Gale made five points on scattered birds, three points to which there was nothing, and flushed a single. Strideaway made three points on scattered birds.

LAD OF RUSH, the bye dog, was started at 10:33, with Cracker Jack for a running mate. Lad had inferior grounds to run on part of the time, but he made an excellent showing, finding and pointing five bevies, one point supposed to be on a rabbit afterward proving to have been a bevy point. He made three points on scattered birds and divided with Jack the responsibility of an excusable bevy flush across wind. He backed Jack's bevy point nicely and made one point which proved barren. He showed excellent judgment in beating out his ground and in his point work. His pace and range were well maintained throughout.

This heat ended the first series, and the party went to lunch.

Second Round.

It seemed strange that after running eleven dogs two hours each, the judges could not determine with more precision what dogs merited further competition and what ones did not. Out of eleven competitors, nine were retained in the competition. Six would have been ample. Cynosure had run a much better heat than two or three which had been kept in, notably Count Gladstone and Tippoo, both of which had shown great weariness and want of stamina in the first series. The heats were one hour each in this round.

COUNT GLADSTONE AND JINGO began at 1:47. The heat was a sloppy one, not up to the best form of either dog, and far from what one would expect in a field trial competition. Jingo was going better in the latter part of the heat. He pointed two bevies and made a point on scattered birds. He was steady to shot, backed and worked to the gun well. Count pointed one bevy, and some remaining birds of another after he had got into the middle of it. Jingo was also in the middle of it. It was very ragged work for both. Count passed to and fro near one bevy which he flushed. He made three points on scattered birds and flushed one, and made two points to which nothing was found. His style on point was slouchy. The heat as a whole was ordinary.

TONY BOY AND TOPSY'S ROD started at 3:11. They ran 1 hour and 5 minutes. There was quite a delay in bringing up the wagons. There was also a good deal of annoyance from the spectators crowding up too close. Tony Boy ran fast and strong, taking wide casts betimes, occasionally too wide for proper ranging. The class of his bird work nearly smothered that of Topsy's Rod, the work of the latter in midday hours being quite different from that in the morning hours of the previous day, on grounds where birds were plentiful. He needed much coaching in his bird work. He flushed one bevy, pointed one which had been marked, made five points on scattered birds, and six points to which there was nothing. Tony found and pointed two bevies, made four points on scattered birds, and one which had nothing to it. Each dog backed well. One of the judges lengthily rebuked one of the handlers, the wrong one, and the handlers scolded each other.

HAROLD SKIMPOLE AND TIPPOO began at 4:25. The heat was a fair working heat on the part of Skimpole. On the part of Tippoo it was sloppy. He flushed one bevy which Harold was pointing, and afterward made two flushes on singles, on one of which he was unsteady. He found and pointed three bevies and made three points on singles and one barren point. One of the bevy points was specially noteworthy, it being on very short grass in the open field, where the birds had no cover to hide in. Harold's range was medium wide.

Wednesday.

The day was cloudy. A mild wind was blowing and the conditions were not unfavorable. The competition was not of a high order.

LAD OF RUSH AND STRIDEAWAY came together at 8:43 to determine conclusions. For a while Strideaway followed Lad in his course, thus not working independently. The end of the grounds where birds were so plentiful was but lightly worked, hence the totals of finds was largely cut down. Strideaway pointed a single and Lad backed. Lad pointed and Strideaway backed; nothing found. Sent on, Lad pointed a bevy and Strideaway backed; the bevy was flushed some yards down wind of the point. Lad pointed in the open field and Strideaway backed to order; nothing found. Sent on, Lad made an indifferent point on a bevy. Strideaway flushed a single on a side hill in sedge or pointed just as it flushed. The heat lasted 1 hour and 2 minutes. It was an ordinary working heat save in the matter of range and speed, both dogs going fairly well.

TONY GALE started at 9:57 with Virginia for a running mate, he having the bye. The heat was a fair working heat. Tony's range was fair. Tony pointed a single which flushed wild. Tony next pointed part of a bevy, Virginia flushing the rest. Tony next pointed scattered birds. Both pointed a rabbit or nothing; the rabbit ran by where the dogs were pointing. Tony pointed a bevy in the open. He next pointed; nothing found. As Virginia's work is no part of the competition it is not given.

Final.

There was some delay in bringing up the wagons, a not unusual circumstance. The judges consulted long and earnestly.

COUNT GLADSTONE AND TOPSY'S ROD were sifted out of the eleven starters to contest for the proud title of Champion of America. They began at 11:55. Taking the work of both dogs into consideration it was not championship work. It was not ordinary all-age work. It was not good puppy work. It was not even good "plug-shooting-dog" work. It was an exhibition of wretched performance on birds and hard handling, and bad work to the gun. Such a heat as that should never have been accepted as a final to a champion stake. It is a monument to error. It is a burlesque on the title. It is an empty record and nothing more. Both dogs should have been retired and others brought forward after such inferior competitions. Such an important stake should never have been decided on such slovenly work. It should not have been decided in the manner it was when there was infinitely superior work done by other dogs. As a matter of right, Topsy's Rod should never have been run with Count. He had been thoroughly beaten by Tony Boy the day before. He had found and pointed a great many birds in his first heat. It was run in the choice part of the grounds, where there were birds in abundance. It was also the choice part of the day. Every dog which ran in the choice part of the grounds made a good showing. In the poorer parts Rod had made a very poor showing. Tony Boy could not make such a good showing on the choice part, for at no time was he run on that part of the grounds. His first heat could not be compared to Rod's for that reason. There was no similarity of conditions. In his second heat he beat Rod beyond question. Tony Boy's work as a whole was better than Count's, for he ran his first heat through without fatigue or shortening his range, while Count was thoroughly wearied in his first heat, needed urging to keep out at work and was going slow and narrow at the finish. His second heat was marked by some sloppy work. His style on point was slouchy when he did point, and the same on back when he did back. Count pointed a bevy and was steady to shot. Sent on, he pointed footscent. Rod

at the same time was near a bevy which was seen to flush. It was claimed that he was pointing it. Rod pointed stanchly; nothing found. In a cornfield Count dropped to a point; he refused to move on when tested with the whistle; nothing found. Rod took a cast and pointed near the edge of woods. Count refused to back, although loudly ordered to do so. He potted all around Rod while he stood pointing; nothing found. The dogs were out of sight for several minutes. Mr. Avent's negro servant, Charley, was helping to search for them. He called out that the dogs were on point. On reaching them, Count was found on point; Rod was backing. Nothing found. Charley explained that there were some which had flushed to the point. Sent on, Count was soon in the vicinity of a bevy which flushed. Count made a point on some scattered birds. Count pointed and Rod ran by, refusing to back; footscent probably. Rod pointed well a single bird in point of woods. Rod flushed a bevy and chased it. Count dropped to a point on some scattered birds in woods. Sent on, about 30 yds. further he ran into a number of birds up wind and flushed them. Sent on, Rod flushed a single bird and chased it. Up at 1:01. Thus ended the farce. Instead of increasing in the merit of their work from start to finish the competition of the dogs was the reverse. The work decreased in merit to the finish and ended ingloriously. It was both painful and ridiculous. No dogs, blundering in their work, inferior to others, willfully disobedient and so hard to handle, should have been considered for a moment as winners of the Champion Stake.

It is painful to have such an unfavorable report to write. There would be an unalloyed pleasure in writing of merit and good management if such there were. It would be a pleasure to bestow praise if it could be honestly bestowed. But there is no praise to bestow. There is just cause for indignation instead. Of course there was no intention to railroad an inferior dog into winning the award. Such is not implied herein. It is all a gruesome mistake. But it is very deplorable, very harmful, very wearisome, is this solemn blunder of crowning the wrong dog.

THE DIALOGUE OF THE CLUBS.

IMAGINE, gentle reader, the clubs of the A. K. C. family in pleasant conversation together, discussing that subject so essential to the type of the bull terrier and the Great Dane that is, the cutting off of the dogs' ears—a matter not only essential as it relates to type, but as it relates to the happiness and prosperity of the owners of bull terriers and Great Danes.

The conversation was conducted with amiability and fairness.

The bull terrier admirers were distinctly conspicuous for their chasteness of speech, tolerance of opinion and skillfulness in disputation and repartee. The elegance of their diction, their profundity of opinion, their scientific knowledge and their fertility in calling names made them formidable antagonists for all those who were over nice in preserving clean hands.

There were fifty-two or three clubs, more or less, in this family circle, of which four or five, more or less, were devoted to the special improvement of certain breeds of dogs, and of these two or three, more or less, cut off the dog's ears in their zeal for his improvement, while two or three others cut off his tail for a like purpose. No one who thinks rightly will deny for a moment that a most profound knowledge of biology, of the peculiarities of a breed, of type, of heredity, of everything, are all required in breeding dogs, to which the finishing touches are put on with the scissors, the chisel or the knife.

The breeders of the St. Bernard, the collie, the mastiff, etc., who breed strictly according to nature's laws, can never hope for the skill of the breeders whose system includes scissors, chisels, knives, balsam, cocaine and dark corners for slicing and clipping and cutting and curing.

Imagine further, gentle reader, that the first speaker, known as Mr. Bench Show, said to Mr. Specialty, of the Bull Terriers: "Mr. S. B. T., does your club hold bench shows?"

"No," was the reply.

"Is your club financially responsible in any way for bench shows?"

"No."

"Well, what are you financially responsible for?" asked Mr. B. S.

"Why," replied Mr. Specialty, "as to that it does not concern the question at all. In fact, it's none of your business. But I will deign to answer you. We do a grand and noble work. We make the type and we encourage breeders. We add luster to the canine world. We are not responsible for bench shows in any way financially. We don't hold shows. We don't intend to hold shows. So long as you fellows hold shows and pay expenses there is no need of us doing so. We appoint judges, thus saving you every trouble but the one trifling item of engaging and paying them for their services."

"But what type do you make? The breeders of past ages bred the bull terrier—out of diverse material, which need not be here enumerated—to a type which reproduces itself and breeds true. The type is established and has been long in existence before your club was formed. Having perfected the whole dog, the breeders of the past could undoubtedly have bred the ear too had not the senseless custom of cropping been in fashion. How do you explain that?"

"Pooh! that's nothing," replied Mr. Specialty. "Ears can't be bred alike on the bull terrier. We, the people, never could agree on a standard ear. The only way to avoid disagreements on ears is to cut the ears off. We, sir, know what is best for the breed. Moreover, we know what's what. Darwin conjectured that, as alarms to the dog became fewer, the dog erected his ears less, the muscles became weaker from disuse, and the ear in time became pendulous, whence we consider we are justified in cutting the ear off. Darwin's conjecture is our demonstration, with the inevitable conclusion that the dog's health, comfort, happiness and well-being require that his ears be cut off at the earliest moment. It's a duty. You need not say that St. Bernards, pointers, setters, spaniels, hounds, etc., live quite comfortably with long, uncropped ears; for they have nothing to do with the case—we are talking of bull terriers. Besides, we must never lose sight of type."

"Very good answer. Ahem! very good! But you are not responsible financially. You have only four or five specialty clubs devoted to breeding and scissors, while

we number nearly fifty, and we give thousands of dollars in prizes; we pay the judges; we invite the public to come and see our exposition; we furnish the prestige; and, as men of high character and influence in the community, we guarantee the finances and moral wholesomeness of the exposition. In short, we do all the work, pay all the expenses and furnish all the prestige. Now, notwithstanding our majority, our importance, our responsibility, we do not say to you that you shall not crop your dogs. We say to you that, as we are the responsible clubs, who invite the people, and guarantee that everything is good and lawful and ennobling and right, we have a just reason to say what we will permit at our shows. We legislate for ourselves. Those shows are ours. While you cut off your dogs' ears to please yourself, you do not exhibit them at your own shows. You show them at ours, whence you throw all the onus on us before the public. We are accessory to forcing on the public what it considers a cruelty and an unlawful practice. While you profess to be legislating for yourself, you are really forcing your obnoxious fashion down the throats of everyone. Claiming it is within your jurisdiction, you force it on others outside of your narrow jurisdiction."

"Sir!" said Mr. Specialty in stern but dignified tones, "is our delight to be abated? Is our interest to be sacrificed? You are no fancier, and therefore cannot know whether or not it hurts a dog to cut his ears off. You even cannot know whether it is a mutilation. If you persist in this unhallowed course, I boldly predict the downfall of the whole kennel world, or at least the destruction of all its glories. We don't like you! In fact, you have incurred our high displeasure. You are our enemy. Sirrah, we will punish you! We hurl forth at you our major anathema. Here it goes, and it will make you dance and smart madly one hundred years, sir. Listen:

"Whereas, by your persistent attacks on cropping, day and night, and throughout the land, you are our enemy; and whereas and whereas, and fourteen thousand six hundred and three more whereases, you are some more our enemy, Therefore be it resolved and resolved and resolved that we all unanimously say boo! boo! Now, sir, you have brought all this misfortune on yourself. The next man who says a word against cropping will be denounced with a longer and louder 'boo' than the one just hurled at you. It will be published throughout the land. We believe in freedom of speech for ourselves, but you must be mute. See! You are, moreover, a *casus belli* and a *reductio ad absurdum*, and hence cutting off a dog's ears is proof of a kind heart."

"Awfully sorry. I'm sure. But what do you mean by *casus belli* and *reductio ad absurdum*?"

"I don't know. It isn't necessary to know. I don't care what they mean. They sound pretty and erudite. I like nice language and amiable thoughts. All the constitutions of our clubs speak of promoting good fellowship. You mean thing you!"

"You have made a most noble defense and a most convincing argument, and no one can now harbor a suspicion that the bull terrier has not outgrown the vulgar and rough elements which cast a cloud over his earlier history. He should feel dignified and ennobled by the pure and chaste sentiments which require that his ears shall be cut off for his master's pure pleasure."

Mr. Bench Show then turned to the next. Said he:

"Now, Mr. Great Dane Club, do you hold bench shows?"

"No, sir, we do not hold bench shows. We are not financially responsible for them. We have a special mission. As we look after the type of the Great Dane, we have a right to say whether his ears shall be cut off or not. We make the type and we encourage breeders. We give valuable trophies for competition. We pick out competent men for judges. The success of the breed rests on our efforts. If you meddle with us, there will be a wreck of matter and a crash of worlds."

"No doubt of it! Why not? But is it true that there have been heated differences between the members through several years—yes, between the club's official judges—as to what is the true Great Dane type? Are there not a number of Great Dane breeders who are not members of your club? Is there not another Great Dane Club in the United States with which you do not fraternize? Which of these is the authority on type? Thus with internal wrangling of members and official judges as to type, with two different Great Dane camps within the United States, with a number of independent breeders and owners, how can the claim of jurisdiction of type be sustained? How can the broad claim of being a representative of Great Dane interests, of speaking for all Great Dane fanciers on the one hand, be reconciled on the other with some trophies being open to competition to members only? The material benefits of judging and trophies thus are for members only; the broad claim of jurisdiction to inflate the club's importance, but which has no silver trophies attached to it, is for the world at large. The arguments of jurisdiction are excellent arguments excepting in so far as they are controverted by the facts. Holding no shows yourself, the practice of cropping forsooth must be paraded at the expense of those who hold shows. It is not sufficient for the clubs who are responsible to say that they object to the practice. Their standing, their sentiments and their interests are naught as compared with a whim, a caprice, a morbid fashion. There can be no doubt of the equity of a club which says that in a practice which is illegal it will decide for itself and for all others. But, of course, in your claim of jurisdiction, if it be sound, it would be useful in this wise: If a member of the club were arrested, or in fact anyone were arrested and prosecuted for cropping a dog, would the fact that the Great Dane Club claiming jurisdiction had decided cropping was good, would that, I say, be a good defense in court? No, of course it would not. But, having encouraged the practice, would the club stand financially responsible for the fines, etc., which might be imposed? No, it would not. Where there is no responsibility, there can be little claim to a voice in dictating the responsibility of others."

A number of parrots were roosting along a nearby fence, listening to the conversation. One parrot remarked that there were at least a dozen other parrots which had not been answered, though they had spoken with much sprightly wit, profound learning, and not a few jests of such subtle humor that no one could understand them. Those parrots still remain unanswered.

FOX HUNTING IN CONNECTICUT.

CONNECTICUT.—*Editor Forest and Stream:* If the real pleasure to be obtained in hunting reynard with dog and gun should be once experienced by thousands of lovers of field sports who have never tasted of its enjoyments, there is no doubt in my mind that this method of obtaining recreation would become universally popular. Nineteenths of the large number of unfortunate sportsmen whose lack of means or inability to spare the necessary time prevents them from taking an extensive annual outing can find a Mecca of enjoyment at their very doors by organizing foxhound clubs.

There are few who are so unfortunate as to be unable to take an occasional day, or at least half a day, afield. The enchantment of the hills, woods and fields and the excitement of the chase is open to the enjoyment of nearly every one. It will not only strengthen lungs, heart, muscles and nerves, but it will imprint on the pale cheek the ruddy glow of health. The very brain will be made clearer and immeasurably benefited thereby.

Recently it was my good fortune to receive from Robert Penn (better known as Bob Penn) an invitation to participate in the annual New Year's hunt of the New Haven Foxhound Club. Bob is one of Connecticut's oldest and best known trap and brush shooters. The invitation, it is needless to say, I quickly accepted.

It was arranged for all hands to meet at the depot on New Year's morning, in time to take the 7 o'clock train for Orange. Teams were to meet the party at the depot in Orange and convey the hunters to the farm of Mr. Arthur Treat, situated on Grassy Hill in that town. From the Treat farm the party was to walk to Turkey Hill, where the hounds would be loosed and the hunt would begin.

On account of a desire to take some of the friskiness out of a little black mare, who badly needed to be used, also desiring to view the country, I suggested to a member of the club, Mr. Gus Potter, that we drive the distance of eight or nine miles instead of taking the train. Gus acquiescing to my proposition, it was agreed that we would start bright and early for Turkey Hill on the morning of the hunt.

"Fair Luna" beamed in silvery radiance upon the first morning of the new year. Even upon Gus, the hound, the little black mare and myself did she smile as we took our rapid way over the smooth frozen road. Day had given no sign of approach until after we were well on our way. Out West Chapel street and onto the Derby Turnpike we took our course. The air was keen and delightfully refreshing. Gus pointed out places here and there that brought to his mind many successful coon hunts of bygone days. In fact, Gus is rather a celebrated coon hunter. He would rather spend all night in the woods on an unsuccessful coon hunt than to miss going any time. Then again, sooner than miss a fox hunt he would forfeit breakfast, dinner and supper. It is seldom, however, that he is unsuccessful, especially when it comes to coon hunting.

We passed one of the Maltby Lakes (there are four) and had nearly reached the lower one when, what is this that confronts us and bars the way? There, revealed in misty outlines by the early morning light, stretching its long arm from the cottage on the one side to the stone wall on the other, was an old-fashioned toll-gate. After paying 8 cents to the same old gatekeeper (in appearance) that I can remember seeing some twenty-five years ago, the gate was swung open and we were allowed to proceed on our way. This, I am told, is the only existing toll-gate in the State and is soon to be abolished.

Gus was entertaining me with a description of how, on one occasion, his dog treed two coons in the top of a tall chestnut that towered above a clump of cedars, hickories and white birches that stood to one side of the road, and through whose branches the pale moon, robbed of her silvery sheen by the gray morning light, seemed to lightly float in the steely heavens like a monster reflective soap-bubble. Suddenly the sun peeped cautiously over the hills, flooding hills and valleys with blue, gold and vermilion. It was nearly 8 o'clock when we drove into the Treat farm barnyard. The rest of the party had arrived there and departed some twenty minutes before. While we unharnessed the horse we occasionally caught sound of the hounds' voices among the piney woods of Turkey Hill, a mile or more to the west. Gus loosed the hound and we started across the fields in the direction of the music.

As the dogs were running south, Gus thought we had better get well ahead of them and select stands on an old road, across which, he said, "a fox is always sure to run."

After a brisk walk of twenty minutes, we struck the road and took our positions.

About this time cold, squally-looking clouds commenced to climb out of the west and the wind, keen and biting, gave us to understand that if we wished to keep warm we would have to select snuggler stands than this unprotected roadway offered.

We started along the road and had not gone far when we met two of the club members. While we stood talking we heard Bob Beecham, a veteran fox hunter and master of the hounds, calling the scattered dogs together. Soon the hounds and about fifteen members of the club put in an appearance in the roadway. While it was generally agreed that the chances of starting a fox were rather slim, still it was decided to start the hounds once more and trust to luck. Mr. Beecham therefore called them together and entered the woods on the south side of the road. Then we all started to take our stands.

After walking considerable of a distance along the road, Gus and I struck out across a cedar-covered knoll which commanded an extensive view of the Housatonic River, about a mile away. We walked a quarter of a mile or more before we found a stand that suited us. It was in the bend of an old wood road, where the knoll rising back of us completely broke off the wind. In spite of the absence of wind, however, it was very cold. Now and then squally clouds accompanied with slight siftings of snowflakes would blot out the rays of the sun. Then, as the clouds would pass away, the sun would shine brightly until obscured again.

We stood here for nearly an hour without hearing anything from the hounds. The wind was blowing so hard as to carry all sounds of their voices away from us. While we stood thus waiting, a shot, followed by two others in rapid succession, was fired in a small strip of woods to the northeast. Presently, growing weary, we started for another road still further to the south, which we had scarcely reached when we heard the dogs in full

cry coming our way. Had it not been for the wind we would have enjoyed a rare treat of hound music. As it was, one moment we would hear them plain enough only to lose sound of them the next. Finally all sounds but that of the wind ceased.

As I looked over broad, well-kept acres I could not help thinking that a sportsman in every sense of the word must be the farmer's friend. A thorough sportsman is a thorough gentleman, thoughtful always of the rights of others. He is religiously careful not to leave down bar-rails, break fences or knock down stone walls. If in getting over a fence he accidentally breaks a rail he is not the one to walk off before, to the best of his ability, he repairs the damage he has wrought.

He is naturally a lover of law and order; so there is a grateful feeling stored away in one corner of his heart toward those who own the land on which he is allowed to trespass. He is filled with righteous indignation when he hears of depredations committed by rowdies, who, traveling under the guise of sportsmen, leave a trail of destruction behind as they run rough-shod over everybody's land.

Especially is the fox or coon hunter the farmer's friend; for, if successful, he destroys the farmer's enemy. When hunting birds it does not seem that his sportsmanship should be gauged by the number he kills, if they are used, and he breaks no law in killing them.

One lover of dog and gun may be only able to take one or two days afield in the fall. If that man should bag fifty or sixty birds in the limited time allowed him for recreation, why should others, who go in some cases thirty or forty times and bag a total of 200 birds or more, begrudge the fifty or sixty bird man his success? He surely has not enjoyed himself throughout the fall as well as they.

Of one of our party whom we now saw we inquired about the shots we had heard and found that they had been fired at a fox by Mr. Seane, a member of the club. The fox was so far away from the shooter, however, that he succeeded only in wounding him. The dogs were so close behind the fox that hopes were entertained of securing him.

Waited nearly an hour at our stand without hearing the dogs; we decided to change our position for one on top of a hill, back of a swamp and piece of woodland.

The prevailing conditions were so unfavorable to start another fox that our party decided to give up for that day. If the success of a hunt is to be judged by the amount of game secured, then can this one be called a failure. On the other hand, if success is to be considered by the pleasure obtained in breaking away from the dull routine of daily life, and by having imprinted on the mind a glorious panorama of nature's pictures, by good fellowship and the making of new friends, and by unlimited quantities of pure, fresh air, and last, but not least, by a drive home in the blaze and glory of bright winter sunshine at the end of the day, then indeed can it be counted a perfect success.

The day after New Year's a party of four, consisting of Bob Penn, Gus Potter, Edward Kelley and a member of the club, shot two foxes. On Wednesday, the 8th, a party of which Bob Penn was one killed three, and on Saturday, 11th, another one was killed. They seem to be unusually plentiful this year. Bob Penn managed to secure more foxes than the others, he having shot three.

WILLIAM H. AVIS.

Crockery City K. C. Show.

THE first annual bench show of the Crockery City Kennel Club, East Liverpool, O., was held Feb. 4 and 5, with 105 exhibits catalogued. George Bateson, of Youngstown, judged all classes. The awards were:

MASTIFFS.—Dogs: 1st, F. Oschman's Grover.

ST. BERNARDS.—Dogs: 1st, F. A. Simpkin's Orloff S.; 2d, W. Er-langer's Grand Turk.

GREAT DANES.—Dogs: 1st, C. E. Macrum's Colonel Jim. Bitches: 1st, M. H. Bough's Playto. Puppies: 1st, J. Marriott's Queen.

GREYHOUNDS.—Bitches: 1st, P. Morley's Belle M.

POINTERS.—Dogs: 1st, P. Morley's Dick M.; 2d, W. Wedgwood's Bar Harbor. Puppies: 1st, W. Wedgwood's Lillian of Liverpool.

ENGLISH SETTERS.—Dogs: 1st, J. M. Thompson's Joe; 2d, J. Challis's Captain; 3d, A. J. Kaster's Roger Mahoning. Vhc., J. Geth-ing's Jack. Hc., C. E. Macrum's Toby Gladstone and Riverside Kennels' Frank Gladstone. Hc. Res., Riverside Kennels' Imp. Lord Kingston. Bitches: 1st, I. N. Crable's Bessie; 2d and 3d, Riverside Kennels' Loretta and Chevaletta.—Puppies: Dogs: 1st, A. J. Kaster's Count Mahoning; 2d, E. Green's Doe Green; 3d, W. Challis's Count Bob. Bitches: 1st and 2d, Riverside Kennels' Loretta and Chevaletta.

IRISH SETTERS.—Dogs: 1st and 2d, Riverside Kennels' Buffino and Seminole Elcho; 3d, S. J. Noragon's Scout. Hc., C. E. Macrum's Dick. Bitches: 1st, A. G. Sherman's Sharp; 2d, J. McHenry's Fay; 3d, Riverside Kennels' Riverside Belle. Puppies: 1st, Riverside Kennels' Jim Blaine.

SPANIELS.—Dogs: 1st, J. Robinson's Ponto.

COCKER SPANIELS.—Bitches: 1st, Mrs. J. Dunkeely's Nellie of Liverpool; 2d, R. Webb's Beauty. Puppies: 1st, J. Hughes's Nigger; 2d, R. Dunkeely's King of England.

WATER SPANIELS.—Dogs: 1st, Mrs. R. Webb's Liverpool Jack; 2d, C. Hutcheson's Don. Bitches: 1st, C. A. Hutcheson's Dave Lantz.

COLLIES.—Dogs: 1st, W. J. Love's Wellsbourne Charlie II. Puppies: 1st and 2d, W. J. Love's Wellsbourne Charlie II. and Betty.

BULL TERRIERS.—Dogs: 1st, J. Starkweather's White Duke; 2d and 3d, W. Wedgwood's Keno and Young Keno. Vhc., T. L. Shaw's Rogue. Hc., H. Tyson's Prince and W. A. Tebutt's Obed. Bitches: 1st, W. Wedgwood's Luce; 2d, J. Massey's Rose; 3d, J. Gibbons's Lil Puppies: 1st, W. Wedgwood's Lady G-Lightly.

DACHSHUNDE.—1st and 2d, Krantz Kennels' Chery and Waldman.

BEAGLES.—Dogs: 1st, B. N. Till's Bead; 2d, F. Little's Ike; 3d, W. McPherson's Prince. Bitches: 1st, W. Challis's Gipsy Queen.

FOX TERRIERS.—Dogs: 1st and 3d, Mrs. W. Wedgwood's Ferris Glen and Rip Rap; equal 2d, J. Owens's Rauter and E. Scraggs's London Risk. Reserve and vhc., H. E. & J. Watkins's Belgrave Nip and Rauter II. Hc., J. Turnbull's Toss. Bitches: 1st, J. Wooliscroft's Gretchen; 2d and vhc. reserve, H. E. & J. Watkins's Oriole Triumph; 3d, G. Meredith's Trix. Vhc., T. Amos's Daisy, H. E. & J. Watkins's Blempton Vice. Hc., Mrs. W. Wedgwood's Rose. C., C. Harrison's Vesta Victoria.—Puppies: Dogs: 1st, Mrs. W. Wedgwood's Rip Rip; 2d, W. Rigby's Minto. Bitches: 1st, J. C. Owens's Snow Flake; 2d, A. Dunkerly's Queen Vic; 3d, H. E. & J. Watkins's Triumph II.

IRISH TERRIERS.—Dogs: 1st, R. Boudler's Dominic.

YORKSHIRE TERRIERS.—Bitches: 1st, H. Williams's Biddy.

BLACK AND TAN TERRIERS.—Dogs: 1st, Scott Bros.' Rochelle Lord. Bitches: 1st and 2d, Scott Bros.' Scott's Vic and Scott's Lassie. Puppies: 1st, Scott Bros.' Venus; 2d, C. D. Nice's Bridget.

BOSTON TERRIERS.—Dogs: 1st, J. Dunkerly's Joe.

PUGS.—Dogs: 1st, J. Hulme's Bob Ivy, Jr. Bitches: 1st, G. Chad-wick's Daisy; 2d, J. Hulme's Kafir Maid; 3d, F. Hulme's Daisy S. Puppies: 1st, G. Myler's Sir Monbars; 2d, A. Beech's Beauty; 3d, H. S. Renehart's Benzetta.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Beagle Scoring.

NANUET, N. Y., Feb. 6.—*Editor Forest and Stream:* In further reference to my article on "Scoring Beagles at Field Trials" for combined bench show and field trial qualities, I beg to inclose you herewith a scoring card for both forms, which in detail covers my ideas on this subject.

I would ask that you publish the cards in your next issue, so that it will be kept warm and bring out a strong expression from all quarters interested in the breed.

H. S. KREUDER.

JUDGES' SCORING CARD FOR BENCH QUALITY.

Judges shall credit dogs with maximum as per standard if warranted, or fractional parts thereof, according to their judgment of merit.

Head—for typical skull.....	5	Back and loins.....	15
Ears.....	15	Running gear, forelegs	
Eyes.....	5	and feet.....	10
Mu zle.....	10—35	Hips, thighs and hindlegs.....	10—20
Body—for typical neck.....	5	Coat and stern—for typical	
Shoulders and chest.....	10	coat.....	5
Spring ribs.....	5—35	Tail.....	5—10
			100

JUDGES' SCORING CARD FOR FIELD QUALITIES.

Judges shall credit dogs with maximum as per standard if warranted, or fractional parts thereof, according to their judgment of merit.

For a natural and eager disposition to hunt.....	5
For running action, which should be free, easy and without apparent labor.....	5
For obedience when not trailing started game.....	5
For hunting likely covers thoroughly and speedily.....	10
For trailing up to and starting game.....	10
For taking trail first after game is started, other than by either dog, chances being equal.....	5
For speediest work in carrying trail.....	10
For truest work in carrying trail.....	10
For marking game in cover.....	5
For best ranging at a loss.....	5
For best hound voice.....	10
For best endurance.....	10
For other creditable work not specifically credited.....	10
	100

The beagle Wonder, having been awarded 100 points for bench show form and an average of 100 points for field trial form, the said beagle is hereby awarded a grand average of 200 points for combined merit and first prize in Class XYZ stakes at National Beagle Club sixth annual field trial, held at Sandy Hook, Feb. 31, 1896.

JONATHAN EQUIPOISE, Chairman Field Committee.

City of the Straits Kennel Club.

PRESSURE on our columns last week prevented us from giving the premium list of the C. S. K. C. the mention it merited. The club has made arrangements with the American, National and United States express companies whereby all dogs will be returned free of charge that have paid full classification rates to the show. Entrance fee \$3, except for local classes, in which the entry fee is \$2. Kennel prizes of \$10 for best kennel of four are offered to many of the breeds, besides many other specials. Challenge prizes are \$15 and \$10. Besides the specials enumerated in the premium list the secretary, Mr. R. Humphreys-Roberts, writes that the following specials have been offered:

Collie Club's silver medal (members only) for best collie in show; bronze medal for best owned west of Pittsburg or in Canada; bronze medal for puppy, same conditions. Framed engraving of fox terrier Cribbage for best wire-haired fox terrier bitch. Swedish beer mug for best collie in novice class. Dog medicines for best kennel of four or more beagles, for pair of dachshunde, best foxhound and Boston terrier, best pair of pugs; tobacco box for best beagle in open class; \$5 each for best English setter and fox terrier owned and bred in Michigan or Ontario; set silver fish forks for best pointer in local class; silver cake basket for best cocker spaniel in open class.

The St. Bernard Club of America offers two sterling silver club medals, one each for best American-bred rough-coated and smooth-coated St. Bernard owned by members of the club; \$5 for best collie bred in Michigan or Ontario; \$5 for the best poodle; jewel tray for the best Italian greyhound. The secretary further mentions that the club is receiving encouragement from all sides.

Spratts Patent Special Car.

NEW YORK, Feb. 9.—Arrangements have been made by Spratts Patent to enable exhibitors wishing to send their dogs through the western circuit to do so at a very favorable rate. They have engaged a special express car, and will be prepared to book entries at the New York show for the round trip, leaving New York on or about the 29th inst. for Detroit, Chicago and St. Louis shows, returning to New York immediately after the last named show. The exact rate has not yet been determined upon, but it will be about half what the regular express charges would be for a similar trip. In order to profit by this offer intending exhibitors will have to notify Spratts Patent at their stand in the New York show, on the 19th inst. and not later than 6 P. M. the 20th inst., as to the exact number of crates they will guarantee to send, and pay a deposit as evidence of good faith, the balance of charges to be paid on or before date of shipment. Should there not be enough crates booked to cover the cost of car, the matter will be dropped and deposits returned at 6 P. M. the 20th inst. Dogs will only be accepted for shipment in good serviceable crates at owner's risk. Two attendants will be on the car and every possible precaution taken to insure the safety of the dogs.

E. M. OLDHAM.

Manitoba Field Trials Club.

WINNIPEG, Feb. 11.—The annual meeting of the Manitoba Field Trials Club was held at the Clarendon Hotel, Winnipeg, Feb. 11. President Simpson in the chair. The secretary read the report for the year, which proved to be very satisfactory (report inclosed), showing a good balance to the credit of the club, the first in many years. The following officers were then elected:

Patrons: His Honor Lieut.-Governor Patterson, Mr. C. C. Chipman, H. B. C.; President, F. G. Simpson, Winnipeg; First Vice, J. M. Avent, Tennessee; Second Vice, C. W. Graham, Winnipeg; Sec'y-Treasurer, John Wootten, Manitou.

The date fixed for the trials was Sept. 2 and the place Morris. The Derby to be \$250, divided into four prizes, same as last year. All-Age \$250, divided into three prizes, same as last year. Amateur open to all amateurs resident in Manitoba and N. W. Territories, prizes for which will be announced later. A committee of three were appointed to select the judge, who will be announced before the entries close. Derby entries close July 1; All-Age

and Amateur Aug. 1. A vote of thanks to the proprietor for use of room brought a pleasant meeting to a close.

JOHN WOOTTEN, Sec'y-Treas.

[The treasurer's report showed a credit balance of \$124.85.]

The Collie Club of America.

HEMPSTEAD, L. I., Feb. 16.—The annual meeting of the Collie Club of America will be held at Madison Square Garden on Friday, Feb. 21, at 3 o'clock P. M.

A. D. LEWIS, Sec'y.

POINTS AND FLUSHES.

The Mascoutah Kennel Club has received the following additional specials:

The Old English Mastiff Club offers, to be competed for by members only, the club's challenge cup, value 40 guineas, for the best mastiff dog or bitch; it is required that three shall compete. Challenge cup, value 20 guineas, for the best mastiff of the opposite sex to the winner of the 40 guinea challenge cup. Entries for Old English Mastiff Club specials to be made with R. H. Derby, Esq., 9 West Thirty-fifth street, New York city, on or before Feb. 24.

No. 3, dachshunde special, should be \$10 for the best dog or bitch.

No. 4, spaniel special, should be for the best American bred spaniel over 28lbs.

Nos. 6, 7, 8 and 9 are for competition by members of the American Spaniel Club only.

Class 162A, puppies 6 to 12mos., dogs and bitches, wire-haired fox terriers, first \$5, second \$3.

Best four wire-haired fox terriers, \$15.

Reduced railroad rates have been secured within the territory bounded as follows: From the Ohio River and Gulf of Mexico on the South to that part of Canada, including Toronto, on the North; from Buffalo and Pittsburg on the East to Salt Lake City on the West. The rate will be a fare and one-third for the round trip upon the following conditions: Exhibitors or visitors must pay full rate in going to Chicago and procure from the agent where they reside or purchase their ticket a receipt or certificate stating they are to visit the dog show in Chicago; upon arrival they must deposit said certificate with the superintendent, and if before the close of the show 100 of said certificates are so deposited, each visitor having had a certificate will receive an order for return ticket at one-third of the regular rate, good for three days after the close of the show. This is of particular importance to Canadian exhibitors and those residing any great distance from Chicago, and it is anticipated that a large number will avail themselves of this opportunity to visit the largest and best show of dogs ever seen west of New York.

The Metropolitan Kennel Club has started on its social mission under happy auspices. It has engaged parlors at the Garden Hotel, 63 Madison avenue, N. E. corner of Twenty-seventh street, where it will entertain its guests. Those who are so fortunate as to possess guests' cards will find that, aside from the social features, material benefits are conferred in the way of checking coats, satchels, etc., and lunch will be served to guests. The rooms will be open from Tuesday noon, Feb. 18, to Sunday noon, Feb. 23. The annual meeting of the club will be held in its parlors on Friday evening at 8 o'clock.

The Meadowmere Kennels, Southampton, L. I., N. Y., have issued a catalogue containing artistic portraits of its poodles, besides giving full particulars of the matters of public interest appertaining to the kennels. There is also much interesting reading matter, written by noted fanciers, which is valuable in itself. Catalogues, etc., can be obtained of Z. T. Baker, Agent, 13 William street, room 1006, or Thomas T. Corrigan, Manager, Southampton.

In the pressure of the bench show season exhibitors should not forget that the entries of the City of the Straits Kennel Club close on Feb. 20, and the Mascoutah Kennel Club entries close on Feb. 24.

Those who desire to purchase a dog should make a memorandum of the combination sale of pet and sporting dogs, to take place on Feb. 21, at the American Horse Exchange, Broadway and Fiftieth st., New York.

We acknowledge with thanks a photograph of the Great Dane Major McKinley, kindly sent to us by his owners, the South Bend Kennels. Of him, the manager, Mr. H. D. Johnson writes: "He stands 37in. high, weighs 215lbs. and measures 7ft. 6in. from tip of nose to tip of tail."

In the matter of Dr. Wesley Mill's libel suit against the Toronto Mail, growing out of published statements concerning Dr. Mill's connection with a certain Great Dane transaction, a long time since, the Supreme Court recently decided the suit in Dr. Mill's favor, the damages and costs of the action awarded amounting to nearly \$500.

The daily press is full of letters on rabies and other canine subjects. Some benighted numskulls have been writing on cropping and advancing the old joke that to cut off a dog's ears prevents his getting canker in them—it is a fact that if a dog's head is cut off he will never get stomachache.—*Stock-Keeper (England).*

At the close of the Toledo show, Mrs. Lee was tendered a vote of thanks for her efficient services as superintendent of the dog department, and was made a life member of the association.

The executive committee of the English Bloodhound Club of America announces that the second annual meeting of the club will be held in Madison Square Garden, New York, on Feb. 22, at 11 A. M. An election of officers will be held and other important business transacted.

In our kennel columns Andrew Laidlaw, Galt, Canada, offers cockers bred from choice stock, and also the services of the cocker dog Omo. The White Thorn Kennels, Detroit, offer bull terrier puppies. F. J. Nolan, Saratoga Springs, offers fox terriers. E. Painter, New York, offers greyhounds. J. O. Converse, Fitchburg, Mass., wants a thoroughbred Pape pointer.

Yachting.

THE New York Y. C. certainly cannot be blamed for precipitancy and undue haste in its treatment of Lord Dunraven, as it has given him a new delay on the very unsubstantial basis of his brief and tardy telegram. We have small expectation of anything in the way of an adequate and fitting apology in either of the promised letters. It was Lord Dunraven's duty to others as well as to himself to stay in New York until the conclusion of the inquiry and to finish the matter then and there in person. This he did not see fit to do, nor has he, though ample time has elapsed, given any indication of an honest desire to repair the great wrong he has done to Mr. Iselin. We shall be surprised if his letters contain, at most, anything more than a lame and inadequate statement, forced from him against his will by the pressure of his friends at home.

If Lord Dunraven has finally decided that the best course is to face the music and attempt some sort of an apology, just as little as may be necessary, it might be worth his while to look up the member of the Herald's staff who phrased the "apology" of that paper which we published last week.

Chicago and Toronto.

THE Lincoln Park Y. C., of Chicago, with a view to increasing the interest in yachting on Lake Michigan, at a recent meeting decided to issue a challenge to the Royal Canadian Y. C., of Toronto, Canada, for an international match, to be sailed on Lake Michigan, or if more agreeable to the challenged club, on one of the intermediate lakes, the challenging yacht being a new craft, designed by Theodore S. Poekel, superintendent of the Racine Boat Manufacturing Company. The following was sent to the Royal Canadian Y. C.:

CHICAGO, Ill., Jan. 23.—W. Bruce Harman, Secretary Royal Canadian Y. C., Toronto, Canada—Dear Sir: I herewith inclose you a formal challenge for a series of fresh-water international races, and trust that your club will find it possible to accept the same, and start in at once making preparations. Our club has appointed those who will confer with your committee, and, we hope, bring matters to a satisfactory conclusion. Very truly yours,

C. O. ANDREWS, Sec'y.

CHICAGO, Ill., Jan. 23.—W. Bruce Harman, Secretary Royal Canadian Y. C., Toronto, Canada—Dear Sir: On behalf of the Lincoln Park Y. C., of Chicago, and in the name of Messrs. Berriman brothers, members of said club, I hereby challenge any representative yacht of your club to sail a series of three races for a suitable prize or trophy with the sloop yacht Vincendor, load waterline not to exceed 45ft., to be sailed on waters to be hereinafter agreed upon, during the season of 1896, and under the rules of the New York Y. C., so far as the same apply to fresh water.

Should this challenge be accepted, it is suggested that a committee of two be appointed by the Royal Canadian Y. C. and a like number by the Lincoln Park Y. C., the four so selected to choose a fifth member; this committee to decide upon the time and place of holding the races, the selection of prize, the conditions governing future challenges, and the exact rules under which the matches are to be sailed.

In furtherance of the foregoing the Lincoln Park Y. C., at a meeting called for the purpose, have appointed Messrs. E. P. Warner and W. A. Paulsen to confer with the two your club may name to conclude arrangements in the event of your acceptance. Sincerely your obedient servant,

C. O. ANDREWS, Sec'y L. P. Y. C.

The following reply has been received: TORONTO, Feb. 3.—C. O. Andrews, Secretary Lincoln Park Y. C.: Your communication of Jan. 23 proposing a series of races between the yacht Vincendor and a yacht of our club was laid before the general committee on Monday, the 27th ult., and by them referred to the sailing committee of our club; but unfortunately, owing to the absence of the members, they were unable to meet until Saturday, Feb. 1. I have now, however, great pleasure in stating that both committees are unanimous in their desire to bring about the proposed matches, and they feel that before finally accepting and naming a yacht to meet the Vincendor it will be necessary for us to have a more definite knowledge of her size, so that in the event of our not having a similar sized craft we may immediately take steps with a view toward building one. I might say that at present we have no racing yacht between 36.5-10ft. l.w.l. or 40-48.5 corrected or sailing length, respectively, measured under New York Y. C. rules.

Will you, therefore, please inform me at the earliest possible moment as to the following points: The l.w.l. and corrected or sailing length, measured under New York Y. C. rules? With regard to the details, my committee feel there will be no difficulty in arranging them, once they know that they have either a suitable sized craft already in our fleet or that we can make satisfactory contract to have one built.

S. BRUCE HARMAN,

Honorary Secretary Royal Canadian Y. C.

The Royal Canadian Y. C. has but one or two yachts available, the Fite cutter Zelma and the cutter Aggie; both of the Minerva type and some 8ft. shorter on the waterline than the challenger, which will be a modern fin-keel similar to Niagara, 65ft. over all, 45ft. l.w.l., 12ft. 2in. beam and 10ft. draft, owned by Berriman Brothers, two Chicago yachtsmen. Should all arrangements be carried out successfully and the races come off, as is now probable, the result will be greatly to the benefit of yachting among both American and Canadian clubs on the lakes.

The proposed race has placed already a terrible strain upon some of the Chicago papers, and produced literary gems in which neither excessive modesty nor a deep knowledge of yachting figure to any great extent. We learn from one paper, which publishes a most horrible caricature of a yacht as the portrait of the new Vincendor, that "the cabin will be abaft the mast," that the use of mahogany obviates that necessity for caulking that exists in the case of common woods, and that "the keel is built on the fin pattern, which has been found to run more speedy than the centerboard," and that "there will be nine tons of lead suspended 8ft. below the center of the vessel to give her stability; this, together with the mast and cabin work, will give her a draft of 10ft." From another Chicago journal we learn that the Lincoln Park Y. C. is "a club of paramount standing with Larchmont, Atlantic, Seawanhaka or even New York on tide water, and just a little bit higher up the shrouds and better stayed than any individual club of the L. Y. R. A. of Lake Ontario or of Lake Erie's Yacht Racing Association, not excepting Detroit's three clubs."

The Boston Knockabouts.

THE following official definition and limitation of a knockabout, to govern the class for 1896, has recently been sent out by Secretary J. J. Souther, of the Knockabout Association:—A knockabout boat is a seaworthy keel boat (not to include fin keel), decked or half decked, of fair accommodations, rigged simply without bowsprit, and with only mainsail and one head sail. The load waterline length shall not exceed 21ft. The beam at the load waterline shall be at least 7 and not more than 8ft. The freeboard shall be not less than 20in. The forward side of mast at the deck shall be not less than 5ft. from the forward end of the load waterline. The planking, including deck, shall be not less than 3/4in. thick, finished. The frames shall be not less than 1in. square, and spaced not more than 12in. on centers. The deadwood shall be filled in. The rudder shall be hung on sternpost. The outside ballast shall be not less than 3,500lbs. The limits of freeboard, beam, planking, frames, deadwood, rudder and place of mast shall not exclude any existing knockabout boats which otherwise come within the restrictions.

The actual sail area shall be not over 500 square feet, not over 400 square feet of which shall be in the mainsail. The inspector shall be provided with a correct sail plan of any boat to be measured, and previous to the measurement the owner shall cause distinguishing marks, satisfactory to the inspector, to be placed on the spars as follows:

On the mast at the tack and at the throat of the mainsail; on the boom at the clew of the mainsail; on the gaff at the peak of the mainsail. No part of the mainsail shall be allowed to extend beyond these marks. The marks shall be black bands, painted around the spars in a manner satisfactory to the inspector. The lower and inner edges of the bands shall be the limits of the sail. The area of the jib shall be considered to be the area of the forward triangle, viz.: the product of one-half the distance from the attachment of the tack to the stem to the forward side of the mast at the tack mark of the mainsail, multiplied by the distance from the upper edge of the said tack mark to the bottom of the jib halliard block.

Only mainsail and working jib shall be allowed, but a storm jib may be substituted for the working jib.

Knockabout boats already launched, and whose sail plans comply with the old rule, shall not be obliged to change their sail plans to conform to the new rule.

The Spalding-St. Lawrence Co., of Ogdensburg, N. Y., is preparing to make a special display at the coming Sportsmen's Exhibition at Madison Square Garden, New York. Among the boats will be a duplicate of Ethelwynn, completely rigged and ready for racing; a yacht's cutter 17ft. 6in. long and 4ft. 6in. beam; a 10ft. yacht's dinghy and a new model of Canadian canoe.

The Dunraven Inquiry.

MR. HERRESHOFF'S EVIDENCE.

MR. NATHANIEL GREENE HERRESHOFF, designer of Defender, was the first witness called by the defense after the opening by Mr. Choate. The following testimony was given on three different occasions, Messrs. Fish, Canfield and Dunraven being examined in the intervals.

Nathaniel G. Herreshoff, called as a witness on behalf of Mr. Iselin, testified as follows:
 Examined by Mr. Choate:
 Q.—You are the designer, or one of the designers, and builder of the Defender? A.—Yes.

Q.—When was she first begun? A.—The latter part of last February.

Q.—When was she completed? A.—Completed in July.
 Q.—She was designed and built by you with a view of sailing and winning the America's Cup under the provisions of the deed, was she not? A.—Yes.

Q.—Will you please to state to the committee what your general plan was by which she was to be adapted within the 90ft. limited by the deed, to the object you had in view? A.—My design was about 89ft. of waterline, to come 1ft. within the limit. There should be some leeway in case we should want to ballast her, and the construction was carefully studied to get it as light as possible, and carry as large an amount of ballast as she could. I figured very carefully to get the whole amount of ballast in one casting in the keel.

Q.—So that if you hit it exactly she would have to carry no loose ballast? A.—Yes. This was very fortunate in, the casting coming out exactly as we intended, very closely indeed; and the vessel, when constructed, came very nearly to her intended waterline. In the first race she was perhaps $\frac{1}{2}$ in. higher out of the water than designed. In that condition she appeared to have plenty of stability. In fact, more than seemed to be necessary for the purpose of racing in our waters here, and it was soon decided to increase her sails. There was no change in the ballast of the boat from the time she first floated, in any way, until her cabin was taken out, just previous to her Cup races.

Q.—I will come to that more particularly. You know her exact displacement in the water, and you know exactly how much each inch of immersion would lengthen her load waterline, do you not? You have calculated all that? A.—Yes.

Q.—Were you present when she was measured on Friday, Sept. 6? A.—Yes.

Q.—And the measurement then proved her load waterline to be 88.45? A.—Yes.

Q.—Now, will you state to the committee how much her load waterline would have been lengthened beyond that by an immersion of 4 in. deeper? A.—The angle of the stem and sternpost is such that it would be lengthened almost exactly 8 in. with each inch of immersion.

Q.—That would be 32 in.? A.—32 in. for 4 in.
 Q.—Carrying her from 88 $\frac{1}{2}$ to 91 ft. and a fraction? A.—91 ft. and a fraction; yes.

Q.—Which would have made her more than a foot longer than the outside limits permitted by the deed? A.—Exactly.

Q.—That is mathematical, is it not, as you stated? A.—As nearly as a calculation can be arrived at.

Q.—Can you also tell the committee how much additional weight would have had to be placed in her to immerse her 4 in. deeper in the water? A.—I have a memorandum here.

Q.—That is capable of exact ascertainment, is it not? A.—Yes. (Looking at memorandum.) This calculation I made recently. 4 in. would require 28,541 lbs.

Q.—That is fourteen short tons? A.—Fourteen short tons. A little over. Equal to 12.7 long tons.

Q.—Yes; but 14 tons of 2,000 lbs.? A.—Yes.

Q.—Did you accompany her on the trial races or any of them? A.—Yes; all of the trial races.

Q.—Did she have any loose ballast on board? A.—None whatever.

Q.—And she had none when she came into the Erie Basin after the last of her trial races? A.—No.

Q.—That was Aug. 31? A.—Yes.

Q.—At that time had the Valkyrie arrived? A.—Yes; she had arrived.

Q.—Had you seen her, or had you learned from information how she was stripped inside? A.—I learned from information.

Q.—What did you learn about that? A.—That she had no cabin in her; she was quite bare inside.

Q.—Down to that time of Aug. 31, how was the Defender equipped inside? What tanks had she, and what removable objects? A.—She was fully equipped to carry a crew, the whole complement; about forty, I think.

Q.—What water tanks and waste tanks? A.—Quite a large water tank and waste tank and ice tank—ice chest—and necessary pumps.

Q.—And the trimming of the cabin, and partitions for passengers? A.—Yes. Everything was light for the purpose of a racing yacht, but it was very complete.

Q.—Did you have a consultation with Mr. Iselin, or with any of her owners, as to what had better be done with her to match her with the Valkyrie? A.—Yes.

Q.—Will you state what the result was? What passed between you, and what was concluded? A.—I do not remember the exact words, but the result was that we decided to take the cabin out and put her in a condition equivalent to that of the Valkyrie.

Q.—You did not then know how much weight would be so taken out of her, did you? A.—No. I made an estimate that there would be taken out about three tons.

Q.—About 6,000 lbs.? A.—And Mr. Iselin had two tons of lead sent to New Rochelle to put in the place of it.

Q.—That was done at New Rochelle? A.—Yes.

Q.—Were you up there? A.—Yes.

Q.—Did you see it done, or see her after it was done? A.—Yes. I was there while it was being done. It was done on Wednesday and Thursday.

Q.—Wednesday and Thursday prior to the 6th and 7th? A.—Yes.
 Q.—Wednesday and Thursday would be the 4th and 5th of September? A.—Yes.

Q.—Did you see the material that was taken out of her weighed? A.—I did not.

Q.—Was it reported to you? A.—It was reported.

Q.—How much? A.—Seven thousand pounds or a little over. I think there was a small fraction over 7,000 lbs., as I remember.

Q.—Did Mr. Iselin take your judgment as to what should be substituted to equalize that weight taken out? If so, please state to the committee, if it was not the same number of pounds, what made the difference? A.—Yes; I think we decided to put back a smaller amount than we took out; about 1,000 lbs.

Q.—Six thousand pounds instead of seven? A.—Yes.

Q.—Why? A.—Because it would be packed down low, to give her much more stability than the weights that were taken out.

Mr. Choate—I do not understand that.

Mr. Herreshoff—To keep the same stability as nearly as possible and get a lighter displacement.

Mr. Rives—Get the weight lower down.

Q.—Lead packed closely at the keel would be equivalent to this larger quantity distributed over the various upper parts of the vessel? A.—Yes.

Q.—Did you so advise Mr. Iselin? A.—Yes; we consulted together and decided upon that.

Q.—And was the lead ballast brought up to New Rochelle? A.—Yes.

Q.—How much? A.—Two tons.

Q.—There are about twenty-one pigs to the ton, are there not? A.—Generally; yes.

Q.—They weigh about 100 lbs.? A.—Generally; yes.

Q.—Do you know of that being placed on board there? A.—Two tons were placed on board on Thursday.

Q.—And that is all that came to New Rochelle? A.—Yes.

Q.—Now tell what afterward happened, so far as you know, down to the time of the measurement on Friday? A.—So far as I know, I went to Erie Basin by train from New Rochelle to get the necessary measurements of the Valkyrie. If I had gone on the Defender it would have been a little late. It was intended to measure the Valkyrie first, and I think that was going on at the time the Defender arrived there. After the Valkyrie's load line was measured we decided to measure the Defender's load line.

Q.—You arrived at the Erie Basin? A.—I arrived at the Erie Basin by land; by train.

Q.—Before the measurement of the Defender had taken place, after that of the Valkyrie had taken place? A.—No; before either of them had been measured.

Q.—Do you know of some lead being brought on board the Defender there? A.—Yes. In the first place, after getting through with the measurement of the Valkyrie's waterline, I personally made a preliminary measurement of the Defender's waterline to see about where she was setting, for verification of the amount that they should put in, and found she was light and decided to put in the full ton that had been sent forward.

Q.—Was that put on board of her in your presence? A.—Yes.

Q.—What was the amount of it? A.—One ton.

Q.—And no more? A.—That is all.

By Mr. Rives:
 Q.—This preliminary measurement that you made was at the Erie Basin, was it? A.—Yes.

Q.—After she got there and while she was alongside of the wharf? A.—It was for my own satisfaction to know how she was setting. I wanted to get the ballast in before the final measurement took place.

Q.—I understand that this ton of lead was added after you had made this preliminary measurement? A.—Yes; just before the final measurement.

By Mr. Choate:

Q.—Where was this ton placed on the Defender? A.—It was placed very near amidships on the cabin floor, directly over where we intended stowing it.

Q.—You were present, were you not, when the measurement took place? A.—Yes. I witnessed the measurement of both yachts on behalf of Mr. Iselin.

Q.—From that time will you state how much you were on the Defender until she was remeasured on the Sunday? A.—From the time we got through the measurement on Friday, I was not on board of her again until Saturday morning about 8 o'clock.

Q.—Saturday morning about 8 o'clock, down at the Horseshoe, I suppose, inside the Hook? A.—Yes.

Q.—How did you get on board of her then? A.—I went on board from a steam yacht.

Q.—With Mr. Iselin? A.—Yes.

Q.—Were you then on her from that time until the race of that day was completed? A.—Yes; until they anchored at Bay Ridge.

Q.—And then you left her? A.—Yes.

Q.—And were again present at the remeasurement on Sunday? A.—Yes.

Q.—What time did you leave her on the Friday? How soon after the measurement? A.—It was directly after the measurement. I should judge about 2:30, or in that neighborhood, possibly a little later.

Q.—The remeasurement on Sunday, it was agreed, corresponded as exactly as two measurements could to that on Friday? A.—Yes.

Q.—Now, have you made drawings, or have drawings been made under your direction, of the waterline as ascertained on Sunday? A.—Not under my direction, no. Those are Mr. Iselin's.

Q.—These are not yours? A.—No.

Q.—On the morning of the 7th, the morning of the race, what time was it when you got on board the Defender? A.—I think it was about 8. I am not sure.

Q.—What did you do from then until the time the race began? A.—There was very little to do, any more than watching the setting of the sails, and making general preparations for the start. One thing that we did do; very soon, I think, or almost directly after I went aboard with Mr. Iselin, we went below with Capt. Haff. He wanted us to see the position that the lead had been stowed in.

Q.—You mean this extra ton? A.—The extra ton.

Q.—Will you tell the committee in your own way just what was done and what you saw, and how you were enabled to see it? A.—The floor was taken up, and I merely looked down from above at the position it was stowed in.

Q.—What did you see? A.—I saw the lead stowed away on top of the keel.

Q.—And that the pigs had been cut? A.—The pigs had been cut.

Q.—Each in two? A.—Yes.

Q.—Could you see whether there were three tons there or seventeen tons? A.—Yes, I think so.

Q.—You are sufficiently familiar with that matter to tell whether, as you observed it, there was anything more than the two tons that had been put on at New Rochelle and the other ton that had been put on at the Erie Basin? A.—Yes; I think I could tell.

Q.—That was all there was? A.—Yes.

Q.—You went for the purpose of seeing, and you did examine and satisfy yourself before the race began? A.—Yes.

Q.—How long was that before the race? A.—That was in the morning, between 8 and 9 o'clock.

Q.—That was before Lord Dunraven put his representative on board? A.—Yes.

Q.—You inspected that job pretty thoroughly, did you not, that day? A.—Oh, yes, I generally inspected it.

Q.—Was there anything else on board of her to replace what had been taken out at New Rochelle, excepting these three tons of lead? A.—No.

Q.—Were there any water tanks, or waste tanks, or anything that would weigh? A.—No.

Q.—If there was any water, I suppose, to drink, you can tell what there was of that? A.—There was a small amount on board, enough for the use of that day.

Q.—You remember that there was one can of water brought aboard—a milk can? A.—I do not remember particularly about that. I know they had water on board.

Q.—You sailed the whole of the race of that day, and at no time did she have anything more on board than you have stated? A.—No. No heavier in the water than she had sailed before.

Q.—Do you know anything of an examination to see if there was any water in her shoe, or did you not take part in that? A.—I do not remember particularly that morning, but we generally did look at that before the races. As a rule, we always do.

Q.—Was there any possibility of any water ballast or any other ballast being used on her that day, except these three tons of lead? A.—No, certainly not.

Q.—Could you tell—I suppose you are something of an expert—if there had been ten or fourteen tons of extra weight put into her? Would you have recognized it as she sailed? A.—Yes, I think I would.

Q.—How would it have affected her so that you could tell that there was such an extra weight there? A.—There would be quite a difference to her motion in a seaway.

Q.—One that you could recognize? A.—Yes.

Q.—There was something peculiar in the boom and spars of this Defender, was there not? The use of aluminum? A.—We used a steel boom and steel gaff, finally, in the place of wood.

Q.—When were they put in her—the steel boom? A.—That was first tried on the 31st day of August, just before going to the dry dock.

Q.—After she came in there on the 31st of August? A.—No; we had been out trying her the night before—the night of the 30th.

Q.—You were present at the remeasurement? A.—Yes.

Q.—And you know that both measurements were properly conducted? A.—Yes.

Q.—And that they corresponded exactly? A.—Yes; perfectly satisfactory.

Q.—When you came on board at 8 o'clock on Saturday morning, the 7th, what did you observe as to how she lay in the water? Did you think she was a different vessel from what you had seen her in the Erie Basin? A.—No, I did not notice anything different.

Q.—Did you see any difference in her trim? A.—I did not notice it.

Q.—Her immersion, or the load water length? A.—Of course when all the crew were on board, with all their coats, that put her down somewhat in the water.

Q.—The weight of the coats? What difference does that make? The crew were on her when she was measured, were they not? A.—Oh, yes.

Q.—Was there any appreciable weight or difference occasioned by those coats? A.—No—the position in the forecabin. That is further forward. There would be very little difference in the trim.

Q.—How was the water there that morning?

Mr. Whitney—Where?

Mr. Choate—Down at the Horseshoe, when he boarded her?

A.—As far as the wind was concerned, the wind was light. It made a very little ripple, but as I remember there was quite a swell, and the yachts were heaving a good deal by the steamers going by; the Long Branch steamers.

Q.—Can you tell whether there was motion both ways, pitching and rolling? A.—Yes; I remember that particularly because the Hattie Palmer was laying alongside of her when I first went aboard, and it occasionally took a number of men to keep her clear.

Q.—Had you observed the weather the night before? A.—Yes.

Q.—What was it? A.—The wind was fresh, east, and had the appearance of being a strong breeze the next day. We expected a stormy day.

Q.—What, in your judgment, would have been the effect upon the Defender, as to her chances of winning the race, of putting 10 to 14 tons of ballast on her more than you had advised?

Mr. Herreshoff—Do you mean on that day—that Saturday?

Mr. Choate—Yes.

A.—I think the chance would have been very poor indeed.

Q.—A very poor one indeed? A.—Yes.

Q.—How would it have affected her sailing qualities? A.—I think she would have been slower with that weight on board in that light breeze.

Q.—In your judgment, could you have told a difference of a foot in her load waterline, or 3 or 4 in. even of immersion, as compared with the time of her measurement on Friday, as the water was on Saturday morning, when you boarded her?

Mr. Herreshoff—Do you mean from alongside?

Mr. Choate—Yes, as you came up alongside, and as you went on board of her.

A.—Yes; I think I could tell the difference, although in a sea it would be very uncertain.

Q.—You could not have formed a reliable judgment? A.—No.

Mr. Askwith—The comment I make upon this gentleman's evidence is that he came down in the morning and took a cursory look into the hold. As I say, we are not here prosecuting.

Mr. Choate—It was not very cursory as he describes it. Still, you do not wish to ask him any questions?

Mr. Askwith—We are not proving any case now. We say it cannot be proven. I do not see what question to ask.

By Capt. Mahan:

Q.—What was this hole in the side that we hear so much of? A.—It was the delivery to the bilge pump.

Q.—With your knowledge of her frame do you know where that is—

whether it was above water? A.—No. Only from this drawing, which was very accurately made. I know it was intended to be just about at the waterline.

Q.—When she was in her sailing trim? A.—Yes. That was the object, to always put those pipes near the waterline, so that they can be got at to clean the vessel a little bit, in case of accidents or a little leak. It is better to have them near the waterline than down below. Of course, if they are high up above the waterline they would be unsightly.

By Mr. Whitney:

Q.—What time did you go to Bay Ridge that night after the first race? A.—I should judge it was between 8 and 9 o'clock—nearer 9 than 8.

Q.—Were you towed up the Bay? A.—Yes.

Q.—It was dark, I suppose, when you arrived? A.—Oh, yes, it was dark. It turned dark when we were just outside of Sandy Hook.

By Mr. Askwith:

Q.—Do I understand that the cots were in, on board? A.—I do not remember whether they were on board then or not. The Hattie Palmer was alongside, and the men were at their breakfast. It was their duty to take them out, one of the first things, in the morning.

Q.—Were the things continually moved backward and forward? A.—They are taken out.

Q.—Do metal vessels leak? A.—Yes. The Defender always leaked a little; there was a small leak.

Q.—Does the vessel sink an even amount as the weight progresses? Suppose you put in so many hundredweight of lead, and you sink her in., would it require as many hundred the second inch, or would there be a less quantity of lead required? A.—More—in proportion, to increase the waterline.

The Chairman—I suppose you can hardly get very far to-night, before 6 o'clock, with another witness.

Mr. Choate—No, I am ready to put Mr. Iselin on the stand, and then the other witnesses will all be here to-morrow morning. If the examination is to take the course indicated by Mr. Askwith, I think we shall have no difficulty in putting in all our testimony to-morrow. That is, if he does not feel that he is here with any duty of cross-examination.

The Chairman—We will take an adjournment until 10 o'clock to-morrow morning.

At 5:50 P. M. adjourned to 10 o'clock A. M., Saturday, Dec. 28, 1895.

Dec. 28.—Nathaniel G. Herreshoff, recalled and further examined by Mr. Choate:

Q.—You spoke yesterday of a leak in the Defender, and left it very indefinite. Will you tell the committee what that amounted to? A.—It was only a slight leak she always had; enough to occasion pumping once a day. It was done in the morning. I don't know the exact amount; probably twenty or thirty gallons.

Q.—Was that the most you ever knew? A.—That was a constant leak, and then when she was under sail she leaked a little more. The water gained while she was under sail in a fresh breeze. At any rate, it was of no particular consequence.

Q.—Take a boat like the Defender, could you, or do you think anyone, looking at her on broadside, could tell whether she had a slight list or not? A.—No; I could not.

Q.—And you are very familiar with such craft as she is? A.—Yes.

Q.—To ascertain whether she had a slight list or not, what would you do? A.—The best place for observation would be from the bow or stern, or if you wanted to know exactly, by measurements of the height of the free board.

Q.—You mean observation on the bow or stern outside, or from inside the vessel? A.—And looking at her from outside either on deck, or better, from a small boat.

Q.—Are you able to say from your knowledge of the construction of the boat how much a list of one degree would change the position of that water pipe in relation to the waterline? A.—Well, a difference of one degree would—heeling her one degree would immerse her side amidships something over 2 in.

Q.—How much weight would it take to do that on the side of the vessel, if you can tell or give any idea about it? A.—It would probably take a weight of about one-half or three-quarters of a ton.

Q.—And as to the depression or elevation of the bobstay bolt—what would be the effect of a comparatively slight weight in the bow? A.—She would probably move a little more with the same weight over the waterline at the bow or stern than at the broadside. Of course not so much in angle as if it was put on the side of the vessel.

Q.—How would the wind on her rigging affect either her listing or the elevation or depression of her bow? A.—A strong breeze would make a perceptible difference.

Q.—(By Mr. Whitney)—What was the size of this hole, Mr. Herreshoff, in general, where this ballast was that you looked down upon? A.—In her bilge—

Q.—Yes? A.—(Continuing.) It is a scuttle, a floor that is movable, perhaps 1 $\frac{1}{2}$ ft. wide—maybe 2 ft.—and you look right down into an open space for some 10 ft. or so. Of course, to see anything you would have to get your eyes accustomed to the light—dim light—but by standing there a moment you could see plainly the bilge construction and what ballast there was there—bilge water and anything. The space in the lower part is about wide enough for a man to get down.

Q.—What was the reason those pigs had to be cut? A.—Because this place was not large enough for them to lay down on that side. This place in the broadest part is about two-thirds the length of—perhaps 1 $\frac{1}{2}$ ft.

Q.—You mean the width of it? A.—Yes; and the distance fore and aft between the floor plates was about 19 in., so that it was impossible to lay the pigs flat.

Q.—They had to go in between beams? A.—Yes; in the floor space between the frames.

Q.—Go in crosswise of the boat? A.—Yes, sir; without cutting they could only be stood up on end.

Q.—(By Mr. Rives)—Did you say whether the tanks had been taken out of the boat? A.—Yes.

Q.—What was the capacity of those tanks, about? A.—I think the water tank had a capacity of some 600 or 700 gallons. I don't remember exactly.

Q.—That was the only tank in the boat? A.—There was a water tank and then there was a waste tank into which the water ran from basins and was pumped overboard. That was taken out. That was much smaller. And there was also a large wooden tank lined with zinc for the storage of ice.

Q.—That was taken out, too? A.—Yes.

Q.—Do you know how much a gallon of sea water weighs? A.—I don't remember exactly the proportion; it is about 8 $\frac{1}{2}$ lbs., I think, roughly; 8 $\frac{1}{2}$ lbs. to the cubic foot.

Q.—(By Mr. Whitney)—Is there any place beside this hole where ballast could have been secreted without being exposed to ordinary observation? A.—No.

By Mr. Whitney:
Q.—How much in inches is a degree? A.—Two inches. Between 2 and 2½ in.

By the chairman:
Q.—You say it would take two tons? A.—In the neighborhood of two tons.

By Capt. Mahan:
Q.—Is that the result of calculation you have made since, or is it simply an estimate still? A.—Simply a partial estimate. I made a rough calculation of the amount before.

By Mr. Whitney:
Q.—How many did she carry in her crew? A.—Eighteen.

Mr. Herreshoff—During the Cup races?
Mr. Whitney—Yes.

A.—There were fifty, I think. I am not positive, but about fifty.

Q.—Some fifty men? A.—I think so.

By Mr. Choate:
Q.—You were present at the remeasuring on Sunday? A.—Yes, sir.

Q.—In what capacity were you there? A.—On behalf of Mr. Iselin, to see that the measurement was carried on correctly.

Q.—Mr. Watson was there, was he not? A.—Yes, sir.

Q.—Representing the Valkyrie? A.—Yes, sir.

Q.—Were you present at the marking that took place at that time on the stem, and the placing of the disc on each side of the Defender? A.—Yes, sir.

Q.—Were they correctly marked? A.—Yes, sir. Satisfactorily.

Q.—And Mr. Watson oversaw it with you? A.—Yes, sir.

Q.—There was one question suggested to me by what has occurred since you were on the stand. Could there have been any lead other than what you saw in the center of the boat when the floor was taken up and you examined it on Friday morning, and you not see it? A.—No, unless it was stowed in under the wings.

Q.—What would be the sense in stowing it under the wings? A.—There would be no sense in it particularly.

Q.—Why not? A.—It would only increase her stability to a moderate amount, compared to the increase if it was stowed lower down on the keel.

Q.—You agree with what Lord Dunraven said, that to have any effect upon the stability of the vessel, it must be as low down as possible? A.—Yes, certainly.

By the chairman:
Q.—What do you mean by the wings? A.—The part underneath the cabin floor, at the sides.

Q.—Here (indicating on the model)? A.—Along there, that place just underneath the floor.

By Mr. Choate:
Q.—When the remeasurement took place, or at any time, did you and Mr. Watson look down under the floor? A.—Not at the remeasurement.

Q.—When? A.—Before the first measurement on the 6th.

Q.—Did he look with you? A.—Yes; I went there. I had the cabin floor taken up the whole length of the vessel and we inspected it.

Q.—Before the first measurement? A.—Yes, sir.

Q.—What was done with this extra ton, as we have called it, of lead that was then on the cabin floor? A.—That was only the middle part of the floor that was taken up, leaving the lead under the stern at either side.

By Mr. Whitney:
Q.—You spoke about a disc being marked on the boat; what was that? A.—A circle, painted with red paint.

Q.—What did that indicate? A.—It was placed so that the lower edge of it was at a tangent with the surface of the water.

By Mr. Choate:
Q.—The lower edge of it just touched the water? A.—Yes, sir.

By Mr. Whitney:
Q.—What part of the boat was it on? A.—It was somewhat aft of amidships.

By Mr. Rives:
Q.—On each side? A.—On each side. The position was about there (indicating).

By the Chairman:
Q.—From the waterline up? A.—Yes, sir.

By Mr. Whitney:
Q.—That is considerably aft, is it not? A.—Yes, sir; as far aft as it could be painted well and seen. It would be difficult to get it under the stern and make a mark there; so that we substituted the two discs instead of making the mark at the stern, as being inaccessible.

By the Chairman:
Q.—At the second measurement? A.—Yes, sir; directly after the second measurement.

Q.—That is the re-marking that is referred to? A.—That is the only marking.

Mr. Choate—That is all, unless Mr. Askwith wishes to ask some questions.

Mr. Askwith—I prefer to ask Mr. Herreshoff some questions on Monday morning, if there is no objection.

Mr. Choate—All right. He had hoped to leave, but he will have to stay until Monday morning, or be back Monday morning. I will call Mr. Leeds, who wishes to leave town this afternoon.

Herbert C. Leeds, called as a witness on behalf of Mr. Iselin, testified as follows:
Examined by Mr. Choate:
Q.—You were on the Defender all summer, from the time she was built, were you not? A.—Yes, sir. From start to finish.

Q.—That is, you sailed all the trial races? A.—In every race.

Q.—In every race? A.—Yes, sir.

Q.—Will you tell the committee what, if any, ballast she had during the trial races? A.—She never had any ballast until the Cup races.

Q.—Where were you from the time that she was measured on the Friday until she was remeasured on the Sunday? A.—I was with Mr. Iselin and the rest of the party.

Q.—You attended the first measurement, did you, on Friday? A.—Yes, sir; on Friday I was present.

Q.—You were there with Mr. Iselin? A.—Yes, sir.

Q.—What attention did you pay to the measurement, if any? A.—None.

Q.—Before the measurement did you observe the Defender to see whether she had any list on or not? A.—I did.

Q.—How long before the measurement? A.—It may have been half an hour; it may have been an hour.

Q.—What did you observe? A.—I noticed that she had a list to starboard.

Q.—Did you do anything in consequence of that observation on your part? A.—I told Mr. Iselin of it, and requested him to throw the boom over to port.

Q.—Was that done? A.—My impression was that it was done. I did not see it.

Q.—You boarded the Defender, with Mr. Iselin, on the morning of Saturday, down at the Horseshoe, did you not? A.—Yes, sir.

Q.—At about what hour? A.—My recollection is it was after 8 o'clock.

Q.—What familiarity and experience have you had with yachting and with other boats than the Defender? A.—I sailed the Vigilant; was on the Vigilant in 1893; I sailed the Gloriana other years, and in different races.

Q.—And from your previous experience in the summer of 1895 you had become entirely familiar with her? A.—Yes, sir.

Mr. Leeds—With the Defender?
Mr. Choate—With the Defender.

A.—Certainly.

Q.—You had seen her as she lay in the Erie Basin at the time she was measured the day before? A.—Yes, sir.

Q.—When you boarded her on Saturday morning, did you observe that she was immersed lower in the water than she had been on Friday in the Erie Basin? A.—No.

Q.—Do you remember on which side of her you boarded her? A.—I could not say positively.

Q.—How long was that before Lord Dunraven put Mr. Henderson on board? A.—I should state it was about three-quarters of an hour, at a rough estimate.

Q.—Will you state how the weather was at that time, and from that time until Mr. Henderson came on board? A.—I think the water was what you call a little choppy; there was a little swell on. As Mr. Herreshoff says, caused by passing steamers, and also by the sea rolling.

Q.—Did you observe whether there was or was not any wind? A.—I think there was a little wind.

Q.—As to the motion of the Defender at that time when you and Mr. Henderson came on board, what kind of a motion was it? A.—It would be a slight motion.

Q.—On the previous trial races had you observed any habit of Mr. Iselin as to examination before the race began? A.—Yes, sir.

Mr. Leeds—Examination of what?
Mr. Choate—Of the inside of the Defender.

A.—Yes, sir.

Q.—What had been his habit? A.—It was his custom always to ask if there was any water in the boat, and look himself to see, down below; not only at the trial races, but all the season.

Q.—Did you take any part in the examination which Mr. Herreshoff has testified to, made by himself and Mr. Iselin and Capt. Haff, that morning—taking up the floor and examining the lead, whether it had been properly packed? A.—I examined the lead, but I cannot state at what hour, whether it was that morning or not.

Q.—What did you observe? A.—I observed that the three tons were there, practically. I could not say exactly, three tons. I remember the lead being there.

Q.—Had there been any larger quantity, would you have observed it? A.—Yes, a considerably larger quantity.

Q.—You know that what we call the extra ton had been brought in at the Erie Basin? A.—Certainly; I saw it.

Q.—And set up on her deck or cabin floor, above where it was to be finally placed? A.—I saw it there.

Q.—What part of the cabin floor was that? A.—My impression is it was over the forward part of the cabin floor, or the after part of what we called the sail room floor. I should think probably the sail room floor. About amidships.

Q.—You went on the race that day and came back with the boat? A.—Yes, sir.

Q.—What time did the Defender get up to Bay Ridge? A.—I think about 8 o'clock.

Q.—Was it light or dark at that time? A.—Dark.

Q.—What kind of a night was it? A clear or a dark night? A.—A dark night.

The Chairman—Do you wish to inquire any?
Mr. Askwith—I will assist the Commission by asking a few questions, taking up the attitude which was suggested this morning.

By Mr. Askwith:
Q.—What position have you held on the Defender? A.—No official position. A friend of Mr. Iselin.

Q.—You accompanied him in yacht races? A.—I have for two years.

Q.—Both on the Vigilant and the Defender? A.—Yes, sir; on the Vigilant in 1893.

Q.—Had the Defender any tanks? A.—Yes, sir.

Mr. Leeds—Water tanks?
Mr. Askwith—Yes.

A.—Yes, sir. You mean at the early part of the season?
Mr. Askwith—Yes.

Mr. Leeds—Yes, sir.

Q.—Can you tell me their weight?
Mr. Leeds—The weight of the tank itself?

Mr. Askwith—Yes. Mr. Herreshoff has spoken of three tanks, I think? Can you tell me the weight of them?
A.—No, I am not familiar with the weight.

Q.—Were those tanks taken out with the 7,000lbs. weight that was taken out? A.—My impression is that they were, at New Rochelle.

Q.—You do not know, to be certain? A.—I did not see them taken out, but they were not there that day.

By Mr. Choate:
Q.—You mean on Friday? A.—No. He means previously to that, Wednesday or Thursday, up at New Rochelle, I presume.

By Mr. Askwith:
Q.—Yes, I think that is the time that you took out the furniture and fittings of the boat, was it not? A.—She was stripped two or three days before she was measured.

Q.—Three days before the race? A.—Before she was measured. Wednesday or Thursday, I think, she was stripped.

Q.—Had she raced with those tanks previously in the course of the year? A.—Yes, sir.

Q.—Were they full or empty then? A.—I think, as a rule, we carried a little water in them.

Q.—How were they supplied with water?
Mr. Leeds—How do you mean, how were they supplied? Fresh water, you mean, I presume?

Mr. Askwith—Yes. You do not know their size?
A.—I do not know how much they contained.

Q.—Several questions were asked of Lord Dunraven and Mr. Glennie with regard to the trial races of which they knew nothing—as to whether information had been given to them about the trial races. Had there been any complaint of the Defender in the trial races? A.—I never heard of it.

Q.—You do not know? A.—I do not know of any.

Q.—Neither did they. When you examined this lead—when was it? A.—I said I could not tell you that.

Q.—You also said you could not say exactly how much there was? A.—Certainly not.

Q.—The lead was in half pigs? A.—Yes, sir. The lead was in pigs cut in two.

Q.—Roughly cut in two? A.—Yes, sir.

Q.—Without counting them it was very difficult to estimate how much was exactly there? A.—To estimate exactly, certainly.

Q.—Did you go on board in the morning on Saturday? A.—Yes, sir; the morning of the first race, you mean?

Mr. Askwith—Yes.

Mr. Leeds—Yes, sir.

Q.—About 8 o'clock? A.—I should think shortly after that.

Q.—Had you left the boat previously to that, at the same time Mr. Herreshoff did? A.—Yes, sir; precisely.

Q.—From New Rochelle? A.—No.

Q.—I thought he said that he left at New Rochelle? A.—He was on board when they measured her on Friday.

Mr. Choate—He came down to the Erie Basin on Friday morning, he said.

Q.—Had you been present at that measurement? A.—Yes, sir.

Q.—Had you been present between the time the furniture and the tanks were being taken out at New Rochelle and the first measurement? Had you been on board the boat? A.—Yes, sir.

Q.—You had? A.—Yes, sir.

Q.—Had you come down on the boat? A.—No; I came down, I think, on the Neckan.

Q.—What is the Neckan, a tug? A.—No, just a yacht Mr. Iselin had.

Q.—How long had you been on the Neckan? A.—Practically all summer.

Q.—We are at cross purposes, I think. I am asking you, between the time when the furniture was taken out at New Rochelle and the time when the first measurement was had at Erie Basin, were you on the Defender during that time? A.—I was on the Defender, I think, on Thursday afternoon when she went for a sail from New Rochelle. That is my impression.

Q.—On Thursday afternoon? A.—Yes, sir.

Q.—When did she leave New Rochelle? A.—She left New Rochelle Friday morning.

Q.—Did she come down straight to Erie Basin? A.—She went straight down, yes, sir. I think she left early in the morning, and we left on the steam yacht.

Q.—Had she been a long time at New Rochelle before Thursday? A.—I do not recollect.

Q.—How long before you started down to the measurement had the ballast in the shape of tanks and furniture been taken out of her? A.—I think it was only completed the day before we went down.

Q.—On Thursday? A.—I would not state that positively. I think it was completed on Thursday.

Q.—How long was your sail on Thursday? A.—Thursday afternoon—I could not state exactly.

Q.—You do not remember? A.—No.

Q.—When was the furniture taken out? A.—I think on those preceding days.

Q.—Before or after the sailing? A.—Before.

Q.—Did you sail with her perfectly light? What had she in her? Any ballast? A.—My impression is that it was 2 tons of ballast. I did not look to see.

Q.—You do not know? A.—No.

Q.—You do not know whether it was lead, or what it was? A.—I did not look to see.

Q.—Was that sail a sort of trial, to see how she went? A.—No. It was to try the sails.

Q.—Do you often alter a boat two days before an important race by changing the form of her ballast? A.—I do not alter any boat.

Q.—You are not responsible for anything of that kind? A.—No.

Q.—When did Mr. Iselin acquire the habit of examining the interior of the boats? A.—That I could not tell you.

Q.—Had he always done it in all of the important races that the Defender had been in? A.—I should say almost invariably.

Q.—Perhaps I had better ask this: Do you suppose that he acquired the habit and began that practice because he suspected there might be such a thing as ramping habits? A.—I don't know what it means.

Q.—You have heard of ramping horses, surely; it is a well-known term? A.—I am not familiar with the expression.

Mr. Choate—What does that mean?
Mr. Askwith—Preparing them, in a way, such as—
Mr. Choate—As you suspect here?

Q.—Do you think he thought there might be a possibility of a fraud? A.—I do not think so.

Q.—That was not his object? A.—I do not think so.

Q.—Where were you when you say that you noticed this list to starboard of the Defender? A.—On the naphtha launch.

Q.—At what time? A.—About half an hour or an hour before she was measured.

Q.—When was she measured? A.—On Friday.

Q.—What time? A.—I could not tell you. I think it was somewhere along 1 or 2 o'clock.

Q.—When you came down in the morning you went on board about 8:30, you say? A.—That was Saturday I am talking about now. She was measured Friday.

Q.—When you came down to the measurement on Friday, was not the time that you came down at 8:30—that was Saturday? You came down to the measurement on Friday at 1 or 2? Was that the day that you noticed the list? A.—No; it was the day of the measurement—on Friday.

Q.—Before she was measured? A.—Yes, sir.

By Mr. Choate:
Q.—In the Erie Basin? A.—In the Erie Basin. It has nothing to do with Saturday.

By Mr. Askwith:
Q.—You state you made a remark to Mr. Iselin about it? A.—I cer-

tainly did.

Q.—But you do not know of yourself whether anything was done or not? A.—My answer is, my impression was that the boom was flung over. I do not remember. I remember making the remark.

Q.—The vessel, when it was measured, would have to be measured true? A.—Yes, sir. You say it would have to be—I suppose she should be.

Q.—Can you answer, as an experienced yachtsman, this question: If the trim was merely altered, the vessel put 2in. or 1in. by the head, how much would that lengthen her waterline? A.—It would depend on the vessel, I should think.

Mr. Askwith—Take a vessel of the profile of the Defender.
Mr. Leeds—If she was 1 or 2in. by the head?
Mr. Askwith—Yes; 2in., or 1in. by the head.

Mr. Leeds—I should not think it would make any perceptible difference in the length of her waterline. If she came out that amount by the stern, I suppose you mean?

Q.—How much would it be if it was put 3 or 4in. by the stern?
Mr. Leeds—And the bow coming out 3 or 4in.?

Mr. Askwith—Yes.

A.—I am not familiar with the lines as they run there; I do not know.

Q.—In fact, you have simply got your experience in yacht racing in company with Mr. Iselin, as a friend? A.—Exactly.

Mr. Askwith—I think those are the only questions I wish to ask.

Mr. Choate—Mr. Askwith, Mr. Herreshoff is, for personal reasons, very desirous of returning to his home in Bristol to-night, if you could possibly cross-examine him.

Mr. Askwith—I am afraid I cannot ask the questions. I have not followed his evidence with that in view, and it requires careful examination.

Mr. Choate—We will call Mr. DeLuze.

The London Yachting Exhibition.

THE fourth annual yachting exhibition, which is now being held at the Royal Aquarium, Westminster, London, is hardly as extensive as last year's show, and may be said to be more an exhibition of yacht accessories, as there are but few yacht models or half models exhibited this year.

The only real show of yacht models in the exhibition now running is that of Messrs. Cox & King, naval architects, of 5 Suffolk street, Pall Mall, London, who on their elegant stand show a beautiful half model and plans of a high-speed twin-screw ocean-going steam yacht designed by them, the dimensions of this vessel being length over all, 255ft.; breadth, 32ft. 6in.; mean draft loaded, 15ft. 6in.; tonnage yacht measurement, 1,200 tons. The propelling power consists of two completely independent sets of triple expansion engines to drive the yacht at least 15 knots per hour on the measured mile, and at a speed of 16 knots per hour at sea in moderate weather. The special features of this yacht are the complete variation in design from any steam yacht at present constructed, the result being a thorough ocean-going vessel specially protected from retaining heavy seas, capable of steaming in all weathers and carrying some 350 tons of coal for long cruises, combined with a maximum of accommodation, which comprises an open and extended promenade awning deck about 150ft. long and unique interior arrangements with saloons and sleeping cabins on the main deck, having intercommunication fore and aft.

The equipment and outfit provides every modern improvement and convenience, including electric lighting with accumulators, search lights (2), electric side lights, masthead and other lights, steam and hand steering gear, refrigerating machinery and ice houses, fresh water distilling condensers, laundry and other offices, also steam heating and ventilating arrangements throughout of a special character. Machine guns and ample boat equipment, including steam launch and lifeboats, etc., etc.

In addition to the above, Messrs. Cox & King exhibit several other half models of beautifully modeled yachts, including a screw steam yacht, length over all, 189ft. 8in.; breadth, 22ft., with a draft of water of 11ft. 6in.; a screw steam yacht, length over all, 169ft. 8in.; breadth, 21ft. 6in., with a draft of water of 10ft. 6in.; both of which are designed to maintain a speed of twelve knots per hour at sea in moderate weather. They also show a half model of the screw steam yacht Perlonia, length over all, 88ft.; breadth, 14ft., with an extreme draft of water of 5ft. This yacht has just been built by Messrs. W. White & Sons, of Cowes, from their designs for Capt. J. H. Anderson, and is intended for cruising in the Mediterranean. The very moderate draft adapts her for canal use and cruising on inland waters, while at the same time she is in every way a safe and good sea-going craft, and behaved exceedingly well on her maiden voyage from Plymouth to Pauillac on the Garonne, when she steamed a distance of 450 nautical miles in forty-eight hours in a heavy gale from the east.

The half model of an auxiliary steam yacht, length over all, 147ft. 9in.; breadth, 22ft. 7in., and draft of water 12ft. 9in., shows the lines of a handsome and powerful vessel now building, which will be rigged as a topsail yard schooner and have a lower sail area of about 6,150 sq. ft. of canvas. This yacht will be fitted with triple expansion engines to develop 340 indicated horse power and drive her at an average speed of ten and one-half knots per hour in moderate weather. The same firm also exhibit half model of a powerful cutter yacht of light draft and of 44.73 linear rating by the English Y. R. A. new rule. This yacht is now building from their designs by Houston, of Row-hedge, to the order of Monsieur Eugene Burm, of Zele, Belgium, and it is intended for cruising generally on the rivers and inland waters of Belgium, and also for occasional racing under the flag of the Yacht Club d'Anvers, which club will adopt the new English rating rule.

The exhibition, however, appeals more to the enthusiast in boating and river sailing than to the yachtsman proper, for the display comprises steam launches, canoes, skiffs, punts, yawls, gigs and dinghies, and, as one might expect, the Thames builders are well to the fore, viz.: Duntton, of Shepperton; Hammerton, of Long Ditton; East, of Reading; Andrews, of Maidenhead; Turk, of Kingston; Shaw, of Marlow, and Simpson, of Teddington. Other builders too have excellent exhibits: Messrs. Simpson, Strickland & Co., of Dartmouth, show a nice 33ft. launch, fitted with Kingdon's patent engines, and a Thornycroft water-tube boiler of the newest type with water-tube fire bars. The Liquid Fuel Engineering Co., of Cowes, exhibit a highly finished pair of compound engines of 10 horse power to work at 600 revolutions with 250lbs. steam pressure. The weight of these engines with pumps complete is 185lbs. According to the catalogue they intend to show before the exhibition closes a new 25ft. motor launch, which they are now building for the Prince of Wales's yacht Britannia. The British Aluminium Co. exhibit a launch constructed by Messrs. Escher, Wyss & Co., of Zurich, of aluminum plates and fitted with a petroleum engine; and the Daimler Motor Co. are showing a smart 33ft. launch, the property of the Hon. Evelyn Ellis (who for the last four seasons has had her in use for up-river trips), and also a Daimler motor carriage. The Daimler motor was fully described in the *Engineer* of Dec. 20.

Messrs. Sargent, of Wootton, Isle of Wight, exhibit a yawl-rigged boat with electric motive power as an auxiliary, which craft will run nine hours with one charge at a speed of five miles per hour. The New-Mayne Syndicate of Palace Chambers, Westminster, S.W., show their patent rudder motor, by the application of which any rowing boat may be propelled by electricity. This contrivance consists of a bulb-shaped reservoir for fitting on the base of the rudder, at the forward end of which is a propeller driven by electricity stored in cells placed under the boat's thwart. Messrs. Glaser, Brewers & Co. are also exhibiting life buoys and deck and boat cushions as life-saving appliances, stuffed with reindeer hair in watertight cases, which material is considerably lighter than cork. There are other life-saving appliances on view, also sea anchors, oil distributors, line throwing apparatus and other accessories and utensils useful to yachtsmen.

The catalogue of the exhibition contains an abridged history of yachting by Mr. E. A. du Plat, B. A., who organized the exhibition.

Atlantic Y. C.

THE annual meeting of the Atlantic Y. C. was held on Feb. 10 at the Waldorf, Com. George J. Gould presiding. In his report Com. Gould suggested the co-operation of the yacht owners of the club with the regatta committee in order that the races and annual cruise of the club might be made more interesting, offering to give prizes for events to be arranged by the regatta committee. He also suggested a repetition of the programme of last year, with a rendezvous at Larchmont on July 3, the cruise beginning on July 5 after the Larchmont annual. An invitation from the Larchmont Y. C. to rendezvous at Larchmont for the cruise was read. On motion of Fleet Capt. Watson it was resolved that the commodore's report be printed and sent to all members. Sec'y Austen reported that the club numbered 229 yachts, with a membership of 400, a gain of 30 yachts and 106 members last year. Treas. Winttingham reported a balance of \$4,000 in the treasury above all indebtedness. The sum of \$1,500 was appropriated for the regatta committee and the date of June 16 was selected for the annual regatta. The following officers were elected: Com., George J. Gould, str. Atlanta; Vice-Com., Frederick T. Adams, schr. Sackem; Rear-Com., John H. Hanan, str. Embury; Sec'y, David E. Austen; Treas., George H. Church; Meas., Henry J. Gielow; Trustees: Philip G. Sanford, J. Rogers Maxwell, Thomas L. Arnold, Alex. P. Ketcham, J. Fred. Ackerman and Thomas L. Watson; Membership Committee: Louis F. Jackson, Spencer Swain and Henry W. Banks, Jr.; Regatta Committee: John L. Bliss, Henry J. Gielow, David E. Austen, W. L. Gerrish and George W. McNulty.

On motion of the regatta committee the racing rules were amended, the basis of the allowance tables being changed from 50 to 60 per cent. and the following amendments passed:

Rule IV.—Strike out concluding paragraph, "Any yacht entered in a class in which there are no other entries shall sail in the next class above her own which fills, and shall be rated at her actual measurement."

Rule VIII.—Strike out second paragraph and substitute the following:

"Distinguishing numbers are assigned to each sailing yacht enrolled in the club and published as the racing number of the yacht in the club book classification, which numbers must be provided by each yacht and be fastened to the mainsail above the reef points. Yachts of other clubs will be furnished with distinguishing numbers or letters by the regatta committee."

Rule XIII.—Strike out first paragraph and substitute "The starting line will be an imaginary one between the Craven's Shoal buoy and a stakeboat anchored to the westward of said buoy. All yachts must cross this line, leaving said buoy on port hand."

Lines 6 and 7, strike out "between buoy No. 11 and a stakeboat anchored to the southward and eastward," and substitute "between Craven's Shoal buoy and a stakeboat anchored to the westward."

Rule XVI.—Strike out the entire rule and substitute as follows: "All starts shall be flying. The time at the start and finish shall be taken when the point marked by the foremost in schooners and the mainmast in single-masted vessels and yawls crosses the line. If this point in any yacht be across the line when the proper starting signal for such yacht is given, she must return and recross the line."

"A yacht so returning, or one working into position from the wrong side of the line, after the starting signal for any class has been given, must keep clear of and give way to all competing yachts. Each yacht must cross the starting line after the proper starting signal for the class in which she is entered."

Changes were also made in the starting signals, etc.

Rule XXVII.—Add the following paragraph: "If in a class but one yacht starts, such yacht, after having completed the course as above stated, shall be entitled to a walkover prize of one-half the value of the prize offered in that class; and if five or more yachts start in one class, a second prize of one-half the value of the first prize shall be awarded to the yacht second to complete the course, corrected time."

An amendment increasing the number of meetings to four in each year was lost. The proposal of the Sea Gate Club that the Atlantic Y. C. should establish itself permanently at Norton's Point, Coney Island, was referred to the trustees.

Seawanhaka International Cup.

The race committee of the Seawanhaka Corinthian Y. C. has issued the following circular relating to the international cup established last year by the club:

"The experiment of introducing an international contest as a means of arousing greater interest in small yacht racing was successfully tried by this club during the season of 1895. Through the efforts of Mr. William Willard Howard, a well-known American canoeist, and of this club, Mr. J. Arthur Brand, representing the Minima Y. C. of London, England, was induced to visit the United States with his 15ft. yacht Spruce IV., and to sail for the challenge cup offered by this club for international competition between small yachts. In September last a series of five hard fought and exciting races were sailed, of which Spruce IV. won two and Ethelwynn, the successful defender of the cup, won three."

These contests attracted general attention, and have resulted in the construction or projected construction of a larger number of these handy little vessels, not only in the vicinity of New York, but also at many other points throughout the United States and Canada.

Several challenges for the cup for matches during 1896 have already been received from clubs in Canada and Great Britain. A challenge from the Royal St. Lawrence Y. C. of Montreal on behalf of Mr. G. H. Duggan has been accepted, and the races will take place probably from July 13 to 18. This challenge is for a match in the 15ft. racing length class (Seawanhaka measurement). A later challenge in the same class by the Royal Corinthian Y. C. of London on behalf of Mr. Linton Hope is also under consideration. The defense of the cup is open to yachts owned by members of yacht clubs of the United States in good standing, and trial races will be held as hereinafter stated to determine the choice of a yacht to defend the cup.

The Seawanhaka Corinthian Y. C. earnestly desires to interest other yacht clubs in providing for the defense of the cup. For the information of any who may be interested in the subject, and especially for the guidance of those who may contemplate making entries in the trial races, the race committee announce the following general conditions governing the cup, which are extracts from the declaration of trust executed by the Seawanhaka Club, and the following general regulations for the control of the match and trial races, subject to such modification of detail as may hereafter be agreed upon with the challenger:

CONDITIONS GOVERNING THE CUP.

Article I. The cup shall be known as the "Seawanhaka International Challenge Cup for Small Yachts," and shall be preserved as a perpetual challenge cup for friendly competition between foreign countries. The term "foreign," as used in this instrument, shall be so construed as to permit contests for the cup between any country and its colonies and dependencies, and between such colonies or dependencies themselves.

Article II. Any organized yacht club in good standing of any country, foreign to the country of the yacht club in whose custody the cup may be, shall always have the right to challenge for the cup and to sail a match therefor, provided that such challenge shall be made and such match be sailed in accordance with the terms and provisions of this instrument.

Article III. Matches for the cup shall be limited to yachts propelled by sails only, whose racing measurement or size shall not exceed the maximum limit of the so-called "25ft. racing length class" or fall below the minimum limit of the so-called "15ft. racing length class" of the Seawanhaka Club, as such classification exists at the date of this instrument; or whose racing measurement or size, according to the rules of the club having at the time of challenge the custody of the cup, falls within the limits of size substantially corresponding to the limits above specified.

Article IV. All matches shall be sailed between a single yacht on behalf of the challenging club and a single yacht on behalf of the challenged club. Neither club shall be required to name its representative yacht in advance of the races, but the match shall be sailed to a conclusion between the yachts selected for or sailing the first race thereof, and no substitution of one yacht for another shall be permitted after the preparatory signal of the first race has been given.

Article V. A match shall be constituted of not less than three nor more than five races, and shall be awarded to the club whose representative yacht shall win a majority of such races.

Article VI. The representative yachts of the challenging and challenged clubs must be constructed in the respective countries of such clubs. Centerboards or plates or sliding keels shall always be permitted in construction and no restriction shall be placed upon their use. All ballast must be fixed.

Article X. The helmsmen sailing the representative yachts in the match must be amateurs and must be residents of the countries of their respective clubs. The challenging and challenged clubs must name in writing, each to the other or to their respective representatives, at least 24 hours before the day appointed for the first race, the helmsmen who will sail their representative yachts, and such helmsmen shall sail such yachts in all the races of the match unless prevented by illness or other substantial cause, in which event substitutes will be allowed.

Article XI. The challenging and the challenged clubs may by mutual agreement fix and decide all the terms and conditions of the match, whether relating to dates, courses, rules of measurement, sailing regulations, notices, or any other matter whatsoever pertaining to the match or preliminary thereto, and may also by mutual agreement waive for such match such of the provisions of this instrument as would otherwise govern the match or the preliminaries thereof, provided, however, that the limit of the racing length or the size of the competing yachts shall in no event exceed the maximum limit as established by this instrument in Article III. thereof, unless the consent in writing of the Seawanhaka Club to so increasing such limit shall first have been obtained.

GENERAL REGULATIONS GOVERNING THE MATCH AND TRIAL RACES FOR 1896.

I. The courses shall be on the waters of Long Island Sound in the vicinity of Oyster Bay, or in the bay itself. They shall consist of a triangular course and a course to windward or leeward and return. For the 15ft. class, each leg of the triangular course shall be 2 nautical miles in length and shall be sailed over twice, making a total of 12 miles. The course to windward or leeward and return shall be 3 nautical miles to each leg and shall be sailed over twice, making a total of 12 miles.

II. The start shall be a one-gun flying start.

III. The races shall be sailed without time allowance.

IV. Yachts must not exceed 15ft. racing length (S. C. Y. C. measurement).

The formula for determining racing length under the S. C. Y. C. rules is as follows:

$$\frac{L \times W \times \sqrt{\text{Sail area}}}{2} = \text{Racing length.}$$

V. Yachts shall be measured without crew on board, but instead thereof a weight of 800lbs. shall be carried amidships during measurement to represent crew.

VI. All ballast shall be fixed. (Weighted centerboards shall be considered fixed ballast.)

VII. No outrigger or other mechanical device for carrying live ballast outboard shall be allowed.

VIII. In determining sail area a system of measurement shall be employed which will give, as nearly as possible, the actual number of square feet thereof. Sails shall be limited to mainsail, jibs and spinnaker. The combined area of mainsail and of the jib used in windward work shall constitute the factor of sail area in determining racing length. The area of spinnaker and balloon jib shall each be limited to four-tenths of the total area of the mainsail and jib used in windward work.

IX. The helmsman shall be an amateur, and the total number of persons on board shall be limited to two.

The race committee also announce the following programme for the trial races, subject to change, of which due announcement will be given:

Trial races to select the defender for the year 1896 of the Seawanhaka international challenge cup for small yachts, June 22, 23, 24.

COURSES.

1. The course for the first and third races shall be triangular and shall be as follows:

Triangular Course—From a line between Centre Island Buoy off the entrance to Oyster Bay, Long Island Sound, and the committee steamer anchored southeast of the same.

E. by N. $\frac{1}{2}$ N.—Two miles to and around a mark bearing a red flag or ball, leaving it on the port hand.

N.W.—Two miles to and around a mark bearing a red flag or ball, leaving it on the port hand.

S. by W. $\frac{1}{2}$ W.—Two miles to the finish line between Centre Island Buoy and the committee steamer anchored northwest of the same.

Course to be sailed over twice; total distance, 12 nautical miles. On the second round yachts will leave Centre Island Buoy on the port hand.

Note.—The race committee may in their discretion direct the course to be sailed in the reverse direction, leaving buoy and marks on the starboard hand, and the signal for such reversal of course will be the anchoring of the committee steamer at the start to the northwest of Centre Island Buoy. In this case the committee steamer will be anchored southeast of Centre Island Buoy at the finish.

2. The course for the second trial race shall be a course to windward or leeward and return.

Course to Windward or Leeward and Return—From a line between Centre Island Buoy and the committee steamer to and around a mark bearing a red flag or ball, leaving it on the starboard hand; distance 3 miles and return; course to be sailed over twice; total distance, 12 nautical miles. The direction will be signalled by the general yacht signal code from the committee steamer at least 15 minutes before the preparatory signal.

STARTS AND SIGNALS.

The start will be a one-gun flying start with a preparatory signal, and will be made at 12 o'clock noon across a line between Centre Island Buoy and the committee steamer.

First Signal—Preparatory (whistle 15 seconds long). The club burgee on the committee steamer will be lowered and a blue peter hoisted. There will be an interval of 5 minutes between the first and second signals.

Second Signal—Start (whistle 15 seconds long). The blue peter will be lowered and a red ball hoisted.

Note.—Attention is called to the fact that the flag and balls constitute the signals, the whistle merely calling attention thereto.

SPECIAL CONDITIONS.

1. The yacht selected to defend the cup shall be the one which, in the judgment of the race committee, shall be the best adapted therefor and not necessarily the winner of the majority of the trial races. Additional races may be ordered by the committee between such contestants as they may select.

2. The owner of each yacht entering for trial races must, on or before June 20, furnish to the secretary of the committee the racing measurement of his yacht, certified by the measurer of the Seawanhaka Club.

3. Each yacht must carry a racing number (which may be obtained at the club house on the morning of the first race) fastened securely on both sides of the mainsail.

4. In the event of a race being postponed or ordered resailed, it will be sailed at as early a date as may be practicable.

ENTRIES.

All entries for the trial races must be made by the clubs to which the owners of the respective yachts entered belong. Clubs intending to make entries are requested to notify the secretary of the race committee, and will receive printed or written blanks upon or in accordance with which entries must be made, and at the request and upon the responsibility of any club entering a yacht to compete in the trial races, all the privileges of the club house at Oyster Bay will be extended to the owners and amateur crew of the yacht so entered during the period occupied by said races, upon the same terms as to members of the club.

In connection with these conditions, we give a chart of the waters on which the races will be sailed.

Spruce and Ethelwynn.

In a letter in a recent issue of the *Field*, the writer, a Mr. Joseph Parker, of Boston, tries to depreciate the position of Spruce IV. in the half-rating class in England, and also of Ethelwynn in her victories over Spruce IV. at Oyster Bay. Mr. Parker, who from his statements certainly did not see the Oyster Bay races, misrepresents entirely the performances of Ethelwynn as compared with Spruce. Mr. J. Arthur Brand writes in reply the following letter to the *Field*:

In justice to Mr. C. Field and Mr. W. P. Stephens, the owner and designer of the Ethelwynn, I cannot allow the remarks of Mr. Joseph Parker, of Boston, Mass., U. S. A., to go unchallenged; besides, they are most unfair to Spruce and her designer and builder, Mr. H. C. Smith, of Oxford. Spruce was the fastest half-rater in England, running and reaching in light winds, when the challenge was made, as the extract of my letter to Minima Y. C. on the day the formal challenge was sent proves: "I have built Spruce IV., and she has had several trial tests, and I am now in every way satisfied that she is most satisfactory for sailing for the Seawanhaka Cup in America. I have consulted an eminent American yachtsman, and he is of my opinion. The weather and winds in Oyster Bay, where the races are to be sailed, are light, and the waters smooth, and Spruce IV. has been designed for that weather, and in such she has proved herself wonderfully fast, particularly in running and reaching, and since her alterations she holds her own when beating to windward; and when she is fitted with her American canvas she ought to prove a smart boat altogether in the light winds." After losing four races running in her own weather, Spruce was hauled up, and her plate was found very badly bent. She then had two new plates put into her and all but 50lbs. taken off her bulb, the last of which plates she raced with in America, which wonderfully improved her to windward. This 50lbs. bulb even ought to have been off when racing on the other side. Spruce, who could not be touched by the other English half-raters she met, running and reaching, was beaten by Ethelwynn on these points; it was only going to windward that Spruce could get away from her. In what would be ordinary light winds in England Ethelwynn could walk round Spruce, but in a blow and very light airs Spruce turned the tables on the American. The bulb-keepers Rags and Viva would not have had a chance except on Thursday, Sept. 26, when they would have beaten Spruce by some ten minutes; but she beat the Ethelwynn that day. Perhaps, sir, you will kindly state why Spruce was left out when you gave the account of the half-rating races. Her record was in your table, though I was unable to give it you through my absence in America. By Thalassa's order of merit Spruce was third on the list of the boats she had met, Rag first and Viva second. I may state it was not three prizes that Spruce won, but fifteen.

We cannot quite reconcile Mr. Brand's claim of Spruce's superiority to windward with the facts in the two final races, Ethelwynn beating her on the four windward legs of the two races.

The *Yachting World* of Jan. 31, with which paper Mr. Brand is connected, has an editorial on "International Small Rater Races," apropos of the Linton Hope challenge, which concludes as follows after reference to Mr. Hope's allusion to "frivolous protests": "Now, as is well known, Mr. J. Arthur Brand, who raced Spruce IV. against Ethelwynn last year, lodged a protest against the cup being awarded to the American boat, and it looks uncommonly as if Mr. Linton Hope was expressing an opinion in the above extract as to the merits of that protest. We should be extremely glad to hear from the gentleman in question that he had no such intentions, as at the present moment the Minima Y. C. has taken up Mr. Brand's protest and claims the cup, as Ethelwynn not only unshipped her ballast, but took out 50lbs. of lead on the morning of the Monday's race, which was not replaced until Friday."

With the first part of these remarks we are not concerned, but the statement about the ballast infers that the rules were in some way violated by Ethelwynn. There was nothing in the rules or conditions to prevent a boat from altering her ballast during the series of races provided that she did not exceed her class measurement. Ethelwynn was officially measured with 100lbs. of lead aboard and also with 150lbs., her racing length with the greater weight being only 14.62 as compared with Spruce's 15ft. She sailed the races of the first five days with but 100lbs. of ballast; but on coming in from the fifth race, in view of Mr. Field giving place to a man some 45lbs. lighter, a written notice was sent to the committee that the other 50lbs. would be shipped, and it was put aboard on Thursday afternoon and carried on Friday

and Saturday. There is nothing in the rules to prohibit this, nor was any protest made by Mr. Brand over what he now claims to be irregular, the failure to carry the extra 50lbs. in the early races.

It is quite true that on Saturday morning, when Ethelwynn was beached and turned on edge for cleaning, four pigs of lead were lifted out, as they could not safely be left in the boat; but they were replaced as soon as the boat was set afloat.

We should be extremely glad to hear from the Minima Y. C. that it is not seeking to claim the cup on such a frivolous protest, and also that it would not pride itself on winning three races—one by a rank fluke (at the end of the first round on Sept. 25), one by the groundless withdrawal of her rival on Sept. 26, and one by a purely technical protest. Mr. Brand freely admitted during the races that Ethelwynn was the better boat, and that she could be made to go faster with proper handling, and he must know that he was fairly and squarely beaten under his own conditions in the two final races. It is unfortunate that he has not seen fit to accept the result in public with good grace after admitting in private that his boat was really beaten on her merits.

New York Y. C.

The annual meeting of the New York Y. C. was held on Feb. 13, with Com. Brown in the chair and 137 members present. Immediately after the meeting was called to order the following was offered by Lewis Cass Ledyard:

Whereas, The Earl of Dunraven, an honorary member of this club, has publicly made certain statements charging that foul play was practiced by those in charge of the Defender in the recent races for the America's Cup, and upon investigation of said charges made by a committee of this club, appointed on Nov. 18, 1895, and participated in by Lord Dunraven and his counsel, it clearly appeared that the said charges were not only untrue, but, in fact, wholly unwarranted and unsupported by any reasonable grounds of suspicion. Lord Dunraven has neither retracted the said false charges, nor offered any apology for making the same. Under these circumstances it is, in the judgment of this club, manifestly improper that the Earl of Dunraven should continue to enjoy the privileges of honorary membership therein. Therefore,

Resolved, That the secretary be instructed to inform the Earl of Dunraven that his resignation as an honorary member of the New York Y. C. is requested by the club.

Secretary Oddie then read the following cable:

LONDON, Feb. 12.

Oddie, N. Y. Y. C., N. Y.:

Forwarded letter Rives Saturday; Phelps to-day.

DUNRAVEN.

J. Pierpont Morgan, of the special committee, then made the following motion, which was carried by a vote of 25 to 10, there being thirty-five voting members present:

"In view of the dispatch which has just been read by the secretary, it seems to me unwise that the club take any action to-night on the resolution offered by Capt. Ledyard. Not that we are not in a position to do so, but we have extended to Lord Dunraven every courtesy up to this time, and I think it would be a mistake, in the face of a dispatch from him stating that there are letters on the way, to act too hurriedly to-night, when we can just as well do it a few days later. I would therefore move that this meeting be adjourned to two weeks from to-night, Feb. 27, to take action on the resolution offered by Capt. Ledyard."

The reports of officers and committees were then read, the secretary's report showing a membership of 1,127 and a fleet of 297 yachts. Ogden Golet, str. White Ladye, offered two cups of \$1,000 and \$500 for schooners and cutters, to be raced for off Newport on the cruise. A letter from the Seawanhaka Corinthian Y. C. relating to a conference of representatives of the larger clubs for the purpose of securing a uniformity of racing rules was read and referred to the regatta committee with power.

The following officers were elected: Com., Edward M. Brown; Vice-Com., Henry C. Ward; Rear-Com., Lewis Cass Ledyard; Sec'y, J. V. S. Oddie; Treas., F. W. J. Hurst; Meas., John Hyslop; Fleet Surgeon, M. J. Asch, M. D.; Regatta Committee: S. Nicholson Kane, Archibald Rogers, Gouverneur Kortright; Committee on Admissions: Frank T. Robinson, Charles McK. Looser, Lewis Cass Ledyard, Daniel T. Worden and Joseph Stickney; House Committee: Edward E. Chase, Arthur Ingraham, H. Edward Ficken, Robert S. Bowne and Frank M. Cronise; Library Committee: Fordham Morris, Arthur H. Clark and Theodore C. Zerega; Committee on Club Stations: Wm. H. Thomas, Wm. Butler Duncan, Jr., Clarence McKim, L. Vaughan Clark, Tarrant Putnam, Frederick P. Sands, George S. Payson and Henry C. Ward.

The following new members were elected: John C. de La Vergne, C. W. Clinton, Wm. Watson Caswell, John A. Spoor, Harry E. Converse, the Hon. Morgan J. O'Brien, Edwin P. Baugh, Jr., Chauncey M. Depew, Robert Golet, 2d, Robert D. Evans, Alfred Scheitlin, George Lord Day, Col. Francis Vinton Greene, Caleb G. Evans, Josiah M. Fiske, Jr., Walton Ferguson, Jr., J. Montgomery Strong, Matthew A. Wilks, Richard Stevens, Peter A. B. Widener, Frederic Elliott Lewis, Edward F. Darrell, Charles Fleischman, Horace Clark Duval, George S. Hoyt, M. J. O'Brien and C. C. Hibbard.

Navy Members—Lieut. Wm. H. Chambers, Engineer U. S. N.; Com. Royal B. Bradford, U. S. N.; Lieut. Mark L. Bristol, U. S. N.; Capt. Benj. Rives Russell, U. S. M. C.; Lieut. Roger Welles, Jr., U. S. N.; Lieut.-Com. Seaton Schroeder, U. S. N., and Naval Constructor Francis T. Bowles, U. S. N.

Honorary Members—Hon. Edward J. Phelps, Capt. Alfred T. Mahan, U. S. N.

Flag Members—Mrs. Sarah Drexel Fell and Mrs. George Lewis.

Vedette and Echo.

Editor Forest and Stream:

The item recently published in the *FOREST AND STREAM* concerning the Queen's cup race of 1895 is incorrect in several particulars; the main facts of the case being as follows: The Queen's cup is to be raced for by three classes or divisions, and under the management of the club at whose home port the race is sailed—in this case the Royal Hamilton Y. C. of Hamilton. Vedette, which has raced twice in the lowest class and once in the class above, had notice in writing on June 29, two days before the race, that she was over 32ft. and could not enter. Cyprus, of Toronto, and Alert, of Hamilton, both smaller than Vedette, were also notified that they were over the limit, and did not start. Echo, which, by the way, is enrolled in the Victoria Y. C., of Hamilton, but not the Royal Hamilton, did not protest, for the reason that she won the cup and was awarded it by the only parties having authority to award it. Neither the Royal Hamilton nor the Victoria Y. C. has consented to the appeal to outside parties, and neither has sent any evidence. The Royal Canadian Y. C. took the matter into its own hands in submitting the case to the Royal St. Lawrence Y. C.

H.

British Opinion.

We have been unable to give space to the current comments of the British papers on the Dunraven matter, but many of them have taken a very fair and liberal view of the case. We take pleasure in reprinting the following, the leading article from the *Yachtsman* of Feb. 6:

In another column we publish the report of the special committee appointed by the New York Y. C. to examine and report upon the charges made by Lord Dunraven in reference to the shipment of extra ballast on board the Defender after she was measured. The report will indeed go far to convert even the most rabid partisan of Lord Dunraven in his late unworthy war of words. Throughout it is couched in very courteous language, and although the *verbatim* report of the evidence has not yet been received in this country it is abundantly clear that there was no foundation in fact for the insinuations to which Lord Dunraven has committed himself. The perusal of the document will, we have no doubt, tend to raise the prestige of the New York Y. C. in the minds of all lovers of fair play. It is, therefore, the more to be regretted that such leading London journals as the *Times* and the *Globe* should have thought fit to publish misleading and, in some respects, unfair criticisms of the committee's judgment in their editorial columns. If any people still continue to believe in the truth of Lord Dunraven's accusations re the trim of the Defender, it would be well for them to ask why none of the so disreputable crew of the Defender and Hattie Palmer offered to sell their guilty secret when this widely advertised inquiry was on foot? We do not for a moment believe that Lord Dunraven would have consented to such a mode of securing evidence in substantiation of his pamphlet, but in the case of such a dishonest crew the offer at least might have been reasonably expected.

Let us put the Royal Yacht Squadron in the place of the New York club, and suppose that such an action as that charged against those responsible for the management of the Defender had been leveled by Mr. Royal Phelps Carroll against the Briannia on the occasion of the match for the Cape May Cup in 1883. The premier club could not have behaved with a better grace than the New York Y. C. has shown throughout this unparalleled episode. Such charges as those made by Lord Dunraven did not leave room to acquit Mr. Iselin from complicity in the fraud described—a mere disclaimer to that effect on the part of the accuser was powerless to prevent some of the odium from attaching to everyone concerned in the Defender's management—and therefore the club was bound to deal with the subject in the most thorough manner. The gentlemen selected to judge of the case are men of the highest possible integrity, and in order that there should be no room for doubt as to the thorough impartiality of the inquiry, the Royal Yacht Squadron was invited to join the N. Y. Y. C. in the matter. This the club refused to do, and whatever may have been the reason

for the refusal it cannot be taken as a very high mark of sympathy with Lord Dunraven's action, while the offer of the N. Y. Y. C. leaves no room for disputing in any shape or form the judgment delivered by its special committee.

It is to be regretted that Lord Dunraven did not wait until the committee had finished hearing the evidence, but it is satisfactory to have had his own assurance that it has acted with strict impartiality. With this knowledge we feel sure that the hint contained in the report will not be lost upon him, and that the *amende honorable* will not be withheld. Thus one of the most unfortunate occurrences in the annals of yachting will be brought to a happy conclusion. Lord Dunraven will no doubt express his regret in a fitting form, and assuredly the report before us has rendered this very easy for him. If we might suggest such a thing, the "shake hands and be friends" might take the shape of a series of private matches between the Defender and Valkyrie next season off Marblehead.

Zettler Rifle Club.												
NEW YORK, Feb. 11.—The weekly shoot of the Zettler Rifle Club was held this evening at the club's headquarters, 219 Bowery. There were 13 members present, and of this number, one, Louis Flach, scored the first highest possible of the season—250. Dr. J. A. Boyken was in great form also, making 4 scores of 247 and 1 of 244. Gus Nowak, being in arrears, shot up 2 of his back scores; H. D. Muller also shot a back score. Below are the details:												
Dr J A Boyken.....	247	244	247	247	247		H Holges.....	237	243	238	243	246

HALL.

Rifle Notes.
The New York Rifle Club's weekly meeting was set for Feb. 12; this club holds its meetings at Zettler's gallery every Wednesday evening. On the above date only two members shot their strings: R. J. Young's two best scores were 245 and 240, while his score on the honor target was 73. The other member present was out of form and did not register his scores.

The Zettler Rifle Club will hold a ladies' prize day on March 24, when the ladies who are relatives of the members of the club will compete for prizes offered by the gentlemen.

The question as to whether there is to be another National Schuetzenfest at Glendale Park this summer will be decided in the near future.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.
Feb. 21-22.—ROCHESTER, N. Y.—Tournament of the Rochester Rod and Gun Club; targets; team match, Rochester versus Buffalo, on Feb. 22. E. D. Hicks, Manager.
Feb. 21-22.—MEMPHIS, Tenn.—Winter tournament of the Memphis Gun Club; live birds and targets.
Feb. 22.—ROCHESTER, N. Y.—Return match at targets between teams of the Rochester Rod and Gun Club and the Audubon Gun Club of Buffalo.
Feb. 22.—MARION, N. J.—All-day shoot of the Endeavor Gun Club; targets.
Feb. 22.—MAPLEWOOD, N. J.—All-day shoot of the Maplewood Gun Club; morning—live birds; afternoon—targets.
Feb. 22.—RYE, N. Y.—All-day shoot of the Rye Gun Club; live birds and targets.
Feb. 22.—MORRISTOWN, N. J.—Sweepstakes at Morristown Driving Park; live birds.
Feb. 25-26.—ELIZABETH, N. J.—Sixth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.
Feb. 27.—DUNKLEEN, N. J.—First tournament of the New Jersey Trap Shooters' League; League team race at 2 P. M.
Feb. 27-28.—DAVENPORT, Ia.—Forrester Gun Club, live birds and targets, open to amateurs only. J. F. Kroy, Sec'y.
March 18-21.—BAYCESTER, N. Y.—Tournament of the Cobweb Gun Club; targets and live birds. F. L. Train, Captain.
March 24-26.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap, at live birds at Elkwood Park; \$1,000 guaranteed in the main event, all surplus added.
March 31—April 2.—ELIZABETH, N. J.—Target tournament under the management of Neaf Apper and C. C. Hebbard.
April 14-16.—CHARLESTON, S. C.—Tournament of the Interstate Association, under the auspices of the Palmetto Gun Club.
April 14-17.—ATLANTON, Kansas.—Thirteenth annual open to all, and second annual manufacturer's amateur tournament; \$1,000 added money and manufacturers' prizes. Lou Erhardt, Sec'y.
April 20-24.—HOUSTON, Texas.—Twenty-first annual tournament of the Texas State Sportsmen's and Game Protective Association. J. Emmett Haney, Manager.
April 21-24.—OMAHA, Neb.—Nebraska State Sportsmen's Association's annual tournament; \$1,000 added to the purses. Frank S. Parmalee, Sec'y.
April 22-24.—WELLINGTON, Mass.—Tournament of the Boston Shooting Association; targets. O. R. Dickey, Manager.
April 28-30.—JOPLIN, Mo.—Annual Owl Shoot of Kansas and tournament of the Missouri Trap Shooters' Association; also open to all programme; \$1,000 added to the purses. W. G. Sergeant, Sec'y.
April 29-30.—BIRMINGHAM, Ala.—Interstate Association's tournament, under the auspices of the Birmingham Rod and Gun Club.
April 30—May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.
May 5-6.—BEDFORD, Ind.—Annual tournament of the Bedford Rod and Gun Club. R. R. Braxton, Sec'y.
May 5-6.—ALGONA, Ia.—Annual tournament of the Algona Gun Club.
May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; \$2,000 added money.
May 12-15.—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club. \$2,000 added money.
May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co. R. S. Waddell, Agent.
May 20-24.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.
May 22-24.—MISSOULA, Mont.—Annual tournament of the Montana State Sportsmen's Association, under the auspices of the Missoula Rod and Gun Club. Will Cave, Sec'y.
May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.
May 26-28.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club; nobody barred; targets. Royal Robinson, Sec'y.
May 26-28.—BINGHAMTON, N. Y.—Annual spring tournament of the Binghamton Gun Club; first two days, targets; third day, live birds.
May 30.—CANAJOHARIE, N. Y.—Tournament of the Canajoharie Rod and Gun Club; targets. Chas. Weeks, Sec'y.
May 30—June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.
June 1-5.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. B. Meyers, Sec'y.
June 3-4.—NATCHEZ, Miss.—Interstate Association's tournament, under the auspices of the Gaillard Sporting Club.
June 8-13.—BUFFALO, N. Y.—Thirty-eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.
June 9-11.—DAVENPORT, Ia.—Annual tournament of the Iowa State Sportsmen's Association. R. B. Cook, Sec'y.
June 9-11.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.
June 10-11.—FARGO, N. D.—Second annual tournament of the North Dakota State Sportsmen's Association; targets; \$500 added money. W. W. Smith, Sec'y.
June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlain Cartridge and Target Company. Targets thrown free; \$770 in cash also added to the purses.
June 23-26.—PITTSBURG, Pa.—Tournament of the Pittsburg Gun Club; targets; \$500 added money.
June 30—July 2.—WOPSONONOCK, Pa.—Fourth annual tournament of the Altoona Rod and Gun Club; targets. W. S. Bookwalter, Sec'y.
July 22-23.—PORTLAND, Me.—Interstate Association's tournament, under the auspices of the Portland Gun Club.
July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.
Aug. 4-6.—CHICAGO, Ill.—Tournament of the Du Pont Smokeless Powder Company. E. S. Rice, Mgr.
Aug. 26-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.
Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Yes in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 518 Broadway, New York.

Rolla Heikes sat down in his home at Dayton, O., on Feb. 12, and wrote us a nice little letter. We mention this fact because Rolla isn't given to writing us letters; we wish he were. We are not going to give his production in full, but will just give a juicy extract that will be of interest to all trap-shooters: "From present prospects this is going to be the banner year in trap-shooting circles, causing you many a shot with your pen, and myself many a moment of anxiety while waiting for the referee to call out 'dead bird.' I am aware that I have a heavy load on my shoulders, trying to set the pace for the many good shots who are after my scalp. The society is becoming warmer every year, and many new members are falling in line and gradually making their mark. Of course it is only a question of time how long I can keep up my gait. Should I continue to feel as I do this A. M., the boys will all know that I am still in the race." Considering that Rolla broke 50 straight at unknown angles on the 10th, two days before he wrote the above, he had reason for feeling pretty well. In W. Fred. Quimby's store in this city there is a large portrait of Rolla hanging on the wall; over it is the inscription "The daddy of them all." Charlie Hebbard wrote it and he wrote it well, for the title is one that fits.

The trap-shooters of Missouri, Kansas and Nebraska are going to have a big time during the month of April. As already announced, April 14-17 are the dates for Lou Erhardt's great shoot at Atchison, Kan.; the next week is the State shoot at Omaha, Neb., under the management of Frank Parmalee, George Loomis and J. C. Read; the dates are April 21-24. This shoot will be followed by the annual Owl shoot of Kansas, at Joplin, Mo., April 28-30. In connection with this will be run the tournament of the Amateur Trap-Shooters' Association of Missouri and an open tournament as well. All will be under the auspices of the Joplin (Mo.) Gun Club, of which club W. G. Sergeant is the able secretary. The State shoot at Houston, Tex., during the Omaha week may take a few shooters away from the one at Omaha; but as these are both State affairs, neither will suffer very much probably from the clashing of dates.

The Sherbrooke Gun Club, of Sherbrooke, Province of Quebec, Canada, is a new organization, having been in existence less than half a year. Jas. F. Morkell is the club's president, and C. H. Foss its secretary; the roster of the club shows a membership of 20 in good standing. In writing about his club, Mr. Foss says: "The weather since we organized last October has permitted the holding of a few practice shoots, all of which have been well attended; considering that all our members are novices, good progress has been made. The club is looking forward to contests with the neighboring clubs whom they hope to meet during the coming season." Mr. Foss adds that his club solicits correspondence from clubs in that vicinity with a view to team races as above.

The new target grounds of the New Utrecht Gun Club are located at Eighty-sixth street and Thirteenth avenue, Brooklyn, N. Y. Secretary Pool has issued the following circular telling how to reach the grounds: "The Second avenue and Bensonhurst cars will take you direct to the grounds. Third avenue, Hamilton avenue and Court street cars, also Brooklyn Elevated connect with Second avenue line at Sixty-fifth street and Third avenue. Members from New York will find the Thirty-ninth Street Ferry a convenience. Boats leave the Battery, New York, every half hour and connect with Second avenue cars at Thirty-ninth street, Brooklyn. Time from New York to grounds 45 minutes."

The programme for the Grand American Handicap is out, and we give elsewhere a very full synopsis of its contents. It is very seldom that so much space can be devoted to the notice of a programme; but this is something exceptional, as the Grand American Handicap week of 1896 will bring together a larger number of live-bird shots than were ever before gathered in front of the traps in this country. East, West, North and South, every part of this great country will be represented at Elkwood Park on March 25, when the opening gun in the Grand American Handicap is fired.

J. Emmett Haney, secretary-treasurer of the Texas State Sportsmen's Association, and manager of the association's tournament, April 20-24, at Houston, Texas, is making every effort to have that shoot a success. A special feature of the shoot will be the programme on the fourth day of the tournament, April 23, which day will be known as "Manufacturers', Jobbers' and Dealers' Day." On that date the races will all be for merchandise prizes donated to the association by the above named "Manufacturers, etc."; the entrance fee in all these events will be the price of the targets.

The Ohio State League has decided to change its dates from the second week in May to June 9, 10 and 11. The change was made at a special meeting held at Dayton, O., on Feb. 7. This change does away with the clashing of dates for the above tournament and the big shoot at Memphis scheduled for the second week in May. The only tournament scheduled for the dates chosen in June is the New York State tournament at Buffalo, N. Y., with which the Ohio shoot cannot possibly conflict very seriously.

The death of Mr. John Neff, of Austin, Tex., which occurred quite recently, was a sad shock to his many friends. Death resulted from bullet wounds, the theory being advanced that a revolver which he was cleaning had gone off in his hands. Mr. Neff was very

Trap Around Buffalo.

NORRIS VERSUS D. F. SMITH.

BUFFALO, N. Y., Feb. 5.—B. F. Smith, of Audubon Park, and Norris, of this city, shot a couple of 100 target races to-day and broke even, each winning one. They then shot at 25 more targets to see who was to blame and Smith proved that it was Norris by breaking 19 to 16. Each race for \$3 a side, loser to pay for the targets. Norris made a good run in the last half of the first race, scoring 25 straight in the third series of 25 and 24 out of the last 25, making 49 out of the last 50. Full scores were as below:

Norris.....	1011111110111110110110001111111111001011011—38	
B F Smith.....	11111111111111111111111111111111111111—49—87

AT EAST AURORA.

Feb. 6.—Quite a large delegation intended to go to East Aurora, N. Y., this morning, but when the time for our train, 8:30, came, it was pouring down with rain, so all turned back but myself. I had a capital time—everybody does at Frank Kelsey's—and made some new friends, among them Mr. Pope, from Olean, N. Y. The scores made to-day were:

Events:	1 2 3 4 5 6	Events:	1 2 3 4 5 6
Targets:	10 15 25 25 25 25	Targets:	10 15 25 25 25 25
Pope.....	7 15 12 18 16 17	Olmstead.....	8 12 18 17
Foot.....	6 10 15 15 19 20	Andrews.....	6 13 23 20 18 23
B F Smith.....	7 12 22 22 18 19	Kelsey.....	8 15 23 22 23 18
Kenny.....	6 10 17 16 17	Pollock.....	15 18 22

Team race, 25 targets per man, losing team to pay for targets and refreshments. Score: Andrews's team: Andrews 23, B. F. Smith 21, Olmstead 20, Pollock 19—total 83. Kenny's team: Kelsey 23, Pope 20, Kenny 18, Foot 18—total 79.

AT AUDUBON PARK.

Feb. 7.—The Porter-Sorgel match, set for this day, did not come off, Porter being at home sick. Hankins and B. F. Smith shot at 15 live birds, Smith winning by killing his 15 to Hankins's 13. The scores were good ones, as a strong wind was blowing. This wind made the targets hard to hit when it came to shooting at them instead of live birds. There is a possibility of a long race being arranged between Smith and Hankins in the near future. The scores in to-day's events were as below:

No. 1.		No. 2.
B F Smith.....	222212232222-15	11011-4
R Hankins.....	1121102-111212-13	10101-3
A Combs.....		01001-2
P Smith.....		10011-3
O Besser.....		11101-4
No. 3.		

No. 2 was a 5-bird event, Bogardus rules, 15yds. rise, use of one barrel only, lost bird if killed within 10yds. of the trap.

Events:	1 2 3 4 5 6	Events:	1 2 3 4 5 6

THE AUDUBON'S WEEKLY SHOOT.

Feb. 8.—Twenty-three members of the Audubon Gun Club put in an appearance at Audubon Park this afternoon with the intention of taking part in the regular weekly shoot of the club. C. S. Burkhardt, Forrester and A. Reinold carried off the honors in to-day's events. The boys are practicing hard with a view to giving the Rochester, N. Y., shooters a still harder rub than they gave them when they visited Audubon Park and carried home some Buffalo scalps. The ground to-day was covered with snow to the depth of 4 or 5 in., but the air was mild; taken altogether the conditions were not unfavorable ones for target-shooting. Scores:

Events:	1 2 3 4 5	Events:	1 2 3 4 5

Boston Gun Club.

Boston, Feb. 12.—The Boston Gun Club held another successful shoot this afternoon, about a dozen members appearing at the score in the sixth prize contest at Wellington. The afternoon was decidedly breezy and no one complained of lack of air. The dippers and swishers, according to which way the wind veered, served only to make it interesting, particularly when up for pairs. Mr. Spencer put in a splendid 18, closely seconded by Mr. Sawyer with 17. Scores tabulated below:

Events:	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18
Targets:	10 10 10 5 6 10 10 5 6 10 5 6 10 10 10 10 10 10
Chester (14).....	4 7 4 2 3 7 6 4 3 5 2 5 6 4 4 4 4 2
Sewall (16).....	6 4 6 3 4 7 1 4 6 3 5 6 6 4 5 4 4
Miskay (17).....	10 7 3 2 9 8 4 1 4 6 3 2 9 5 4 9 7
Bartlett (14).....	3 7 3 1 3 6 4 1 6 4 2 1 4 4
Horace (16).....	7 2 3 4 5 6 3 4 4 5 6 4 4 7 6 4
Parker (17).....	9 6 1 5 4 4 2 7 6 4 7
Sawyer (15).....	9 8 5 3 9 4 4 3 5 5 8
Sheffield (15).....	8 1 3 5 4 3 5 6 7 8 9 4
Spencer (17).....	9 4 4 10 4 4 6 7 5 10 8 6
Jack (16).....	7 2 4 7 2 5 4 3 3 4
Kirkwood (18).....	8 4 5 5 3 4 5 8 4

Events Nos. 3, 13, 14 and 17 were at reversed angles, No. 14 at 20yds.; events Nos. 4, 8 and 11 at unknown angles; Nos. 5, 9 and 12 at pairs, balance of programme being 10 birds, known angles; Nos. 15 and 18 at 25yds. distance. Nos. 10, 11 and 12 comprised match score, 21 targets—10 known, 5 unknown and 3 pairs—resulting as follows: Spencer 18, Sawyer 17, Sewall 14, Horace 13, Bartlett 12, Chester 12, Sheffield 12, Kirkwood 12, Miskay 11, Parker 10. Spencer scored two straight 10s, Miskay one.

Airy Lou Hart's Programme.

THE "general information circular" issued by Lou Erhardt, mention of which was made last week, contains a lot of information that will be of interest to those who purpose attending the shoot to be given by Airy Lou Hart on April 14-17. The title of the shoot is "Second Manufacturers' Amateur Tournament," and means strictly what it says, the amateurs being well looked after. The programme will be modeled somewhat as follows: 4 amateur events, 20 targets, \$1 entrance, 4 prizes as follows: 1st prize, manufacturer's donation, cash, or a gun ranging in price from \$20 to a hammerless ejector; 2d prize, \$15 in cash; 3d and 4th prizes are respectively \$10 and \$5 in cash. In addition to the above there are also 4 open events of 20 targets, \$2 entrance, \$25 added to each purse. One thousand dollars in cash prizes will be distributed during the tournament in addition to the purses.

In the circular Erhardt says: "This may be changed some, if sufficient shooters request it, before programme is issued. We may also add a championship event. Programme will be final. We would be pleased to have suggestions from those expecting to attend. We are going to give a square and fair shoot to suit the boys, not a few, but all. Last year's record (which you will find below) speaks for itself, and we say with pardonable pride, of the hundred gentlemanly shooters present not a one went away dissatisfied, but each and every one spoke in the highest terms of the tournament and promised to be here this year, and bring their friends. We hope so, boys, and let us make this the banner amateur tournament ever held on earth. All the cracker jacks will be here (but will shoot in open events only), so come and meet them, and listen to their argument why their guns and their nitro powders, etc., are the best."

The record in 1895 referred to above shows that in events 6, 7 and 8 there were 94 entries; the lowest entries in any events were recorded in Nos. 14, 16 and 17, 54 each. The average for the 17 events on the programme was 70, a very high average indeed as tournaments go. The 1896 tournament will be managed by Jack Parker, a guarantee that all will go smoothly.

The Season at Monte Carlo.

PRIX DES MARGUERITES.

JAN. 24.—The weather to-day was dull, but without wind; the sun did not show himself at all this afternoon, failing to be on hand for the first time this season. There were 49 entries in the Prix des Marguerites, but so good were the pigeons that 22 of that number fell down in the first round; the close of the 5th round found only 3 survivors out of the 49 starters, Mr. Dolan being among the number. The American killed 6 straight before retiring, M. Horodetzki (24 meters) ultimately winning with 9 straight; Gourgand and Maldura shot off the tie for second and third moneys, Gourgand winning on the 1st round. Scores:

Prix des Marguerites Handicap of £40, added to a sweepstakes of £2 each; second received 30 per cent. of the entries, third 20 per cent.; 49 subs.

Meters.	Meters.
24 M Horodetzki (1st, of £84).9	24 Mr Haunam.....4
25 M Gourgand.....4	24 M de Tavernost.....4
25 M O Maldura.....8	23½ M Albert.....4
27½ M d'O Vari.....7	30½ Mr Roberts.....3
23½ Mr Dolan.....6	30½ M Paul Gervais.....3
26½ M Duferron.....5	28 M Descharmays.....2
24 Signor C Grasselli.....5	26½ Baron de Monchoisy.....2
23½ M Paccardi.....5	24 Count Esterhazy.....2
26½ Signor Nocca.....4	24 Mr Mackintosh.....2
25 Signor Sani.....4	24 M Poutz.....2

Missed their second bird: Signor Calari (26 meters), Signor Riva and M. d'Hayes (25½), Prince Poniatowski (25), Mr. Sutcliffe, M. Thome and M. A. Poizat (24). Missed their first bird: M. Journu and Count Trauttmansdorff (29 meters), Signor Mainetto Ghido (28), Signor Asti Cesare (27½), M. de Jomisen (27), M. Lo (26½), M. Pinson (26), the Duke of Braganza, M. A. Ginet and Comte du Taillis (25½), Signor J. Grasselli, Mr. Robinson and Mr. Pearce (25), Mr. T. Brinckman, M. Pierre Sergueyeff, M. Lohienne, Signor Ratto, M. Brunel, M. de Voronka and Signor Pederzole (24), M. Lindes and Comte d'Elstoo (23½).

AN EXTRA DAY.

Jan. 25.—To-day was an extra day on the Monte Carlo programme, but there were not many shooters present, as the principal event had only £12 added. Mr. Robinson (24 meters) killed 10 straight and won first money; second and third moneys were divided between M. D'O. Vari (27½ meters) and M. Thome (24 meters).

PRIX DES VIOLETTES.

Jan. 28.—Mr. Dolan, the Philadelphian, shared first honors in to-day's event, the Prix des Violettes, with Signor Nocca. Both shooters killed 11 straight and then divided first and second moneys. Mr. Henry, an Irishman, took third money with 10 out of 11. There were 60 entries in the event; 21 missed the first bird, 19 more retiring in the second round. Signor Guidicini, a three-times winner of the Grand Prix, made his first appearance this season; his debut was decidedly creditable, as he killed 8 birds before he missed, being one out of the four left in at the end of the eighth round. The wind was blowing strongly, making the birds hard to get onto. Scores:

Meters.	Meters.
26½ Signor Nocca (divided first and second prizes of £132).....11	25½ M R Gourgand.....4
23½ Mr Dolan (ditto).....11	28 Count L Gayoli.....3

Moreaux, Count Esterhazy, M. de Pomian and Mr. Brinckman (24).	23½ M Albert.....2

Missed their first bird: Count Voss (28 meters), Signor Cesare (27½), M. Paul Gervais (26½), Signor Calari (26), Duke of Braganza and M. d'Hayes (25½), Signor Galetti, M. Thome, Signor Maldura and Signor Oliva (25), Signor Fiorini, M. Demonte, M. Hannan, M. de Tavernost, Signor Briscoe, M. A. Poizat and Mr. Halford (24), M. Paccard, M. Lindes, Signor G. Grasselli and Count d'Elstoo (23½).

PRIX DES LIS.

Jan. 29.—This was another of those glorious days that has so far characterized the Monte Carlo season of 1895-96. The wind of yesterday died away during the night, leaving the air still and calm. The attendance at the grounds was the largest this season, while the entry list for the Prix des Lis Handicap showed an increase over the other events decided to date. The total number of entries was 65, but so good were the birds that the close of the 6th round settled first and second moneys, Mr. H. J. Roberts (heavily handicapped at 30½ meters) and Signor Calari (26 meters) dividing £137 10s., first and second moneys. There were four ties for third money, Signor Galetti winning by killing his first two birds. Of the 65 shooters, 24 missed their first birds, 18 others (among them Mr. Dolan) dropping out in the 2d round. The scores:

Prix des Lis Handicap of £40, added to a sweepstakes of £2 each; second received 30 per cent. of the entries, third 20 per cent.; 65 subs.

Meters.	Meters.
30½ Mr Roberts (divided first and second, £137 10s.).....6	28 M Descharmays.....3
26 Signor Calari (ditto).....6	26½ M Paul Gervais.....3
26 Count L Gayoli.....5	26½ M Horodetzki.....3

24 Signor Briscoe.....5	26½ Signor Marconcini.....2
27½ Signor Nocca.....4	24 Mr Poutz.....2
26 Signor Farina.....4	24 Mr Mack.....2
25 Signor Sani.....4	24 Grand Duke Peter of Russia.....2
24 Count Esterhazy.....4	24 M Demonte.....2
29 Signor Guidicini.....3	24 M Gourgand.....2
29 Count Trauttmansdorff.....3	

Missed their second bird: M. Drevon (29½), Signor Oliva and Baron de Monchoisy (26½), Mr. Henry (26), Duke of Braganza, Mr. Robinson, M. d'Hayes, Comte du Taillis and M. A. Ginet (25½), Mr. Dolan (25), M. de Tavernost, M. A. Poizat, M. Pierre Sergueyeff, Signor Georgini, M. de Pomian, Mr. Holt and M. de Maubenge (24), and M. Brunel (24).

Missed their first bird: Signor Mainetto Ghido and M. d'O. Vari (25), Signor Asti Cesare (27½), Signor Zuffelli and Signor Gorra (27), M. Dupernay and M. Lo (26½), M. Thome, Signor J. Grasselli and Prince Poniatowski (25), Herr Himmelbauer, Mr. Hannan, Mr. Pearce, M. Verdaine, Mr. Erskine, Signor Pederzole, Mr. Mackie, M. Chouquet, M. Lohienne and Mr. Halford (24), M. Albert, Signor G. Grasselli, M. Paccard and M. Lindes (23½).

THE GRAND PRIX DE CASINO.

Feb. 6.—The Grand Prix began yesterday with 4 birds at 26 meters; there were 117 entries, 15 being absentees. This is the largest entry ever known at Monte Carlo. To-day saw 8 more birds shot at from the 27-meters mark, three misses out. The winner was M. Journu, who killed all his 12 birds. Count Gajoli and M. Lo divided second money; third money was divided between Signors Colombo, Oliva and Calari. The Grand Prix de Casino is a sweepstake of £8 added to 20,000 francs and an objet d'art.

Lynchburg Gun Club.

LYNCHBURG, Va., Feb. 11.—The regular weekly shoot of the club was held to-day. A fierce and icy cold wind raced across the grounds, making the shooting difficult and disagreeable. Many expressions of disgust, warm, loud and of sundry hues, were turned loose by the members at the erratic flight of the targets as they cavorted, gyrated, and then dodged the shot while being toyed with by the wind. The warmth of the discussion somewhat tempered the chilly atmosphere that persistently hung around the scorer's stand, affording some little comfort to the gentleman with the pencil. The scores:

Baltimore Shooting Association.

BALTIMORE, Md., Feb. 14.—The three-days' tournament given by the Baltimore Shooting Association, while not up to the expectations of the projectors in point of attendance, proved a very enjoyable shoot to those who were present, and served to add another laurel to the long list of victories of the veteran Capt. A. W. Money. The main event on Wednesday, Feb. 12, was the 25-bird race, handicap, \$25 entrance, for the Baltimore Shooting Association's challenge cup. With such well-known shooters at the 30yds. mark (as Brewer, Macalester and Fred. Hoey, and Capt. Money at 29yds.), the Baltimore boys felt that their chances of being in the divide were very small, and consequently did not enter. Money and Brewer tied on 24 and divided the purse, Capt. Money also taking the cup, Brewer not being eligible for the same. Capt. Money was immediately challenged for the cup by H. A. Penrose, race to be 100 birds, \$100 a side, and to take place within the next sixty or ninety days. The cup is a handsome loving cup, plain and simple in its ornamentation. The name of the winner is engraved on cup. If holder is challenged and cup won, name of second winner also is engraved thereon. From the shooting character of the membership of this Association, the outlook is that the cup will be kept continually on the move. After the cup shoot balance of day was devoted to sweep and miss-and-out shooting.

On Thursday, Feb. 13, the rain descended in torrents and put a quietus on shooting for that day, although all preparations were made for a good day's sport, heedless of the rain, but the shooters failed to materialize.

To-day was bright and beautiful, but cold and with about a 40-mile-an-hour zephyr blowing across the traps. The day was devoted to sweepstake shooting.

The scores made on Wednesday are given below, the results of some of the events being tabulated on account of pressure on our columns:

Events:	1 2 3 4	Events:	1 2 3 4

The Knoxville Gun Club's Certificate Contest.

KNOXVILLE, Tenn., Feb. 8.—The most elusive problem to be solved by both managers and shooters is the equitable (?) adjustment of the "shooting skill" which one individual possesses with that of one who has no such talent. The complex organization of man is such that no two individuals can ever hope to be perfect, and can only approximately approach that perfection by different gradations of either mental or physical development. The experience of life distinctly shows and absolutely sets apart the skill of one mechanic, one physician, one merchant, one lawyer, one shooter above the other—all due to the individual capacity for development by energy of purpose.

How does one lawyer excel another? If the successful attorney was asked to elucidate this proposition he would answer to this effect: It is accomplished only by hard study, persistent application and deep thought, combined with a tireless energy of purpose to succeed. The question arises, How can "the bar" handicap this man against the less informed and learned (?) brother on the other side of the question at trial? To raise him up to the same plane where success reaps its first reward?

The manufacturer muses to himself, "Come, devise a plan to equalize the weaker brother, or at least some plan to encourage him to attend the tournaments as well as the home club contests." Of course, his idea is for the shooter's pleasure and not his profit. On the other hand, the shooters say: "Let us get a show with the expert and we will attend the home and foreign meetings." Now, the main idea is, that if the club cannot induce a member of good or indifferent shooting capacity to attend club contests and only pay 1 cent for targets and no "contributions," how can you expect him to attend foreign meetings to donate his mite (?) with the hope of getting even, or of a future return?

Let us first encourage the home club contests; awaken an interest at home among the club members; stir up their dormant shooting instincts by an attractive club contest; offer cash inducements to get them out, and when out just "drag a leetle" on how they "knock the black out 'em," and my word for it the clubs of the country will be thick and the manufacturers will "smole a smile of sweet content," as those not paid are burning powder (and money).

Working on this line, that home rule governs to the best advantage for proper training, the Knoxville Gun Club has finally concluded, after two years of trial, that no plan yet devised for home club contests equals that as now modified and in use this year known as "the certificate handicap."

For the benefit of those whose inquiries are now to hand, also for the benefit of the cause at large, I will try and give briefly the details of this contest. It is very easy to understand and if properly carried out will prove of inestimable advantage to dormant clubs and of interest and excitement to the live organizations.

Conditions: 20 targets, 18yds. rise, known traps, unknown angles, rapid fire. The contest to be at the first 40 targets shot at by any member in two different races of 20 each race. Premiums attach to each.

Basis: The general average of the first 40 targets in all races shot at during the preceding year by the members of the club is taken and set apart as their per cent. basis.

A, general average found, 60%=12 out of 20.
B, general average found, 65%=14 out of 20.
C, general average found, 72%=15 out of 20.
D, general average found, 80%=16 out of 20.
E, general average found, 88%=17 out of 20.

A is placed in class that he must break 12 out of 20.
B is placed in class that he must break 14 out of 20.
C is placed in class that he must break 15 out of 20.

Now if A equals his per cent., 12 out of 20, and B equals his, 14 out of 20, the club pays or credits A and B with 10 cents or one-half his target money, charging at the club rate, 1 cent each target. If they exceed their per cent. basis, as an extra premium, the club offers a "certificate of merit" of the value of 25 cents. Hence each individual shoots against his own per cent. for a premium and not against all the club members for a single or more premiums. This per cent. basis either remains for the year or else is subject to an advancement with the skill of the shooter by a special committee of three, known as the "club contest arbitrators," who decide all disputed points that may arise. The target money credit is paid to the members at the end of the year. The "certificate of merit" is, however, open to a challenge by any other certificate owner, and right of challenge for the next meeting shall be commencing with the lowest score and up in order.

To determine who wins a challenge certificate, the process is as follows: A challenges D for his certificate; before either can win they must equal or exceed their per cent. basis—A=12 and D=16. If both fail they tie. If A makes his per cent., 12 out of 20, and D fails to make his 16 out of 20, then A wins. If they both exceed their per cent. they tie, that is, if A=13 and D=17, or A=14 and D=18 A wins if A=13 and D=16, because A exceeds his per cent. and D equals his per cent., and so in other cases. This gives the better shot a harder contest as his per cent. increases in proportion, but at the same time it does not handicap him out of the race and it likewise encourages the weaker shot.

The challenger must deposit with secretary a 25-cent fee, this to form a separate fund, to be divided 40, 30, 20, 10, to the four men holding the greatest number of certificates at the end of the year. No one can give or accept more than three challenges for any one meeting, and the failure of either party to be on hand on the agreed date (next meeting) forfeits his certificate to the party present; also the failure to attend by any member forfeits his rights for that club meeting.

These are the essential features that govern, and of course each club can improve any minor defects as they may arise to suit each club. To those who have never tried this plan I would say; commence now at the first of the year, and you will find that more enthusiasm will arise over challenge contests among the members than you can imagine. No one likes to be beaten, and nothing will enthrone new life in a dormant member more than the generous, gentlemanly rivalry that arises in a club certificate challenge contest and the earnest desire to retrieve lost laurels from the vic or.

R. VAN GILDER, Sec'y.

The Grand American Handicap.

The programme issued by the Interstate Association for its Grand American Handicap meeting, to be held at Elkwood Park, March 24-26, is to hand. In drawing up the programme the Association has exercised great care, and has, we think, fully explained every point that seemed to be in need of explanation. For that reason we give the programme and its contents as nearly as possible in its own language. The

INTRODUCTORY REMARKS

deal with Elkwood Park, its location, and also with that important branch of the programme—the handicapping committee. It reads as follows:

"In presenting this programme of the fourth annual Grand American Handicap tournament to the general shooting public of America, we feel confident that the coming event will meet with the same hearty approval as have our previous tournaments. Elkwood Park, the place selected for holding the tournament, should meet with the general indorsement of all intending shooters. It is easy of access from New York by two different lines of steam railway. The time necessary to reach the grounds, one hour and a half without a change, with trains stopped at entrance to park, is nothing compared to the convenience when one gets there. Contestants who may not desire to return to New York at close of each day's shooting can secure ample and excellent accommodations at the Norwood Hotel, Branchport, about a half mile from the park, or at Long Branch, about one mile away, with plenty of conveyances at hand to carry them to and from the shooting grounds.

"It will be noted by the reader that the Interstate Association has made a radical departure as to the method of dividing the money in the main event. The plan as decided upon, and as explained at length elsewhere in this programme, will permit of the participation of a greater number of shooters in the division of the purse. This new system has been given the careful and thoughtful consideration of the Association, and we feel confident it will meet with the hearty approbation of competing sportsmen.

"The Handicap committee—Messrs. John S. Hoey, Jacob Pentz, of *Shooting and Fishing*; Edward Banks, of *Forest and Stream*; J. M. Taylor, of the *American Field*; and W. K. Park, of the *Sporting Life*—selected by the Association to handicap all contestants, are thoroughly posted as to the respective merits and in touch with the shooters of America. It is entirely unnecessary to add a word in commendation of the ability and fitness of the gentlemen named, they being well and favorably known wherever the sport of live-bird shooting is indulged in.

"The handicap of 1896 will be conducted on the same equitable lines as have characterized our previous tournaments. Each shooter taking part will be the recipient of every attention and just consideration consistent with the fairness that has always been a feature of the Interstate Association's events. May the best men win."

The next and probably one of the most interesting portions of the programme are the

CONDITIONS GOVERNING THE HANDICAP.

The conditions are:

"Twenty-five live birds, handicaps ranging from 25 to 33yds., 50yds. boundary, with a dead line at the 33yds. mark, \$1,000 divided, 50, 30 and 20 per cent., to the three highest guns. All money in the purse in excess of \$1,000 will be divided among high guns other than the three first. The number of parts into which the surplus money will be divided will be determined by the number of entries received.

Entrance money \$95, \$1,000 guaranteed by the Interstate Association, and all surplus added. In addition to first money the winner of same will be presented with a beautiful silver cup donated by Messrs. Phil Daly, Sr., and Phil Daly, Jr.

"Regular entries must be made on or before March 21, and must be accompanied by \$10 forfeit. The remaining \$15 may be paid up to the last shot of the second round. Penalty entries may be made after March 21 up to the last shot of the second round by paying \$35. Entries will be received at the New York office by J. A. H. Dressel, Secretary-Treasurer, 313 Broadway, New York, N. Y."

FIRST DAY'S PROGRAMME.

The programme for the first day consists of four scheduled events which will be shot off on two sets of traps; a third set of traps will be kept busy all day with \$3 miss-and-outs. The four events above mentioned, together with the conditions governing the same, are as follows:

Elkwood Park Introductory, 10 birds, \$10 entrance, class shooting, 30yds. rise, 4 moneys, 40, 30, 20 and 10 per cent.; price of birds deducted from the purse.

Branchport Sweepstakes, 7 birds, \$5 entrance, birds extra, not class shooting, 30yds. rise, 3 moneys, 50, 30 and 20 per cent.

Nitro Powder Handicap, 15 birds, \$15 entrance, class shooting, handicaps 25 to 33yds., 4 moneys, 40, 30, 20 and 10 per cent.; price of birds deducted from the purse.

Sportsmen's Handicap, 7 birds, \$5 entrance, birds extra, not class shooting, handicaps 25 to 33yds., 3 moneys, 50, 30 and 20 per cent.

GRAND AMERICAN HANDICAP DAY.

The second day, March 25, is the day on which the big event, the Grand American Handicap, heads the programme. This event commences at 10 A. M. sharp, and will be continued on the third day if necessary. John Hoey and Jacob Pentz will alternate as referee in this event. The Grand American Handicap is *high guns*; the conditions have been given above.

Two other events are also down on the programme for this day. These are:

Long Branch Sweepstakes, 10 birds, \$10 entrance, class shooting, 30yds. rise, 4 moneys, 40, 30, 20 and 10 per cent.; price of birds deducted from the purse.

Highland Sweepstakes, 7 birds, \$5 entrance, birds extra, not class shooting, 30yds. rise, 3 moneys, 50, 30 and 20 per cent.

THIRD DAY'S PROGRAMME.

As stated above, provision is made in this day's programme in case the Grand American Handicap has to be carried over—a contingency that is almost certain to arise, as there can be no doubt that this year's entries will exceed those of '95. In addition to the above there are 4 other events scheduled for this day:

Norwood Scramble, 10 birds, \$10 entrance, class shooting, 30yds. rise, 4 moneys, 40, 30, 20 and 10 per cent.; price of birds deducted from the purse.

Champion Sweepstakes, 7 birds, \$5 entrance, birds extra, not class shooting, 30yds. rise, 3 moneys, 50, 30 and 20 per cent.

Consolation Handicap, 10 birds, \$10 entrance, class shooting, handicaps 25 to 33yds., 4 moneys, 40, 30, 20 and 10 per cent.; price of birds deducted from the purse.

Auld Lang Syne Handicap, 7 birds, \$5 entrance, birds extra, not class shooting, handicaps 25 to 33yds., 3 moneys, 50, 30 and 20 per cent.

Extra events will be arranged to suit the shooters if the above programme is shot out in time to permit of such events being decided.

The division of moneys in the Grand American Handicap was fully explained in our issue of Feb. 1. As a supplementary explanation we may state that the three high guns will under any conditions regarding number of entries receive respectively \$500, \$300 and \$200. If there are over 40 entries, but not more than 50, the next three highest guns divide the surplus, 50, 30 and 20. If the entries range from 51 to 60 there are practically 8 moneys; 61 to 70, 10 moneys; 71 to 100, 14 moneys. It must be borne in mind that this is not class shooting, but high guns, the three highest guns being paid as above.

Dropping for place in any event will result in forfeiture of all interest in the purse, and will debar the "dropper" from taking part in any tournament given under the auspices of the Interstate Association.

Shooting commences at 10 A. M. sharp each day. The Interstate Association Rules (Hurlingham Rules revised) will govern all points not otherwise provided for in the programme. No guns larger than 12-gauge allowed, the weight of all guns being limited to 5lbs. No handicaps will be announced until the evening of March 23.

A few brief pointers are given in regard to the shooting of the Grand American Handicap. The event will be shot off on one set of traps, and if it is impossible to finish the event in good light on March 25, the referees shall stop the shooting whenever they may deem it necessary; the event will then be re-commenced at 11 A. M. sharp on March 26. No entry will be taken and no shooting up allowed after the end of the second round. Three misses will force a shooter out; of course, he has the privilege of shooting up if he has a chance for any money. The Association reserves the right to refuse any entry. The absolute winner—the high gun in the handicap—will receive a handsome silver cup from Messrs. Daly, of Elkwood Park. Birds will be supplied by Worden Bros., of Harrisburg, Pa., and will be trapped throughout the shoot at 30 cents each.

Admission to the park will be 50 cents per day and will be charged to all alike. Shooters will have the same refunded upon entering in any sweepstake event, while contestants in the Grand American Handicap will receive a pass entitling them to enter free during the week. The accommodations for both shooters and spectators will be first class, while meals and refreshments can be obtained right on the grounds.

The headquarters for sportsmen who desire to stop in New York will be the Astor House. Those who prefer to stay near the grounds will find ample accommodation at the Norwood Hotel, E. C. Richardson, proprietor, Branchport, N. J. Rates to shooters will be \$2 per day.

TO REACH ELKWOOD PARK.

The following extract from the programme tells how to get to Elkwood Park: "Take the Central Railroad of New Jersey from foot of Liberty Street, New York city, to Branchport, N. J.; or take the Pennsylvania Railroad from foot of Cortlandt and Desbrosses streets, New York city, to Long Branch, N. J. Arrangements have been made whereby the 8:15 A. M. train from New York via the Central Railroad of New Jersey, and the 9:10 A. M. train via the Pennsylvania Railroad will stop, each of the three days of the tournament, right at Elkwood Park gates. Passengers from New York on the 8:15 A. M. train will reach the shooting grounds at 9:45 A. M. Passengers on the 9:10 A. M. train will reach the shooting grounds at 10:45 A. M. Returning, trains will stop at Elkwood Park at 4:20 P. M. and 5:50 P. M., reaching New York in one hour and a half. Passengers should purchase round-trip tickets, as they are good on either railway."

The De Lancy School on Top.

WISSINOMING, Pa., Feb. 12.—After a most exciting race the De Lancy School Gun Club's team of six defeated the Red Dragon Gun Club's six-men team by two breaks, the score standing 86 to 84 in De Lancy's favor. The match was shot at Wissinoming to-day. This is the first team match the De Lancy Club has ever taken part in, and this in some measure accounts for the falling off in some of the totals. Peters, of the Red Dragon, made a clean score of 25 breaks, very nearly winning the race for his side. The scores were:

A. E. RICKMAN, Sec'y.

At Watson's Park.

CHICAGO, Ill., Feb. 5.—Dr. Shaw and Mr. Thompson shot at a few live birds to-day at Watson's Park for practice. Dr. Shaw shot at 40 and scored 32, while Thompson scored 14 out of 18. Below are the scores:

Dr. Shaw.....120111221111122001111010—20
Thompson.....12011112011110—12—32
Thompson.....12011112011110—14

The above shooters also had a little practice at targets, each man shooting at 50; Shaw broke 46 to Thompson's 43.

Feb. 7.—O. H. Hampton shot at 50 live birds to-day for the sake of having a little practice; out of his 50 he scored 37, as follows:

Hampton.....11111100211111111221102—22
2111010010221022020210010—15—37

Feb. 8.—C. E. Felton and Oswald von Lengerke shot a match to-day with W. R. Morgan and E. Abel. The conditions were 25 live birds per man, losing team to pay for all the birds and a wine supper. As a result of the match Felton and Von Lengerke enjoyed some shooting and will take supper at the expense of Messrs. Morgan and Abel. The scores were:

Felton.....1111001211122212212021111—22
Von Lengerke.....2202202122122110121222202—21—43

Answers to Correspondents.

No notice taken of anonymous communications.

C. O. D., Utica, N. Y.—Lizzie of Marsfield is registered in Vol. XIX., E., No. 31,208.

H. J. W., New York.—Ans. The color of the Gordon setter is black and tan. A pure tan unmixed with black or smudgy is the ideal color. The tan is on lips, cheeks, throat, spot over eyes, feet, legs, vent and a short distance on flag. A touch of white on chest is not objected to, though as little white as possible is desired.

J. B. F., Elizabeth City, N. C.—1. At what age does a well-bred pointer or setter become unable to hunt all day? 2. At what age are they at their best? What age do you consider the turning point? My experience is that between the years of 2 and 6 is the only time a dog is worth having as a hunter. 3. Why is it that our native Virginia or North Carolina dogs are the best hunters? I have bought in the last few years several dogs finely bred, and I have not yet had one worth having. Ans. 1. The individual capabilities of dogs vary so much and decrepitude or indifference to hunting set in at such variable ages that to set a definite age would be to dispose of the matter arbitrarily. Some dogs never lose their enthusiasm and work till physical infirmities cripple them; others cease to work as soon as the novelty is gone. Many dogs are never able to work all day. 2. Generally from two to five or six years, though some dogs retain their usefulness much longer. The turning point in a dog's usefulness cannot be definitely set, for the reasons mentioned in our first answer. 3. You may find many owners who will join issue on your estimates. It is possible that your experience may have been with individual specimens, too few for general conclusions. The capabilities of a few are not the standard by which to classify the whole. This is a matter which is of general interest, and we invite correspondence in the matter. If the local dogs are the better and more enduring workers, it is not generally known.

PUBLISHERS' DEPARTMENT.

Old Point Comfort (Fortress Monroe), Va.

PERSONALLY CONDUCTED TOUR VIA PENNSYLVANIA RAILROAD.

OLD Point Comfort is the fashionable coast resort of the Old Dominion, celebrated not only for its natural advantages of climate and location, but for the social life which attracts so many eminent representatives of all classes. Admirably located on Chesapeake Bay and Hampton Roads, within sight and influence of the broad Atlantic, and in a latitude insuring evenness of temperature, it enjoys the advantage of being a winter resort of undisputed merit.

The next of the Pennsylvania Railroad Co.'s series of personally conducted tours to this delightful resort will leave New York and Philadelphia Feb. 20.

The tour includes Richmond and Washington, and covers a period of six days. Excursion tickets, including railroad fare, hotel accommodations and all necessary expenses, will be sold at \$32 from New York, Brooklyn and Newark; \$31 from Trenton, and \$30 from Philadelphia.

In addition to the above excursion tickets to Old Point Comfort and return direct, covering luncheon going and one and three-quarter days' board at Old Point Comfort, valid for return by regular trains until following Tuesday, will be sold at \$15 from New York, Brooklyn and Newark; \$13.50 from Trenton, and \$12.50 from Philadelphia. Proportionate rates will be made from other points via either route.

Detailed itineraries will be sent on application to Tourist Agent, 1196 Broadway, New York, or Room 411 Broad Street Station, Philadelphia.

Where to Find Game.

WHERE to find game is oftentimes a perplexing question. The sportsman who strikes a good spot generally keeps the information as close as possible, in order to enjoy the exclusive privileges.

Along the line of the Baltimore & Ohio Railroad in Virginia and West Virginia, such places are numerous, and it is remarkable how little they are known. The mountain streams abound in gamy fish. The South Branch of the Potomac is considered the best bass fishing stream in America; the Cheat, Youghiogheny, Potomac and Monongahela rivers are all excellent fishing streams. The hills and valleys adjacent are fairly alive with game—partridge, wild turkey, grouse, pheasant, wild pigeon, quail, rabbit and squirrel are plentiful, and in the back country thirty or forty miles from the railroad, deer and bear can be found.

Good hotels are convenient, and horses and guides can be secured at reasonable rates.

For circular showing fishing and gunning resorts reached by the B. & O. R. R. address Chas. O. Scull, Gen'l Pass. Agent, B. & O. R. R., Baltimore, Md.

Practical Wildfowling.

By Henry Sharp. L. Upcott Gill, Strand, London, publisher. Price \$3.50. This is a well written and generously illustrated book of 300 pages. The author is a practical wildfowler of twenty years' experience, who knows his subject thoroughly, and who has been able to put his knowledge to practical account in a very readable way. To facilitate ready reference the matter is presented in two parts. Part I. is devoted to outfit and accessories—guns, ammunition, punts, boats, decoys, dress, etc.—and Part II. to a description of the various species of ducks, geese and shore birds found in the British Isles, together with practical hints and instructions for their pursuit.

The book is written for English shooters, but there is much in it that will prove of interest to sportsmen in this country, and not a little that will prove instructive also.

SETTLEMENT, SAVAGERY, SELF.

THE American sportsman who grumbles over the rapid decrease of game must put himself in an attitude of hostility to the material advancement of the country. It is an elementary proposition that the larger the number of people which a given tract will support, the smaller the number of wild creatures to be found in it. Civilized communities afford poor shooting; where the settlements are sparse there is more game; in the land of the savage game is abundant. When the buffalo roamed the plains in unnumbered thousands, the few men who traveled there always had food at hand; now people are plenty there and cattle feed where the buffalo thundered. Acres that once produced a robe now produce a fat steer or two. Is it better or is it worse?

Sport is recreation, the light side of life, rest, pleasure; the seasoning which adds zest to the average man's round of toil, and which helps him to get through with it more effectively than if his life were all work. That human nature needs this rest and recreation has been recognized since the beginning of time, for did not the Creator rest upon the Seventh day, and have we not all been exhorted from childhood to do likewise? The importance of this rest and recreation is the gospel which FOREST AND STREAM preaches, and to which, happily, it has made many converts.

But what does the American sportsman want? He growls faithfully about the destruction of game and its consequent scarcity, but would he like to see the plains depopulated, the cattle replaced by the buffalo and the cowpuncher by the Indian? Or take it nearer home: would the dweller in the city like to have the farmer and his boy, the mill operator in the small manufacturing town, the telegraph operative at the little railroad station, all deprived of their shotguns so that there may be birds enough for him and for his friends to shoot?

We growl and growl. Game is getting scarcer; game laws are broken; the cold storage warehouse is at the bottom of the failing game supply. But who is there among us who, if he has the luck to find good shooting for a day, stays his hand while there are birds? If he starts a good brood of quail and they scatter in the long grass, he kills as many as he can there, congratulating himself the while that this is like old times again; then the few that are left he follows into the swamp or the woods and tries to kill them there. Or if he goes ducking and by some remarkable combination does have birds come nicely to him, does he stop shooting so long as his ammunition holds out? Does he not rather kill all he can and try to equal some famous score made in earlier days.

And all the time the game is growing scarcer.

SNAP SHOTS.

THE FOREST AND STREAM will very shortly remove to new and handsome offices in the New York Life Building, No. 346 Broadway, corner of Leonard street. This is two blocks north of the present location. The offices will be on the eighth floor, reached by the elevator at the Leonard street entrance.

A very large proportion of the contributions printed in our columns is of letters which have no signature or which are signed with pseudonyms. Many men now write for the FOREST AND STREAM under a *nom de plume* who for various reasons would not contribute under their own name. As a rule, these communications lose none of their value in being unsigned with a real name. Many of our old-time contributors are quite as well known by their pseudonyms as they could have hoped to have been by their real name, and their communications have just as much interest, vivacity and weight as they would have if signed by the real name of the writer.

The prospects are that the forthcoming Sportsmen's Exposition next month will exceed in interest the one of last year. The spaces have nearly all been taken and the displays will be elaborate, varied and instructive. The FOREST AND STREAM is making preparations to do its share of the week's entertainment.

The Adirondacks Guides' Association is a body which is capable of very efficient service for game protection and

the promotion of high principles among its members. The guides are powerful for the enforcement of the game laws. If they care to take into their hands the duty of seeing that visiting sportsmen scrupulously obey the laws, they can have absolute control of the situation. We believe that there is a constantly growing sentiment among the guides of the Adirondacks in support of the game laws. There is a better understanding now than ever before that the interests of the guide are protected and made permanent by a provident use of the game supply. This holds not only in the Adirondacks, but in Maine and elsewhere. Commissioner Henry O. Stanley, of Maine, is our authority for saying that there is a growing sentiment in support of protection among the guides and residents of his State. They are coming to recognize more clearly than ever the value of the fish and game as a source of wealth to the State and of income to themselves, and although the number of sportsmen is constantly increasing the violations of the law are coming to be looked upon with less indulgence by the guides than ever before.

In almost all sections readily accessible to the hunter, the big game of the West was swept out of existence in a few years' time. And it was not until it had ceased to exist that people realized that it was gone. Up to the very last years of the existence of the buffalo, the cry was that it could never be exterminated, which of course meant that those then living would never see its end, and to-day we still hear residents of the West marvel at the suddenness of the animal's disappearance. One day they were abundant and the next there were none. In 1883 the Red River half-breeds, Crees and Blackfeet brought into Carroll, Mont., 50,000 robes, the year following they brought none.

While the speedy destruction of buffalo and elk was caused largely by greed, it was also due in a measure to men's thoughtlessness, coupled with the desire which seems inherent in many civilized minds to "kill something." Buffalo were run for fun; men tried their rifles on elk, antelope and deer and made no use of the slain. So long as the animals were very abundant the effect of killing was scarcely noticeable, but as they became fewer in any locality the destruction began to count. The effect was cumulative. Hunting parties from the East and from Europe as well as local hunters were alike responsible for work of this kind, and the grand total must have been very great.

Within the past few years, since game has become scarce in the West and since the taking out of hunting parties has become a recognized vocation in the West, there has arisen a decided change in the sentiment of the better class of residents in regions where there is still some game left. This change is due in many localities to the influence of good and true sportsmen, either from the East or the West, who have visited the game country, killed in moderation, preached to their companions and guides the doctrines of legitimate sport, and shown them how and why it is for the interest of everyone that the animals that are still left alive should be protected. The influence of such missionary work has been felt in many sections of the West and it has resulted in much good. Men who take out parties recognizing that wholesale destruction means the end of their business now discourage needless killing by both local hunters and by men from a distance who employ them as guides. Of course there are still many individuals who hunt for hides, and slaughter—so far as they can—with the same recklessness that they displayed in the old days of game plenty, but on the other hand there is a good leaven of the game protective spirit among residents of the farther West and this leaven is working all the time.

It is evident, however, that no material increase in the numbers of our game can take place in regions where new settlements are being made and which are constantly being hunted. Absolute protection over considerable areas is required for such increase, but given such protection, the multiplication of the animals will be rapid. We have had one such particular locality—the Yellowstone Park—for many years, and there are others—the recently established forest reservations which should become similar refuges and resorts of our great game, and which will be such if Congress shall ever give the legislation necessary to that end.

The farmers of Sussex county, N. J., are entertaining

themselves by holding public meetings to agitate for the repeal of the fish and game laws. In the good old days of the fathers, they reason, before such things as a closed time and restricted methods were known, game and fish were found in great supply. There was enough for all, and no one need bother himself about the law. If we could only get rid of the statutes, reason these sapient agitators, the good times would come again: there would be enough for everybody; wildfowl would darken the sky, quail would whistle from every field, the streams would be choked with fish, and the Sussex farmers would fare as sumptuously as did the Israelites when they were fed on quail in the wilderness. Outside of Sussex county this may not commend itself as strictly logical; irreverent critics may even suggest that the Sussex farmers have gone clean daft.

Writing to Mr. J. B. Burnham in comment on his game photographs made in Maine last summer, a Boston correspondent recalls having hunted over the same territory in 1875, when, he says, there were not a dozen deer to a township; and now they are there in thousands. The increase he rightly calls phenomenal. We are so accustomed to dwell upon the darker side of the picture that we give less than due note to the many instances of a replenished and restored game supply. The wilderness of Maine is perhaps the most striking example of such an improved condition, where, owing to various causes, natural and artificial, a country once practically barren of game now yields its deer annually by the thousands.

And speaking of replenished game supplies we must not forget the opossum on Long Island. Whether or not the creature was indigenous there is a mooted point, the probabilities appearing to be that it was introduced. There are several claimants for the credit of having added the opossum to the game store of that country; and some of the claims run back to the year 1850; but it was not until the later 80s that the number of opossums had become so great as to attract attention. As is well known, the opossum preys upon poultry, game birds, hares and other animal life; and the opossums of Long Island have become so numerous in some sections as to be a decided nuisance in this respect. We have before now printed complaints from correspondents who have been plagued beyond endurance by ravages of the nocturnal prowlers. In some towns bounties are offered on the vermin and the authorities pay at the rate of 25 cents for each pair of opossums' ears brought in. It is a curious fact that rewards for vermin in nine cases out of ten stimulate trickery and dishonesty, and it is not surprising, therefore, to hear that the youthful genius of Long Island, with wits sharpened by the opossum bounty, has discovered in the skin of the domestic cat a prolific source of revenue. The papers recorded last week that a youngster of East Patchogue had been assessed a fine of \$10 by a justice of the peace for having collected bounty on cat skins cut into small pieces trimmed to resemble opossums' ears. Why is it that people who in other affairs of life are conscientious and honest will resort to such tricks and devices when the authorities may be bamboozled by false evidences of the destruction of vermin? It is a problem whose solution we must leave for those who can tell us why it is that a conscientious and high-minded woman thinks she is doing a cute thing and one highly commendable if she can cheat a customs officer.

Capercaillie and black game have attracted so much attention in this country that one may confidently foretell their introduction as game birds, although there may be many more failures before success shall be attained. Undismayed by the miserable outcome of a previous enterprise in this line in Maine, the Fisheries and Game Commissioners of that State are now bringing over from Sweden a lot of capercaillie and black game, which are expected to arrive in New York by an early steamer. They will be put out in New Sweden among the Swedes of Aroostock county, and another importation following later will be sent to the Rangeley district.

If the guides of a game country could be banded together in an agreement neither to violate the laws themselves nor to allow a sportsman under their guidance to violate them, the game problem would practically be solved.

The Sportsman Tourist.

UNCLE LISHA'S OUTING.—XIV.

A Wild Goose Chase.

UNCLE LISHA and Joseph set forth in the belt of trees that shaded the west bank of Little Otter from the Slab Hole to the South Slang, so intent upon the performance of doughty deeds that they skulked with bent backs till the ache could be endured no longer, and with a loud sigh of relief they straightened up just at the very time and place to disclose themselves to a flock of ducks that were enjoying the seclusion of a marsh-locked pool. Startled by the sound and the sudden apparition of human forms arising within forty paces of their retreat, the ducks sprang into the air with a simultaneous splash and vociferous outcry of alarm. In no less surprise the two gunners stood gaping at the retreating flock, then with one accord they squatted with lowered heads till the whistle of departing wings grew faint in the distance and then turned their humiliated faces full upon each other.

"Sam Hill!" Joseph ejaculated, "what a chance it seems 's 'ough we 'most hed."

"What a couple o' dumb'd dodunks we be, more like!" Uncle Lisha responded in intense disgust. "Naow le's go 'long an' use aoww eyes an' act as if ducks had some tew."

With this determination they proceeded, yet more cautiously, stopping frequently to examine the marsh before them, with heads as gradually uplifted as grass rises after the pressure of the foot. At last they discovered a pool similar to the one at which they had exposed themselves so unwarily, and a careful reconnaissance disclosed a flock of twenty or more dusky ducks taking their ease on the reed-hedged pool, some asleep, their broad bills resting on their round breasts, others leisurely sounding the shallows with elongated necks for choice tidbits, while a few alert old drakes carried their wise heads high, in constant vigilance.

The hunters squatted for a brief, whispered plan of attack, and having arranged it, moved forward, stooping low, to occupy the spot selected for the onslaught. There was one place in the line of approach where the screen of weeds was so low that it could only be passed without discovery by crawling, and when it was reached the hunters went on all fours—not on hands and knees, but on hands and feet—hitching their prone guns along step by step. Now, though their heads were quite out of sight of the ducks and the ducks unseen by them, their posteriors were fully exposed to the view of the vigilant sentinels, who at the sight of these two strange objects undulating slowly forward above the tops of the rushes at once sounded the alarm, and the whole flock sprang to wing with an uproar of splashing, fluttering and quacking.

The unlucky hunters halted without a change of posture and listened in dismayed silence till the tumult of departure had subsided, before they ventured to drop upon their knees and look in the direction from which the sound of retreat had come. Then they arose and gazed upon the deserted pool, whose nearest semblance to life was in a few scattered feathers drifting across the quiet space.

"Wal"—Uncle Lisha exhaled the word after holding his breath a long time—"I sh'd like to know what on this livin' airth scairt them 'ere ducks. They never seen nor heard us, that's sartin'."

"I swan to man, I do know," Joseph said, "erless they smelt us, an' it don't scarcely seem 's 'ough sech tough-nosed critters could smell much anyway. But I d' know. S-s-s-h! See that 'ere tormented gre't henhawk? Mebbey it was him scart 'em. H-s-s-h!" He sank his voice to a whisper as a marsh hawk came cruising low along the rushy level in such intent quest of game that he did not see the two motionless figures, and then with an upward slant alighted on a dead tree top within close range, still scanning the marsh and unconscious of danger, while Joseph cautiously got his gun ready and took deliberate, deadly aim. As his executioner staggered backward from the recoil of the deadly charge the pirate tumbled from his lookout and fell with a swift, feathery thud on the hard margin of the shore, where Joseph pounced upon him in utter recklessness of beak and talons that still attempted revenge or defense.

"Gosh darn him!" he groaned, as the talons of one foot closed in a dying clutch upon his wrist, and then, as he strove to loosen it with the free hand, that also was caught by the other foot. Then the bird's head drooped, the fire of his eyes went out, but the death grip of his talons was not relaxed, and Joseph, helplessly manacled, turned to Uncle Lisha for relief.

"Wal, you be in a fix. But I couldn't help a-laughin' if it was a-killin' ye."

Joseph could see no cause for laughter, as the claws were withdrawn one by one, accompanying each withdrawal by a groan or a suppressed "S-s-s-s-p."

"You're as bad off as the feller 'at ketched the bear," Uncle Lisha remarked as he deliberately performed the surgery. "Ye see, he follered a bear track into a hole, an' the feller 'at was a-huntin' along with him he staid aoutside. 'I've ketched a bear,' he hollered from inside. 'All right,' says t'other feller, 'fetch him aout an' le's see him.' 'I can't fetch him,' says he. 'Wal,' says t'other feller, 'come aout yourself.' 'I can't,' says he, 'he's got a holt on me an' won't let me,' says he. There, naow, I've got ye onhooked."

With an unaccustomed display of temper Joseph seized the hawk by the legs and repeatedly banged the lifeless head against the nearest tree.

"Good airth an' seas! What ye duin' that for? He's deader 'n a smelt."

"Wal," said Joseph, looking rather foolish as the heat of his wrath abated, "I kinder thought mebbey I'd better let him onderstan' 'at the's a herearter for hawks jes' s much as the's is for other folks. I'm a good min' ter give him another polt. Dum him. Haow he hurt my wris's. Why, he hain't nothin' but feathers!" he exclaimed, when he had taken time to try "the heft" of his prize. "You might nigh about chuck him right into a bed jest as he is, seems 's 'ough. Anyways, he's wuth a-hevin'."

While reloading his gun he proposed lying in wait by this pool for whatever might chance to come to it, but Uncle Lisha longed for fresh fields of conquest and also thirsted for a draught of drinkable water which he hoped to find at some spring, and so marched along the bank,

leaving his companion to conduct alone his own plan of the campaign.

Joseph seated himself comfortably on a log close to the tallest weeds and did not wait long before a bittern came flopping lazily over the marsh and alighted in the edge of the pool. He had never had so near a view of one and knew not what manner of fowl it might be, but it looked worth killing either for picking or eating. So he trained his gun upon it, and at the discharge it wilted down like a lopped weed. When with some difficulty he drew it within reach by the aid of a pole he was somewhat disappointed in its weight, but he said to himself:

"It looks nigh 'nough like one o' them 'ere new-fangled Hang-shy rwusters to be jes' good t' eat, which it hain't sayin' no gre't for it, an' then the's the feathers, what the's is on 'em, so I guess I hain't done so bad arter all, don't seem 's 'ough I hed."

He had scarcely composed himself to another season of waiting when he was startled by the roar of Uncle Lisha's gun, and after a vain attempt to repress his curiosity shouldered his gun and game and hastened forward to learn the result of a shot so loud that he felt sure it must have achieved something great.

Uncle Lisha had not gone a furlong alone when he came upon another patch of open water, where he saw a flock of large fowl, alarmed at his approach, crowding into a watery path that ran channelward into the depths of the marsh. He managed to get a slow aim upon the entrance just as the last bird was disappearing in it and fired. There was a clamor of consternation, a wild scurry through the rushes, but the nearest bird only beat the sedges convulsively with its broad pinions for a moment and then stretched lifeless head and wings upon the bending weeds. When Uncle Lisha realized how grand a feat he had accomplished he could hardly withhold a shout of exultation, and when Joseph came panting upon the scene he let it out in a great roar.

"Good airth an' seas, Jozeff, I hev act'ally shot a wil' goose. I du b'lieve!"

"Sam Hill, you hain't, Uncle Lisher," cried Joseph, standing on tiptoe and craning his neck to the utmost. "Not a ra'al wild goose, you don't mean. Wal, I snore if it don't look like one, seems 's 'ough, jest as true as you live!"

"Why, of course he's a wilt goose, er was. He's tame 'nough now, though," said Uncle Lisha, with proud assurance. "An' naow we got tu git him. I s'pose the mud's more'n forty foot deep aout there, but I'll git him if I hafter stay here till the ma'ash freezes. Naow le's git some slabs an' things an' lay aout tu him."

Laying aside their guns, they brought slabs and boards with which the spring floods had plentifully strewn the shore, and with no little labor bridged the treacherous marsh, till Joseph, a little the lighter and the least clumsy of the two, gained an unstable footing to the prize, which he lifted and cautiously edging his way along the narrow causeway bore it to the shore.

"There," he said, plumping the gray goose down at the feet of its slayer, who squatted before it, caressing it and feeding his eyes upon it, "I don't b'lieve I wantter kerry it on such a rhud no funder. It don't seem's I would, tu hev it, not sca'sely."

"Wal, I would, clean tu Danvis! Good airth an' seas, won't it make Samwil an' Ann Twine's eyes stick aout when they see it, an' them a-shootin' nothin' but leetle insignificant ducks. But there ain't no two ways 'bout it, I got tu ha' some water, er choke tu death. Le's go over tu that 'ere haouse and git us a drink an' then mog along back to camp. Why, it's the haouse where Samwil left the hosses tu. They're sorter neighbors, an' I da' say it will please 'em tu see this 'ere faowl, for it hain't every day 'at folks gits a chance tu look at a wil' goose clus tu. Why, what's that 'ere you got beside your hen hawk? Come to think on't I did hear ye shoot ag'in." In the elation of his own success he had not noticed the addition to Joseph's bunch of game, nor had Joseph in the midst of excitement and labor thought to call attention to it.

"That's more 'n I can tell ye. That is, for sartin'. He looks consid'able like one o' these 'ere Hang-shy rhusters, but I don't s'pose he is sca'sely, 'cause I never hearn tell on 'em a-runnin' wil' as I remember on. Mebbey it's one 'at got strayed off f'm hum."

"Wal," said Uncle Lisha, after a critical examination of the bird through his glasses, "I cal'late it's a mud hen."

"Mebbey it's a mud rhuster," Joseph suggested. "I couldn't say of which sect, but of that spechy. Wal, le's be a-moggin', for I be dryer 'n a graven image, so 't I can't spit 'nough tu enjy a smoke."

Thereupon they assumed their burdens and trudged across the fields to the farmhouse, which stood foremost in a straggling village of outbuildings. In response to Uncle Lisha's knock at the open kitchen door, a pleasant-looking woman came out of a cloud of fragrant steam that arose from a brass kettle of cider apple sauce upon the stove. She wore a blue sock on her left arm like an improvised mitten, but the needle caught into the heel and a dangling loop of thread showed that she employed the intervals of watching her cookery in darning the family footwear.

"Good arternoon, marm," said Uncle Lisha. "We stopped in tu see if we could git a drink o' water."

She looked the visitors over a moment to assure herself whether they were of the sort to be served with a tin dipper or a pitcher and glass, and then removing the sock as she went into the pantry, presently returned with the daintier service, which the old man's honest and respectable face seemed to warrant in spite of his shabby clothes.

"That 'ere 's turrible good water for the time o'—for this part o' the country. We be'n a-huntin'," he continued, as he held the glass to be refilled the third time. "We be'n a-huntin' an' got tormented dry. It's turrible dry work a-huntin', partic'ly when you're all the time in sight o' water 't you can't drink. An' I do know but what it makes a feller drier tu shoot a wil' goose. I do know as you ever see one." He lifted his trophy from where he had dropped it in careless conspicuity and held it up before her.

"Why, you done well, didn't you," the matron said. "Tain't often folks gits 'em. But I've seen 'em afore. Aour folks ketched one oncte an' we kep' him tew, three year, I guess, an' he mated along with aour tame geese an' we've got one o' the mixtur yit. Why!" with the final exclamation the expression of pleased curiosity in her face hardened to one of unpleasant surprise. "You jes' le' me look o' his neck," and laying hold of it and

raising the feathers she disclosed a red string tied around it, at sight of which Uncle Lisha's heart sank with a sickening qualm.

"Yes, sir," she said, "you've be'n an' killed aour ol' half-bred garnder. Be you some o' the folks that's a campin' daown here?"

"Yis, marm."

"Well, I guess Mr. Larkin 'll be 'raound there and settle with you for killin' of his garnder. He sot consid'able by him."

"Good airth an' seas!" Uncle Lisha whispered in a suppressed roar, as if he feared that he might be heard at camp. "Don't for massy sake let him come 'raound there talkin' abaout my shootin' of his goose. Where is your man? I c'n settle with him for 't right here. You go an' fetch him."

Mrs. Larkin hesitated a moment in fear that they might depart in her absence, then bustled away and presently was heard calling her husband in the back yard. Then their voices were heard approaching in low dialogue till Mr. Larkin appeared entering the kitchen from the rear. He was a large, raw-boned man, his shoulders stooped with excessive labor, his fingers hooked like claws ready to pounce upon a hard task or an elusive shilling, while his broad coarse face strove to put on a mask of guileless good humor. He greeted them as if they were all old friends, grinning more effusively, Uncle Lisha thought, than the situation seemed to warrant.

"Du, sir," Uncle Lisha responded, and proceeded at once to business. "My name 's Lisher Peggs, an' this 'ere 's my neighbor Jozeff Hill, an' we live tu Danvis when we're tu hum. Jes' naow we're a-campin' over here. We don't make a business goin' raound killin' folks' poultry as a gin'al thing, but it 'pears we hev your'n and naow we want tu settle for 't. What d' ye cal'late the life o' your goose is wuth? We don't want the car-kiss."

"Wal, I d' know," Mr. Larkin pondered, with a subsid-ing grin. "Come in and sed daown. 'T won't cost ye nothin'. Won't ye? Wal, I don't know ezackly. That 'ere was a turrible goose tu lay an' take care o' goslin's. I never see sech a—"

"Mr. Larkin," his wife said in a severe undertone.

"As I ever see sech a case for layin' an' carin' for goslin's as she was."

"Mr. Larkin," his wife said in a deeper tone of reproof, and covertly punched him in the back, "it hain't a goose; it's a garnder."

"Hey," gasped Mr. Larkin, his smile fading out, but as quickly returning. "Why yis, land, yis; so 't is. But I tell ye what, Mis' Larkin she sot a turrible sight by him, I tell ye."

"Wal, wal," and the old man spoke a little impatiently, "it don't make no diffunce haow much your garnder laid or your womern sot. What I wantter know is what he was wuth a-livin' an' haow much he's wuth dead, an' I'll pay ye the diffunce pervided I c'n raise the money," and he drew from his pocket the heart case which served him as a purse.

"Wal, naow, I don't know; le' me see," said Mr. Larkin, weighing the goose in his hand and feeling its breast. "He hain't turrible meaty, and I carc'late he'll be tough-er'n tripe, an' it'll coost abaout as much tu chaw him as he's wuth. Then ag'in, lookin' at it from a opposite p'int o' view, he was lible to continer a-livin' a consid'able number o' years, which he was the more val'able in that respect."

"The's the feathers!" Joseph suggested, with a view to bettering his friend's bargain. "The's an awful snarl o' feathers on that 'ere goose, which it seems as 'ough they'd ortu be took account on in the trade. Naow if you was a min' tu call it even, I do know but I'd be willin' tu throw in this 'ere faowl 'at I got." He held up the bittern before Mr. Larkin, who viewed it at first with wonder, then with intense disgust, which his bland smile could not conceal as he exclaimed,

"Land, what be you a-goin' tu du with that plaguey stake driver? No, I guess I don't want him. I'll tell ye what, Mr. Peggs, sein' it's you an' you're a stranger, you gi' me a half dollar an' we'll call it square."

Uncle Lisha heaved a sigh of relief, and emptying the heart case into his palm he sorted out the requisite sum from the handful of ninepence and fourpence half penny bits, cents and half cents which had been gathered in the mending of many boots and shoes. Mr. Larkin counted the much divided half dollar over twice and carefully scrutinized a doubtful penny of Canadian coinage before he reluctantly acknowledged the payment of the debt, and Uncle Lisha felt free to depart without the trophy which he had borne hither in the pride of his heart. Now as he trudged back to camp empty handed, while Joseph bore his own spoils in humbleness of spirit, he spoke but once and then only with heartfelt emphasis,

"Damn the goose!"

They found the tent and its environs silent and deserted, and after appeasing their hunger with a cold bite, Joseph sat down to pluck his fowls. He had not been long so employed upon the bittern when Antoine and the boatman came strolling up from the landing.

"What you goin' do wid dat t'ing?" Antoine asked, after curiously watching him a few moments.

"Wal," said Joseph, as he carefully plucked out the last feathers, "I kinder thought arter I'd got the feathers saved, I'd take an' dress it an' cook it an' see haow it 'ould eat, jes' for the fun on 't."

Antoine wrenched his interior with a groan of intense disgust, and snatching the bird from Joseph's hands, tossed it away with all his might. The lank form, with neck and legs asprawl, went clattering through leaves and bushes in a great curve, till it was lost to sight, and was heard to fall with a dull final thud on the sands below the cliff.

"Dar, dat was de bes' way for cook up dat kan' o' vittle. You 'll was cook some bowfins one tam, but you 'll a'n't goin' for stink de fire wid dat mud hens, bah gosh, no."

Joseph's eyes followed this last featherless flight of the bittern and dwelt awhile on the point of its disappearance before he turned upon the Canadian and said reproachfully, but without a trace of anger in his even drawl:

"Naow, Antwine, seems tu me that 'ere is a 'tarnal mean kind o' caper, an' I do know but what I'd ortu take an' fling ye ov' the laidge arter the bird, but it might kinder break frien'ship, an' I guess I won't. But I mus' say it sorter seems tu me 'at for a feller 'at cooks eels an' mud turkles, an' I do know but frawgs, you be dumb pertic'lar, an' as you might say, nicer 'n you be wise."

"Wal, seh, Zhozeff, Ah dun' know 'f Ah'll a'n't prob'ly 'd ought for tol' you 'fore Ah t'row it," Antoine said, apologetically, "but, sah, if you'll heat dat t'ing he was mek you sick lak hol' dev'. You'll a'n't goin' heat dat hawk, a'n't it?" he asked, as Joseph drew the bird toward him with evident intention of plucking it.

"It hain't sartain but what I will if I seem tu hanker arter sech victuals," Joseph answered; "but anyways, if you hain't no objections I'm a-goin' tu save the feathers, which is what I'm arter in partic'lar."

"Naow, Zhozeff, Ah'll goin' tol' you de trut'," Antoine said, with impressive seriousness and an accompaniment of emphatic gestures. "If you put de hawk fedder wid de dawк fedder he heat it all up."

"Sho', Antwine?"

"Dat jes' as true as Frenchmans heat onion," Antoine asserted in the face of Joseph's incredulous stare. "Wait for Ah'll goin' tol' you. One tam Ah'll was leetly boy an' leeve in Canada, mah mudder was mek it some bed fedder of geese's fedder an' she was gat it mos' all stuff up but leetly maght he a'n't gat 'nough fedder. Den mah fader was keel two hawk, was come 'raoun' for ketch de chicklin, an' mah mudder was pull de fedder for feenish his bed of it. It was very nice plump beds, an' dey keep it for de bes' one for w'en company come see it, an' nex' year mah gran'pere an' gran'mere come for visit all naght, an', seh, gran'mere was gre't big hol' hwomans, an' w'en he come on de room in de morn' he was r-r-rubby, r-r-rubby hesefa an' grunt very hard, an' w'en mah mudder ax it what de matter, she say de bed rope cut him all in chonk, 'cause de bed fedder was so t'in, an' mah mudder was surprise mos' for be mad for have it say so 'baout hees bes' bed, but w'en he ex-amine he fin' honly de hawk fedder, de res' it was all heat up. Yas, sah, Zhozeff, dat jes' true you leeve."

"Wal," said Joseph, continuing the employment which he had still pursued while listening to the story, "I c'n keep 'em sepritt an' put 'em in a piller. Mebby if a feller slep' on it 't 'ould keep him f'm hein' hen-pecked nights."

When Sam returned and the sportsman and his oarsman had departed a hot supper was prepared and eaten, after which the party sat around the cheerful camp-fire and recounted the day's adventures, from which were judiciously eliminated the episodes of Joseph's encounter with the hawk and Uncle Lisha's goose shooting.

ROWLAND E. ROBINSON.

Natural History.

BIRD FLIGHTS.

IN looking over some old numbers of FOREST AND STREAM I noticed the following: "The train started up a bevy of quail, and for some distance two or three of the bunch flew along between the fence and the train and keeping up with us. One was near the window and instead of passing us, as I supposed a quail would naturally outspeed a railway train, it only drew ahead a little; * * * as the bird was almost stationary, I had a rare opportunity to note its appearance while in flight. It seemed as though the whole figure of the bird was drawn up into very convex shape, the back being humped up and the wings apparently strongly curved up, as if hollow underneath and pulled in, so to speak, at the lower edge." In another number of the paper is a photograph of a flying prairie chicken, which shows the bird's tail considerably depressed, giving the bird some of the convex appearance described above.

The description and the picture have evoked some thoughts on the manner and the speed of bird flights. In level or descending flight the bird's tail is always depressed, because the bird's wings are hinged to the body forward of the center of gravity, and but for the support given by the air beneath the tail feathers the bird could not keep its body in a horizontal position when on the wing; the hinder parts would hang down. By depressing the tail more or less, the height of the flight is regulated. In proof, watch the flight of young birds whose tail feathers have not yet grown, and it will be seen that the body is carried in a partly upright position.

When a small boy I read somewhere that a woodpecker was able to perch against the side of a tree by holding with its claws and resting its weight on the stiff tail feathers; that if it were not for these stiff tail feathers, the bird could not do it. Soon after this two fighting woodpeckers locked together fell to the ground, and one was secured unhurt. To prove the tail supporting theory the tail feathers of this bird were pulled out and the bird was set free. It flew away with the rear part of the body hanging down, and its line of flight rose at an angle of about 45 degrees. The bird perched on the side of a tree all right.

Doubtless some use of the wings is made in raising or lowering the line of flight, but the work seems to be done principally by the tail. In turning to right or left the wings seem to do it all, as the tail only presents its edge to the air, to the right or left. If the bird is sailing while making a turn the under side of the body is partly turned toward the circumference of the circle described by the line of flight, the tail and front edges of the wings slightly elevated.

The large or crow blackbird is a notable exception to the ordinary way of using the tail feathers. This bird spreads them vertically and uses them to direct the flight to right or left, exactly as the rudder of a boat is used. The flight of birds while flapping the wings is very easy to understand, as is also their sailing until their acquired momentum is used up, but when a buzzard sails for miles and meanwhile rises hundreds of feet without a single beat of the wings, I have to give it up. It looks like applying force in one direction only, a thing supposed to be impossible. If any one understands how the buzzard does it (as it must), in accordance with any mechanical laws, and can give us a clear demonstration of it, let us have it.

There is no doubt that the speed of bird flights is often overestimated. It is often stated that some kinds of birds fly from sixty to one hundred miles per hour. Now, the writer has hundreds of times noted the speed of many of the varieties to be seen from car windows in various parts of the country, and has never seen a bird of any kind—unaided by the wind—fly faster than the train, when the speed of the train exceeded fifty miles an hour. There was no guess work about the speed of the train. The

rails are 30 ft. long—176 rails to the mile. There are 3,600 seconds in an hour; $3,600 \div 176 = 20$ (very nearly), so if the train ran one mile an hour it ran over a rail joint once in 20 seconds; at five miles an hour it would run over five joints in 20 seconds, and so on, so that the number of rail joints passed each 20 seconds denotes the number of miles per hour the train is running. On the very best roads the "click" of the wheels on the rail joints cannot be heard, but on ordinary track it is heard very plainly. Time the birds when riding on the cars, and see if they don't fly slower than you thought, and whether there is not less difference in the speed of crows and quail than you supposed.

O. H. HAMPTON.

THREE SNAKES AND TWO FROGS.

Leaves from a Naturalist's Note Book.

UNCLE REMUS has not told of all the wonderful pranks played by members of the animal kingdom, although he has given us many an interesting tale which, in one form or another, will be vouched for throughout the Southern States. In the mind of that worthy old gentleman of color the animals of to-day do not practice their wily ways as keenly as was their wont in the olden time of which he spoke, but there are observing ones who still find jokers among the creatures of the woods and waters. Even the reptiles are incessantly "watching out" for opportunities to play pranks upon one another, as will be shown by this little tale, in which a common grass snake and a bullfrog, both residents at the Columbia College laboratory, are the principal figures. Uncle Remus never allowed the more cunning fox to hold the mastery for long over the defenseless rabbit, and in this instance the snake has no chance with the slower frog, not through any favoritism of the narrator, but simply because in actual life such was the case.

"Daddy" Bullfrog was one of the largest of his species, a giant in his way, and had been brought in from his native haunts up the Hudson for the good of science. Such a prize was he that for a long time he lived on in his tank unmolested and much admired by all visitors to the laboratory. His neighbors in the same inclosure surrounding the tank were two green snakes that had attained the goodly growth of perhaps 20 in. in length. Although the snakes and frog were never really intimate—that is, not chummy—at least they did not war upon one another, and therefore may be considered to have been good neighbors. Daddy sat in his favorite corner by the margin of the pool and blinked and basked in the sun rays which found their way through a window near by, while the little twin green snakes reclined comfortably on their chosen side, and all no doubt thought how much nicer it was there than in their old existence, where they had to hustle around for their daily rations. It may be that they remarked upon this to one another, for Mr. Frog was occasionally heard to utter a self-satisfied guttural, to which his neighbors would reply by raising their heads and waving them about in the direction of the tank. Their tongues could be seen to move, but their remarks were inaudible to human ears. The frog, however, would wink sagaciously after each such interchange of ideas, so it is presumed that what was said was satisfactory to him. Some of the students of an imaginative but it is to be feared a frivolous turn of mind suggested that the snakes were simply "sassing" the frog and sticking out their tongues at him in derision. Few accepted this theory, however.

But granting even that these creatures did not converse together after the human fashion, it is certain that they possessed certain traits in common with the man animal. Like men, they lived together on civil terms at least until a matter of business, something involving their bread and butter so to speak, appeared upon the scene, when at once a keen rivalry began. Reformers tell us that there is something radically wrong with our social system which causes this unfriendly competition among men, but those who watched the frog and the snakes hold the opinion that the difficulty is more deep seated than social condions, in fact that it is but a remnant of the animal nature, an evolutionary struggle for the survival of the fittest.

Each day the inward cravings of the inhabitants of the tank were appeased with a hatful of small frogs. The instant these were turned loose upon the community a grand scramble began to see which would win the most of the plunder. The snakes, with a wholesome respect for their big neighbor, never crowded him much in this business, but by their greater agility and cunning strove to overcome his greater capacity of mouth and general ponderousness. At last, however, a day came when one of the snakes so far forgot himself in his zeal as to trespass upon the territory of Daddy Bullfrog. There was a loud "kerchug" as Daddy landed with a mighty spring upon his rival, who found himself in chancery and en route, headforemost, down froggy's throat. Daddy without more ado drew himself together on the bank, took a good gulp or two to help the snake along, and then with an expression of entire satisfaction went to blinking again with a good 16 in. of animated green tubing swinging from his grim, set jaws. For a time the snake slatted around pretty freely, that is the portion left out-of-doors did, but "Daddy, like Brer Rabbit, he say nuffin," but now and again would give a knowing wink, as much as to say, "That's all right, young feller; I've got you now where you'll do the most good."

Next morning all was quiet in the tank inclosure. In a far corner lay the bereaved twin snake torn twixt grief and fear, and no amount of gentle poking could induce him to so much as raise his head above the ferns and moss about him. At each touch he would wriggle along a little, but always in a narrow circle, so as to keep well into his corner. He evidently realized the strategic necessity of keeping his flanks protected against attack by the frog, and was unconscious of any other enemy or willing to submit to any fate than that which overtook his late brother. Over by the pool sat Daddy with a countenance serene, and any one ignorant of the tragedy of the previous day, and seeing that long green tube hanging passively from his mouth, would have said that he was smoking a hubble bubble. Closer examination showed that there was a little less snake visible, while the frog seemed no bigger than before. For three successive days the frog sat slowly and calmly consuming his former neighbor, and on the fourth morning the snake had disappeared entirely from sight and the frog was apparently none the worse for his gustatory feat.

Another cannibalistic experience of a frog and snake

wherein the tables are reversed was witnessed by a naturalist while walking cross-country in the South. His attention was first attracted by a sound coming from the direction of a pool near by, a sound which would have made a timid man's blood run cold. It was not a shriek or a wail. It was not articulate enough for either, but was more like the sounds deaf mutes make at times, perhaps at pain, perhaps at joy—they always sound the same. It was a harsh, throaty utterance, not unlike the loud creaking of a door. But the wayfarer did not need to wonder at it on this occasion. He knew at once the meaning of that sound. In his life spent afield studying untamed life he had heard that sound many a time before and instantly answered it as he would any other signal of distress, for such he knew it to be. A couple of strides brought him to the pool, and, as he knew full well, there on the farther bank lay a big black snake holding in his mouth a fat bullfrog. The snake had made his attack from the rear and only the frog's head and shoulders were now visible. He was being swallowed bodily. The saunterer's pistol was out in an instant, but he suddenly held his fire when he realized that to shoot then was to endanger the life of the frog, when his desire was to set him at liberty unharmed. Accordingly he waited patiently in the brush until the snake had worried his fat morsel well down. When the bulgy spot had retired just behind the snake's head the naturalist, fearing to wait longer lest suffocation should put the poor victim beyond his power to aid, leveled his weapon and fired. The snake's head was shot clean off and the frog, unscarred, but badly scared, jumped forth and sunk himself in the pool.

There has been a good deal said and written first and last as to the power of the snake to charm the creatures which he sought as prey, but their ability to overcome a human being by their wiles would scarcely be entertained as possible. It can, however, be stated with the utmost truthfulness and good faith, that at least one man, both sturdy in body and strong in mind, fell a victim to a harmless little whipsnake.

It was in the woods in Georgia one bright day that the gentleman was walking when he chanced upon the little reptile lying coiled in a sunny spot among the leaves. As he paused to look at him a moment before turning aside to pass him unmolested (for he had inherited none of the animosity of mankind toward the serpent tribe, except they be dangerous), the snake raised his head and instantly began drumming upon a dry leaf with the tip of his slim tail. Its beady eyes were riveted upon the intruder, the pink tongue darted in and out incessantly, and all the while the tail kept up a ceaseless and ever increasing r-r-rat-tat-tat upon the leaf. For a few moments it was amusing to the gentleman to watch what he supposed to be the agitation of fear, but suddenly he realized that such was not the case. He could not take his eyes off the snake, and as he stood riveted to the spot, speechless and powerless to move, he felt that a blue vapor was creeping up from the snake and enveloping him in its coils, and a sensation of suffocation seized him. He began to struggle with himself, but felt, he afterward said, as he had often in a horrible dream, wholly incapable of moving a muscle to defend himself from what seemed impending doom. But the allied forces of mind and body were soon rallied and conquered in this case, and with one fierce effort and a yell of rage he hurled himself forward, and catching the snake in his hands broke the spell and killed the little demon. No man who knew the subject of this experience would for a moment question its truthfulness, and yet it must be admitted that it is well calculated to arouse the suspicions of the stranger.

ALLEN CHAMBERLAIN.

THE DECREASE OF BIRDS.

Editor Forest and Stream:—

Much discussion has been going on among naturalists and others in regard to the decrease in the number of birds of some species. We as well as others have observed of late years a great difference in the numbers of the feathered tribe, not only in this vicinity and State, but in other places as well, compared with those that swarmed through the same sections years ago; and many a time have we thought about it and tried to solve the problem.

Many writers and others claim—and with some ground undoubtedly—that much of this decrease is owing to so many being killed for millinery purposes; but should one while in assemblages of ladies take particular note of the supposed birds he would be surprised to see how few of those head-dress ornaments were really specimens of the taxidermist's art. In reality a goodly portion of them are simply make-believes and nothing more, although we do not doubt that many skins and wings of the real birds—that is, of those having the brightest-colored plumage—are so used.

Now, any one will observe that those birds having subdued colored dresses, such as ground birds and those nesting in low bushes, are scarcely ever seen upon millinery, and yet we find they are fully as scarce in proportion throughout sections that we have been in as those of more brilliant colors, thus showing that other cause besides the demand for them in the millinery business have produced the decrease.

Although we have never heard of any one's advancing this opinion before, we think one of the greatest causes, especially in and around thickly settled sections—and such sections include the greater part of the northeastern portion of our country—is the very great increase during late years in the ownership of improved firearms and their cheapness. With breechloading guns and rifles and the convenience of ammunition now, how easy it is for men and boys to load and shoot at birds of any and all kinds—so much easier than it used to be with the old flint-lock and percussion muzzleloaders. And the shooting, whether the birds are on the wing or even sitting, gives those gunners, so they think, some practice in the use of firearms.

One taking note will be surprised to see how many boys, large and small, in the country and in and around villages own either Flobert or other small caliber rifles, besides what a vast number of airguns are in use among the boys—and a good, strong-shooting airgun will maim or kill a little bird almost as surely as a small caliber rifle. Should one take note of it also he will be surprised to see so many young persons having those cheap guns roving around during the pleasant part of the year and popping away not only at English sparrows, but at anything and everything of the bird kind coming within shooting dis-

tance. We have often heard boys even boasting of the number of small birds they had killed or crippled with their rifles or airguns; many, without doubt, thinking there is no harm in the practice of shooting them, yet the effect remains, and although the law may be severe against destroying birds and their eggs, it is in a great number of cases impossible or impracticable to put it in force. Now, as large numbers of young persons in the aggregate thus armed traverse goodly portions of the country adjoining their respective homes, and during the year each kills or cripples quite a number of birds, what a large portion is thus destroyed. Throughout the country the number must be incredible.

We think it is the duty of parents and guardians, as well as teachers, to do all they can among boys under their charge to break up the bad practice of killing off the birds, and also of the practice of some in destroying the nests and eggs, often very easily obtained.

Although many think the climate and unseasonable storms have much to do with the bird decrease, we think the factor above written of has more to do with it than the climatic effects or any other.

A. L. L.
[Bird feathers for millinery use are commonly dyed, so plain feathers are available and are adapted for this purpose.]

Grouse and Bantam Cross.

ESTEVAN, Assa, Canada.—In a recent issue of FOREST AND STREAM a correspondent intimates that a friend of his is going to try the experiment of inter-breeding between the grouse and domestic bantam. A few years ago in the North Saskatchewan District of Canada, a region where both varieties of grouse—the ruffed and sharp-tailed prairie grouse—abound to a remarkable extent, the writer attempted to produce a cross between the male prairie grouse and the domestic hen. Two of the smallest specimens of the latter obtainable in that vicinity were mated in separate yards with two tame prairie grouse cocks. After a few days' acquaintance they were seen to mate in both instances and soon it became evident that these heretofore denizens of the prairie were more attentive to the hens in this respect than would have been males of their own species. In due time both hens commenced to lay and continued thereafter till ten and twelve eggs respectively were secured, whereupon they simultaneously took to hatching. For several weeks they persevered in the discharge of their incubatory duties with a fidelity that was remarkable, but with negative results. Finally an examination of the eggs revealed the fact that in every instance they had been devoid of vitality.

These experiments conducted under favorable conditions and with the greatest care were accepted as conclusive evidence that attempting to inter-breed between these species implies a condition of things for which nature made no provision.

W. M.

Albino Quail.

YANKTON, S. D., Feb. 17.—While hunting about twenty-five miles northwest of this city, along the James River, I came across a covey of quail, and among them were two white ones. These I shot, and found them to be unlike anything I have ever seen or heard of. They are somewhat larger than the ordinary quail, and of a white or cream color, speckled with brown, and at a little distance appear nearly white. Their appearance was not disturbed by shooting, so I had them nicely mounted. They make an exceedingly fine specimen.

Would you kindly inform me if they are of any special breed, or they may be a freak? Could they be sold, and for how much?

W. L. BRUCE.

[It is an instance of albinism which is likely to occur in all forms of animal life from man to mice. We have recorded white deer, white crows, white quail, and recently illustrated a white blackbird. The cause of the phenomena is found in an abnormal condition of the coloring agencies.]

A February Song Sparrow.

NEW YORK, Feb. 22.—While walking along St. Nicholas Place in the upper part of the city yesterday afternoon (Feb. 21), I was surprised to hear a song sparrow in full song. I think I have never heard this bird so early in the season.

WM. C. DORNIN, JR.

Camp-Fire Flickerings.

"That reminds me."

BROOKLYN, N. Y.—Before the light thrown by the burning hickory log dies out I must relate a little incident which has nothing in common with that "bell-on-the-moose story" which I have just read in FOREST AND STREAM. By the way, if James Monkhouse, Jr., had reason to believe that he did hang that bell on the moose's neck he should not hang his story on the big bell, for several reasons.

The other day when I had come in from a fox chase and was remarking how tiresome it was to stand at a runway waiting for fox and hounds to come back, the father of my guide told me that he once took a young man with him fox hunting who lacked that great virtue of patience, if he lacked nothing else. After giving the young man a bit of advice and a good stand near a sandbar which foxes in that particular region often used, he took the hounds with him and soon had a fox afoot. After two hours' driving the fox headed for the sandbar. The old gentleman, following the hounds as best he could, was astonished not to hear the young man's gun. Arriving at the sandbar the young man was nowhere to be seen, but there was a circle in the sand and the words "Gone home," and through the very circle and words the fox had run, as was shown by his footprints.

E. C. J. K.

When you've got a thing to say,
Say it! Don't take half a day.
When your tale's got little in it,
Crowd the whole thing in a minute!
Life is short—a fleeting vapor—
Don't you fill the whole blamed paper
With a tale which at a pinch
Could be covered in an inch!
Poil her down until she simmers,
Polish her until she glimmers.
When you've got a thing to say,
Say it! Don't take half a day.

THE BANNOCK INDIANS AND THE WYOMING GAME LAWS.

Editor Forest and Stream:

The hunting right of the Bannock Indians in Wyoming has been the subject of much controversy and some bloodshed.

Race Horse, an Indian, had killed seven elk, contrary to the Wyoming law prohibiting the killing of more than were immediately needed for food. The Federal judge in that State decided that the Indian right under the treaty was paramount to the laws of that State.

The opinion of the judge, as well as all other discussions I have seen, seem to overlook several important considerations.

1. They proceed first upon the theory that a police power of a State (the right to legislate for the general welfare, including the protection of game) has its origin when the State is admitted to the Union; and, second, that the right of the Bannock Indians under the treaty is necessarily in conflict with game laws, and that the only question is which must yield.

The first proposition involves too broad a discussion in a newspaper review, but the following extract on the subject from Black's Constitutional Law will give some idea of its origin and nature:

"It cannot be doubted that the origin of this power must be sought in the very purpose and framework of organized society. It is fundamental and essential to government, * * * a necessary and inherent attribute to sovereignty. It antedates all laws, and may be described as the assumption on which constitutions rest. * * * It has always been held that the police power is an inalienable attribute of sovereignty and can never, therefore, be curtailed nor diminished; that it is present by implication in every act of legislation."

It must therefore be considered that this principle was had in mind by Congress in all acts and treaties relating to Indians and their hunting rights, and that it entered into and became a part of them, and must be read into this Bannock treaty.

2. But this really becomes unimportant under what seems to me a proper view of the second proposition above stated. The treaty with these Indians was made in 1868, and after providing for their removal to new reservations and the relinquishment of the old, proceeds:

"Article IV. The Indians herein named agree, when the agency house and other buildings shall be constructed on their reservations, named, they will make said reservations their permanent home, and they will make no permanent settlement elsewhere; but they shall have the right to hunt on the unoccupied lands of the United States so long as game may be found thereon, and so long as peace subsists among the whites and Indians on the borders of the hunting districts."

Upon this article is based the alleged right to hunt and kill game regardless of the Wyoming laws.

The right of the white citizen to hunt on public lands is a natural one, subject, however, to such restrictions as the State in which the lands lie may see fit to impose for the protection and preservation of the game. That of the Indian, under this treaty, is an acquired one.

Was it then the intention of Congress, or a proper construction of the treaty, that the Indian right to hunt should be other and greater than that of the white citizen in the same territory?

The American right to "life, liberty and the pursuit of happiness" is declared to be inalienable, and has always been considered as the highest human right known, although at all times enjoyed subject to such legal restrictions as promote the public welfare. Yet it is claimed that this copper-colored right to slaughter game is in some way a notch higher, and subject to no control whatever. If so, to be a white man and an American citizen is a misfortune, contrary to human experience, and a doctrine which courts should be slow to declare.

It will be noticed that Article IV., after providing that the new reservations shall be the "permanent home" of the Indians, and that they shall "make no permanent settlement elsewhere," proceeds with a "but," to the effect that "they shall have a right to hunt on the unoccupied lands of the United States" so long as certain conditions exist.

The United States has always regarded the Indians as its wards, and exercised an absolute and paternal control over their actions to the extent that no Indian is allowed to leave his reservation for any purpose without a permit from the agent.

It is reasonable that after agreeing to the provision that they must have a permanent home the Indians should insist on a stipulation that they might nevertheless have the right to go and hunt, which no agent could arbitrarily deny, and does not the contract show that this language is merely permissive as to leaving such home, and simply a qualification of the implied obligation to remain there?

It will also be observed that the right to hunt is not confined to their former reservation, nor to the State of Wyoming, but extends to all "unoccupied lands of the United States," wherever game and peace exists.

This is the express language of the article, and it is significant that all hunting privileges contained in previous Indian treaties (so far as they have come under my notice) are restricted to a right to return and hunt on the lands relinquished under the respective treaties. This extending of the privilege in this treaty must, then, have been for some purpose, and it is fair to assume that, as the reservation relinquished by the Bannocks was small and was to be opened to white settlement, it was recognized that the game might soon be driven beyond its limits.

This furnishes an obvious reason why the privilege was not restricted, as usual, but extended to all the unoccupied lands where game was to be found. The concluding words, referring to the "hunting districts," also clearly imply that the privilege was not confined to one district or region.

If, then, this right was not permissive as to leave of absence merely, but an affirmative grant of a right to hunt on unoccupied lands, notwithstanding the game laws

there existing, Congress undertook to grant to these Indians a right paramount to the game laws of every State in the Union where game is found on public land, regardless of the time or terms of its admission to the Union. This it could not do, as most of the States had been admitted long prior to the date of the treaty, and their police powers were not subject to curtailment.

It will not be claimed by anyone that Congress had any such power or intention. Yet such is the inevitable result if this treaty is repugnant and paramount to the game laws of Wyoming. For it must be equally so as to every State in the Union where public land and game are found, as its terms unmistakably extend to all alike. It must have been intended to be paramount to all or to none. It either creates a class of non-residents who may invade a State at will and remain exempt from the restraints or control of its police power, or it is a right subject to reasonable control. The mischief that would flow from the former theory is so serious that it cannot be adopted unless the meaning is the inevitable deduction from the language used.

This furnishes a strong ground for holding the right as permissive only, and as being nothing more than an irrevocable privilege to leave their otherwise permanent home for the purpose of hunting on the public lands wherever game is found and peace exists on the borders of the "hunting districts."

3. But if we concede that this treaty provision was not merely permissive, but conferred an affirmative right to hunt and kill game on public lands, it does not purport to give an unrestricted right. The Wyoming laws do not deny the Indians a right to hunt in the sense that conflicts with the treaty right.

The right to hunt is neither denied by law to the white man nor to the Indian; it is merely restricted and controlled, as every other right may be, even those which are denominated inalienable.

A fundamental canon of construction as to the conflict of laws is that there must be a manifest repugnancy, an irreconcilable conflict, in order to hold that one overthrows the other. No such repugnancy exists between this treaty and the game laws of Wyoming. Both can stand, and have some force and meaning, and such construction is imperative.

It must have been obvious to Congress that to confer a right on these Indians superior not only to that of the citizen, but of the State, would sooner or later provoke disorder and conflict.

The fair conclusion, then, is that if this right is more than a mere permission to leave their permanent reservation for hunting purposes, it is by no means an unrestricted license in contravention of the game laws, or more than a guarantee to the Indians against discrimination. The Wyoming laws do not so discriminate. They merely regulate the killing of game, protecting it against wanton and useless slaughter, preserving it alike for the Indian and the white man; allowing each the same privileges. These laws do not attempt to destroy or deny the right. On the contrary, they tend to its preservation and perpetuity, are beneficial and not detrimental to the Indian, and are not, therefore, repugnant to the treaty, in a legal sense, so as to require them to be held void.

It seems to me, then, quite clear that this treaty should be construed as a mere privilege to the Indians to leave their permanent reservations for hunting purposes. Or, if it is more than that, and actually confers a right to hunt on public lands, it is a right subject to the restrictions imposed by the State laws where it ought to be exercised.

Thus construed, the law stands, the treaty stands, and the Indian stands on the same footing as the citizen, and all conflict and difficulty disappears.

D. C. BEAMAN.

DENVER, Col.

MAINE AND MASSACHUSETTS.

BOSTON, Feb. 22.—Does the scalp or pate of a deer, after it has been treated to a solution for preservation, constitute an article of merchandise under the Maine game laws? Mr. F. B. Webster, of Hyde Park, Mass., and several Boston men are interested in this question, and contend that the above-mentioned articles come under the head of manufactured goods, and are therefore subject to shipment out of the State without penalty or seizure. Mr. Webster had a small box containing a few of these scalps shipped to him in December, but they did not get any further than Bangor, as the goods were seized in that city by Warden Harriman and turned over to a taxidermist for safekeeping. In due time Mr. Webster inquired of the express company about his goods and was by them referred to a letter received from Game Commissioner T. H. Wentworth under date of Feb. 4, in which, after stating the fact of seizure, Mr. Wentworth states that the scalps were in a closed box, not accompanied by the owner, and were being shipped in violation of the regulations relating to shipment of game or parts thereof. He admits that there is a question as to whether the scalps were so far cured as to become manufactured goods. Again he says the scalps are of little value, but under the law he thinks are forfeited to the warden. Finally he says that Mr. Webster can have them by the payment of a small charge to the warden and to the taxidermist who has them in charge. Now, this is the one thing Mr. Webster will not do. He says it is a matter of principle, claims they were unlawfully seized, and in a letter to Mr. Wentworth demands that they be turned over to him without extra charges and without delay. He will not admit that tanned skins are game, or that a skin must be tanned by a prescribed plan of another or outside party in order to conform with the laws of Maine. Instead of making a payment for their release he claims a loss by the delay, and thinks the whole matter shows a peculiar way of protecting game interests.

The Bangor taxidermist in whose charge the scalps were placed has on different occasions shipped the same goods out of the State to his customers without hindrance, and one gentleman in Providence who received two pates from him some time ago is distinctly of the impression that they were prepared or cured by the same identical preparation as those of Mr. Webster which were seized. A Boston taxidermist has also received some of these scalps from this same Bangor party within the last two weeks. It is becoming quite the impression in Boston and vicinity that the extremely close watch and frequent seizures of game at Bangor is not altogether for the public good, but is sometimes made to serve personal interests. The commissioners should certainly look into these matters closely and see that perfectly fair and impartial treatment is accorded to all by those under them. In the matter of

these deer scalps, it certainly looks like favoritism to allow one man to ship them out of the State at his pleasure, while seizing and holding the same goods shipped by another.

The Parmachenee Club, who have a club house at Parmachenee Lake, Maine, have a new steward in the person of J. E. Haley, of Rangeley. That old veteran of the Rangeley region, John Danforth, who has been the club steward since its organization, has resigned in order to go into business at Errol, N. H., and he surely has the good wishes of hosts of friends in his new venture.

Robert Storey, of Wilson's Mills, Maine, one of the best Magalloway guides, passed through Boston en route to his home a few days ago. His many sportsmen friends in Boston and elsewhere will be pleased to learn that he has nearly recovered from the serious ill health brought on by exposure from fighting a long and obstinate forest fire which occurred near his home some months ago.

Commissioner H. O. Stanley, of Maine, has been spending a few days in Boston, and speaks with pleasure of a trip to Moosehead Lake from which he has just returned. George Greeley, of Bangor, and a Mr. Robinson, of Portland, were his companions, and fishing through the ice was the occupation which furnished them so much sport; twenty or thirty good-sized togue were captured. They found the ice in the lake both thin and treacherous, and felt relieved when the shore was reached on their return. Mr. Stanley has recently been up to Caribou, Me., on a visit to the State fish hatchery at that place. In a few of the pools there he discovered among the stones at the bottom a fat and luscious-looking worm. In these particular pools the trout were in prime condition and very large, while in the other pools they were much poorer. Just why some of the pools were selected as an abiding place for these worms, while others were passed over, he was unable to find a reason, and is curious now to see what his next visit to this hatchery will show.

Mr. Archibald Mitchell, of Norwich, Conn., spent a few days in Boston last week. Salmon fishing is Mr. Mitchell's greatest pleasure, and he has followed the sport persistently on several of the north shore rivers and at the Bangor pool for some years. Together with F. W. Ayer, of Bangor, he has leased a part of the Restigouche River, above the Restigouche Club's preserve, and known as the Grog Island privileges. While in Scotland last year Mr. Mitchell fished the River Tay, but did not find it quite up to the standard of our American rivers. Still many large fish are taken from that stream, and conditions may not have been favorable for good results during his visit.

Pending House Bill No. 449 is an act relative to the close season for brook trout fishing in Massachusetts, in which it is proposed to make the open season on trout from March 1 to July 1, instead of from April 1 to Sept. 1, as it now is. Boston anglers who know of the proposed measure are much opposed to its passage, believing that the change is not needed, and is an act calculated principally to benefit those who have trout for sale. Fishing with rod and reel in Massachusetts streams in March is next to impossible, and the enactment of such a law would simply permit those who desired to break the ice over the best pools and take out the large trout to sell in the open market. Again, it is in the summer, after July 1, that the vacation season is fairly inaugurated, and if the close season is to begin at that time a large number of people who find pleasure in brook trout fishing will be barred out of the sport. It is the impression that the present law is good enough, and ought to stand as it is. Another proposed act which is strongly criticised is House Bill No. 805, which is an act to provide for the sale of the fish hatcheries belonging to the commonwealth and to provide for the purchase of trout fry from private hatcheries. So thoroughly does this bill seem to be in the interests of individual trout breeders that it is not believed it can possibly get through the General Court. After all the expense and years of time given by the State to the perfection of this work, it would be nothing less than suicidal to turn over the preservation of our trout to the bidding of pirate individuals and the political wire-pulling which such a course would be sure to entail.

HACKLE.

AN EVENING ON THE POND.

THE autumn day was drawing to a close. The lovely tints from the western sky peeped through the scant foliage and playing upon the boughs and variegated leaves of the autumn forest added beauty to the already beautiful scene. Across the water, whose every ripple gleamed with the golden tints of the setting sun, came the dismal hooting of some early-awakened owl. Ever and anon the silence was rudely broken by a splashing in the water as some large fish, sporting in joyous glee or eagerly pursuing its prey, lost account of himself in the water and suddenly finding himself too near its surface dived back into its depths.

If one could have seen through the maze of dead, decaying willows that were unsparingly dispersed over the upper part of the pond, he would have espied two figures, motionless and alert, silently peering toward the northern sky. Each held a gun carelessly over his knee. Before them in a small open space several decoys floated lazily with the ripples.

Do they see those small well-nigh invisible specks away toward the North, which but for their V-shaped line would scarcely attract the attention of even the trained eye? Do they hear the faint almost inaudible chuckling of these beautiful winged creatures as they chat and joke in their onward flight? Yes. For soon the swamp sparrow was startled from his perch in the willows; the screech-owl flapped his wings and turning his head from side to side peered inquiringly through the twigs. The far-away hills sent faint responsive echoes to the shrill "quack! quack! quack!" The silent figures had observed the passing line and one of them had blown into his duck call. The line swerved at the sound of the call and came directly toward the pond. The slight rustle of their wings grew louder and louder until at last it developed into a sound like the raging wind as it whistles through the treetops on some chilling winter's eve. The figures remained silent and still. The flock of mallards, for such they were, circled round and round, coming by degrees nearer to the water's surface. Presently they seemed to hover lingeringly in the air just above the decoys. Four reports rang out in quick succession on the still evening air. They were echoed and re-echoed along the water until the first loud report had gradually died away in a faint, far-off roar. The occasional glimpses through the louds of smoke revealed a confused line of departing

ducks. And there before them on the water lay two mallard drakes creating much confusion in their final death struggles.

Again silence reigned supreme. The gorgeous colors of the west faded into a faint red streak along the horizon. The evening star shone out large and clear and was the signal for the advent of many other heavenly gems. The bullfrogs croaked and bellowed. The marsh hen cackled and the hooting of the owl seemed plainer than before. The boat was guided slowly to the bank and the hunters disembarked for their homeward tramp.

That night their dreams revealed to them the happy hunting grounds of the red men, and when they awoke from these sweet dreams of peace they had none but the happiest remembrances of the evening on the pond.

BANG-BANG.

ABOUT CALIBERS.

Editor Forest and Stream:

Every sportsman has his own pet theory in the above question and everyone will advance some more or less strong argument in defense of his own gun. Personally I have always used a .50-110-300 Winchester, but am not satisfied with it, and in fact so little did I like it that had it not been for Mr. Irland's interesting letter in last week's paper I would have bought one of the new .30-cal. smokeless with mushroom bullets to experiment with; mind you, I did not say to shoot moose with.

The Indians here invariably prefer a shotgun to a rifle; using a ball cartridge, of course, when the game can be approached sufficiently close, say 80yds. and under. Now this is not a matter of expense with them, because I can cite several who have been offered a rifle and preferred a cheap shotgun; they argue that it makes a bigger hole and kills more quickly, and in matters of wood life I am very prone to follow the red man's advice and counsel. My own fault with the .50-110-300 is want of accuracy; I mean to say you cannot be sure to an inch or two where the ball will go at say 50yds. and the greater the distance the less accuracy you have.

Then again the trajectory is in my opinion too high for a good hunting rifle. How often the hunter comes on game some foggy morning, or perhaps they are away up on a hillside, or a dozen and one things may combine to render it an extremely difficult task for any but the most experienced hunters to judge the distance correctly. Take the instance Mr. Irland gives of a moose 300yds. away across a lake. Now I am quite sure that ten out of every twelve hunters will make a big error in estimating distances on or over water. Had we a rifle with such a low trajectory as to make any shot up to 300yds. almost point blank, we would have nearly solved our question. The misses made are nearly all in my opinion owing to overshooting.

A bullet that will hit hard is wanted also, something that will give a great shock, and of course the more ragged the wound the quicker an animal will bleed to death. This is accomplished to a large extent with the soft nose bullets.

A friend of mine has an English express rifle which shoots point blank at 200yds. and it makes a big hole too. Among American rifles I fancy the Winchester .40-125 would act almost the same, but then the trouble is one has only two shots in the first rifle and one shot in the next, and several times in the past my repeater has given me game which otherwise would have escaped.

To sum up, I think that what we want for moose and caribou is a big caliber, low trajectory, great penetration and the mushroom bullet.

Let us hear from some other hunters on the subject. I may say in closing that the Winchester people tell me they cannot make me a workable .40-125 repeater.

HALIFAX, N. S. TIAM.

MOOSE HUNTING WAYS.

Editor Forest and Stream:

I read Mr. Cecil Clay's admirable article in FOREST AND STREAM of Feb. 8, and I like it very much except in so far as the part I do not like, which is the part in which he contumeliously refers to me. He mentions no names, but he is discovered. I know he refers to me. I feel it in my bones. He mentions certain phrases which I considered excellent, and which I deliberated over some days in my garret room before I used them. He trippantly tosses them to one side as if such phrases and such ideas were to be found at every corner. I could have forgiven him if he had even said that they were pretty, but he didn't, and therefore as to being forgiven we will let that go.

His whole argument is not on the theoretical merits of the question, of which merits he must be well informed. No man knows precisely just what the theoretical merits are, although Mr. Clay writes of them. I have written of them also. I don't know what they are. As Mr. Clay treats of them learnedly, I am constrained to believe he knows what they are. I wish he would define them instead of assuming them. Making an assumption and then drawing a conclusion is too nimble a way of proving a case. That is the way I did. I had hoped it would not be copied. If you wish to prove you are right, just show that some other fellow did the same thing or worse and presto! proven.

I forgot to mention that this was all about moose and moose shooting. Read Mr. Clay's article in FOREST AND STREAM of Feb. 8 and it will save me some explanation.

I do not agree with Mr. Clay in his oracular statement when he says, "The pleasure is in the hunting, not in the killing." If the pleasure was in the mere hunting, he could hunt mushrooms, or wild strawberries, or rats. There is more than the mere hunting. There is the danger. There is the capture. There is the food. The more dangerous the animal the greater the zest of sport. There is the personal danger of being hunted, and the personal gratification of victory.

These are the old savage considerations which surrounded man's aboriginal environment when he was hunter or hunted. In civilization, man returns to his primitive life betimes and revels and thrives. He has delights, but he does not understand them. He tries to interpret them according to the light of his experience, and not the light of his nature.

Mr. Clay sums up the whole matter in the argument *ad hominum* as follows: "Opinions depend upon the point of view." There he hit it. The *ad hominum* is good. Since my very learned and most correct articles on moose hunting as it is not practiced—the theoretical of the par-

lor as against the reality of the field—I have had some practical experience.

Now a fellow when he sees a moose feels different then from what he does when he reads that the other fellow has seen it. There is quite as much difference as there is between the pathos of prevention of cruelty to animals which are not to be killed at all and animals which are to be killed if you can kill them.

In short, I went moose hunting myself.

Gentlemen, when you have worked and waited, toiled and boiled, hungered and thirsted through several days, then have seen a moose, you are not very apt to organize yourself into a country debating society as to whether you will do so and so or whether you would better do thus and thus. The ethical principles which are so nice in the parlor, where gas light and dress suits are in evidence, and where immaterial sentiment overshadows absent reality, may be all right under those conditions, but possibly may be out of place with a man who goes out to get moose. When you go for moose the way to get him is to do so. A dress suit is out of place hunting moose—a moose costume is out of place in the parlor.

When I saw my moose I forgot all about the niceties of the parlor; the rules which obtain for the hunter who does not hunt; the rules which one fellow who doesn't makes for the other fellow who does. I saw my moose at 200yds. and I turned loose, but, gentlemen, I could not do it again unless I had a chance. There is nothing like true ethics of sportsmanship for the other fellow and making the other fellow live up to them. Long live the *ad hominum*. Let us hope that Tiam will be generous to one who has emerged from the theoretical to the practical.

DICK OF CONNECTICUT.

CHICAGO AND THE WEST.

The Wardens and the Markets.

CHICAGO, Ill., Feb. 21.—It may be news to most folk to learn that the game wardens of different States are looked upon as legitimate source of supply by the game dealers of the delectable commission street of this city. The laws of some States render this one of the possibilities of the fearful and wonderful protective system of the United States—a system which is rushing the game into market as rapidly, perhaps, as any that could well be devised. I am in receipt from Mr. Will Cave, of Missoula, Mont., of a circular sent by a Chicago commission house to Mr. Jos. S. Booth, game warden at that point. The circular speaks for itself, and I give it, hoping thereby to show the enterprise of the dealer in contrast to the lack of enterprise of the average sportsman-protectionist over the country. I may add that Warden Booth declined to take advantage of his position in this way.

CHICAGO, Jan. 22.—*Game Warden*—Dear Sir: We wish to call your attention to the excellent facilities and the large trade we have in game of all kinds. Handling game in car lots and less from the different wardens and shippers in the different States, we feel confident we can handle any and all shipments you may favor us with to the very best possible advantage. We report obtaining the following prices to-day. On all large lots we obtain the highest prices. * * * The open season is drawing to a close and not much time left to ship. In conclusion, let us say that if you have disposed of your game this season, let us make some arrangements for your future business. We can make it an object for you to do business with us. Awaiting your reply, we are yours truly,

EICHENGREEN & KENNEDY.

It may not be plain to all just how a game warden can become a seller of game, and for the benefit of those who do not understand the wrinkles I will explain by an instance taken from the annals of protection in the State of Illinois. It will be remembered that our illustrious warden, Mr. Blow, last summer brought action against a cold storage outfit in Kewanee, Ill., which had for years been worse than a menace to the game of the State. Our statute provides that a fine of not less than \$5 per bird can be imposed upon one having illegal game birds in possession. It further provides that the game seized is to be sold at auction by the warden, half the proceeds of such sale to go to the warden and half to the school fund. It is curious to reflect that Warden Blow never made any attempt to have the man Merritt fined at all, but he vigorously went after the illegal game, getting Merritt's sworn admission that he had 27,000 head of illegal birds in his freezer. The case then went on in the usual legal grind, the game being replevined from the warden by Merritt, and left *in situ* in the freezer, under bond given by Merritt of \$10,000. In the meantime, of course, the warden got nothing for his services, nor did the deputy, who really deserves the credit for getting the evidence which convicted Merritt. The case was to come up at the next session of the circuit court, which falls on the second Monday of this month. (The judge advises that he will probably have his regular jury in working shape some time during the first week, so the case may be heard from within the next ten days from now.) Should all go well at that session of the court, Warden Blow will be the proud one-half possessor of 27,000 head of game. He is shrewd enough to know that no jury would fine old man Merritt, offender though he certainly is, anything like the amount of the lowest just legal penalty; and he knows that he has, in his half ownership of this enormous amount of game, a legal though outrageous cinch on making ten times as much as he could ever have made in fines. He has behind him, in short, the law of Illinois and all the machinery of the commission business, which openly sends out circulars to the wardens and offers to buy their game. He knows he can sell that game for a big sum of money at a *bona fide* sale, for game in these days is worth good money. He knows that he can convey title absolute to that game. In one sense he is not to be blamed for taking advantage of a law which seems to have been framed expressly for the behoof of the game markets of Chicago. This is our law—we take what the dealers allow us to take when it comes to legislation. This shows again the enterprise of the trade and the lack of enterprise on the part of the sportsmen. I do not need to refer again at this place to the shameful record of the sportsmen of Illinois at the last session of the Legislature, when by reason of the blunders of this same man Blow and his would-be friends we nearly lost even what law we now have left to fight the markets with.

This, then, was Mr. Blow's laudable record in the Merritt case. He went first after the game, not after the

finer. I have always told Mr. Baird and Mr. Bortree, who led the prosecution for the warden—and who deserve credit for doing what they did, although they might have done far better—that they made a mistake in not proceeding under the full cover of the statute and not simply trying to get hold of that game under a part of the statute; although I have not thought that they would spare Merritt in any way if they had the engineering of the suit from the start, and they claim they would later have had him fined also. At any rate, they made no effort to have Merritt fined at the time. All the wild stories printed in a Chicago sporting sheet about the enormous fines that had been imposed on Merritt were canards pure and simple and samples only of bad journalism. But now let us see a little further along, and perhaps we shall understand why Warden Blow just now is a trifle on the anxious seat over his biggest game case. It may be that he is hoist by his own petard. Seeing that no attempt had been made to fine Merritt, and having the records to show that the warden had gotten possession of certain illegal game (the lots of game, 161 birds in all, which were sent out by Merritt on the decoy orders which led to his arrest), State's Attorney Graves seems to have concluded that he could take a hand in this affair about as well as not. So last summer, as was duly recorded here, he brought action against Merritt exactly as the warden or whoever laid the plan of the original prosecution should have done. He secured the lowest fine, \$5 for each bird, and this Col. Merritt paid gladly and cheerfully, it making only \$805 in all, nothing being said about those 27,000 other birds down cellar in the airtight tin tanks which Col. Merritt had sworn to owning and having and holding. Now what is troubling our friends of the prosecution is this question: Will not that county jury next week be of the belief that the eminent fellow citizen, Col. Merritt, has suffered enough? Will they not continue to believe that all that money ought to be kept in the county and not allowed to go out, even to the extent of one-half, in the hands of Chicago aliens? For, be it remembered, when lawyer Graves gets Col. Merritt fined, instead of the warden doing so by his lawyers, the fine rests in the community and does not go to the great city of Chicago, where it is as likely as not to be spent for theaters, cigars, beefsteaks and other riotous living, and not employed in disbursements among the church contribution box, the grocery store and the Christmas tree, as, I am sure, the esteemed fellow-citizen Col. Merritt and his associates at Kewanee will insist in employing it since matters have turned out as they have. This is how lawyer Graves may have been a benefit to Kewanee and a detriment to Chicago.

I trust now everyone can see how a game warden can become a valuable source of supply for the game trade.

In his annual report for this year Warden Blow records sixty-seven arrests and sixty-two convictions. This is a good showing. If Warden Blow would confine his labors to executing the law and not attempt to select or frame legislation, he might come to be a very useful citizen.

Feb. 22.—The celebrated Kewanee freezer case, State of Illinois vs. H. Clay Merritt, was set for trial at Cambridge, Ill., for last Thursday, Feb. 20, but at this writing no word has been received from the seat of war. Mr. F. S. Baird, of Chicago, and Mr. C. K. Ladd, of Kewanee, have been retained by the directory of the Illinois State Sportsmen's Association as attorneys to carry on the prosecution against Merritt. Mr. Baird, Warden Blow, Deputy Warden S. L. Hough, who secured the evidence against Merritt, and Mr. M. R. Bortree all left Chicago for Cambridge last Wednesday evening. The case will be very bitterly fought; the present phase of the action being only that concerning the ownership of 27,000 head of game which Merritt has under oath admitted to be in his freezer. The result will be received with great interest.

Feb. 24.—The sportsmen lose the Kewanee freezer case. Judge Bigelow admitted the record of the earlier criminal suit against Merritt by States Attorney Graves and held it *res adjudicata*. Merritt thus retains the freezer full of game. Warden Blow overreached himself and got nothing. The sportsmen will carry the case to the Appellate Court next October. Merritt appealed earlier criminal case to Appellate Court next May. The May decision will indicate October decision. Both parties will carry the action *in rem*, testing ownership of game, to Supreme Court next January. The freezer game remains in bond. States Attorney Graves has filed a \$50,000 libel suit against Warden Blow and two Chicago daily newspapers who alleged bad motives.

Montana Wolves.

CHICAGO, Ill., Feb. 22.—According to the report of the State treasurer of Montana, there were 13,000 coyotes and wolves killed during the year 1895, in the proportion of one wolf to eight coyotes. The wolf bounty is hence quite a serious thing. And there are plenty of wolves left.

Running Elk.

J. S. Vidal, prosecuting attorney of Lander, says he will make an example of any one who attempts to run down game out of season, for he declares for every calf elk captured and shipped East there are at least ten killed in the chase or die after being captured. This position is said to have been taken on account of recent orders received by professional hunters to furnish young elk and other game for Eastern park owners.

Distinguished Visitors.

The antarctic explorer, C. E. Borchgrevink, is in Chicago this week, and has delivered a lecture upon the subject of his explorations in the region of the South Pole. He is fitting out another expedition, which will leave London next September. He will take eleven men with him into winter quarters on the main land of the far southern region, his ship returning for him in the spring of 1897.

Interesting Observations on Fur.

CHICAGO, Ill., Feb. 25.—Some very interesting observations on fur taking are on hand at this office in a letter from Mr. W. T. Chestnut, of Fredericton, N. B. It would seem that New Brunswick is very much of a fur country, more so than our State of Wisconsin, and one could well share the wish that the FOREST AND STREAM fur trip had been made to that more prolific region. I cannot do better than give some extracts from Mr. Chestnut's letter, which are valuable and much to the point. Among other things he states that he has just been out on a long trapping trip with Mr. Braithwaite, an old trapper

of that country, and has occasion to say something about snowshoes.

"Notwithstanding you got bad shoes in Montreal, we can supply shoes in New Brunswick that will not sag, no matter how wet they get. A good pair of caribou shoes will get tight when wet. Our country is very rough, and skis would not do. I have seen them used in the West. They are fine in open country.

"When I went in the woods this fall, Mr. Braithwaite, my companion, had seven families of beaver located, and if you had been along you would have had a fine chance to see this most interesting animal. One large family in particular had a fine house, large dam, feed cut for winter, and the whole operation of beaver work on a large scale.

"About wooden traps. All of our lines here for sable are set with a deadfall on top of a stump, as shown by Tappan Adney. Our best trappers would not use a steel trap for sable under any circumstances, and steel traps cost less than a good deadfall. One reason is that in our country the snow gets 5, 6 or 8 ft. deep, and a trap on top of a stump will not get snowed under so quickly. The next reason is that sable caught in a deadfall bring a better price, as the fur is not mussed or cut, as it is when caught in a steel trap, as Mr. Sable is a plucky little fellow and tries his best to get out. Another reason is that in this part of the country our moose bird or Canada jay would steal the bait out of your steel traps faster than you could bait them, and a deadfall properly made can be set so as to take in a sable and still keep out a moose bird. Fourth and last, a deadfall never misses if rightly set.

"In your hunting country you use steel traps for small fur and deadfalls for bears, but in ours we use deadfalls for small fur and steel traps for bears.

"Joe Blair's deadfall is a good one, and there are hundreds of them in our woods; but the man that hunts bears for a living does not depend on a deadfall. An old coaster of a bear would not go near the like of that. A few years ago they would, but have been so much hunted that they are shy of them; and so it is only the back settler or the small trapper that uses them to any extent. Of course for mink we use some steel traps and for lynx steel traps.

"Mr. Braithwaite has fifty steel bear traps, and I have known him to take thirty-three bears in one spring with twenty-six traps in use. He has thirteen camps and probably 100 miles of lines. Perhaps you are aware that here we have the finest otter in Canada, and that is saying a good deal, and beaver are by no means extinct, as I have seen Braithwaite get fifty-two one spring not so very long ago.

"Another instance is about moose. A Mr. Rich, of Bethel, Me., had in FOREST AND STREAM a statement saying that moose seldom, if ever, barked a tree all around, not wishing to kill the tree. Here again we are at loggerheads. I mentioned it to Mr. Braithwaite this last hunt and we took particular notice of all peeled trees. Whenever we found one peeled all around, and there were many, we would call it one of Rich's trees. Our idea is this: if a moose is feeding along he peels the side nearest to him and goes on, but if he is in no rush and staying in one place, he will stand and peel the tree as high as he can and all around. We saw hundreds so done.

"It always makes my blood boil to hear about the way your game is handled in the Park, and of course most Americans will not agree with me when I say that I think we could look after it better in this country than you do. If you had our northwest mounted police over there for a while you would soon get rid of the poachers. I can't understand how that winter, after all the trouble to get Howell, your people let him go. You can't walk through our courts like that."

There are no two opinions in regard to the efficiency of the game laws of the English Provinces as compared to those of the United States. We have everything to learn here in protective matters, and will probably not learn it till our game is gone. In regard to the specific case of Howell, the Yellowstone poacher, however, the reason he got clear was that at the time of his arrest there was no law under which he could be held. A better one now exists for the Park, and when Idaho has one equally severe we shall perhaps hear less of the killing of the Park buffalo.

Black Lynx and other Freaks.

All the way from Calais, Me., Mr. Geo. A. Boardman writes in further comment on the fur articles in FOREST AND STREAM, and adds some curious information on the subject of color variations in animals:

"In your article about deadfalls and 'trade names of furs,' you say lynx never grow black. I thought it might interest you to know that they sometimes do. In my early visits to South Florida many years ago I used to be told there were black wolves and also black lynx (*Lynx rufus*). Upon my telling Prof. Baird, of the Smithsonian, what I had been told he wanted very much to get skins of each for them, which I did. I made the acquaintance of a gentleman naturalist by name of Tappan, whom I told my wants (who now, or did, a few years ago, live at Mandan, near Bismarck, Dakota). He collected a fine specimen of black lynx (*rufus*) in Lee county, Florida, and was kind enough to have it sent to the Smithsonian, where they have it among their specimens. It was a nice shiny black, and the spots on the side shine through very prettily. He also sent them skins of black wolves, as black as any bear. The bear skins were not uncommon, but the bear skinners used to cut off the head and tail often and you could not be sure what the animals were.

"Melanism is more rare than albinism. I once got a black robin from the nest, kept it until it moulted in the fall and came out as black as a grackle. In about three weeks it began to turn into an albino, but as I had several white robins I killed it and had it mounted. It went the rounds of the naturalist and is now in my collection. I have thirty-five albino birds and some animals."

Michigan.

Mr. F. A. Mitchell, general passenger agent of the Manistee & N. E. R. Co., whose residence is at Manistee, Michigan South Peninsula, called at this office during the week and afforded a chance for a good talk on game and fish matters in his part of the State. He says that only one non-resident shooting license was taken out in Michigan South Peninsula, although crowds of non-residents fraudulently obtained resident licenses. The result of the license law in Michigan seems to have been as earlier indicated in this correspondence; the shooters who could

not sneak into their old grounds in Michigan went to the deer country of Wisconsin. It would seem that a law of this sort should obtain in all allied States, and not one or two, to actually save much game in the total killed. The license law of Michigan only means that more deer will be killed in Wisconsin, though it certainly means less killed in Michigan.

Mr. Mitchell is an ardent fly-fisher, and speaks with the greatest enthusiasm of the sport of grayling fishing, of which he is especially fond. He says that the State is not yet quite stripped of the grayling supply, though that fish is by no means so abundant as it was in former years.

California.

Mr. E. H. Wilson, of Perris, southern California, said in course of a conversation at this office this week, that in his locality one can still find good deer shooting, and if lucky a chance now and then at a grizzly. The glorious climate of California, as is well known, is reputed to produce a bigger and tougher grizzly than any other section of the country can offer, and one who has been lucky enough to get a California bear necklace can pose indeed as a bad man.

Texas.

Mr. Guessaz writes from San Antonio conveying the sad news of the death of Harry Laning, a Chicago shooter of good acquaintance who went to San Antonio last year to live. Mr. Laning was in poor health for some time, and lately had a bad accident, falling down an elevator shaft and sustaining serious injuries from which he never recovered.

Mr. H. O. Wilbur, of Philadelphia, who has been spending some time in Chicago, starts next week for a long visit to the duck country of Texas. He will probably go to Port La Vaca, east of Rockport and west of Galveston.

Progress in Gun Making.

The rapid progress in perfection of the modern shotgun is well shown by a little invention which I discover to be in the hands of Mr. George W. La Rue, of New York city, who is in Chicago for a few weeks. Mr. La Rue has patents for a new shell ejector, which he has hopes of selling to some gun firm for a modest remuneration. It is a very plain and positive sort of thing, can be attached to any shotgun, and should cost, he thinks, but a trifle in addition to the cost of a good gun. No doubt the world will yet see all of us fellows with single trigger hammerless ejectors of 3 lbs. weight, capable of firing a shot a second, and fatal at 100 yds. What we will be shooting at in those days is another story. Read the answer in the stars—and FOREST AND STREAM.

Michigan.

CHICAGO, Ill., Feb. 14.—Mr. Chase S. Osborn, fish and game warden of Michigan, is in town this week, on his way to Mexico with the large and influential State Press Association of which he is acting manager. Mr. Osborn is a bright and intelligent gentleman of fine presence and nervous, pleasant manners. He is a newspaper man of ability, owning the newspaper at Florence, Wis., and also the *News*, of Sault Ste. Marie, the leading paper of that city, which is his home. Mr. Osborn is the sort of warden of which we need more—a man of responsibility, character and dignity. He has cause to be proud of his work in Michigan protection. He says that on figuring up the results of the year's work in protection for Maine, which is much vaunted these days, he finds that Michigan has done five times as much as Maine, though relatively little is heard of the latter State. Mr. Osborn thinks that very few non-residents sneaked in on resident deer licenses last fall, and he insists that very little venison was shipped out of his State.

Minnesota.

Mr. S. F. Fullerton, "executive agent" or State warden for Minnesota, has destroyed 60,000 ft. of illegal nets this season. He says that the warden of Wisconsin and himself work together and are of great assistance to each other. Mr. Fullerton finds his greatest trouble with the game dealers, but hopes eventually to see the latter put to complete rout.

The case of the State of Minnesota vs. Wm. Corcoran, mentioned as appealed in FOREST AND STREAM of Feb. 8, has been passed upon by the Supreme Court of Minnesota, and the result is a victory for the sportsmen and a defeat for the commission merchants. The Supreme Court holds that it is not class legislation to name commission merchants under the restriction that they shall not receive any portion of a Minnesota deer other than the head and horns.

Wisconsin.

Mr. C. Eseman, of Waupaca, Wis., says that the sportsmen of that vicinity have practically broken up illegal fishing in the lakes thereabout. They confiscated one set line with 640 hooks. Illegal seining has been almost entirely stopped.

Ice yachting has been progressing for the past week in great style on many of the Wisconsin lakes. On Feb. 11 a regatta was held on Lake Winnebago in which thirty boats participated, hailing from Oshkosh, Neenah and Fond du Lac. The course was twenty-four miles in length, triangular in shape. The boats raced for the Fond du Lac silver cup. Mr. Charles Norris, of Chicago, judged. There were eight finishers, and Oshkosh (boat No. 14) won; time, 37m. 10s. Fond du Lac was second; time, 37m. 47s.

Texas.

Mr. M. B. Davis, of Waco, Texas, voices a beginning cry of Texas sportsmen against the destruction of Texas game and asks help of her sister States to change the tide of affairs. He complains that the Texas coast is overrun with Northern shooters who slaughter the wildfowl without measure or moderation on their winter resting grounds. Mr. Davis deprecates the inefficient character of the Texas statutes, especially as touching upon the export of game.

Mississippi.

Mr. Noel E. Money, of Oakland, N. J., has shipped to Capt. R. E. Bobo ten foxhounds, to be added to the famous Bobo bear pack. He will later add several of the rough-coated Welsh hounds, which, he thinks, will be of great value in the pack.

Chicago.

A party of distinguished gentlemen will start on next Friday, Feb. 21, from Chicago on a long and pleasant journey of rest and relaxation in the sunny Southwest.

They are all hard-working business men and their names are as follows:

Mr. A. G. Spalding, of the well-known sporting goods firm A. G. Spalding & Bros.; Mr. Edwin A. Potter, of the Lyon & Potter music house and president of the Chicago Athletic Club; Mr. Gilbert B. Shaw, president of the American Trust and Savings Bank, Chicago; Mr. J. B. Wilbur, president of the Royal Trust Co., Chicago; Mr. A. J. Roach, of the sporting goods trade, Philadelphia. They will spend the month of March on Mr. Spalding's ranch in Grant county, near Deming and Silver City, New Mexico. All are bicyclists and will take to the ranch in this natural home of the broncho the rubber shod machines which seem so rapidly taking the place of the horse—a most unique incident to chronicle. The gentlemen will also take their guns and other sporting equipment, and will spend more than a month of happy days in the delightful region of New Mexico.

Baron von Hegenmüller, of the Embassy for Austro-Hungary to this Government at Washington, D. C., stopped at Chicago this week for a short time, en route to San Francisco, and had his guns overhauled in preparation for some sport in the West. He concludes his American tour by a visit to Florida.

Mr. Chauncey Ward Chamberlain, of Boston, Mass., paid this office a pleasant visit this week. Mr. Chamberlain says that he has a complete file of *FOREST AND STREAM*, from the first number of the old *Rod and Gun* down, and adds that his admiration for the paper increases each year.

Deputy Warden S. L. Hough reports the following convictions secured by himself this week of Chicago dealers selling game after the close of the selling season: H. V. Wennecke & Son, Thirty-first and Dearborn streets, ten squirrels and one dozen quail, \$20 and costs; H. & J. Goldenberg, 188 West Randolph street, nine squirrels, \$5 and costs. Mr. Hough brought his suits before Justice Foster, and that gentleman was so good as to say that an officer of the law ought not to secure evidence by buying illegal game. How else should he secure it?

A farmer by name of Edward McClellan, living near Lake Forest, a Chicago suburb, on Feb. 12 shot and killed the wolf which has lately been ravaging Chicago chicken coops. Chicago is a good place to go wolf hunting when there is a good tracking snow.

Two heavy snowstorms have given this city about 2ft. of snow within the past week, and the snowshoeing has been good in the country near by. I find that the little village of Glen Ellyn, about twenty-five miles out on the Chicago & Northwestern Railroad, offers many advantages for snowshoe parties. The nearest hills to Chicago are located there, and they are good stiff hills, which do very well for *ski* and toboggan work. There is also a little lake and a lot of woods, so that one can have quite a good winter day of it there.

It is a curious fact that the sporting goods trade of Chicago is almost entirely ignorant of snowshoe matters. I tried in vain at the best stores here to get a set of snowshoe straps, failed further to get a set out at a house making sportsmen's clothing, and at last made myself a good set out of some rags. I had not seen a decent pair of web shoes shown in a Chicago store this winter, nor found a clerk who knew anything about them. A friend of mine wanted a pair of *skis*, and went out to buy them, but failed ingloriously. There was only one pair in Chicago, and they were a curiosity. They were constructed of spruce, about 3in. wide, on wholly impractical lines, with utterly absurd straps, and—shades of Billy Hofer!—they were turned up at both ends! The genius who evolved that *ski* model is unknown, but it is a shame that such goods are not supplanted by practical tools which would encourage the growth and enjoyment of a healthy outdoor sport which should be better appreciated in Chicago. This city has good country near by, and often has good snow.

White Deer and a Pine Nut Bear.

An interesting communication comes from Mr. E. Elliott, of Seattle, Wash., in regard to an island in that region where albinism in deer seems to be unusually common. This island is known by Whidby Island, and two of the deer killed there, one entirely white and one mottled, are on exhibition, mounted, in the Rainier Grand Hotel, at Seattle. Mr. Elliott says that Whidby Island is an island offshore in Puget Sound.

Elk in Michigan.

From time to time I have mentioned the report that there were still a few specimens of elk alive in Michigan, though I do not care to name the locality where they now are thought to range. But I can give the time and place where probably the last elk were killed in Michigan. Mr. F. H. Lord, general passenger agent of the Chicago Great Western Railroad, this week told me, by mere accident, that when a boy he "used to tramp around in the Michigan woods after elk and deer."

"Elk!" I said, skeptically. "Are you sure about that?" "Yes," said he, "my father and I killed elk in the South Peninsula of Michigan when I was a boy. I must have been about 15 years old then and that would bring it about in 1866. My father was lumbering in the Cass River country, in Tuscola county, Michigan South Peninsula, near where Caro now is. One winter we got track of a band of seven elk and went out after them on the snow. We surrounded them—I think now they must have been yarded, like moose—and killed four out of the seven. I recollect very well how nervous I was with my old muzzleloading rifle, but I shot one of the elk. The horns of those animals were around our home place for years. I saw them there long after I had grown to manhood, and probably they are lying around there now."

The above is the only account I have ever been able to get from an eye-witness of elk actually seen in Michigan or Wisconsin, although there is much indefinite hearsay evidence. Mr. Lord is to-day barely a middle-aged man, and the experience he relates shows how rapidly the actual is passing into the hearsay in the matter of American game.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

NOTES FROM THE NORTHWEST CORNER.

WASHINGTON.—Let's see! was it Dick of Connecticut who was the doubting Thomas anent the clipping of grouse's heads with bullets? Seems to me it was. I am afraid Dick is a rather incredulous person. You remember that he mildly called in question the veracity of my account of the origin of that resurrected and now re-adapted word *eheu*. His elucidation, amplification and invention *in re* were pretty neatly done, though.

Concerning the grouse business, I notice that several rifle shooters have run up against D. of C. in rather a convincing manner. Why, even I, who do not pretend to honors in rifle shooting, have been convincing myself that D. of C.'s doubt was sadly misplaced. I've got an old .40-60 Marlin with a 10lbs. pull with which I have lately been doing the decapitation act. Of course I don't do it every time, but I've no doubt I could improve if the grouse would hold still and allow me to choose my distance and get a rest, and the sight wouldn't be elevated for 200yds. occasionally, and the trigger pull was reduced to 3 or 4lbs. and I had front and rear Lyman sights. But I'm doing pretty well as it is—well enough to satisfy myself and the grouse that the feat is not imaginary.

Ruffed grouse are numerous in this country, and I hear them drumming even at this late day in the year. Blue grouse, or "hooters," are not so plentiful, but probably will be more so when the snows drive them down from the heights.

Those of your readers who have lamented the disappearance of the wild pigeon from the East might gladden their eyes with the sight and their game pockets with the bird were they out here. I haven't seen any very lately, but when the barberries and elderberries were ripe I renewed my acquaintance very pleasantly with *Passer* something or other (I believe), shooting quite a number, but not seeing more than twenty or thirty in a flock. It was a very gratifying experience after an interim of

CAPT. R. E. BOBO.

twenty-eight years, and I had it borne in upon me once more that the big swift-flying bird would carry a good many shot out of my reach. I shot them along the creek bottoms and—well, that reminds me that a creek out here is a mighty good thing to have around. When I think of some creeks along and about which one might wander all day and night and see nothing but a chub or mayhap a muskrat, it makes me sorry for some folks. Along these creeks grow wild gooseberries, and sal-lal berries, and barberries, and elder berries and other kinds, on which the grouse grows lusty and fat as he drums in the fringing thickets on his favorite log. Up these creeks swarm the lordly salmon, and whenever you will, you may have a day out with the dog and club. In these creeks under the shelving rock or protecting log lies the watchful and beauteous rainbow trout, waiting to spring like an iridescent flash at your fly. Overlooking these creeks sit flocks of pigeons in berry time, but generally, alas, too often, afar aloft upon some sky scraping fir whence they look with mild curiosity upon the being below who crawls through the bushes in vain. But at morning and evening, when feeding, the man with the gun has his innings.

To these creeks comes bruin from his mountain lair when the salmon are running, and there you may build a blind and wait for him to come to the feast, than which there is none other so toothsome—and you may wait and wait, and wait and wait, morning and evening, early and late, for bruin to come with shambling gait. You may shiver and shake in the chilling morn when the frost lies thick ere the day is born. You may sit in patience until the night has blotted out your ivory sight, and you're cold and hungry and disgusted quite, and never get a shot. These bears are wonderful cute, and had much rather come when they get ready. Then again, when you're least expecting them and don't want them at all, they loom up as big as a steer. But their reputation for courage hereabout is away down. Howbeit, I'm not in search of a scrap with a wounded bear in a hole.

To return to the creeks, last but by no means least, the darling little ouls may be interviewed at any time, and they will jerk you one or a dozen of the cunningest little courtesies that ever was, and flip into the water and out again in a wink, unconcerned while the big salmon a foot away plies his sculling oar and the swirling water bubbles in his wake.

So, you see, a creek out here is a *ne plus ultra*, *summum bonum*, *facile princeps*, *sui generis*, *E pluribus unum*, Washingtonian sort of stream.

O. O. S.

A Gloomy Growl from Michigan.

THE editor of *FOREST AND STREAM* appears to have a sort of notion that any discussion of the ethics of cat shooting is wandering into foreign fields, even when the cats were killed in the interest of bird protection. Perhaps he is right, but I would like to know how it will be in twenty years from this time. To me it looks as though the men of that day will be lucky if they even find a cat to shoot, unless indeed they are of those permitted to maintain game preserves.

It is hard to make the sovereign people see the importance of the strict enforcement of such game laws as they have, and this will be the case for some time to come in most of our States.

I can never bring my mind fully into sympathy with any laws tending to exclude the inhabitants of one State from shooting or fishing in another. Such policy seems essentially un-American. Were I dictator I would give the State game wardens more power, and more money, if necessary; make the penalties heavier for infraction of the statutes, and give half the fine to the complainant.

Our State game wardens have done well with the chances they have had, yet they have accomplished but a fraction of what they might had they been permitted and empowered to do their best work in the best interests of the people.

I fully agree with one of your correspondents that the natives need looking after as much as the visiting sportsmen. I think more, for they are on the grounds at all times, and few of them have much respect for the game statutes. For instance, I doubt if there are three men besides myself in this county who in trout fishing habitually observe the 6in. law.

Then the way nearly all the best camp grounds are destroyed for such uses by axe and fire is heart-sickening. And the bass. Defective fishways, or the lack even of these, and the deadly spears and nets, have so exterminated these fish, as well as the maskinonge, in the intermediate lakes, that it is now scarce worth while to fish at all.

If one does get a fair-sized fish, it is pretty sure to be scarred by a spear, and the old grounds seem to be deserted by the bass.

As to deer, I don't hunt them nowadays; it is too dangerous.

I was going to say more, but perhaps this is as much growling as the editor can stand at once, and I will reserve the rest for some other occasion.

KELPIE.

Game Notes from Iowa.

OUR fishing and wildfowl shooting are gradually growing poorer every year in northwestern Iowa, owing to the drying up of our streams and lakes. Many places where I have enjoyed good fishing and duck shooting fifteen years ago can be driven over with a team and buggy. Of course, Spirit Lake, Clear Lake and a few of the other large lakes are left, but they are gradually growing lower every season, and their days are numbered, unless we get increased rain and snowfall for several successive seasons. Our sportsmen are trying to preserve from total annihilation what few fish are left in our larger lakes and streams; to further that end they have succeeded in getting, through the efforts of Senator Funk, the following law passed:

Sec. 1. No person shall have, erect or use while fishing on or through the ice any house, shed or other protection against the weather, or have or use any stove or other means for creating artificial heat.

Sec. 2. No person shall use more than two lines with one hook upon each line in still-fishing, trolling or otherwise.

The above law of course is aimed at the market fishermen, and I believe will accomplish good results if properly enforced; and I believe it will be if the sportsmen of the State will cooperate with our Fish Commissioner.

The following clipping taken from the Cedar Rapids *Republican* shows that we have a real live Fish Commissioner in Iowa:

George E. Delevan, State Fish Commissioner, was in town a few hours yesterday visiting his brother-in-law, T. E. Booth, of the Eureka. He has been having a great deal of trouble with spearmen at Waterloo and Cedar Falls, and has made it pretty warm for a lot of them. He took in sixteen of these offenders on the Cedar River at one time who were making a business of spearing fish contrary to law and then take them to the towns and sell them. Mr. Delevan had them arrested and fined. Part of them were unable to pay their fines and had to go to jail.

Now if those who love the gentle art and want to see our sport preserved will take hold and do their part, I feel sure our fish will increase in the larger bodies of water.

WM. H. STEELE.

FOREST CITY, Ia.

A License Scheme.

Editor *Forest and Stream*:

Those who have studied or hunted the large game of the United States have probably had brought to their notice that for various reasons during the month of September it is, in most cases, much easier to approach the same than during October, November and December, or what is generally considered the open season. Now, to my mind, it is of the most vital importance that large game shall be protected up to at least the 1st of October, and each State should allow no one to shoot without a license. Said license to be granted to all—without cost—by a justice of the peace, game warden, etc., or there might be a small charge of 50 cents or \$1 for the trouble. Now, no license should be granted until the day before open season, and anyone meeting a person shooting or hunting should, on request, be allowed to see their license. If they refused to show said license they should be considered as shooting out of season, and suffer the penalty. This would prevent many people going into the woods before season and bringing out heads and horns just as soon as it opened, and add very much to the protection of large game.

WILLARD NYE.

NEW BEDFORD, Mass.

Megantic Fish and Game Corporation.

THE annual meeting was held on Tuesday, Feb. 25. Treasurer L. Dana Chapman's accounts showed a membership of 300; receipts for the year, \$16,105.69; expenditures, \$16,082.21; total assets, \$20,656.53; total liabilities, \$4,429.49; net assets, \$16,227.04; gain in 1895-6, \$2,984.05.

Sea and River Fishing.

ANGLING NOTES.

Food for Fishes.

I AM well aware that I have friends who expect that I may live to a reasonable old age, and they will not be surprised in such an event to see me tottering around the brooks with a paint brush and pot of paint desecrating the rocks, and nature generally, with signs, after the style of the patent medicine man, reading, "Fish do not live on water," "Fish require food as much as the man that catches them," "Feed your fish if you wish them to thrive and multiply," etc. There is one thing certain, I might do worse than to engage in just such missionary work, for there is sad need of it. One has only to look over the applications made to the Fisheries, Game and Forest Commission of New York, if one really thinks at all, to wonder what all the fish applied for are expected to live on. For little trout brooks that at their best might support a planting of 10,000 trout, 100,000 trout are asked for. Black bass are asked for in such large numbers for certain waters that if, by the mysterious working of providence and the return to miracles, they could be made to live, one could walk across the water in which they are planted dryshod by walking on the backs of the fish.

Fish have good healthy appetites, and unless something is provided to satisfy it they will not do well, but provide the food and they will grow in proportion to the amount of food provided.

A yearling brown trout jumped out of a can in an English hatchery and fell into a rearing pond of trout fry. It was only one little yearling trout and so the hatchery men let the fish remain rather than to draw the pond down to find him and net him out. Nine months later, when the yearling trout had grown to 21 months of age, the rearing pond was drained and the trout taken out, when it was found that the yearling had grown to weigh 5½ lbs. Ordinarily it would have weighed about 1 lb., but by feeding on an unlimited number of his brethren one year younger, it had increased more than five times above the average, though no one could tell the number of fry which contributed to make this weight. Another instance, showing the gluttony of fish when opportunity offers, and the result, was told to me by the late Herr von dem Borne, the distinguished fishcultivist of Berneuchen, Germany. Herr von dem Borne drained a pond in the autumn and allowed it to remain dry all winter. In April following he filled the pond with water filtered through gravel, that no fish life could enter. In June he put in thousands of small-mouthed black bass just hatched and some young carp of the same age. Unknown to the proprietor some pike fry (called pickerel in New York State) had worked through the gravel into the black bass pond when it was filled, and when their presence was discovered at the end of August he drained the pond and separated the fish. The pike were then 5 months old and the largest was 17 in. long and weighed 2½ lbs. This shows that pike will thrive amazingly on a diet of young black bass, but it is too expensive to rear black bass for pike food, and by the same token trout fry are too rich to feed other trout; but food of some sort all fish must have and have in abundance, and it is a waste of time, fish, money, ink and blanks to apply to the State for fish for any water unless there is food in the water for the fish to eat, or to apply for more fish than there is food in the water to sustain them. This is a matter that will be treated at some length in the forthcoming report of the Fisheries, Game and Forest Commission of New York.

Spawning of Black Bass.

A correspondent in the valley of the Hudson writes: "There is a pond here which shows good results from stocking with black bass, and during September and October last I took quite a number of 2½ lbs. average fish. Not the 'barn doors' that we used to wrestle with in Lake Champlain, but for all that good, respectable fish. I observed that in nearly every female fish there was spawn well developed, and as the regular season for spawning is the same as elsewhere, during May and early June, I thought it strange that these fish should have in them spawn well advanced in the late autumn, and wondered whether it was usual for black bass to carry the spawn of next season during the preceding autumn and winter." The spawn observed in the autumn was not developed more than is usual at that time and would not have been deposited until the following summer. Please observe the "regular spawning season," May and early June, and remember that the law of the State permits black bass fishing on and after May 30.

I know full well that this is an old, old story, but how is the supply of black bass to be kept up if it is legal to catch them during the spawning season?

Not by asking the State for millions of black bass annually to supply the waste, as is now done, for the State has not got them and cannot get them. There will be a bill introduced in the New York Legislature this winter to open the black bass season on July 1 each year, and if every one who asks for black bass to plant in depleted waters will take an interest in its passage they will do more to preserve the fish and keep up the fishing than by filling out 1,000 blank applications for bass to be planted, only to be caught before they have spawned, or if they have spawned, before the young bass have left their parents and while they need the parents' watchful care. I cannot let this opportunity pass without saying that it is quite a number of years since I began to answer questions about fish and fishing, and of all the questions propounded I like best to answer such a question as I have put in quotation marks at the beginning of this note, when put to me by an angler, for it furnishes the best evidence that he who puts the question is not familiar with the condition of the eggs of a fish at spawning time, therefore has never caught a spawning fish.

One who has seen ripe eggs of a trout in October will never mistake the ova found in trout in June for well developed eggs, and yet this comment is frequently made of trout eggs noticed early in the fishing season.

Smelt Running.

In New England lakes the fresh-water form of the smelt begins to run up the streams to spawn as soon as the ice breaks up in the spring, and at no other time are

they observed in the streams or shallow water. Commissioner Wentworth, of New Hampshire, writes me that last fall, or perhaps I should say this winter, the ice formed on Sunapee Lake and Pleasant Pond, in New London, to the thickness of 8 in., and then broke up in a thaw, and at once the smelts began to run, something never before known. He does not say the smelt had ripe spawn, but they acted as they do at spawning time. Smelt run up a stream in the night, spawn, and return to the lake or sea before morning, and as they run in great schools the spawn probably develops rapidly, and it would be curious to know that atmospheric changes could influence the development of fish spawn to change the spawning season several months. Anyway, we have yet quite a bit to learn about fish and their habits before we know it all, much as we think we know now.

Value of Inland Fisheries.

When the statistician compiles his figures to show the value of the fisheries of a nation or State he usually estimates the value of fish taken in interior waters for local markets and the fish taken by the independent hook-and-line fisherman, because the quantity taken is so small, comparatively, and the fishing is so widespread as to make it difficult to collect it as returns are collected from the large commercial fisheries. The United States Fish Commission has begun the work of collecting systematically the statistics of the value of our inland fisheries. Mr. John N. Cobb, one of the field agents, has just completed his work in the State of New York. Beginning at Lake George, where quantities of lake trout are taken and no netting is permitted, he worked over to the smelt and other fishermen of Lake Champlain, and then invaded the haunts of the trout fishermen of the Adirondacks. He writes that in some instances he has found difficulty in obtaining information from men who are licensed to use nets, but his canvass has been very thorough, and must prove interesting and of value.

Arctic Exploration and Fishing.

Mr. Alfred C. Harmsworth, of London, who so generously fitted out the Jackson-Harmsworth North Polar Expedition two years ago, and about which we heard so much recently upon the return of the steamship *Windward* after her winter in the polar ice, during which time it was thought she might be lost, writes me that the return expedition will start for the Arctic seas in June, and that he expects to entertain a party of guests on board the ship as far north as Russia, where they will leave her and enter upon a fishing and shooting expedition. He has heard of some rivers that afford excellent fishing, but that are unfished because of their remoteness, and he is bound to have a try at them. He says that the only drawback that he can learn of is the mosquitoes, and that they are the worst in the world; but for unfished waters he is willing to risk the mosquitoes. I shall advise him to try some of our American inventions to keep off mosquitoes, and if they, or any of them, prove too much for the Russian variety of this insect the fortune of the maker of the particular "dope" will be made.

American Salibling for New York.

Col. Wentworth, of the New Hampshire Fish Commission, has assigned 15,000 eggs of the American salibling or Sunapee trout to the Fisheries, Game and Forest Commission of New York, and they will be hatched at the Caledonia station of the Commission and planted in waters in the Adirondack region. Readers of *FOREST AND STREAM* will remember the controversy over this fish a few years ago, as a great part of it appeared in the columns of this journal, and the fish needs no introduction here.

I believe this will be the first time that the fish have been hatched and planted outside of New Hampshire. A consignment of eggs was once sent to New York, but they met with some misfortune in the hatchery and none survived to be planted. A. N. CHENEY.

POLLUTION OF LAKES AND STREAMS.

Editor Forest and Stream:

Looking over the extracts from the report of the New York Fisheries, Game and Forest Commission in *FOREST AND STREAM*, I was forcibly reminded of the indifference of the larger corporations operating in Hamilton county, and their willful violation of all law and decency, and also the carelessness of the so-called game protectors of the locality mentioned.

Piseco Lake is fed by large streams coming in from T. G., Pine, Fly, Sheriff, Ox Bow and other smaller lakes, which until five years ago were full of fine trout, as was Piseco itself. The timber at that time was not all cleared off from the shores of the lake, as is now the case, and timber bark was not sought for as it is now. There was only one way profitable to the devastator of forests to bring this lumber into market, namely, to dam the streams, and take out the stones in the beds of the creeks and small rivers. This was done with dynamite, and I have heard reliable parties say that often it was the case that thirty or more large trout were destroyed by a single blast. But if their butchery of trout in this manner concluded the mischief, we might feel less indignant; but in the case of the Gerundigut Stream—one noted for its fine trout, and having natural spawning beds, where I have seen at one time in the spawning season hundreds upon hundreds of trout weighing from 1½ to 5 lbs., and where the Sacandaga hatcheries employees formerly went to secure eggs—they have thrown a dam across the stream (this dam is situated midway between the lake and spawning beds) at a point not owned by them, and last season during spawning I venture to say there were not twenty trout of more than 2 lbs. to be found on the beds, and 100 of all sizes would have been near the number, when thousands bred prior to the building of this nuisance.

But how is the evil to be remedied?

The protection which the game law gives is by men who are natives or residents of the country, and it seems to be to their interest not to interfere with these individuals who rule Hamilton county; indeed, if we are to have protectors appointed from among the natives, we need never hope for law or justice to do anything but miscarry. Not that they are dishonest, but because if they interfere with these petty tyrants their source of revenue ends, as they, every one to a man, are on the payroll of these corporations and lumber jobbers. Now, this much for our streams.

Our lake is in even worse condition, if possible. During the running of logs, in the spring of the year, the pine dam, on the outlet, is planked until the water is raised from 5 to 6 ft., and is kept there until midsummer, when it is drawn off to suit the large mills at Glens Falls. With this rise of water the former feeding grounds of the deer are rendered inaccessible to them, again affording another rational solution of the scarcity of deer in that immediate neighborhood.

But this is a digression.

This high water interferes with the life of the young fry, and of the hundreds of thousands placed in these waters very few indeed survive.

Then when the monopolists draw off the water (which is when they get good and ready) the shore of our beautiful lake is coated with a mass of festering vegetable and animal matter, which has been placed there by violators of sanitary law, which would not be tolerated anywhere else on the fair face of the earth. When I first located on Piseco Lake it was almost an impossibility to find a dead tree on its shores, but by the regular and protracted submerging of its shores the noble old friends are showing that not the lumberman's axe alone devastates; but his ruthless indifference and the benumbing influence that dollars have on his feelings for the rights of others should be promptly checked.

Again, I implore all who are interested in the preservation of the Adirondacks to strike a blow in the right direction—enforce the law we have, and let new and complicated bills alone. W. H. HACKER, M. D.

PROVIDENCE, R. I.

THE ST. LAWRENCE RIVER WATERS.

POUGHKEEPSIE, N. Y., Feb. 22.—*Editor Forest and Stream:* I send inclosed a copy of a letter received two or three days ago from Dr. Wakeham and copies of his report to the Dominion authorities.

I am inclined to think that the Senate committee will recommend the proposed article in regard to the St. Lawrence River, but am not yet advised as to what action has been taken in regard to the matter.

I have thought that you would be interested in knowing how fully Dr. Wakeham and I agree in regard to the proposed legislation relating to the St. Lawrence River.

You will see from this report that, unless the Canadian boatmen are treated by us as fairly as they treat our boatmen, there is little hope of establishing a uniform law in the near future.

I understand that an effort is being made to get such a definition of the Labor Contract Law that the trouble which now exists will be obviated in the future.

J. S. VAN CLEEF.

OTTAWA, Feb. 17, 1896—*J. S. Van Cleef, Esq.:* Dear Sir—I duly received your favor of the 9th ultimo, with its inclosures, but have delayed replying to it until I could submit the matter to my Minister. This, as you will see by the accompanying memorandum of the 14th instant, I have done.

Mr. Costigan has approved of all that we have done and has directed that the necessary report to council be prepared to carry out the suggested changes. My own opinion is, that under our system no new legislation will be required; however, if it is decided that new legislation is required, the necessary bill will be proposed.

I have to-day been shown by Mr. Smith yours to him of the 15th instant. It seems to me that everything now is in a fair way. I note the remarks in your report about the alien labor restrictions, and I do not see how you could have put the case more strongly. The inclosed papers will show you how the matter stands with us.

I expect to leave here for Washington in a day or two, and you can communicate with me there to care of the U. S. Fish Commissioner.

I hope that all will go on smoothly and I see nothing to prevent it.

I shall try and keep you advised as to how the matter stands with our department, and when the necessary orders in council are passed I shall let you know. Believe me yours very truly, WM. WAKEHAM.

MEMORANDA FOR THE MINISTER.

I beg to submit for the Minister's information this report made to the Senate of the State of New York by the Committee on Fish and Game, appointed to arrange for uniform regulations in the waters of the St. Lawrence lying between Cape Vincent and Kingston at the head of the river and Ogdensburgh and Prescott below.

There is also attached a copy of an act to amend the "Fisheries, Game and Forest Law" of the State of New York, so as to cover the proposed joint regulations for the waters in question.

The regulations are the same as those submitted to the Minister in my report of Aug. 21 last, with one exception.

We had at first decided to fix the length of bass which might be caught and saved at 10 in., but on further inquiry we have found that this is too small a bass, and have decided that the best length to be fixed for bass should be 12 in., a bass of this length weighing a pound. Other than this there is no change.

I do not think any new legislation is needed on our part to perfect the mutual agreement should the Minister decide to accept them. On this point, however, the interior officers of the department would be better able to inform the Minister than I am.

If the Minister approves of the arrangements as proposed, I think a letter should be sent to Mr. Van Cleef, counsel of the Senate committee, informing him of the fact. (Signed) WM. WAKEHAM.

FEB. 14, 1896.

(COPY.)

DEPARTMENT OF MARINE AND FISHERIES, OTTAWA, Aug. 21, 1895.—*Hon. John Costigan, Minister of Marine and Fisheries, Ottawa:*—Sir: In accordance with instructions given me in your letter of July 21 last, I proceeded on Friday, the 16th inst., to Alexandria Bay, N. Y., and there met the Commissioners appointed by the Senate of the State of New York, together with Senator Mullin and several members of the St. Lawrence Angling Association. I was accompanied to Alexandria Bay by the Deputy Minister of Marine and Fisheries. The members of the Senate committee afterward on Monday, the 19th, came to Ottawa, when they were received by Sir A. P. Caron, the acting Premier; the Hon. J. F. Wood; Dr. Bergin, M. P., and the Deputy Minister of Marine and

Fisheries. They were accompanied and introduced by Geo. Taylor, M. P. The matter of equal fishing rights in the waters of the Thousand Islands, as well as the further project of an international park, were discussed. As your representative to discuss with these gentlemen the question of equal fishing rights, for purely sporting purposes, within the waters of the Thousand Islands extending on the Canadian side from Kingston to Prescott, and on the United States side from Cape Vincent to Ogdensburg in the State of New York, I, of course, had nothing to say on the matter of an international park, as the creation of any such park would not be under the jurisdiction of the Department of Marine and Fisheries.

The committee of the Senate were accompanied by Mr. J. S. Van Cleef as counsel, and with this gentleman, after hearing all that had been advanced by the members of the Senate committee, I discussed the project of setting apart the before mentioned waters for purely sport fishing, and together we have prepared the following regulations, which are submitted for your approval.

It is understood as a *sine qua non* on our part that the terms of the United States Alien Labor Act must be so modified, restrained or interpreted that our citizens acting as guides or boatmen may be allowed to ply their calling and seek engagements in the United States waters and along the shore and among the islands within the points specified between Cape Vincent and Ogdensburg as freely and as securely as the United States boatmen do the same in our waters.

This being arranged for and guaranteed by some official authority, I am prepared to recommend to your department:

1. That no nets be licensed or permitted in the waters of the St. Lawrence between Kingston and Prescott.

2. That the close season for bass, maskinongé, pickerel and pike be from Jan. 1 to June 9, inclusive, of each year.

3. That the limit of the number of bass to be taken by each rod per diem be fixed at twelve (12), and that the number of rods to each boat be limited to two (2).

4. That all undersized and immature fish be returned alive to the water, and that no bass under ten (10) inches in length be taken.

5. That the penalties for a violation of any of the above regulations be the same for the United States and Canada. (The penalties we have not arranged; this will be done later by correspondence. Personally I believe that the penalties now in force under the New York act will best suit the conditions.)

6. It is recommended that for the protection of the Canadian waters herein above specified one chief fishery officer should be appointed, having jurisdiction over all the Canadian waters from Kingston to Prescott. This officer to be assisted by as many subordinate guardians as may be considered necessary, these guardians to be selected by himself. The waters on the United States side to be protected in the same manner.

The undersigned therefore recommends that on the part of the Department of Marine and Fisheries of Canada the foregoing suggested regulations be adopted, and that United States sportsmen be allowed to fish for sport with rod and line, and United States boatmen and guides be allowed to ply their avocations freely in the Canadian waters of the Thousand Islands, it being understood and agreed that the same privileges be as freely accorded to Canadian sportsmen, boatmen and guides in the waters of the United States, abreast, both being subject to the same regulations.

The above regulations will be submitted to the Anglers' Association for their comment and approval. It may be that they may have to be, in some minor detail, modified. I submit them to you now in their present shape, that you may be fully informed of the drift and progress of the proposed arrangement.

There can be no doubt that we have both something to gain under these proposed arrangements. United States sportsmen will enjoy a larger and more varied fishing ground, while our boatmen and guides will have a greatly extended field of employment.

The stoppage of all netting on our side will not entail any hardship, as over most of the district we do not even now allow any netting; while the men who have heretofore held net licenses are of the class who will find employment as guides.

I have had to consent to allow the open season for bass to begin five days earlier than it does by our present regulations. In New York State bass fishing begins on June 1. Under this proposed new arrangement their close season will be extended to June 9. Therefore, our loss is more than made up to us by the nine days gained on the United States side, coupled with the stopping of all netting, the imposition of a size limit, and the limit of the daily catch.

I hope, therefore, that we have actually made a considerable gain in the way of bass protection. I am charged to inform you of the regret felt by the members of the Senate committee and the Anglers' Association of the fact that you were unable, owing to previous official arrangements, to meet them at Alexandria Bay.

The Deputy Minister was accompanied to Alexandria Bay by Mr. John Hardie, of the Department, and Mr. Samuel Wilmot. We were met at Brockville by Mr. W. C. Browning, president of the Anglers' Association, and many other members of the club, and from there taken over to Alexandria Bay on Mr. Browning's yacht *Indienne*.

This yacht was also kindly sent to take us through among the islands and back to Gananoque. On behalf of the other Canadians present and myself, I desire to thank the members of the Senate committee and the Anglers' Association for the kind and generous manner in which we were treated.

I have the honor to be, sir, etc.,
(Signed) WM. WAKEHAM.

New York City.

AN INTERMOUNTAIN BUDGET.

Facts, Figures and Possibilities.

AFTER four weeks of continuous and unwonted cold, the January thaw came with all the sweet influence of the northwestern "chinook." Snow left the ground. Ice disappeared from the rivers, and on Jan. 20 the song of the meadow lark was heard in the land. But the strangest part of this pseudo-spring is the fact that the trout have commenced to run four weeks before their accustomed time. Ever since Jan. 15 there has been excellent trout fishing at the mouth of Provo River, and on the 25th ult. I was tempted to visit the lake and indulge in a little sport with hook and line. The lake, except at the mouths of rivers and creeks, was covered with about 16in. of ice. Teams were constantly crossing to the opposite side, twelve miles distant, and returning heavily laden with cedar posts.

Scarcely had I reached my destination when a friend wanted to borrow my tackle "for a couple of minutes." As a result, it took just that length of time to get the spoon snagged and lost in 6ft. water—moral. This gave me an opportunity to study what was worth far more than any amount of trout could have been. Two miles north, away out on the ice, I could see several groups of seiners at work. Thither I hastened. The man who rowed me across the river said that during the current week at least a thousand pounds of trout had been caught at the mouth of the river. Reaching solid ice, a brisk walk of half an hour brought me to my objective point. On the way I saw a large pile of carp and suckers that had evidently been drawn the night before. This pile, as I afterward learned, was the surplus from a previous catch that more than loaded the wagon of the seiners. All over the light snow were the tracks of wildcats and coyotes. When the fishermen clean their fish on the ice the offal is all disposed of by wild beasts or buzzards before the following day.

This was the first time that I had seen the operation of seining under the ice. Mysterious as the performance had been to my imagination, it was yet more mysterious when I saw two men, 200yds. apart, each working a windlass until a certain black knot showed through the hole in the ice, then going on with his machine for another 60ft., and so continuing the hauling process until the two sides of the isosceles triangle converged in a hole a dozen feet square and close to the edge of the lake. This particular seine was 200yds. long, and the drag was about 600yds. It took two hours to make the haul. How slowly the seine came into sight! More than half of it was in when the first fish appeared. Then the fun began. First a golden-sided carp and a few wriggling mullets; then the spotted gleam of a trout and the soft gloss of muskrat fur. The Deputy Fish and Game Commissioner becomes an animated spectator. Each trout is pitched back into its native element, while the ice all around is hidden by a writhing, flopping mass of carp, suckers and mullet. Eight hundred pounds is the result of this one haul—600lbs. carp, 200lbs. suckers and mullets, five large trout and one muskrat.

On my way back to town I saw several well-laden fishermen and they all said that in all their trout both roe and milt was unusually mature for this season. It seems to me that it would be advantageous to the sportsman should the season close a month earlier than it does at present. At all events this early run is the best for the fish, because the large trout spawn and get back to the lake before the irrigation season commences. Not by hundreds, but by tons, are trout destroyed during the June and July irrigating. Sometimes an irrigator will pick up a dozen fine fish in his lucerne patch. One morning last summer I found three trout on my little 20x20 vegetable garden where I had left the water running over night. Sooner or later every fish that gets into an irrigating ditch is left high and dry.

The Tuesday following, Jan. 28, trout had reached Clear Creek, a tributary of the Spanish Fork River and forty miles from the lake. Three days later a trip of four miles up Provo River gave me eight beauties. I thought that this would end all such sport until June. But such was not the will of fate. Only yesterday, while walking between Provo and Springville, I saw an urchin with some mosquito net gathering minnows. This boy was a good boy and his heart was as open as his countenance, for when I offered him two bits to show me his fishing ground, he not only did so, but gave me the use of his tackle. Strange that I should have gone twenty or thirty miles to find good trout streams when here within five miles of my door was the champion of all. Unfortunately the "kid" had no reel and but a short line, or my joy would have been longer. Through the willow thickets we plunged and the warm sunlight made us feel that spring is really here. Under the banks and into the deepest pools I dropped the silvery bait and almost every time it was greedily seized, though I landed only six trout. One of these I threw back to grow for another year or two. The remaining five weighed when dressed 3½lbs. I shall cultivate further acquaintance with that brook when the days are at their longest.

What our Game Wardens Say.

It should be a matter of earnest congratulation to the sportsmen who live between Snake River and Grand Cañon that Mr. Hough never writes up this neck of the woods as he did "Bobo's Black Bear Preserve." We have fish and game to last for many years and we can treat our friends, who are invited, to fin, fur or feather, as they may like, but we must enforce protection more rigorously in the future. In view of Commissioner Musser's biennial report and of proposed changes in the fish and game law, the wardens of the several counties have been expressing themselves freely and making many wholesome recommendations.

Commissioner Myron C. Newell, of Utah county, evidently makes a very careful study of his work from an economic standpoint as well as from that of the sportsman. He reports a general observance of the fish and game laws. He states that the amount of fish caught and marketed, as nearly as he can estimate, is as follows: Suckers, chubs, carp and other common fish, 146,000lbs.; trout 4,000lbs.; black bass, 20,000lbs.

During the year 1894 twenty-one arrests were made, seventeen tried and fines to the amount of \$82 imposed. The attention of the authorities has been called to the condition of the canals and the need for screens for the saving of the fish from death by running down the same.

Provo River has been extensively shot with giant powder in Wasatch county. This is a practice which should cease.

In 1895 fourteen persons were licensed to seine in Utah Lake. The amount of fish caught was: Trout, 4 000lbs.; bass, 40,000lbs.; carp, 133,324lbs.; other fish, 189,900lbs.; total, 357,224lbs. The increased value over the preceding year was \$4,474 93. The amount of ducks killed and sold in this county was \$1,000. Trout are slightly on the increase. That they do not increase more is due to the defective irrigation system. Black bass are increasing very rapidly under favorable conditions. Pelicans, blue cranes and other birds retard the progress of the small fry to a great extent. Carp are increasing, while suckers and chubs are decreasing. Catfish are doing well. Sunfish are becoming quite numerous. The law permits the catching of black bass fifteen days too soon. They should not be taken sooner than July 1. Seining should be permitted as late as May 1 for carp, suckers and chubs. It should be prohibited from May 1 to Sept. 1, and not allowed within a half mile of any stream flowing into the lake. Ducks should be protected from Feb. 1 to Oct. 1.

Mr. Newell earnestly advocates the export of carp at all seasons and of bass during the open season. The people of Utah, and especially of the mining camps, do not yet appreciate our food fishes, and if the home market alone was considered it would not pay to run a single seine. Colorado is our great market. The price realized by fishermen is for suckers, 1½ cents; carp, 2½ to 4 cents; bass, 10 cents; trout, 12½ cents. The middleman doubles the price, and in Salt Lake the following prices are quoted: suckers, 4 to 5 cents; carp, 6 to 8 cents; black bass 20 cents; trout, 22½ cents. The catch of bass with hook and line was so great at times last season that the commission merchants refused to buy, and yet the average wages, man for man, of the fishermen of Utah Lake has been only \$1.39 per working day for the past year. It has been conclusively proved by Mr. Newell that as a preventive one heavy fine is worth a score of light ones.

Commissioner Heath, of Salt Lake county, reports the arrest of twenty-eight persons, and the collection of fines and costs to the amount of \$334. Trout fishing is better in his district than it has been for many years. He complains of pelicans, loons, weasels and skunks; suggests that quail be protected for a term of three years and, at the expiration of that time, that the season be limited to four months; favors the seining out of all carp, suckers and common fish, and leaving the lakes and rivers free for trout, bass and whitefish. Mr. Heath is radically opposed to the shipping of fish and game outside of Utah.

J. A. Lampert, of Weber, says he had \$5 salary left in 1894 after paying expenses. Several arrests were made. One man was apprehended at a cost of two days' work and \$4. The offender was fined \$1. Mr. Lampert thanks God that his term expires in March, because there is no encouragement for doing good work.

Cache county, through N. W. Crookson, reports a society for the protection of fish and game with over one hundred members. Five convictions were had during the year 1894. Deer and mountain sheep are killed by mountain lions, which are on the increase. A bounty should be offered for them. Game birds are increasing; fish doing well. Four convictions with fines of \$25 each were had last year for using dynamite. The officer suggests a fine of \$50 for this offense and recommends that no sawdust be allowed to run down the stream.

Wasatch county reports but two arrests, and yet in this county violations of the law are more frequent and open than in any other portion of the State.

Uintah, Carbon, Emery and Grand counties contain elk, deer and mountain sheep. Owing to the unsettled character of country and population, the law is evaded and carloads of venison have been shipped to Denver. From this section as well as from the South come reports of Indians killing deer for their hides.

In southern and western Utah, in the Sanpete, Millard and Beaver districts, the reports are most encouraging. Irrigation reservoirs, as soon as constructed, are stocked with carp or bass, and the pond weed with surrounding grain fields soon attracts thousands of ducks and geese during the migrating season. Eight tons of trout have been caught during the year from Panguitch Lake. Some was done by illegal seining.

C. C. Kearn, of Bear Lake, says that the laws have been faithfully enforced. About 15,000lbs. of chubs were caught from the lake last year. Idaho men come down to the lake and use seines and gill-nets in an unlawful manner. It is almost impossible to catch them. He recommends the same law as governs fishing in Utah Lake. In FOREST AND STREAM's synopsis of Commissioner Musser's report mention was made of an attempt to stock Bear Lake with whitefish. The following favorable reply was received yesterday by Mr. Musser:

WASHINGTON, D. C., Feb. 4.—Mr. A. M. Musser, Salt Lake City, Utah: Dear Sir—Replying to your letter of the 27th ultimo, relative to a carload of whitefish fry for Bear Lake, I beg to say that your application is on file and it is probable that the Commission will arrange to send the car west from Alpena, Mich., early in March. You should arrange as you did last year for the car to be so placed that there will be no difficulty in obtaining constant supplies of fresh water for hatching the eggs. Please provide transportation from Chicago to Bear Lake and return for United States fish car No. 3 and crew of five men, R. S. Johnson in charge. The transportation should be sent to this office.

By direction of the Commission. Yours truly,
W. DE C. RAVENEL.

The above means two or three millions fry. Good, eh!
A. MILTON MUSSER.

Law Makers and Game.

Did you ever see a boy put on his first trousers? It takes him some time to distinguish the front from the rear and to amble in the right direction. When he has mastered the pants he always tries to conquer his dad, and generally nothing short of a good thrashing will bring him to his senses. Kind friends, Utah has just put on pants, and the first State Legislature is monkeying with Venezuela, Turkey, Ambassador Bayard, new iron-clads and everything on earth except the interests of the young commonwealth. However, while all this is going on, the lobby is getting in some excellent work. The fish and game committee is composed of men who have no practical knowledge of the needs of the State, nor of the proper legislation to bring about desired results. They are very anxious to do what is for the best and have already had several sessions at which the views and experiences of sportsmen, irrigators and fishermen have been presented and freely discussed.

CUSH FISHING IN THE CONNECTICUT.

SPORTSMEN of New Hampshire and Vermont relieve the monotony of midwinter and supply their tables with one of the best food fishes by fishing through the ice for cusk. The same tackle is used as when fishing through the ice for pickerel or longe; but as the cusk is a night feeder, the flags are dispensed with, and the staffs on which the lines are wound may as well lie across the hole as to be erect. Live minnows are used for bait, although the cusk is a ravenous feeder and will take a dead minnow. They are bottom feeders, and lines should be well leaded and bait allowed to lie on or swim close to the bottom. Cusk can be taken at any season during the winter, but the best time is upon the advent of new ice early in the season and then again in March. February is a dull month for them, as the females are spawning and seldom take a hook. The males taken at this time will also average much smaller than in January or March.

I had my first experience with this method of fishing last evening, when I was invited to Lunenburg to see how it is done. Within half a mile of the railroad station I found my friends just before dusk busily cutting holes and setting the lines. At 5 o'clock the lines were all baited (fifteen to a man), and shortly afterward a tour was made resulting in a catch of fifteen cusk for sixty lines. This assured my host, the minister, fresh fish for breakfast and prospects for a good Sunday dinner, and we repaired to a vacant house near by to cook our supper of ham and eggs. After supper we made another tour of the lines and captured eighteen more cusk. As my train home left at 8:50, it was necessary for me to take my departure, leaving my friends to pass the night in recounting their adventures as they lay before the cheerful fire, varied by an occasional break (when the stories became too rank for the minister) to take a look at the lines. I have not heard the result of the catch during the night, but as the cusk feed all night I feel certain that the four which I brought home will not deprive the minister of his Sunday dinner.

The fishermen are positive that, while these fish are not tempting to look upon, they are superior as a food fish to the longe or any other fresh-water fish taken at this season. I am surprised that market fishermen do not take up this means of livelihood at a season when work is scarce of the kind which suits their temperaments. Perhaps they consider this method of fishing too hard work (I refer to the market fishermen of the interior). The holes should be cut and lines set before dusk, and then tended throughout the night. The cusk of the Connecticut range from $\frac{1}{2}$ to 5 lbs. in weight. The thirty-two captured before I left the fishing grounds were all males from $\frac{1}{2}$ to 2 lbs. each.

WHEELOCK.

ST. JOHNSBURY, VT., Feb. 5.

CARP ON CAPE COD.

BOSTON, Feb. 13.—*Editor Forest and Stream:* I want to tell you about the perhaps termination of our carp project on the Cape.

I think it was seven years ago I obtained from the State a can of carp, placed them in a little pond kept alive from surrounding rainshed, with the idea of transferring the increase to other and favorable places. The original plant consisted of about thirty fish not over 2½ in. in length. Eighteen months later I took two of them out—one a male and one a female with spawn. They weighed 2 lbs. each and were 16 in. in length. The next year I took from the same place several young carp, perhaps 6 in. long, weighing ½ lb. No other fish were in this pond, and lily pads and grasses were profuse in and around its edges. The third year four of the larger carp were transferred to another pond near by which had for denizens yellow perch, shiners, pickerel and turtles. This also was a pond which existed from rainshed alone, no springs augmenting its contents. The pond was of say two acres in extent and as favorable for carp support as the first one. That they thrive there well is evidenced by the fact that owing to dry times the pond has subsided to the extent that Saturday, the 8th, the carp were being taken out dead in large numbers, frozen to death, as well as pickerel and perch. I quote from my friend's letter concerning them. * * * "No less than twenty-six great fish were spread out on the banks quite dead and looking like a school of porpoises; about one-third of them were of the leather variety, the others having symmetrical scales. They were very uniform in size and weight, averaging 2 ft. 6 in. in length and weighing 15 lbs. With them there were about a dozen pickerel, the largest weighing 3½ lbs., and a considerable number of perch and shiners. The carp must have weighed close upon 400 lbs. Of course, they must have been killed by the frost, as the water was reduced to about 15 in. in the deepest part of the pond." Evidently the cold weather had hardened the mud to prevention of the carp being able to get into it, as customary with them in cold weather.

Thus ends my Barnstable attempt, which has been kept a wonderful secret, to the extent that none save five persons knew of their presence until this disaster, which called many to view and much talk.

Another lot placed in a pond with shelving depths running from 3 in. to 30 ft. further down the Cape fifteen years ago by myself we shall probably hear from later. This pond had nothing but shiners in it, and only very small anglers visited its waters. They all in their early youth have acquired the stigma of big fish stories, for they have told of big fish jumping out of the water, but their elders laugh. There must be some whoppers there by this time, judging by the Barnstable result.

REIGNOLDS.

New Jersey Sea Fishing.

THE Board of Fish and Game Commissioners of New Jersey has sent the following address to the Senate and General Assembly of the State of New Jersey:

GENTLEMEN: The Board of Fish and Game Commissioners desires respectfully and most earnestly to call your attention to a state of affairs existing along the coast line of this State which in our opinion requires immediate attention. One of the natural advantages of this State is its long stretch of seaboard, an advantage of vast benefit to our citizens in many ways. Although some years ago it may have appeared impossible to deplete the ocean of its stock of fish, yet such have been the improvements of modern time in the manufacture of appliances for taking fish, and such the rapacity of men who have unhindered pursued the calling of fishermen, that there is a serious danger threatening the supply of fish. Other States have long since given heed to the warning, which is becoming louder every year, but so far the

subject has received very little attention at the hands of the legislators of this State. Although the taking of fish in our inland waters is jealously guarded and our shad fisheries have received the protection accorded to them by many wise laws, little or nothing has been done toward the regulation of taking fish from the ocean. The natural result of restrictive legislation on the part of other States has been to bring to our shores a horde of fishermen from other places, for here they enjoy the license which has long since been refused to them at other points along the Atlantic seaboard.

For the purpose of taking an important step toward the protection of the shore fisheries the Board of Fish and Game Commissioners has caused to be drafted three bills, which have been introduced in the Senate, and to the necessity of the passage of which we desire to call your attention.

Pound-Net Fishing.

It is but comparatively few years ago since the first pound-net was erected in the waters of the Atlantic Ocean along the coast of New Jersey. Since that time, however, the number and size of these nets have increased in such proportion as to seriously threaten the supply of food from the sea. Many of these nets have been erected near inlets and thus thousands of fish are annually prevented from reaching their spawning grounds. The pound-nets take in all the fish, large and small, and the damage done is incalculable. The immediate result of the multiplication of these nets is to render fish dearer and scarcer and to deprive hundreds of fishermen of their means of gaining a livelihood. The pound-nets remain in the ocean throughout the summer months and frequently take far more fish than the market needs. Formerly fish were taken at every seaside resort and every place along the coast where there were any human habitations. Now the pound-nets secure all the fish and these are taken to the New York and Philadelphia markets to be subsequently returned to our State in a very much deteriorated condition on account of their having been kept on ice for several days. During the past summer numerous instances occurred which proved conclusively the injury done by these pound-nets. At times stress of weather prevented the agents of the pound-net owners from getting to their nets; the result was that thousands of fish were killed in the nets and subsequently thrown out to be washed ashore in a putrid condition, not only endangering the health of our residents, but materially interfering with the business and enjoyment of people who come here for the purpose of spending the summer. At other times the quantity of fish taken was so great as to necessitate the removal of them to so-called factories, where they were used for fertilizing purposes. The result of a continuance of this state of affairs will be apparent to every person and needs no further elucidation on our part.

For the above reasons the Board of Fish and Game Commissioners respectfully urges the passage of a law regulating in some manner the taking of fish from the ocean. If any further reasons are necessary to show the propriety of some restrictive legislation, attention might be called to the fact that the men engaged in fishing with pound nets are constantly occupying territory which belongs to the State of New Jersey, and that the fish they take are the property of the public. They gain their livelihood and accumulate fortunes from the advantage which nature has bestowed on the State at large.

When the law suggested by the Board of Fish and Game Commissioners was recently brought up for discussion before a gathering of persons interested it was argued that its provisions were too severe. The Board of Fish and Game Commissioners thereupon made such modifications to the proposed enactment as were deemed advisable, and finally no argument could be found against the measure on the part of owners of pound-nets, with the exception of the general statement, arrogantly expressed, that they want no interference in their business. All other industries of which the natural advantage of the State forms an important component part are regulated by legislation, and we respectfully submit that there is no reason why the pound-net industry should be an exception, especially when the serious harm done by the pursuit of this industry is considered.

Inland Tide Water Fishing.

Another bill which has been introduced in the Senate, and the passage of which the Board of Fish and Game Commissioners would like to advocate, is the bill providing for uniformity in the taking of fish in the inland waters of this State. These waters are the great natural spawning beds of the fish from the sea, and the fact that interfering with fish during their spawning season will eventually drive these fish from our shores has in the past induced the Legislature to pass laws regulating the taking of fish in these waters. These laws were passed at the demands of various localities where the evil effects of indiscriminate slaughter of fish were becoming apparent, and the result has been a mass of legislation kaleidoscopic in its many variations. Thus there are five different laws regulating fishing in the inland tide waters of Cape May county, each pertaining to some particular locality and nearly every one being different from all the others in the seasons for taking fish. What is true of Cape May county is true to a greater or less degree of every county along the ocean. The advisability of some uniform legislation on this subject is thus made apparent.

Menhaden.

The Board of Fish and Game Commissioners has no desire to precipitate a discussion of the question of taking menhaden. No matter what may be said on that subject, the fact remains undisputed that menhaden form the principal food for bluefish and other valuable food fish, and that the deprivation of their sustenance will drive from our shores all such fish. By a recent decision of the Supreme Court of the United States the principle has been established in this country that the control for fishing purposes of the ocean for three miles from the coast line is vested in each individual State, and does not pertain to the United States as a nation. Before the rendering of this decision it was contended that New Jersey could not control the fishing within the three mile limit. The decision has rendered operative a law on our statute books absolutely prohibiting the taking of menhaden by the use of shirred or purse nets. Investigation which the Board of Fish and Game Commissioners caused to be made indicated that the two establishments engaged in taking menhaden in this State confine themselves strictly to that industry, and that neither attempts to take food fish for fertilizing purposes. Nevertheless, every year millions of food fish are removed from our shores by vessels hailing from other States. The Board of Fish and Game Commissioners would accordingly suggest the enactment of a measure by which the taking of menhaden may be licensed to residents of this State, it being believed that in this manner a stop can be put to the mischief done by non-residents without interfering with established industries within the borders of the State.

The Board of Fish and Game Commissioners is anxious to subserve the interests of the general public, and for the purpose of accomplishing this desirable end hopes for such assistance from the Legislature as has been herein indicated. Very respectfully yours,

H. P. FROTHINGHAM, Sec'y.

MT. ARLINGTON, N. J., Feb. 17.

FIXTURES.

BENCH SHOWS.

March 3 to 6.—City of the Straits Kennel Club. R. Humfrey Roberts, Sec'y, 6 Merrill Block, Detroit. Entries close Feb. 20.
March 10 to 13.—Chicago.—Mascoutah Kennel Club's bench show. John L. Lincoln, Sec'y.
March 17 to 20.—St. Louis Kennel Club's show, St. Louis. W. Hutchinson, Sec'y.
April 20 to 23.—New England Kennel Club's twelfth annual show. D. E. Loveland, Sec'y.
May 6 to 9.—Pacific Kennel Club's fifth annual show. H. W. Orear, Sec'y.

FIELD TRIALS.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.
Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings, Sec'y, Pittsburgh.

THE NEW YORK DOG SHOW.

The twentieth annual bench show of the Westminster Kennel Club was a most pleasing success. It held undiminished its importance as a society event, vying with the horse show as an interesting attraction. From the first day, Feb. 19, to the close on Washington's Birthday, the visitors seemed to increase in numbers. On the last day Madison Square Garden was filled to its full capacity. Both in the quality of the dogs and in the number the management had an excellent show. There were 1,409 dogs catalogued, and of these but few were absent.

The judges and their classes were as follows:

Mastiffs, St. Bernards, bloodhounds, Russian wolfhounds, deerhounds, greyhounds, English foxhounds, collies, Old English sheep dogs, poodles, bull dogs, bull terriers, fox terriers, Irish terriers, Scottish terriers, Bedlington terriers, pugs, toy spaniels and miscellaneous were judged by Mr. George Raper, Sheffield, Eng.

Great Danes, American foxhounds, Basset hounds and dachshunde, by Mr. G. Muss-Arnolt, Tuckahoe, N. Y.

Pointers, by Mr. James L. Anthony, Netherwood, N. J. English setters, Gordon setters and Chesapeake Bay dogs, by Mr. William Tallman, Plainfield, N. J.

Irish setters, by Dr. William Jarvis, Claremont, N. H.

Irish water spaniels, Clumber spaniels, field and cocker spaniels, by Mr. J. F. Kirk, Toronto, Canada.

Beagles, by Mr. W. S. Clark, Linden, Mass.

Boston terriers, by Mr. W. C. Hook, Boston, Mass.

Newfoundland dogs, whippets, Black and Tan terriers, white English terriers, toy terriers, Yorkshire terriers, Dandie Dinmont terriers, Skye terriers, schipperkes and Italian greyhounds, by Dr. H. T. Foote, New Rochelle, N. Y.

Dr. H. Clay Glover was veterinarian.

The catalogue is probably the most artistic and useful of any one ever published by any bench show management in America. It contained the standards of the different breeds with illustrations, thus being a work of useful information as well as of immediate reference.

Mr. James Mortimer superintended the show in his usual skillful manner.

The judging was not satisfactory to all, a condition by no means rare at bench shows, but it was accepted with much less discontent as a whole than is commonly the case.

A protest was lodged against the bull terrier bitch Merle Goddess on the ground of deafness. On examination by the club's veterinarian the protest was sustained. A similar protest had been lodged against the bitch in England before she was shipped to this country, but it was not sustained. Dr. Sewell was the veterinarian at that time. He pronounced her only partially deaf. The dogs below her in her class will not be advanced to the next higher places till it is definitely learned whether or not her owner will appeal to the A. K. C.

There seemed to be a growing interest in dogs. Many owners reported sales. Dr. Lougest sold Mayflower, mastiff bitch, winner of first in the puppy class, to Dr. Hill. The bitch is to be sent to the doctor's home in Dresden, Germany. The winner of first in open bitch class for mastiffs, Mr. J. L. Winchell's Constable, sold for \$250 to Dr. Perhacs. Dr. Lougest reported a greater demand for mastiffs than he had stock on hand. The Meadowmere Kennels reported sales aggregating about \$1,100. They sold Carnot, poodle dog, to Miss Whitney for \$250; Caesar to Miss Bloodgood for \$250. The Hempstead Farm Kennels sold the pointer dog, Hempstead Druid, and the collie, Hempstead Yokel, to General Torrance. Mr. Geo. Mott sold the pointer, Sir Walter, to Mr. W. G. Brokaw. Messrs. Phelps and Davis sold the Boston terriers, Topsey and Commissioner, to Mr. M. C. D. Borden, New York, and Circe to Mr. J. Pierpont Morgan.

Spratts patent benches and fed in their usual acceptable manner.

POINTERS.—The classes were well filled, and as a whole were of good quality, though it were far from uniform, it running from good to very ordinary. Mr. Anthony acquitted himself most creditably of his judging responsibilities. In heavy-weight dogs, challenge class, Lad of Kent won over Count Graphic, and in the corresponding class for bitches Josie Bracket won over Lass of Kent. There were eleven heavy-weights in the open dog class. Sir Walter carried off the honors. He is a stoutly made dog, of good muscular development, and while not coarse, he is somewhat lacking in fine symmetry. He is somewhat heavy in skull and is throaty. He has excellent back, legs and feet. Jackson, second, is throaty, head not clean cut, and is a bit coarse. The rest of the winners were about the average. The bitch class had four competitors, and of these Devonshire Pearl, in the pink of condition, won easily. All Mr. Gould's dogs were noticeable for their perfect condition, clean coat, hard flesh and good health. Lady Graphic, second, is coarse in head and fair otherwise. The rest of the class were average in merit. In the light-weight challenge dogs Ridgeview Comet had a walkover, and in bitches Lady Gay Spanker won over Miss Rumor, all well known. There were thirteen in the light-weight open dog class. Prince's Boy, first, stands on good legs and feet, shows throatiness; head fairly good. Chancellor, second, is well known. Plain Sam, third, is a fairly good dog. Furlough Mike, fourth, stands a trifle high on good legs; neck lean and well set on good shoulders. Beaufort of Kent, the reserve, was lacking in symmetry and clean finish. There were twelve in the light-weight bitch class. Belle of Lancaster, heavy in

skull and long cast, took first. Count Graphic's Baby, second, is throaty. The rest of the class was not of noteworthy excellence. Puppies were out in good numbers, there being eight dogs and nine bitches. There were but two in the field trial class; Plain Sam and Lady Margaret winning in the order named. Furlough Kennels took the kennel prizes, and Lady Gay Spanker took special for the best pointer over Lad of Kent, the only matter on which there is room for real difference of opinion in Mr. Anthony's decisions.

ENGLISH SETTERS numbered about fifty—a small number for this show. They were not noticeable for high quality. There was nothing new brought out, old time winners taking the prizes in most instances. English setters show but little if any improvement over the dogs of a decade ago. Cactus and Glendon made the challenge dog competition, while Maid Marion had a walkover in her class. In open dogs, Sheldon was awarded first. He is fairly good in head, but otherwise he is only average; he moves awkwardly. Second went to Cincinnatus Pride, a good second. He is a trifle light in quarters and stifles; shoulders good. Rodfield, third, was in fine condition. His feet turn out a trifle, but not enough to be a fault. In many points he is superior to the winner of first, and it is a question if he was not the best dog in the class. Rockingham, Jr., is of ordinary merit. Montell, hc., was rather coldly treated, he having merit enough for a place, while Robin Goch also was deserving of more consideration. There were twelve in the bitch class. Countess Zoe and Nellie F. were first and second in the order mentioned. The latter excels in many points over the winner of first. Prima Donna, third, has fair head, shows topknot, and is but fair in quality. Fourth went to Vic Hollymere. Eastern Queen, vhc., was worthy of more consideration. In puppies, The Duke first, Gilhooley second, the latter the more symmetrical. Lady Victress Llewellyn had no competition in the bitch puppy class. Rodfield and Montell were the only competitors in the field trial class. The Rockingham Kennels won the kennel prize.

IRISH SETTERS were in fair numbers. Five faced the judge in the challenge dog class. Kildare was first, Kildare Glenmore was second. The remaining three were Finglas, Pride of Patsy and Bob, Jr. There was the same number of challenge bitches, Queen Vic first, Bessie Finmore second. The others were Norna, Lady May Swiveller and Delphine. There were nine in the open dog class. Shamrock O'More, the winner of last year, took first again. Kilstal, second, was excelled by Londonderry, third, in hips and head, though high on legs and out of condition. Kildare Malt is a fairly good dog. There were thirteen bitches in the open class. Rosamond in excellent form won over her competitors, Duchess a good second. Red Bud Finglas, third, was not in good condition owing to maternal cares. Nona, fourth, is a fairly good bitch. The Oak Grove Kennels won the kennel prize.

GORDON SETTERS were only fair in quality. Heather Lad, Leo B. and Heather York were the competitors in challenge dogs. Heather Bee, Princess Louise and Flomont were in the challenge bitch class. There were eight in open dogs. Russet, first, is a good dog, good color. He is a trifle light behind. Wang Ivanhoe is out at elbows. Dwight Jim, third, is a good dog with some curl of coat. Comus, fourth, has a smudgy tan. There were nine bitches. Dwight Pearl won easily. Princess Bonnie was shown in too high flesh. Dwight Bee was not in good condition. Puppies were four all told and ordinary. Flomont and Sally Beaumont won in the field trial class in the order named.

BEAGLES were of good quality and fair in numbers. They were well judged. There were three in the challenge dog class—Ringleader first, Frank Forest second, Roy K. reserve. Lonely had no competition in the bitch class. There were nine dogs. Harber, an excellent beagle, took first; Furrier, second, was inferior to Truman, the reserve, in many respects. Raffler, third, was lumbery. There were six bitches. Purity, first, was a fair beagle, light in bone and long cast, and not first-rate in head. Nell R., second, is quite a good beagle. Cinderella, third, is thick in shoulders and out at elbows. In the classes for beagles not exceeding 13in. the open dog class had but two, Leader and Laick's Boy, winners in the order named. There were eight bitches. Lonely II., first, could have been in better condition. Fallacy, second, could be improved in front. Topsy K. is heavy in shoulders and was shown too fat. There were eight puppies. Mr. Joe Lewis won the kennel prize.

FOXHOUNDS made a light showing. There were but four English hounds, two each for the two classes. They were fair only. In open dogs Clay was a good first, while Duke, third, should have been second, and Commodore, hc., should have been third.

RUSSIAN WOLFHOUNDS were in moderately fair numbers, not equal in many respects to the exhibits of former years. Argoss was first, Princess Irma second, both winners of note. Open dogs numbered six competitors, bitches the same. The winners were good in race character.

BOSTON TERRIERS were out in force, far in excess of the entry of last year. The breed seems to be gaining steadily in popularity. The dogs were all in excellent condition. A number were uncropped and there was shown a great diversity of size and texture of ear. A noticeable gain in breeding to types was apparent. The judge was not over generous in the matter of prizes, and the commended cards were noticeably absent.

POODLES were an excellent lot, shown in excellent condition. The classes were very strong in numbers and quality. The Meadowmere Kennels were very strong in evidence, many of their famous dogs being in the competition. This kennel took the special for the best exhibit with champion Chloe, champion Dinah, Emperor and Cesar. Mr. Trevor said a club is soon to be formed to promote the interests of the poodle. Considering the age and popularity of this breed there is no reason why the club should not be a success. There were seventy-six entries in the different classes.

DACHSHUNDE had a moderately fair entry. Don Quixote II. and Polly Flinders were the challenge winners; both well known. Waldman P., a good type of dog, standing on good short legs, won first, and in bitches first went to What's Wanted, a superior specimen.

BLACK AND TAN TERRIERS were in fairly good numbers. Dr. Foote judged well. The class for uncropped dogs and bitches had seven entries.

FOX TERRIERS, wire-haired and smooth, made a strong

showing both in numbers and quality. Messrs. L. & W. Rutherford captured the kennel prize. Warren Sentence won the Grand Challenge cup for best fox terrier in the show. Blemton Stickler, a fine dog, won in challenge smooth coats, second going to Ripon Stormer, both winners in warm competition. The other classes were high in quality.

IRISH WATER SPANIELS were an ordinary lot, not up to the quality shown a few years ago.

CHESAPEAKE BAY DOGS showed a variety of type. There were three in open dogs, King, Echo and Deacon, one, two and three respectively. Deacon first, King second, Echo third might have been better, while in bitches the two winners, Daisy and Princess, might have had their positions reversed.

B. WATERS.

MASTIFFS.—That good dog Emperor William was alone in challenge dogs, he was in capital condition, Lady Diana, not looking so well as when I last saw her, had a walkover in the challenge bitch class. Open dogs, eight entries, the winner turning up in Black Prince Brampton from Mr. Winchell's kennels. He has a good head, plenty of bone and substance and moves well. Rob L., who secured second honors, is a dog of fair character. William Tell, third, is a fair one, a trifle light in eye, but with quite some character. Mr. Winchell furnished the winner in the open bitch class, a nice brindle, Miss Constable, whose chief fault was her movement behind. Lady Cameron shows age and is out of form. Vera III., a fair type, might have been second. In puppy class Mayflower won easily from a moderate lot.

ST. BERNARDS.—In challenge rough-coated dogs, first was won by Otos, who beat Roland, Jr., in head, body, legs and feet. In corresponding bitch class Miss Anna was alone, looking in good condition. In open class, Swiss Mountain Kennels won with their new importation, Leeds's Barry; he is a good big dog with good skull, muzzle and depth of face, nice legs and feet, and moves well. Hellgate Defender, second, is a good sort, with fair head and body; ears too large. Demetrius, third, is well known and deserved his prize. In the open bitch class first went to the well-known Kingstonian Beauty, with Eloro, second, who lost to the winner considerably in body and head. Lady of the Esk, third, is not good in head, but has a nice body and stands well in front. Princess Rustic Beauty, reserve, lost to the winner behind the head. Puppies were a medium lot. Nobleman, on account of his good head, rightly receiving first. In smooth-coated challenge class Jacob Ruppert, Jr.'s, Empress of Contocook easily won from Cleopatra, whose condition told against her. In open class Altar Kennels won with Rex Watch; somewhat plain in head, she has a good body and stands on good legs and feet. Visitor Watch secured the second ribbon easily from Lady Hannay, third, beating her in head. In puppy class for dogs and bitches Alton W. won easily from Isolde, with Jan's Ruth, reserve.

BLOODHOUNDS were a good entry, showing much quality. Victor secured first in challenge dogs and Kaween in corresponding bitch class. In open dogs Simon de Sudbury, first, and Jansen, second, was the order. The winner is a late importation and has done much winning in England; he is a good dog, with grand head, body and quarters, and stands on capital legs and feet. In open bitches She easily beat Layswood Chorus, who lost to the winner in head and movement.

GREAT DANES.—A good entry of these dogs was on exhibition headed by Major McKinley, who wears his years well. Marcus Antonio, first in open dogs, is a very fair one. Beau Brummell, second, lost to the winner considerably in body, front, neck and shoulders.

GREYHOUNDS.—In challenge dogs Southern Rhymes won, scoring in head, neck and shoulders over Lord Neverstill. In challenge bitches Bestwood Daisy had a walkover. In open dogs Puck, first, is a new one, entered breeder and pedigree unknown, and was closely pressed by Salutation, second. Duke of Morningquest, third, is well known. In corresponding bitch class Toon & Thomas won with Southern Belle; winner has a good body, legs and feet. Miss Dollar III. was placed second and Southern Gay Girl third. The last named lost in condition.

SPANIELS (over twenty-eight pounds).—Dennis won, Drayton Warwick second; winner is an Irish water spaniel, and was shown in bad coat; he was closely placed by Warwick. In corresponding bitch class Drayton the Shrew beat Midnight III., but wrongly so; the last named should have won. Field spaniels were a good lot, but the judge mixed them up considerably; he gave first to Staley Barow, second to Royd Monarch and third to Dark Despair, while Wardleworth Sweep, the English winner, only received two letters. In bitches, Endcliffe Myrtle was absent. Meg, first, Scandal, second, was the order of awards. Scandal has gone off in head, and is somewhat on the cocker order.

COCKER SPANIELS.—Black Duke, looking well considering his age, received the premier honors, Woodlawn Prize second, and Middy vhc. In challenge bitch class, that typical cocker, Baby Ruth, won, her nice head and the condition she was shown in doing much to make her victory an easy one. Woodland Princess can thank Miss Woagless' poor condition for the second prize. In challenge class in other color, dogs and bitches, Tonita handily disposed of Bambo, who lost considerably in head and front. In open, black dogs, Guy Silk won, with Viscount second and Commodore third. The winner was well shown. In corresponding bitch class Woodland Belle received first prize, Gabriel second, and Floss Obo third. The winner is a good stamp of cocker, with nice head and good coat.

COLLIES.—There was a good entry of this breed, but quality has fallen off from that of last year. Charlton Phyllis won first in challenge bitches, with Lady Gay (not looking so well as when last shown) second, and Highland Floss third. Sefton Hero was alone in challenge dogs. Open dogs were a good lot. Rufford Ormonde was easily first, with Hempstead Chief second, Cragstone Predominant third. The winner looked well, but his coat is not quite as nice as it could be. In open bitch class first went to Hempstead Dorothy, Scottish Gem second, and Flora May third. The latter would have been higher, but condition told against her.

BULL DOGS.—In challenge dogs His Lordship had the satisfaction of beating King Orry. The latter scores in head. In challenge bitches Salem rightly won over White Venn, second. Both are well known. In open dogs Facey Romford, a good son of King Orry, was placed first,

with L'Ambassador second, and Sheriff third. The winner scored in head and body, also in shoulders and chest. In open bitch class Hucknall Gypsy won with some to spare from First Attempt. There was a good entry of dogs under 45lbs. Heathen, first, is a good dog, with fair head and good body, chest and quarters. In corresponding bitch class, Princess Venn has a better type of head than Lady Monarch II.; both are good in body. Some fair puppies were shown.

BULL TERRIERS.—Cardona had an easy win over Little Flyer, second, while in corresponding bitch class Castle Edgewood Topsy won handily from Starlight, second. In open dogs competition was keen. Trafalgar, entered breeder and pedigree unknown, is a good stamp of terrier. Victor, second, is well known, but has not the terrier character of the winner. Merle Goddess, first, and Green Hill Empress, second, was the order in open bitches. The winner is a good one, but the decision was protested on the ground of total deafness. We understand the protest was sustained and the dog disqualified. Fox terriers were the largest exhibit of any one breed, and the Messrs. Rutherford secured many of the coveted ribbons. Blemton Stickler rightly won in the absence of Blemton Victor II. He was closely pressed by that good little dog Ripon Stormer. In open bitch class Warren Sentence easily won from her kennel companion Warren Cautious. The winner is a grand one and rightly received the special for best fox terrier entered. In the wire-haired division Cribbage easily beat Oakleigh Bruiser, second, while in corresponding bitch class Surrey Janet was closely pressed by Edgecliffe Fidget, whose good head and body stood her in good stead. In the open class Endcliffe Brisk rightly won, while in the open bitch class Bushy Bramble, first, Endcliffe Nimble, second, was the order. Bramble is good in head and well fronted. Nimble is a bit off in condition.

RUSTIC.

AWARDS.

MASTIFFS.—CHALLENGE—Dogs: 1st, Dr. C. A. Lougest's Emperor William. Bitches: 1st, Dr. C. A. Lougest's Lady Diana.—OPEN—Dogs: 1st, J. L. Winchell's Black Prince Brampton; 2d, Midvale Kennels' Rob L.; 3d, W. P. Smith's Prince Edward II. Bitches: 1st, J. L. Winchell's Miss Constable; 2d and 3d, Dr. C. A. Lougest's Lady Cameron and Vere. Puppies: 1st, Dr. C. A. Lougest's May Flower; 2d, Mrs. Alexander Bremer's Yankee Boy.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—Dogs: 1st and 2d, Hellgate Kennels' Otos and Roland, Jr. Bitches: 1st, J. Ruppert, Jr.'s, Miss Anna.—OPEN—Dogs: 1st, Swiss Mountain Kennels' Leeds Barry; 2d, Hellgate Kennels' Hellgate Defender; 3d, Gramercy Kennels' Demetrius; 4th, I. W. Comey's Dictator. Reserve, J. F. CLUB MEETINGS.

A. K. C. Annual Meeting.

The annual meeting of the club was held in the Metropolitan Kennel Club's rooms Feb. 20. Mr. Edw. Brooks presided. Sixteen members were represented. The minutes of the last annual meeting were accepted. The officers elected by the associate members are as follows: Pres., H. H. Hunnewell, Jr.; Vice-Pres., G. W. Amory; Sec'y, A. C. Wilmerding; Delegates: (1), H. T. Foote; (2), A. C. Wilmerding; (3), W. Whitney. The secretary's report reviewed the affairs of the A. K. C., and presented that notwithstanding business depression the club had been self-supporting and had paid running expenses promptly. The fiscal year ended with a balance of \$2,233.08, an increase of about \$230 over the preceding year. The visit of the secretary to the Pacific coast had produced most satisfactory results in that locality. The amendments to the bench show rule gave the Western clubs much needed relief. The experience with the amended constitution has been satisfactory. The roll of active members numbers 53. The roll of associate members numbers 195. Gross receipts were greater by \$119.45 than last year, and expenses were \$821.57 less. The treasurer's report was accepted as published in the A. K. C. Gazette.

On Feb. 7 the Pacific Advisory Committee was organized, composed of the following delegates: W. L. Prather, Jr., Alameda Co. Sportsmen's Ass'n; T. J. Watson, Pacific K. C.; H. T. Payne, Southern Cal. K. C.; F. W. D. Evelyn, M. D., Pacific Fox Terrier Club; A. T. Regensberger, D. D. S., St. Bernard C. of Cal. Officers of this committee: F. W. D. Evelyn, chairman; W. L. Prather, vice-chairman; H. T. Payne, sec'y. The committee notified the A. K. C. that it is ready for the transaction of business.

Following is a list of the A. K. C. officers elected: President, August Belmont; Vice-Pres., Elward Brooks. Stud book committee, Jas. Watson, chairman; H. F. Schellhass and C. B. Knocker.

Committee on field trials and coursing: H. F. Schellhass; the other members are chosen from members of the field trial and coursing clubs.

Committee on constitution and rules: F. S. Webster, chairman; H. F. Schellhass, J. Watson and H. T. Foote. Finance committee: A. C. Wilmerding, chairman; J. B. Blossom and J. Mortimer.

Membership committee: E. M. Oldham, chairman; C. D. Bernheimer and A. P. Vredenburg.

By an oversight, no secretary was elected.

Dr. Wesley Miles, as representative of the Canadian Kennel Club, made a plea for reciprocity between the two clubs in the matter of registrations, wins and disqualifications. Mr. Belmont arrived and took the chair at this juncture. After much discussion, in which the former relations of the two clubs were quite thoroughly analyzed, the whole matter was referred to the advisory committee with power. The annual meeting then adjourned and the regular quarterly meeting of the executive committee was held. There were present associate members H. T. Foote, A. C. Wilmerding, W. Whitney, American Fox Terrier Club (H. H. Hunnewell, Jr.), American Scottish Terrier Club (J. L. Little), American Spaniel Club (E. M. Oldham), Birmingham Industrial Exposition (A. P. Fish), Bloodhound Club (A. F. Stahl), Boston Terrier Club (J. A. Burritt), Bull Terrier Club (A. Thomson), City of the Straits K. C. (A. T. Knowlson), Collie Club (J. Watson), Columbus Fanciers' Club (J. M. Taylor), Gordon Setter Club (J. B. Blossom), Great Dane Club of America (C. Wood), Mascoutah K. C. (C. F. R. Drake), National Beagle Club (H. C. Schellhass); N. E. K. C. (F. M. Curtis); N. E. F. T. C. (D. E. Loveland); N. K. K. L. (F. Link); Northwestern B. C. (F. S. Webster); Pointer Club (G. Jarvis); R. I. S. F. Ass'n (M. A. Viti); H. B. C. (R. H. Burroughs); W. K. C. (Elliott Smith); Irish S. C. (G. H. Thompson); Pacific Fox Terrier Club (C. B. Knocker).

The appeal of Mr. Bell was denied. He desired the date of his reinstatement to be changed from March 1 to Feb. 15.

The Pacific Fox Terrier Club and the Irish Setter Club were admitted to membership.

The following applications for kennel names were granted: J. L. Anthony, the Graphic Kennels; C. S. Stuart, the Chicago Black and Tan Terrier Kennels; George Greer, the Brookside Kennels; F. A. Borst and T. R. Diles, Algonquin Kennels; F. E. Miller and W. L. Prather, Jr., Algonquin Kennels.

Resolved, That as the date of closing of entries of any show is an official part of that show, a person eligible to make entries at that show must be in good standing at the time of closing of the entries.

The disqualification of E. P. Schell was removed.

The application of the Live Stock Society of America and Seattle Kennel Club was accepted. The resignation of the English Setter Club was accepted. Mr. F. S. Morrison, expelled by the Milwaukee Kennel Pet Stock Association, was suspended. The matter of charges preferred by H. Rieman against B. Alton Smith was referred to the Advisory Committee. Clubs in arrears were given thirty days to settle or be expelled.

The resolution on the matter of mutilation was considered inoperative if passed. A motion to refer the matter to the Committee on Rules, to frame a rule to abolish cropping, was lost by a vote of 12 to 6, as follows: Ayes—Dr. Foote, Collie Club of America, Gordon Setter Club, National Beagle Club, Northwestern Beagle Club, Pointer Club. Nays—American Fox Terrier Club, American Scottish Terrier Club, Mr. Wilmerding, Binghamton Industrial Exposition, Bloodhound Club, Boston Terrier Club, Great Dane Club, N. E. K. C., N. E. F. T. C., R. I. S. F. Association, Milwaukee K. C. and Pacific Fox Terrier Club.

The Bull Terrier Club's resolution of censure on Messrs. Foote and Schellhass was referred to the Advisory Committee.

National Beagle Club of America.

THE quarterly meeting of the National Beagle Club of America was held in the committee rooms of the Madison Square Garden, Feb. 19. The meeting was called to order by the president, Hermann F. Schellhass, with the following members present: Messrs. J. W. Appleton, George B. Post, Jr., A. Wright Post, J. B. Lozier, George Laick, H. L. Kreuder, N. A. Baldwin, William Saxby, George F. Reed, W. S. Clark, Horace Porter, Joe Lewis, W. C. Duff, C. F. Lewis, A. C. Pickhardt and George W. Rogers. Minutes of last meeting and report of treasurer were read and accepted. The committee on the Futurity Stake, Messrs. J. W. Appleton, G. W. Rogers and H. L. Kreuder, submitted the following, which was approved by the club:

FUTURITY STAKE, 1897.—This stake is open to all beagles, dogs and bitches 15 in. or under in height, whelped on or after Jan. 1, 1896.

An entire litter (born alive) must be entered before 8 weeks old, and both sire and dam must be registered or eligible for registration.

Names and markings as detailed as possible on puppies to be continued in stake shall be given at time of second payment.

Entrance fee is 25 cents for each puppy and must accompany the entry.

Additional payments shall be made as follows on individual puppies; it is not required to continue payments on the whole litter: 50 cents at the age of 5 months, 75 cents at the age of 8 months, \$1 at the age of 12 months, \$2.50 at the age of 16 months.

The balance of the total entry of \$10 to be paid on closing the stakes the night before the class is run.

The prize money shall be divided as follows: 40 per cent. of the entire entry fee to winner of the first, 25 per cent. to second, 15 per cent. to third; 10 per cent. to breeder of first prize winner, and the remaining 10 per cent. to the club.

A transfer of ownership does not affect the nomination, and the new owner upon furnishing a certificate from the former owner certifying the change of ownership may continue the payments and start the entry. Blanks may be obtained from the secretary.

FUTURITY STAKE, 1896.—Open to all beagles, dogs or bitches, 15 in. and under in height, whelped on or after Jan. 1, 1895. Conditions the same as the Futurity Stake of 1897, with the following exceptions: It is not required to enter every puppy in the litter. Payments equal to the amount which would be due had the conditions of the stake been in force since Jan. 1, 1895, must be made on or before March 15, 1896—that is, on dogs under 5 months of age a payment of 25 cents must be made; on those 5 months old and under 8 months 75 cents must be paid; on those 8 months old and under 12 months \$1.50; on those 12 months old and under 16 months \$2.50; on those over 16 months \$5. Additional payments shall be made as specified in the conditions of the Futurity Stake, 1897.

Mr. Kreuder submitted a scoring system for reducing each dog's field and bench qualities to an average; for establishing and recording each dog's actual merit in both forms. This in more detail has been published in the kennel press.

After considerable discussion by different members Mr. Kreuder withdrew his motion.

GEORGE W. ROGERS, Sec'y.

250 WEST TWENTY-SECOND STREET.

Irish Setter Club of America.

THE annual meeting of the Irish Setter Club of America was held at the Madison Square Garden on Thursday, Feb. 20, at 1 P. M., Dr. G. G. Davis in the chair. Present: Dr. G. G. Davis, James B. Blossom, B. L. Clements, Dr. William Jarvis, W. Sutton, Jr., and George H. Thomson, and by proxy F. L. Cheney. The reading of the minutes of the previous meeting was dispensed with. The treasurer's report was read and approved. Mr. L. A. Van Zandt was elected a member.

It was decided to hold field trials in 1896, the management of the same to be intrusted to the Field Trial Committee.

The following gentlemen were then elected to hold office during the ensuing year: President, Dr. G. G. Davis; Vice-President, James B. Blossom; Secretary and Treasurer, George H. Thomson; Executive Committee, F. L. Cheney, Pittsfield, Mass.; W. Sutton, Jr., New York; B. L. Clements, New York; W. L. Washington, New Castle, Pa.;

Dr. William Jarvis, Claremont, N. H.; Ray Tompkins, Elmira, N. Y. There being no further business the meeting adjourned.

GEORGE H. THOMSON, Secretary.

[The treasurer's report showed a balance of \$84.66. George H. Thomson, delegate to A. K. C.]

Eastern Field Trials Club Meeting.

THE meeting of the Eastern Field Trials Club was held at Madison Square Garden, Feb. 20, at 3 P. M. The meeting was called to order by the president, Pierre Lorillard, Jr. Members present: Pierre Lorillard, C. H. Phelps, Jr., James E. Orr, Dr. S. P. Brown, G. W. Ewing, G. M. Arnolt, Joseph H. Hunter, Theodore Sturges, Joseph Meares, Washington A. Coster and S. C. Bradley. Minutes of last meeting read and approved. W. Gould Brokaw, New York, and F. H. Fleer, Philadelphia, were elected to membership.

The club will give in 1896 the same stakes and under the same conditions as in 1895, to be run at Newton, N. C., beginning with the Members' Stake, Nov. 14, following with the Derby, All-Age and subscription stakes.

Moved that the secretary communicate with the gentlemen proposed by the club to act as the judges of the club's trials of 1896, and on receipt of acceptance their names be made public.

Treasurer's report was read and accepted.

S. C. BRADLEY, Sec'y.

The Great Dane Club of America.

AT the annual meeting of the Great Dane Club of America, held at Madison Square Garden Feb. 22, at 8:30 P. M., the following officers were elected: President, Robert Dudley Winthrop; Vice-President, A. B. Strange; Secretary and Treasurer, Clifford Wood; Delegate to the A. K. C., Clifford Wood; Executive Committee: the officers *ex officio* and Messrs. J. Blackburn Miller, Charles D. Bernheimer, Charles G. Peters and James A. Lawrence.

The following new members were elected: Messrs. Clarence E. Ward, Riverton, Conn.; J. Blackburn Miller, Newburgh, N. Y.; J. M. Studebaker, South Bend, Ind.; Gen. Joseph Torrence, Chicago, Ill.; Robert D. Winthrop, Charles G. Peters, William P. Smith and Ira Rosenbaum, New York city; Lorenzo Blackstone, Norwich, Conn.; H. L. Robertson, Topeka, Kan.; Charles G. Porter, Watertown, N. Y.; G. Muss-Arnolt, Tuckahoe, N. Y.

Adjourned to meet March 3.

CLIFFORD WOOD, Sec'y G. D. C. of A.

Canadian Kennel Club.

THE executive committee of the Canadian Kennel Club met on Feb. 14, beginning at 8 P. M. and continued till midnight. In the case of Boyle vs. Trebilcock, it was carried that the charge was not proven. In the matter of field trial rules, it was the sense of the meeting that the club could not readily control field trials, and the matter was laid on the table. It was resolved that no dog having its ears cropped and born on or after July 1, 1896, shall be eligible for competition at any bench show held in Canada under Canadian Kennel Club rules. New members: J. W. Jacobi, T. J. Tilley and W. H. Blaiklock. The annual meeting will be held on the Tuesday of the Toronto show week. The matter of reciprocity with the A. K. C. was considered, and Dr. Wesley Mills was appointed a special delegate to the A. K. C., with power to make the best terms possible without involving the C. K. C. in any financial responsibility.

St. Bernard Club of America.

THE annual meeting of the St. Bernard Club of America was held at Madison Square Garden, Wednesday, Feb. 19. There were present Mrs. Churchill, Miss Whitney, Mrs. Lee, Miss Chandler, Miss Goodenow, T. M. Burke, W. H. Joeckel, J. F. Lutz, D. Mann, Col. Jacob Ruppert, Jr., H. B. Turner, I. W. Comey, R. H. Burrows and D. E. Waters.

The treasurer's report showed a balance in the treasury of \$200. The following were elected officers: President, W. H. Joeckel; Vice-Presidents, Miss Whitney, Col. Jacob Ruppert, Jr., and R. J. Sawyer; Secretary, Robert H. Burrows; Board of Governors, H. B. Turner, A. C. Shallenberger, W. C. Reick, D. E. Waters, C. A. Pratt, E. H. Moore, E. Sauerhering, K. E. Hopf and H. S. Pitkin.

The National Greyhound Club.

THIS club was organized on Feb. 21. Officers: President, G. M. Keasbey; Vice-Presidents, August Belmont and Albion Page; Secretary, R. L. Little; Treasurer, L. C. Whiton; Delegate, Horatio Nelson; Executive Committee, G. M. Keasbey, A. Belmont, Dr. J. H. Lyke, E. R. Ladew, J. L. Kernochan. A number of new members were added, amongst whom were Foxhall Keene, W. Wade, Ben. Lewis, M. B. McGregor and N. Q. Pope. The new club has purchased the medal die of the old club.

Bull Terrier Club of America.

THE officers elected are: President, F. F. Dole; Vice-Presidents, John Moorehead and J. O. Horne; Secretary, W. D. Brereton; Executive Committee, John H. Church, J. Otis Fellows, C. Albert Stevens, William Mariner, M. J. Higginson, P. Tiffany, T. H. Gibbon; Delegate to A. K. C., Arthur Thompson.

American Bedlington Terrier Club.

PRESIDENT, William H. Russell; Secretary and Treasurer, John Hopkinson; Delegate, T. Pearsall; Executive Committee, W. H. Russell, M. A. H. Thelberg, J. Hopkinson, T. Pearsall, C. W. Lougest.

Spaniel Club.

OFFICERS elected: Pres., E. M. Oldham; Sec'y, R. P. Keasbey; Treas., Dr. S. J. Bradbury.

The officers are *ex officio* members of the executive committee. The other members are Marcel A. Viti and H. K. Bloodgood.

Collie Club Meeting.

THE Collie Club meeting was held on Friday. Officers elected are: President, Jenkins Van Schaick; Vice-Presidents, Thos. H. Terry and J. P. Morgan; Treasurer, J. D. Shotwell; Secretary, James Watson.

The Pointer Club.

OFFICERS: President, Geo. J. Gould; Vice-President, James L. Anthony; Secretary, F. S. Webster; Treasurer, C. F. Lewis.

POINTS AND FLUSHES.

Mr. James L. Kernochan and party were assaulted while on the Long Island train en route to Hempstead on Saturday night after the dog show had closed. A party of firemen, some of them partially intoxicated, returning from the parades in New York, were the aggressors. One first insulted Mr. Kernochan, then struck him. Mr. Kernochan punished his antagonist severely, when others of the party knocked him down and kicked him. The grooms of the Meadowbrook Club who were present came to his assistance and a general melee followed. Fortunately Mr. Kernochan and others of the party were not seriously injured, though badly bruised. Mr. Kernochan will probably prosecute all the parties concerned in the assault.

Mr. S. T. Hammond, Springfield, Mass., was in attendance at the New York dog show on Friday. The hearty welcome bestowed on him showed that the warm places which he held in the hearts of all sportsmen had not cooled by the passage of time.

Mr. Fred Kirby, of Philadelphia, will take a string of dogs through the Western circuit. He would take charge of more dogs for that purpose.

In the matter of the special baggage car for the transportation of dogs through the bench show circuit, at the last moment only one crate had been offered.

On Monday of this week the A. K. C. received fifty registrations, none of which came from bench shows. There are many indications that the depression in canine matters caused by the hard times is passing away.

According to the *Evening Post*, the queer wedding gifts are in vogue in Dakota. Following is a list of presents received at a recent wedding: A bull pup, a yellow dog, a water spaniel, a meerschau pipe and tobacco-pouch, a good shotgun, a bowie knife, a rifle, three dogs, a game rooster, one fiddle, one banjo, one spotted pup, one English mastiff, and a pair of silver-mounted pistols.

We notice with surprise in an American exchange that the Bull Terrier Club of America were severely down upon Dr. H. F. Foote and Mr. H. F. Schellhass for what the members of the club are pleased to style their "persistent and unreasoning assaults upon the practice of cropping." The club also decided that "the said Dr. H. F. Foote and his proposal to disqualify all dogs not 'in a natural condition' is assuming a hostile position toward the exhibition of spaniels, fox terriers, poodles, Great Danes, bull terriers, Boston terriers and Black and Tan terriers, and is thereby hostile to the American Kennel Club, which is maintained for the advancement of all canine interests regardless of breeds." Of course these resolutions are a little rough upon the doctor and his fellow offender, though it is questionable whether the receipt of the intelligence of the displeasure of the American Bull Terrier Club will disconcert them much. We certainly hope it will do nothing of the sort, and that the American Kennel Club, which is "maintained for the advancement of all canine interests," will not forget the sufferings of dogs in their solicitude to gratify the conservatism of their owners. At all events, we fail to see how anybody professing to encourage the improvement of dogs should make things easy for people who want to exhibit mutilated animals. Anyhow, we trust that the doctor and his accomplice will stick to their guns, and by persisting in the path of iniquity upon which they have so unblushingly entered, do all they can to put an end to barbarous practices of every sort.—*Stock-Keeper (England)*.

Three dogs died at the W. K. C. show. Dr. C. A. Lougest's Berry Bradshaw, a bloodhound of note, was one of the unfortunates.

The coursing for the Waterloo Cup was concluded on Feb. 21. Fabulous Fortune beat Utopia; Wolf Hill beat Thoughtless Beauty. Fabulous Fortune won the final and the cup.

The prices at the auction sale of dogs at the American Horse Exchange on Feb. 21 ruled low. The specimens sold did not warrant high prices. Fox terriers, twenty-three in number, averaged about \$13 each. Pointers averaged about \$36 each.

Yachting.

In its leading editorial, which we reprint this week, the *Field* practically accepts the finding of the special committee; admitting the impartiality of the committee and the conclusive nature of the evidence as to the lead and the water tanks. At the same time this acceptance is rather grudgingly given, and with the opinion that the verdict should have been "not proven"; while Lord Dunraven's evidence is characterized as "positive" and that of the defense as mostly "negative." Even admitting this technical distinction, we believe that every one who reads carefully the extracts from the testimony which we are now publishing will admit that the so-called "positive" evidence of Lord Dunraven and Mr. Gleanie, in fact of all of the Valkyrie party, is of the weakest possible nature, resting solely on eyesight, unsupported by a single authenticated measurement. Those who examined Defender from rowboats, and whose observation constitutes the main point of Lord Dunraven's case, seem to have contented themselves with rowing along one side only, and to have made no observations from ahead or astern as to any possible heeling, or from the other side as to any increased emersion there. Such "positive" evidence as this naturally carries very little weight in the face of the evidence as to the effect of a list of one or two degrees, such as would be imperceptible from a broadside view.

The negative evidence, on the other hand, is based on the testimony of the designer, owner, captain, sailormen, riggers and carpenters who worked on the yacht, friends of the owner, the club measurer, and outside experts, reinforced by measurements, surveys and elaborate experiments by heeling the yacht. The nature and great

amount of the negative evidence, which has been in no way weakened by Lord Dunraven's representative on cross-examination, affords proof that may well be termed convincing and unimpeachable.

Had it been a matter of shifting or starting ballast in an open boat with a crew of four or five and only a few hundredweights of ballast involved, it would have been impossible after the lapse of even less time to have proved anything; but in the case of *Defender*, where a weight of a dozen tons of lead must have been shipped and unshipped three times in two days, involving the knowledge of a number of men but of possibly seventy-five in all associated with her crew or on the tender or as outside mechanics, and with reporters by the score about her in the keen quest for news, it would be little less than a miracle if the fraud had been perpetrated with such complete secrecy as to have been undiscovered in the course of the investigation.

On Feb. 17 the letters from Lord Dunraven to Messrs. Phelps and Rives, of the special committee, arrived on the *Etruria*, but their contents have been carefully guarded until the special meeting called for Feb. 27. A letter has since been received, addressed to Com. Brown.

A second Chicago yacht club is now in the field with a new yacht, to take part, if possible, in the proposed "international" race between Chicago and Toronto. The dimensions of this craft are considerably less than those of the first yacht, and very much better suited to the purpose. Whatever temporary good may result from such a race as is proposed, we fail to see that the introduction on the lakes of what may be termed the Niagara type, of extreme bulb-fin, can be other than harmful to the best interests of yachting. The acceptance by the Royal Canadian Y. C. of the Chicago challenge will necessitate the formation of a syndicate and the expenditure of some \$10,000 in the construction and racing of a yacht that will be absolutely useless on Lake Ontario and on the other lakes as well save for this special match. A long experience has shown that an extreme draft of 9 ft. is all that can be carried with convenience and safety on Lake Ontario in the regular yachting service of cruising, racing and making the circuit of all the Lake ports, as is done by the yachts of Oswego, Toronto, Hamilton and Rochester. The largest keel boat possible on this length is such a craft as the *Fife* boats *Zelma* and *Yama*, and the home-built boat *Aggie*, of about 37 ft. l.w.l.; the 46 ft. *Vreda*, drawing about the same as the smaller yachts. Such a yacht as these gives a main cabin, after stateroom and good fore-castle and toilet space, and has proved the most convenient size of all-round racing and cruising craft for the special work on Lake Ontario. The larger yachts are either centerboard craft or keel boats of limited draft for their length and so not in the racing. In build and equipment these yachts are preëminently usable, not mere racing machines, but fitted for the comfort of their owners on long trips. So far as we are aware the practical limit of draft, as gauged by the majority of harbors—and they are few enough—is no greater on the Western lakes than on Ontario, and there are strong reasons for observing the natural limit of about 9 ft. in all yachts, keel or centerboard.

A draft of 10 ft. or over would be a very serious obstacle to the use of a yacht on Lake Ontario, save for special racing purposes, and the conditions of local yachting are entirely against the introduction of this type of craft. Apart from the draft, there is no popular place for the bulb-fin machine, and its introduction is in every way undesirable. It is quite possible that a challenge from a yacht of 43 ft. racing length, the class to which *Yama*, *Aggie* and *Zelma* belong, would result in the construction of two or three more of these yachts by Canadian yachtsmen and the strengthening of this desirable class throughout the lakes; but as the challenge now stands the only thing possible is to organize a syndicate and build a single racing machine to defeat Chicago. If she should be successful and her future owner should continue to race her on Lake Ontario, she would probably destroy the existing boats and put an end to all racing; as there is no more prospect of such a class becoming permanently popular on Lake Ontario than of New York and Boston yachtsmen rushing to build in *Defender's* class. In international racing between America and Great Britain, the bulb-fin machine of extreme size has been a necessity under existing conditions. In international racing between Chicago and Toronto there is no necessity whatever for the adoption of a similar type; and many excellent reasons against it.

It is one thing to own a yacht, especially a large and costly steam yacht, and another thing to be able to name it; and the new additions to the fleet do not shine conspicuously in the way of originality or distinctiveness. The magnificent Watson yacht building for Mr. Higgins will be disguised under the trite and hackneyed name of *Varuna*; the other Watson yacht, for Mr. Drexel, will be named *Margarita II.*, and the yacht building by Mr. Nixon for P. A. B. Widener, and shortly to be launched, will be christened *Josephine*. It is not an easy task to choose a fitting name for such craft as these, but it should at least be possible to steer clear of the trite and commonplace names that grace the yacht lists year in and year out, and fail entirely to specialize and identify these fine yachts in a manner appropriate to their size and appearance.

New York Y. C. Library.

WITHIN a few years past the New York Y. C. has been fortunate in securing an active and energetic library committee, at the head of which is Mr. Fordham Morris; the result being that the club has already a very fine library, as shown in the following report, to which additions and improvements are constantly being made:

To the *New York Yacht Club*: The library committee presents the following report of its operations during the season of 1895-6:

There are now in the library over 3,600 bound books, charts, maps and photographs, not counting duplicates or framed pictures. The chart table and sailing directions in the library afford information sufficient for the planning of cruises to any part of the world. Special attention has been given to the close relations which exist between American and Mediterranean yacht clubs, and the charts requisite for cruising in that inland sea have been added to the collection.

The committee has given much attention to obtaining data for the navigation of our inland waters, as the club signal now flies on the Great Lakes, the Ohio and many others of our great inland waterways. By the deepening of the canals in this State, new routes to the Great Lakes will be open to yacht cruisers; and if the Hennepin and New York enterprises are finished to their contemplated magnitude, a yacht of considerable draft will soon be able to cruise wholly within American waters from New York to Duluth or the deltas of the Mississippi. The committee has embraced some suggestions relative to this question in a separate communication.

The appropriation for the fiscal year was \$1,385. It has all been expended in new books, binding up old books, bookcases, library appliances, postage, printing and correspondence. All bills are paid up to date and all outstanding contracts which mature before the next appropriation are provided for, so that the new committee will not have to meet charges from last year. The details of the account appears in the treasurer's report.

Much liberality has been shown by members and others in donating books and other works to the library. When received, the donors have been promptly thanked, and notice of the gift duly posted on the bulletin board. The committee has caused a list of all donors and the works contributed to be printed and mailed to each member of the club and the donor. The committee hopes that a perusal of this record of generosity will induce others to follow the example.

The committee are grateful to the members for the interest manifested in their labors. It should be the highest incentive to our successors; for our work, if carried out on its present lines, will, in a very few years, result in the making of the best yachting library in America. All of which is respectfully submitted,

FORDHAM MORRIS,
WILLIAM GARDNER,
ARTHUR H. CLARK.

YACHT DESIGNING.—VI.

BY W. P. STEPHENS.

[Continued from page 144.]

HAVING now an idea of the nature of the fluid in which vessels float, we are in a position to attempt some simple experiments from which much may be learned. The following apparatus and demonstration was arranged by the author as a part of a lecture on "The Yacht Designer and his Work," delivered by him before the Seawanhaka Corinthian Y. C. in 1892. We will take first a glass vessel, with an opening near the top as an overflow, and a pair of common scales. The vessel being filled with

TANK, MODEL AND SCALES.

water, we will place it in a small cylinder of pine (1), which will naturally float, about half immersed, or with its axis just above the water. If we force it down to the bottom of the vessel it rises at once on being released, impelled by a force which is called *buoyancy*. This force acts always in a vertical direction, and, as we shall see later, through one particular point of a floating body, or for that matter, of every immersed body, even though the body may sink through the force of *gravity* being greater than that of *buoyancy*. Now we will remove the block and fill the vessel with water up to the level of the overflow pipe, and place the pan of the scales under this pipe. On replacing the cylinder very carefully a certain amount of water is displaced and runs over into the scale pan. Now we will take the cylinder from the water and place it on the opposite end of the scales, and it will exactly balance the water in the pan, previously displaced from the vessel by it.

We say "exactly," but as a matter of fact, in performing this experiment a number of times by way of rehearsal, it proved to be almost impossible to obtain exact results, from a cause noted in the previous chapter, the viscosity of the water, or its resistance, when in very small quantity, to a change of form. The displacement of the cylinder being only about a teacupful, the water would rise somewhat above the level of the outlet before its surface would break and it would begin to flow; and drops would cling to the leaden spout as the flow diminished, so that the overflow into the pan would not quite balance the cylinder. Unless performed on a larger scale, involving an overflow of perhaps several gallons of water, the experiment in itself may not prove a convincing success; but the fact that the weight of water displaced by a floating body is exactly equal to the weight of the body is so firmly established that no one would care to question it on the basis of an experiment on a very small scale. In the case of a yacht, the displaced water is equal in weight to that of the hull, spars, lead keel, sails, gear, crew and every minor detail.

It is this weight of displaced water which measures the buoyancy or floating power of a body. This seems perfectly natural in the case of a wooden vessel, but at first sight it is rather paradoxical in the case of an iron or steel one, though it is equally true. We will take a piece of sheet lead (5), which, on immersion, of course, sinks quickly to the bottom. We will now take it and turn up the edges to form a shallow box (6), and though it is still lead, and of the same weight as at first, it now has buoyancy, and floats. When first immersed, the volume of water displaced, though equal to the *bulk* of the lead, was but one-eleventh of its *weight*. In the form of a box, however, while the *weight* is the same, the *bulk* of water displaced is very much greater; and the weight of this water is more than the weight of the lead; consequently the *buoyancy* is greater than the *gravity*.

We have now learned two very important facts about the block of wood, it will float under all conditions, and we have a measure of floating power (buoyancy) in its own weight. Now we will ship in its upper side as it lies afloat a small stick, representing a mast, and the result is—a capsize. We will now take another block of pine (3), of the same length, bulk and weight, but flat, with a rectangular instead of a circular cross section. In buoyancy and displacement it is precisely the same as the cylinder, but on stepping a mast in it (4) a very different condition of affairs presents itself. The block not only does not capsize of its own accord, but when heeled down and released it resumes its original upright position. It is certainly a step nearer to a yacht than the round block, for it will carry sail and afford a foothold for a crew, but it is not perfect; we heel it a little further than at first and again we have—a capsize.

These two capsize teach a good deal. We have discovered that the second block possesses a new attribute, stability, by virtue of which it not only rests in one particular position when undisturbed, but returns to the same position after being removed from it. We have found, further, that there is a limit to this same stability, and that if the block be heeled too far it disappears.

Now we will take our old friend, the cylinder, and affix to the side opposite the mast a small piece of brass (7), a fashionable fin-keel (2). What is the result? We have given to this model the same attribute that the flat one possesses, stability; when we heel it and release it, it returns to its original position. Now let us heel both together and watch the result; up to an angle of perhaps 55 degrees from the vertical, both return at once to the upright position when released, but when past that angle,

while the flat block capsizes, the cylinder with its meta-keel continues to regain its original position, no matter how far it may be heeled; in fact we may turn it until the mast points directly downward, but it becomes upright as soon as released.

We shall not attempt here to discuss the question of the accuracy and propriety of the expression "stability of form," those who are interested will find a very full discussion in Kemp's "Yacht Architecture." It is evident,

MODELS.

however, that the stability of the cylinder differs from that of the flat block, in that the former is due solely to the addition of ballast, while the latter is derived from the form and proportions of the floating body. In addition to a recognition of this difference, we have learned the meaning of a term very common in naval architecture, the "range of stability." In the case of the flat block, the "range," or the angle through which it may be heeled without losing its stability, is quite limited; in the cylinder, however, it is infinite—we can find a position in which the block will rest save the original upright one.

If we could carry the practical experiment a little further by attaching a cord and weights to the top of each mast, so as to measure the power required to heel the vessel at each degree of inclination, we would find that in the cylinder a very light pull would serve to move it from the upright position, but the resistance would increase until considerable force was necessary when the mast was on the surface of the water; the vessel now having a strong tendency to right herself. In the case of the flat block a comparatively heavy pull would be necessary at first, but it would soon decrease, and at an angle of 55 degrees was reached the model would fall over of itself. The two extremes represented by these models include all types of yachts, from the old "flatiron" or "skinning dish" to the modern bulb-fin and the old "plank-edge" cutter. The former possessed what is called "initial stability," being very stiff at small angles of heel and having a nearly level deck at all times—except when as not infrequently happened, they capsized; the constant liability to this mishap, with possibly fatal results, being one of the most serious of the defects of this type. The narrow cutter, like the cylinder, would under the pressure of sail never remain near the upright position, no matter how heavily she might be ballasted, the east breeze would heel her considerably and place the deck at an angle that was inconvenient to work on, and in a strong wind the deck might be so nearly vertical that the crew kept their hold with difficulty; but at the same time she would be incapable of capsizing.

In the next chapter we shall go further in the subject of buoyancy and stability; but before leaving the vessel of water and its block models we would point out that while we have investigated two of the important attributes of a yacht, buoyancy and stability, there is still a third. We have thus far succeeded in obtaining models which will float and at the same time maintain an upright position under certain conditions, neither of them would steam or sail very far in a day, the real vessel, no matter for what purpose she was intended, must possess a third attribute, *form*, by virtue of which she makes her way as easily and speedily as possible through the water.

"FORM."

The Dunraven Inquiry.

MR. ISELIN'S TESTIMONY.

C. OLIVER ISELIN, being called as a witness in his own behalf, testified as follows:
Examined by Mr. Choate:
Q.—You were one of the owners of the Defender, with Mr. Morgan and Mr. Vanderbilt, I believe? A.—Yes.
Q.—And by arrangement with them her entire management was left with you? A.—Entirely.
Q.—During the whole summer? A.—During the trial races and the Cup races; also the building of the boat.
Q.—Before I go into your examination on other matters, I wish to know when you first heard that Lord Dunraven had made any complaint about the Defender? A.—It was on Oct. 25 I heard that first; I read it in the paper.
Q.—October or September? A.—I read it in the paper in October.
Q.—That was after the report of the Cup committee to the yacht club? A.—Yes; the next day.
Q.—You had heard nothing on that subject from either the Cup committee or from Mr. Fish? A.—Absolutely nothing.
By Capt. Mahan:
Q.—That is with reference to this particular point we are speaking of? A.—Yes.
Mr. Choate—Yes. The complaint that Lord Dunraven made to Mr. Fish.
By Mr. Choate:
Q.—How and when did you learn that there was to be a remeasurement on Sunday, Sept. 8? A.—I heard of it on Friday afternoon, Sept. 6. I heard there was to be a re-marking—a marking.
Q.—My question was when and how you first heard there was to be a remeasurement on Sunday? A.—I heard of that Sunday morning.
Q.—Over at the Erie Basin? A.—At the Erie Basin.
Q.—How came you at the Erie Basin that Sunday morning? A.—I was told on Friday, just after the measurement, by either Mr. Canfield or Mr. Rogers, I cannot remember which one, that the boat would be marked on Sunday morning. That is the reason I appeared there.
Q.—And you went from your home in New Rochelle down to Erie Basin to attend to the marking, did you? A.—No; I did not go from my home.
Q.—From New York? A.—I went from Bay Ridge. I slept on the Neckan Saturday night.
Q.—From whom did you learn, after you got over there, that there was to be a remeasurement? A.—I cannot state who told me.
Q.—And the marking you saw done as a result or an accompaniment of the remeasurement? A.—I did not see the marking done.
Q.—You did not wait for that? A.—Yes, I waited, but I could not see it. I was sitting on the deck amidsthips.
Q.—You knew it was being done? A.—I knew it was being done.
Q.—We will go back now to the beginning of the matter. You ordered the building of this boat through Mr. Herreshoff? A.—Yes.
Q.—Was anything arranged between you as to the general plan or theory upon which she should be built, in respect to her load waterline? A.—Yes.
Q.—In relation to the terms of the deed under which the Cup was held? A.—She was designed to conform with the deed, and we agreed that we had better make her 89ft. waterline, so as to have a foot margin in case we wanted to use more ballast or wanted to make a difference in the trim, in case the immersion was greater than we expected. We designed her to be 89ft.
Q.—As appears she came within about ½ft. of that? A.—Yes; when she sailed.
Q.—How many trial races were there in the summer between her and the Vigilant? A.—Three.
Mr. Iselin—What do you mean by "trial races"?
Mr. Choate—I thought she raced with the Vigilant three times, did she not?
Mr. Iselin—She raced a great many more than that.
Q.—Under the auspices of the New York Y. C.? A.—Yes.
Q.—How many were there? A.—I think eight races besides the trial races.
Q.—Through how long a period prior to the end of August? A.—From some time in July she was racing. She raced in July. She had two races with the Vigilant in July, and then she went on a cruise with the New York Y. C., and was racing about ten days nearly every day from port to port, and also racing for the Citizens' Cup and others.
Q.—When were you notified by the club that she had been selected to race with the English yacht? A.—After the trial races with the Vigilant down the Bay.
Q.—After the last of those? A.—After the last of them.
Q.—During all of these races prior to that time did she carry any ballast, and if any what?
Mr. Iselin—Prior to what?
Mr. Choate—Prior to her being selected to race with the Valkyrie.
A.—She carried absolutely none. Not 1lb. of ballast. Of loose ballast, I mean.
Q.—What was there in her that weighed which could be taken out? A.—There was a water tank, bilge tank, large ice-box, stove, cooking utensils, cabin fixtures, partitions, bedding, all the linen, crockery, men's clothes, my apparel and my friends' apparel on board. That is about all.
Q.—After the arrival of the Valkyrie, did you learn that she was practically stripped of all those things? A.—I did.
Q.—And did you have a conference with Mr. Herreshoff in consequence? A.—I did.
Q.—With what result? A.—The result was we decided to strip the Defender to be on equal terms with the Valkyrie.
Q.—And for that purpose where was she taken? A.—She was not taken for that special purpose anywhere. She happened to be at New Rochelle.
Q.—When you so decided? A.—Yes.
Q.—How long was that before the Friday, Sept. 6? A.—That was on Tuesday and Wednesday and Thursday, just before Sept. 7.
Q.—Were you up at New Rochelle while she was being stripped of all those things? A.—I was.
Q.—Did you see that they were all taken out of her? A.—I did.
Q.—Did you provide for the weighing of those things? A.—I did.
Q.—What had been planned or arranged or advised between you and Mr. Herreshoff, to take the place of this weight so taken out, and what was the weight so taken out, as you were informed? A.—We did not expect there would be quite as much weight to come out of her as did, as appeared by weighing. So we decided to order two tons of lead to be sent from New York, to take the place of the cabin fixtures and other things.
Q.—Thinking that would be enough? A.—Thinking that would about counterbalance what was taken out; and that lead was sent up to New Rochelle.
Q.—That was in the form of pigs of about 100lbs. weight to the pig? A.—Yes; there were two tons, forty-two pigs.
Q.—How did you procure that? A.—I told my friend, Mr. Thorne. He was one of my friends on the Defender, and sailed with me all summer; and I asked him to order it for me in New York.
Q.—Of any particular house? A.—I did not state to him any particular house, no. I asked him to order the lead.
Q.—Do you know from whom it was purchased? A.—Yes; I know now. Mayor, Lane & Co.
Q.—Is this the bill? A.—That is one of the receipted bills.
Q.—That is the bill for the forty-two pigs? A.—Forty-two pigs.
Q.—This is a bill made out to A. Iselin & Co.—that is your father's firm? A.—Yes.
Q.—"Forty-two pigs prime pig lead, 4,045lbs., at \$3.75, \$151.69." Cartage added. "Ship to C. Oliver Iselin, Yacht Defender, New Rochelle, via Steamer Mary Gordon. Ordered by N. B. Thorne." The date of the bill is Sept. 4. A.—Yes.
Q.—That weighed 4,045lbs.? A.—Yes.
Q.—When was this shifting done? A.—Taking these things out? That was done on Tuesday, Wednesday and Thursday before the Cup races.
Q.—What was the result of the weighing of what was taken out? A.—We took about 7,000lbs. out, all told.
Q.—And you had only got 4,045 to substitute for it? What did you do on that? A.—I did not think I had substituted enough, so Mr. Herreshoff and I decided we had better order another ton.
Q.—Did you do so? A.—I did so, by wire.
Q.—From the same house? A.—From the same house. I ordered it by wire. My wire was to Mr. Thorne.
Q.—And on the same day did you purchase from the same house twenty-one pigs more? A.—I did.
Q.—Where was that to be delivered? A.—That was to be delivered at the Erie Basin on Friday morning.
Q.—To await the Defender when she came down? A.—Yes.
Mr. Choate—This bill is dated Sept. 5, 1895: "Sold to A. Iselin & Co., 21 pigs prime pig lead, 2,015, at \$3.75, \$75.56; cartage and ferriage added; addressed to C. Oliver Iselin, Yacht Defender, Erie Basin Dock."
Q.—That having been done, on the 4th and 5th apparently, the second purchase on the 5th, when did the Defender leave New Rochelle for the Erie Basin? A.—She left on Friday morning, the 6th.
Q.—How did you come from your home in New Rochelle to the Erie Basin? A.—I came on the steam yacht Neckan.
Q.—Chartered by you for that occasion? A.—Chartered by me to live on. Previous to that I had lived on the Defender during all the races.
Q.—And you came from New Rochelle on Friday morning down to the Erie Basin? A.—Yes.

Q.—What time did you reach the Erie Basin? A.—As nearly as I can say it was about 12 o'clock.
Q.—Did you learn that the Valkyrie had then been already measured? A.—No, she had not. The measurement, as I recollect it, was not completed.
Q.—How soon after you arrived there did the measuring of the Defender take place? A.—I should say about one hour.
Q.—It began about that time? A.—It may be a little more.
Q.—Do you remember anything passing between you and Mr. Leeds prior to that? A.—I remember his saying to me that the boat had a slight list to starboard.
Q.—Was anything said about the boom being put over? A.—He said he thought the boom ought to be put over or something done.
Q.—Did you give any direction in consequence of that, or was anything done that you remember? A.—No. I cannot recollect whether the boom was moved or not. I know the boat was put on a perfectly even keel when she was measured.
Q.—She was on an even keel when she was measured? A.—Yes.
Q.—How do you know that, otherwise than that it is usual or necessary? A.—Because I have a telltale on deck to tell me that.
Q.—You saw that telltale? A.—I did.
Q.—You were on deck all the time she was being measured? A.—I was on deck all the time she was being measured.
Q.—At that time you observed by this telltale that she was on an even keel? A.—Not the time she was being measured. Just before. Because, when she was being measured, I had to sit in one position; but just before, I was looking at the telltale to see whether she was level or not.
Q.—When you got there had the additional ton of lead, twenty-one pigs of lead, been already placed on board her? A.—No, they had not been.
Q.—Did they arrive after you got there? A.—No; they were waiting there for me; they were on the dock on the truck.
Q.—You saw them placed on the Defender? A.—I did.
Q.—Where were they placed? A.—On the cabin floor, about amidsthips, or a little aft of it.
Q.—Do you know of any other lead than that being put upon the yacht at that time, to the end of the races? A.—I do not.
Q.—You procured none? A.—I procured none.
Q.—You ordered none? A.—I ordered none.
Q.—How long did you stay by after the measuring of the Defender had been completed?
Mr. Iselin—Stay on the Defender?
Mr. Choate—Stay there or in the Erie Basin?
A.—I stayed on the Defender a very short time, because it was late and I wanted my lunch, and I went to the Neckan that was lying on the other side of her. I was sitting in the cabin on deck where I could see the Defender while she was lying there, while I was eating my lunch.
Q.—By that time had the Valkyrie left the Basin? A.—At the time I had my lunch, yes.
Q.—Do you remember meeting Mr. Rogers and Mr. Canfield? A.—Yes; I do remember meeting them.
Q.—You remember their going over there? A.—Yes, I remember that perfectly.
Q.—What passed between you and them? A.—They told me—
Mr. Choate—I refer to the marking of the vessel.
A. (Continued)—They said at the time that Lord Dunraven wanted the waterlines marked, and asked me whether I would agree to that. I answered, as near as I can remember, it would be perfectly satisfactory to me, and I would be pleased to have it done.
Q.—But the Valkyrie was not there at the time to be marked? A.—The Valkyrie had gone out. So they told me we would have to return on Sunday morning.
Q.—Did you hear anything about the tides, or anything preventing the Valkyrie coming back that day? A.—Yes. I heard, not from them, but from the Valkyrie people, who asked to get out. They were inside of us. Some of our ropes interfered with their getting out, and they said they wanted to hurry out on account of the tide. I think it was Mr. Kersey who stated that to me, and suggested my going out with the Defender too.
Q.—At this time state how you had officered and manned the Defender. The same officers and crew that had been with her all summer? A.—Yes; the same officers and same crew, with the exception of one or two sailors. There were also sailmakers who had been with her all the summer.
Q.—Captain Haff had sailed her during all these trial races? A.—Yes.
Q.—And the same mates and quartermasters? A.—Yes; the same—no, there was a change in the quartermasters during the summer. One quartermaster was ill, and we only had two quartermasters the first part of the season, and we afterwards had four; but two of the quartermasters were taken out of the crew.
Q.—For those places had you selected competent and experienced men, as you supposed? A.—I selected the best men I could find in this country, to the best of my knowledge.
Q.—You left the Defender that afternoon, I suppose? A.—Yes; I left her after the measurement.
Q.—Did you make any further examination of her than you have already stated? Did you see the twenty-one pigs of lead after they were brought on board? A.—I did.
Q.—You say they were on the cabin floor? A.—Yes. I also examined the hold.
Q.—You examined the hold that day? A.—I did examine the hold, before the measurement.
Mr. Choate—I did not know that.
Mr. Iselin—I also examined the hold at New Rochelle before she came to Erie Basin, after the stowing of the ballast.
Q.—Will you state what you found in the hold at New Rochelle and at the Erie Basin, before she was measured? A.—I found the two tons in New Rochelle, and I examined it, because I wanted to see that it was properly stowed; and when she arrived at the Erie Basin I examined the hold then, to see whether there was any water in her. There was a slight leak in the boat, and I was so very particular about having every drop of water taken out that I used to have men go down into her with buckets and a sponge to sponge every drop of water out, not only in the keel of the boat, but also in the lazarette. There was a slight leak in the rudder post, and in the morning there were six to eight buckets of water that came out of the lazarette. I was most particular about having every drop of water out of the boat at all times.
Q.—When you examined her before the measurement on Friday, what lead did you find in her? A.—I found two tons.
Q.—And on the cabin floor the twenty-one pigs? A.—On the cabin floor the twenty-one pigs.
Q.—Where did you spend that night, Friday? A.—I spent it on the Neckan, at the Horseshoe.
Q.—How far away from where the Defender was? A.—A good way off. It was rough that night going down. So much so that I went in close to the Government Docks, so as to avoid any rolling around at night.
Q.—You were not near enough to hear or see anything going on in the Defender that night? A.—No, I was not.
Q.—How did you get aboard of her, and at what time on the morning of Saturday? A.—I came aboard the Defender in my launch about 8 o'clock, as nearly as I can judge.
Q.—Who went with you? A.—Mr. Thorne, Mr. Leeds, Mr. Herreshoff and Mr. Butler Duncan and Mr. Kane and no others.
Q.—Those gentlemen accompanied you on the race? A.—Yes.
Q.—They came for that purpose? A.—Yes. They had been racing with me all summer.
Q.—It has been stated by Mr. Leeds as about half-past 8. Is that the way you recollect it? A.—No, I think it was nearer 8 o'clock.
Q.—You think it was earlier; about 8 o'clock? A.—Yes; about 8.
Q.—How was the vessel lying at that time—I mean to say, the Defender—as to motion; what was the condition of the water and the state of the wind? A.—The wind was light from the eastward, with a slight swell and a slight motion.
Q.—The vessel did not lie perfectly still in the water? A.—Not perfectly still.
Q.—Was there a motion both ways, do you think? I mean to say, did she roll and pitch both? A.—No, I think there was a little roll to her. I did not notice any pitching.
Q.—There was some motion? A.—Some slight motion, but the motion was very slight indeed.
Q.—You were familiar by this time with the Defender? A.—Yes.
Q.—Did you observe that she lay any lower in the water than when she was measured in the Erie Basin the day before? A.—I did not.
Q.—How long was it after you got on board that Lord Dunraven put Mr. Henderson on board? A.—I should say it was very nearly one hour after—somewhere near 9 o'clock, I think, when he came.
Q.—During this hour what had you been doing? A.—As soon as I came on board I asked Capt. Haff how that twenty-one pigs had been stowed—I wanted to see it—and I went below with Mr. Herreshoff and Capt. Haff and examined the hold and saw that the lead had been properly stored.
Q.—As the weather was that morning, what were the best chances for your boat in the race—to be as light as she could be or as heavy? A.—As light, in my opinion.
Q.—That is what you thought? A.—Yes.
Q.—You and Capt. Haff and Mr. Herreshoff made this examination to see whether the lead had been properly packed? A.—Yes.
Q.—What did you find when the floor was taken up? A.—I looked down and asked Capt. Haff just where he had put the lead, and he pointed to where the lead had been put, and I could see that it was there.
Q.—Could you see that there was any considerable quantity? If

there had been more than the three tons would you have seen it? A.—Yes, sir; if there had been any considerable quantity more.
Q.—But there was none beyond that? A.—No, none that I could see. There was none there.
Q.—What precautions did you take that morning as to water being out of the vessel? A.—I asked the carpenter, who was in the habit of doing that sort of thing for me, to measure the water in the hold, which he did in my presence, with a stick that was kept for that purpose. The stick was kept under the cabin floor.
Q.—Is that through a sort of hatchway? A.—There is a little hatch just at the bottom of the companionway as you go into the cabin.
Q.—What was the result of the examination for water? A.—The carpenter reported that there was no water in it, and not only reported, but I looked down and could see that there was no water in it.
Q.—Did you have the bilge sponged out, as you say? A.—I did not have the bilge sponged out.
Q.—There was no occasion for it? A.—Not the bilge; but the other part of the vessel I had sponged out.
Q.—You know perfectly well what there was in the vessel that day, do you not, besides the officers and crew and yourself and your friends? A.—Yes.
Q.—Was there anything except this three tons of lead? A.—Nothing except the sails; no ballast.
Q.—Of course I do not mean the parts of the vessel; but none of those things that had been taken out at New Rochelle had been carried back into the vessel? A.—None.
Q.—What did you do about water? Were you going on that day's race without any water? A.—We had a milk can on board; one of those large milk cans.
Q.—One of those large 40qt. milk cans? A.—40qt. can they called it; holding 40qts.
Q.—That was all the water you had? A.—That was all the water.
Q.—You sailed the race. Now, was there any communication at all to the Defender on her way up to Bay Ridge? Any communication made?
Mr. Iselin—By the committee?
Mr. Choate—By anybody, yes?
A.—Yes; some one came aboard of her—not aboard of her, but came alongside of her, and handed me a horseshoe of flowers, just after I crossed the winning line.
Q.—But I mean was there any communication about the race or about the boat, or that she was to appear at any place for remeasurement, or anything of that sort? A.—None.
Q.—It was after you got up, was it, that you heard? You did not hear anything, did you? A.—On Saturday night I did not hear anything. I do not remember hearing anything about a remeasurement until Sunday morning.
Q.—Where did you go on Saturday night? A.—We lay off Bay Ridge close to the Defender.
By Mr. Rives:
Q.—There was a crowd of vessels up there at Bay Ridge that night, I suppose, was there not? A.—Yes; a great many vessels.
By Mr. Choate:
Q.—What time did you get up? Was it after dark or before? A.—After dark.
Q.—It was too late to have the vessel remeasured that night, do you think? A.—In my opinion, yes.
Q.—Did you ever know of any measurements by night, in the dark? Did you ever know of the measurement of any vessel or yacht? A.—No, I never heard of any.
Q.—You attended on the remeasurement on Sunday, did you? A.—Yes.
Q.—Were you on board the Defender then? A.—Yes.
Q.—You made no special examination of her then, I suppose? A.—Yes, I did.
Q.—What did you do? A.—I had the floor taken up and examined the hold.
Q.—What did you find? A.—I found practically three tons of lead there, as far as I could see.
Q.—The same appearance as she presented just before the previous measurement? A.—Yes.
Q.—And just before the race? A.—Yes.
Q.—To your knowledge had anything been taken out of her or let out of her in any way from the time she started on the race until then? A.—Nothing to my knowledge.
Q.—You are quite an experienced yachtsman. You had occasion to signal a protest on the second day's race, had you not? A.—Yes.
Q.—Because of foul? A.—Yes.
Q.—Do you know of anything that could have prevented Lord Dunraven, on the previous day's race, on Saturday, signaling a protest about this subject that he complained of—the deeper immersion of the Defender? A.—No, I see no reason why he should not have done so.
Q.—Would it have been entirely within the rules? A.—Entirely.
Q.—I mean for him to signal his protest, and nevertheless sail the race on that day? A.—Entirely.
Q.—And it would have saved all this racket? A.—All.
Q.—Did you examine the marks after they were made on the Sunday?
Mr. Iselin—Did I examine what marks?
Mr. Choate—The marks that were put there by Mr. Hyslop.
A.—Mr. Herreshoff painted on the marks in the presence of Mr. Watson and Mr. Hyslop.
Q.—You did not watch them to see about the correctness of that? A.—No; I could not watch them, because I was sitting amidsthips.
By the Chairman:
Q.—When did you first learn that a remeasurement had been called for by Lord Dunraven? A.—On Sunday morning.
Q.—Sunday morning? A.—Yes, sir; the remeasurement. But the marking I heard of on Friday.
Q.—And from whom? A.—On Sunday morning—I do not know from whom I heard it; but from the talk among my friends I understood that the boat was not only going to be marked, but remeasured. I may have been told so by Mr. Canfield. I do not remember.
By Mr. Choate:
Q.—Was Lord Dunraven brought there at the time of the remeasurement? A.—Yes.
Q.—Did you meet him personally and talk with him? A.—I did.
Q.—Did he refer to any complaint? A.—He did not.
Q.—Or did any fault? A.—He did not.
Mr. Askwith—Those questions might have been asked Lord Dunraven when he was here.
Mr. Choate—I know they might have been, but I did not think of it.
Q.—What did pass between you and Lord Dunraven? A.—I went on deck, and Lord Dunraven at that time was sitting on the Valkyrie, nearly amidsthips, waiting for the remeasurement, and he came off of the Valkyrie with Mr. Kersey, and I was with Mr. Duncan. We shook hands and said good morning, and talked about its being a very warm day, and I think I asked him what time he got up to Bay Ridge the night before, and he told me pretty late and the Bridgeport later. He did not dine until 10 o'clock, or something like that.
Q.—No complaint? A.—No complaint.
Q.—No reference to any complaint or cause of complaint? A.—None whatsoever.
By Mr. Rives:
Q.—Did you have any conversation with him on Saturday morning at the Hook, when he came alongside your boat? A.—I had a few words with him, yes.
Q.—To what effect? What was it about? A.—I said good morning, and just as he was going off I said, "Lord Dunraven, I have a suggestion to make to you. I would like to make you a little bet on the result of these races." I said, "I would like to bet you my binnacle against yours." He waited a few minutes, and I think his answer was, as near as I can recollect it, "I think not."
By Mr. Choate:
Q.—As I understand you, up to Oct. 24 you remained in absolute ignorance that he had any cause of complaint? A.—To Oct. 25.
Q.—You considered yourself charged with the full responsibility of anything that occurred on that vessel during the races? A.—Absolutely.
Q.—I will ask you your judgment whether any such thing could have occurred as has been suggested by Lord Dunraven, either the lightening of the boat preliminary to the first measurement, the putting on board in any form of any weight to the extent of nine or ten tons, or to any amount, and the taking it out again before the second remeasurement, without your knowledge? A.—I cannot imagine that such a thing could be possible.
Q.—You say that, not only on your knowledge of this particular case, but from your general experience as a yachtsman? A.—Yes.
Q.—I do not know exactly how extensive your expert knowledge is, but could you tell from the motion and handling of the Defender whether there were ten or fourteen tons more or less of ballast or weight in her? A.—Yes, I could tell at once.
Q.—How could you tell that? A.—By the feeling of the boat, the way she moved.
Q.—Do you know from that that no such thing had occurred? A.—No such large amount of ballast as was necessary to immerse her 4in.
Q.—You had been on her on every previous race? A.—Every previous race.
Q.—And were perfectly familiar with her movement and conduct? A.—Perfectly.
Q.—This boat has been laid up at New Rochelle since when? A.—Since after the Cup races.
By Mr. Whitney:
Q.—The trial races, you mean? A.—No.

By Mr. Choate:
Q.—Up at New Rochelle? When did she go to New Rochelle after the Cup races? A.—She went there the next day, I think—yes.
Q.—Had she been lying where you have been in the habit of seeing her up there? Have you seen her several times? A.—All summer, yes; but not since—
Q.—Not since then? A.—I have seen her; but she is not lying where I could see her from my house.
Q.—These marks that were put on by Mr. Herreshoff and Mr. Watson remained as they were put on by them? A.—As far as I can say, certainly.
Q.—You know of no change? A.—I know of no change.
Mr. Choate—I want to correct one error I made. It seems that Mr. Leeds said it was shortly after 8 that Mr. Leeds and you went aboard and not 8:30. You said about 8 o'clock?
Mr. Iselin—I said about 8, yes.
By the Chairman:
Q.—Who had charge of the Defender during the night of Friday, before the first race? A.—Capt. Hafl.
Q.—He was on board? A.—He was on board.
Q.—Who had charge of the Hattie Palmer that night? A.—Capt. Taylor, I think his name is.
Q.—He was on board through the night? A.—Yes; so far as I know. He was supposed to be.
By Mr. Whitney:
Q.—How near did you lie to the Defender Saturday night? A.—It might have been a hundred yards. Perhaps not quite so much. Near that.
By the Chairman:
Q.—Where was the Hattie Palmer Saturday night? A.—When she first came up to Bay Ridge she was alongside the Defender, and as far as I know she stayed there until between 9:30 and 10 o'clock. The crew got all their meals on board the Palmer; the Defender did not arrive there until after 8 o'clock; they got their supper and put their cots aboard; I believe it was 9:30, but I am not positive of that.
Q.—Then where did the Palmer go, if she went anywhere? A.—The Palmer, I think, went into the Atlantic Club House, or near there. I think so.
Q.—How far from the Defender? A.—That would be half a mile at least, or three-quarters of a mile, I should judge.
Q.—But Capt. Hafl remained on board the Defender Saturday night? A.—Yes.
By Mr. Whitney:
Q.—You sailed the races prior to the Cup races without any ballast? A.—Yes.
Q.—Had she been measured before this? A.—Yes; she had been measured in the trial races with the Vigilant.
Q.—Was she measured for the Goelet cup race? A.—No; she was not. I believe Lord Dunraven stated she was.
Q.—What did her measurement show—the first measurement? A.—She was 85⁸⁵/₁₀₀ ft.
Q.—That was her first measurement? A.—Yes.
Q.—Her second measurement was Friday, the 6th, was it? A.—Yes.
Q.—I see Lord Dunraven says that according to Mr. Hyslop, the official measurer, the Defender was some 6in. shorter when measured for the Cup races than when measured for the Goelet cup race. What do you say? A.—That is not so, according to Mr. Hyslop's measurement. There was a difference of forty-hundredths of a foot.
By Mr. Rives:
Q.—She was longer at the time of the trial races? A.—Yes.
By Mr. Askwith:
Q.—You say she was not measured for the Goelet cup? A.—Yes, I said so.
Q.—Had you found her to be in her best trim then? A.—I do not know what her best trim is yet.
Q.—Did you frequently, in the course of the summer races, alter her trim? A.—Yes.
Mr. Iselin—In what way?
Mr. Askwith—By ballast.
A.—No, there was no ballast on board to be changed.
Q.—By bringing in an extra tank, or extra furniture? A.—No.
Q.—Was she sailing then on her designed trim? A.—No. She was sailing shorter, very little; the difference between 88.85 and 89.
Q.—Had you found the trim that she was then sailing on unsatisfactory? A.—No. You can always improve these boats, in my opinion.
Q.—Did you think it wise to improve a boat by taking out all her fittings two days before the race, and by having lead put into her on the night before the race, and your men working the whole night? A.—You are not stating the facts as they were. The men were not working all night.
Mr. Choate—I have not heard of it.
Mr. Iselin—I have not heard of it either.
Mr. Askwith—I put in some affidavits showing that knocking was going on the whole night on the Defender.
Q.—Were many of your men on board the Defender that night—or how many? A.—I think there were forty men sleeping on board that night.
Q.—On the two? A.—No; not on the two.
Q.—On the Defender alone? A.—On the Defender alone.
Q.—On Friday night? A.—On Friday night. Fully forty men.
Q.—Were some of those men of yours on board the Hattie Palmer? A.—None of the regular crew. I had, besides the regular crew—
Q.—You were not there, so you could not say what the men were doing. But do you know whether it was your own men or other men who were moving the lead into the Defender? A.—I cannot state that, because I was not there.
Q.—You gave no orders upon the subject? A.—I gave orders to have the lead stowed; yes.
Q.—Did you know that the pigs of lead were to be sawed in two? A.—Yes. Not sawed, but cut.
Q.—How were they cut? A.—Cut with an axe. That is the way they were cut. It was with the use of an axe.
Q.—Roughly cut with an axe? A.—Roughly cut with an axe.
Q.—To be fitted into the partitions of the Defender's skin? A.—Yes.
Q.—The night before the race? A.—The night before the race.
Q.—You had not attempted any such alteration of that kind during the whole summer? A.—No.
Q.—The America's Cup race was the first race that you tried such an alteration in—or rather your agents did? A.—Yes.
Q.—You took out 7,000lbs. of fittings, of tanks—was not that the amount? A.—Yes; as near as I could get at it.
Q.—You suggested that you put in 6,000lbs. of lead? A.—Yes.
Q.—Was it a usual thing to lighten up a vessel the night before a race? A.—I do not know whether the lightening up of the vessel was usual. She would have more stability, in my opinion, with the 6,000lbs. in the keel than she would have with 7,000lbs. in the cabin. In other words she might be an improved boat.
Q.—Would not the result of putting in 6,000lbs. instead of 7,000lbs. be to lighten the vessel up and to lower her center of gravity? A.—Yes, the difference would be the 1,000lbs. in weight.
Q.—Well, but that would be the effect, would it not?
Mr. Iselin—To lighten the vessel?
Mr. Askwith—And to lower her center of gravity?
A.—Yes.
Q.—Is it, in your experience, usual and a wise thing to alter a vessel's flotation and alter the center of her gravity at the last moment? A.—When the difference is so small, in my opinion, it would not make any difference.
Q.—What was the advantage of doing it? A.—The advantage, if any, would be that she would carry her sails better. In case of a blow she would carry her sails better with the weight lower down.
Q.—You would have no opportunity of seeing whether the vessel could be improved? A.—No; but I know that from the fact that she would be.
Q.—Can you tell me why the lead was cut up? A.—Yes.
Q.—Why? A.—Because it was too long to go between the frames of the vessel. The frames were 20in. apart, and the lead is about 28in.; each pig about 28in. long.
Q.—Can you tell me why it was not stowed away before night? A.—Yes; because we had no time to stow it and cut it before that time, to my knowledge.
Q.—You knew on Oct. 25 that Lord Dunraven had made a request for remeasurement and marking; did that astonish you very much? Mr. Iselin—On Oct. 25?
Mr. Askwith—Yes; when you read it in the paper?
A.—Yes.
Q.—You did not take any action upon the report which you saw in the paper? A.—Not at once.
Q.—You waited until his own story came out? A.—I did.
Q.—Did that appear to you to add anything very different from what had been said in the report to the New York Y. C.? A.—Yes; it had an entirely different aspect, in my opinion.
Q.—Was Mr. Latham Fish not accepted by you as a representative man, to go on your behalf upon the Valkyrie? A.—He was accepted in this sense: That the committee asked me whom I would like to have, and I said, "Any one among your committee would be perfectly agreeable to me." But he was not supposed to be representing me. He was representing the New York Y. C.
Q.—Did you not look to him as the person to look after your interests upon the Valkyrie? A.—In the way of seeing that there was fair play, yes; and that the sailing rules were obeyed, and all that sort of thing, yes.
Q.—He made no communication to you? A.—None.
Q.—That at the time of the race Lord Dunraven had made no

suggestions that your boat was sailing at a lower immersion? A.—None.
Q.—Did you take any active part in the designing of Defender, beyond an agreement or arrangement with Mr. Herreshoff that he was not to exceed 89ft.
Mr. Iselin—I do not know what you mean by an active part.
Mr. Askwith—You are not, I mean to say, a designer yourself, but you take an amateur interest in designing?
Mr. Iselin—I do.
Q.—Did you assist him at all in designing? A.—No. I wish I knew enough to assist him; he knows so much more than I do.
Q.—Did you leave the preparation of the plans entirely to him, or did you look at them as they were proceeding? A.—No, I looked at them after they were completed. There was more than one plan made.
Q.—Do you know whether the working plans of the Defender are in existence? A.—Yes; I should say they were. I am not positive of it. I do not suppose Mr. Herreshoff would burn them up or destroy them.
Q.—The Defender was measured, I suppose, in the course of summer, for some of these races? A.—Yes; I have already stated that she was measured for the trial races.
Q.—Only for those? A.—That is all.
Q.—This furniture and these traps and tanks must have weighed a great deal. Did you keep on adding to them in a casual manner, without testing the weight that was actually in the boat, or did you fit her up with a certain number of tanks and a certain amount of furniture, and not add to those during the summer? A.—They were not added to during the summer.
Q.—In any of these races, at the time when she was fitted up with her furniture, did you stiffen her at times by loose ballast? A.—Never.
By Mr. Rives:
Q.—You kept adding to your sail area during the summer, did you not? A.—Yes; I did.
Q.—The boat was a little too stiff, in your opinion? A.—Yes, in my opinion she was too stiff to compete with a boat like the Valkyrie.
The Chairman—I did not hear that.
Mr. Iselin—She was, in our opinion, too stiff to compete with a boat like the Valkyrie.
By Mr. Askwith:
Q.—When was her sail area altered? A.—It was immediately after the Goelet cup race.
Q.—Had you seen any plans of the Valkyrie at that time? A.—No; I had heard a great deal about them.
Q.—You have heard that they have been missing? A.—No. I never heard of that.
Mr. Choate—Are you in search of them?
Mr. Askwith—I am not the owner of the plans.
Q.—Did you weigh the amount of furniture and tanks that you took out? A.—We weighed the furniture and partitions and those things, but we did not weigh the tanks, because Mr. Herreshoff had that data.
Q.—He had what? A.—He had the data of the weighing of the tanks. He had that information.
Q.—He had that given to him, that they weighed about so much? A.—No, not given to him. He had calculated it.
Q.—He had calculated it? A.—I suppose so; he calculated everything.
Q.—No closer steps were taken to ascertain the exact amount of ballast that was taken out—the amount of material that was taken out? A.—No, I do not see how he could take any other steps.
Q.—When you examined the Defender on the morning of Saturday, where did you look at her hold forward? A.—Two different places: aft and about amidships. I mean to say, aft, that is, coming down just at the bottom of the companionway.
Q.—Where was the lead stowed? A.—The lead was stowed right on top of the keel and between her frames.
Q.—Whereabouts in the boat? A.—Well, it was a little aft of amidships. Part of the lead was a little aft of a partition that came between the sail room and cabin, which partition was left at that time.
Q.—Did you count the pigs of lead?
Mr. Iselin—that morning?
Mr. Askwith—Yes.
Mr. Iselin—No.
Q.—You were said by the last witness to be in the habit of examining your boat before races, to see whether there was anything extra in her. Was that the purpose of it? A.—To see if there was any water in her, yes.
Q.—Did you examine her, or do you examine her, with any idea of possible suspicion? Was that the object of examining her? A.—No; it was not.
Q.—You have heard, or there was a rumor, that there has been at times suspicion in yacht racing?
Mr. Iselin—Of overloading with ballast?
Mr. Askwith—With ballast, yes.
A.—Yes, sir; I have heard of such things.
Q.—It is not unknown that frauds have, according to rumor, been committed, although perhaps no definite complaints have been made? A.—Well, I have never heard of any particular case that I can think of now. I have heard of such things, but of no particular case.
Q.—But it is not such an utterly unheard of thing in the yachting world, any more than in the racing world? A.—Yes; it is much more unheard of in the yachting world.
Q.—But it does exist? It is rumored, at any rate, to exist in both? A.—Yes.
Q.—If this statement of Lord Dunraven had been brought to your notice upon Sept. 7, should you have been inclined to have treated it as absurd and preposterous? A.—No. I do not know what you mean, exactly.
Q.—Perhaps I put it vaguely. I mean, put it in the words that are said to have been used by Lord Dunraven, in making his statement about the yacht Defender: If those had come to your notice, should you have been inclined to treat that as a complaint?
The Chairman—What words do you refer to?
Mr. Askwith—The complaint upon Sept. 7, which was conveyed to the Cup committee.
The Chairman—Do you mean the statement that the vessel was immersed 3 or 4in. more?
Mr. Askwith—Yes.
A.—The charge of fraud, you mean? I would have refused to have sailed any more races with Lord Dunraven. That is the step I would have taken.
Q.—I am not asking you that question. I ask you this: You would not have treated that as a light statement to have had made to you? A.—No, not any charge of fraud.
Q.—Taking the statement in the exact words that were put down, you would not have treated that as a light statement if it had been made to you? A.—Not if Lord Dunraven had made it in writing.
Q.—If it had been made to you in words, if it had come to your knowledge in any manner, upon that day, should you have treated it as a light statement? A.—No.
Q.—It was a matter that affected the absolute race itself and the interests of both boats; is not that so?
Mr. Iselin—The result of the race? It would have affected the result of the race?
Mr. Askwith—No; I am not saying it affected the result of the race; but it would have affected the race?
Mr. Iselin—In what way?
Mr. Askwith—Such a statement as that, that the boat was sailing more deeply immersed than when she had been measured. If that had been known to you, it would have been a matter, in your opinion, which would affect the race. Your boat would have been disqualified, I presume, if it had been found out to be the fact?
Mr. Iselin—Yes, if it had been found out so.
Q.—And it would certainly have been a sufficiently serious matter for you to desire an investigation? A.—Yes.
Q.—You have only the merest and most distant acquaintance with Lord Dunraven? A.—Yes.
Q.—I mean, you did not know him before this race? A.—Oh, yes.
Q.—You did? A.—Yes.
Q.—You have met him before? A.—I met him in 1893.
By Mr. Rives:
Q.—You met him for the first time in 1893, did you say? A.—Yes.
Q.—That was when he was racing against the Vigilant with Valkyrie II.? A.—Yes; I met him in 1894 also.
By Mr. Askwith:
Q.—You met in the yachting world here, then, and you met him when he was out yachting in 1893? A.—Yes; I was sailing the Vigilant.
By Mr. Rives:
Q.—You sailed the Vigilant in 1894, too, at Cowes? A.—Yes; I sailed in the Vigilant in 1894 at Cowes.
By Mr. Askwith:
Q.—This conversation was just an interchange, and no more, of ordinary remarks of one person to another? A.—Ordinary civilities, yes.
Q.—The tanks upon the Defender were movable tanks? A.—You could get them out, yes. They were put in there, but you could take them out the same way they were put in.
Q.—Were they fixed tanks, according to the design?
Mr. Iselin—What do you mean by fixed tanks?
Mr. Askwith—Well, when you say you could get them out, were they sort of breakers?
A.—They were put in there so that they could be taken out at any time we wanted to. We could take them out.
By Mr. Whitney:
Q.—Fastened to the boat, were they? A.—They were fastened so

that they could not roll about from one side to the other. They were under the floor—under the cabin floor.
By Mr. Askwith:
Q.—They were not permanent fixtures?
Mr. Iselin—What do you mean by permanent fixtures? I do not see how a tank can be a permanent fixture.
Mr. Askwith—I suppose you can always take a tank out somehow?
A.—You could take these tanks out.
By Mr. Rives:
Q.—How were they fastened? Were they bolted to the ribs of the ship, or something like that? A.—I could not say how they were fastened. Mr. Herreshoff can tell you that.
By Mr. Askwith:
Q.—Can you tell me whether they were similar to the tanks on the Vigilant? A.—No, I could not. I could not recollect now exactly what those tanks were.
Q.—Were they near the centerboard trunk?
Mr. Iselin—On the Defender?
Mr. Askwith—I mean to say, on the Vigilant.
A.—Yes; I think they were near the centerboard trunk; they must have been somewhere near there; I do not remember; that was in 1893.
Q.—I suppose Mr. Herreshoff would know a great deal more than you, really, of the question of weights? A.—Yes.
By Mr. Whitney:
Q.—What did you mean by saying that you found when she came out she had too much stability to beat the Valkyrie? A.—She was, in my opinion, a much stiffer boat than the Vigilant, and I knew how Vigilant compared with the Britannia, and also heard how Valkyrie compared with the Britannia, and I could form my conclusions from that. I also knew what lead I had in my keel—the weight of the lead, and approximately the size of the Valkyrie's sail plan. I could make up my mind from that information.
Q.—What kind of weather did you fear? A.—I feared light weather in the races with the Valkyrie.
Q.—What change would you have made in the boat at the time of the race, if you could have made any? A.—I would have lightened her.
Q.—Speaking of your experience, how many yachts, small and large, have you yourself built, do you remember? A.—Yes; I have built six yachts, small and large. I commenced yachting when I was about 16 years old, commencing with small boats, and have been at it ever since.
By the Chairman:
Q.—You have spoken of a number of races that you were in during the summer previous to this. Did you have many with the Vigilant? A.—Yes; we had, in fact, all of them except one with the Vigilant.
Q.—Were you always successful in your races with the Vigilant? A.—Yes. We never lost a race, except by breaking down. We never lost a race where we finished.
Q.—Were any of those races in what you would call heavy weather? A.—Only one. It was one of the trial races. On one race from Huntington to New London. It was blowing hard that day; also on one of the trial races. The rest of the weather was very light; very moderate.
Q.—In comparison with the Vigilant how did the Defender act, as between heavy weather and light—that is to say, in which did she behave the best, as compared with the Vigilant? A.—She behaved the best in heavy weather, in strong breezes. She was a better boat in heavy weather.
The Chairman—Have you anything further?
Mr. Choate—I have three or four questions, suggested by the cross-examination.
By Mr. Choate:
Q.—To a question, not followed up, you answered that Lord Dunraven's publication had, to your mind, a very different aspect from the matter as stated in the committee's report; an entirely different aspect. What did you mean by that? A.—His first communication to the Cup committee was merely a verbal one, and the boats having been remeasured, and Lord Dunraven having sailed the second race, I considered that he accepted that measurement and had no further reason for complaint.
Q.—Was this substitution of 6,000 for 7,000lbs. taken out made after a full conference with Mr. Herreshoff? A.—Yes.
Q.—And on his advice or his concurrence? A.—Yes; we both agreed to that together.
Q.—You said that the object of your habit of examination before a race was not to satisfy suspicion. What was your object? A.—My object was to see whether there was any water in the bilge.
Q.—You say that you would not have treated Lord Dunraven's statement about the extra immersion of 4in. as a little matter if it had come to your knowledge when it was made? A.—Well, I would have treated it as a gross insult to me at the time.
Q.—You would have regarded it as a charge of fraud? A.—I would have.
Mr. Choate—We will call, for one moment, Mr. Louis F. Merrian, Louis F. Merrian, being called as a witness on behalf of Mr. Iselin testified as follows:
By Mr. Choate:
Q.—You are secretary of the concern of Mayor, Lane & Co., dealers in plumbers' supplies, and so on? A.—I am.
Q.—And were in last year, last summer? A.—Yes, sir.
Q.—Did you make the sale to Mr. Thorne of the two lots of lead of which the bills have been put in by Mr. Iselin? A.—It was made through the house.
Q.—And these are correct statements of the weight, and prices and amounts? A.—Yes, sir.
Q.—And no other lead was furnished by your house for the Defender? A.—No other.
Q.—What was the size of these pigs of lead? I see they weighed just about 101lbs. What were their dimensions? A.—Two feet five inches was their length, and 4³/₄in. wide, and 2³/₄in. thick.
Q.—It is a standard measurement? A.—Yes.
Q.—You have the receipts for the delivery of these two lots on board, have you? A. (Producing papers.)—Yes, sir.
Mr. Choate—I want to see the dates. Sept. 4, received the forty-two pigs, and Sept. 5, received the twenty-one pigs. That is all.
Mr. Askwith—I have no questions to suggest.
Mr. Choate—We will call Capt. Hafl, if he is here.
Henry C. Hafl, being called as a witness on behalf of Mr. Iselin, testified as follows:
By Mr. Choate:
Q.—How long have you followed the seas? A.—Well, I have followed the water, off and on, for about thirty-five years.
Q.—How long have you been specially in the yachting business? A.—Well, for the last—since 1866, mostly. I have been some three or four years out of it.
Q.—Will you name a few of the yachts that you have commanded? A.—The Onward, Fannie, Mayflower, Titania, Volunteer, the Colonia, Vigilant, Defender.
Q.—The Vigilant was not the American Vigilant, but the English Vigilant, was it not? A.—Yes; she was the American Vigilant. She was on the other side when I was sailing master of her.
Q.—You brought her over? A.—No, sir; I sailed her over there.
Q.—When were you employed by Mr. Iselin in regard to the Defender? A.—In February last, I think somewhere about February.
Q.—Did you command her all the time, on all the trips she made on all the races? A.—I was what is called the sailing master of her, yes, sir.
Q.—Did you employ her other officers and crew? A.—Yes, sir; I did.
Q.—Will you state what the officers were and what was the complement of men? A.—We had a mate, second mate, two quartermasters on the start and thirty men.

The "Field" and the Dunraven Charges.

THE London *Field*, of Feb. 8, discusses the Dunraven inquiry in its leading article as follows:
The decision of the committee appointed by the New York Y. C. to inquire into the alleged alteration of trim of the Defender was a foregone conclusion; but we must confess that the report of the committee impresses one with a sense of its impartiality, as far as they could deal with the evidence placed before them. The committee declare that the charge is "completely disproved." We think, however, the strongest term which ought to be applied is "not proven." It is very easy to perceive that it would be absurd to attempt to prove what the exact trim of a yacht was on a particular day, after the lapse of three months. Lord Dunraven does not believe it was even possible to do so the next day, because the committee had not taken precautions to see that no weights of any kind were removed from the yacht during the night. The Cup committee declare that they never received a request to station any watchers on board the Defender until she could be remeasured; but surely, when they received Lord Dunraven's statement that he believed she had sailed the race on Sept. 7 immersed 3 or 4in. deeper than when she was measured, they should have realized that something more was necessary than ordering the yacht to be remeasured the following day. The excuse we can make for them is that they justly believed in the honor of the owners and officers of Defender, and therefore the idea of placing a "policeman" on board did not occur to them.
All this trouble about the increased immersion would have been avoided if the committee had complied with Lord Dunraven's request to have the load line marked, as it is in this country. As far back as 1894 he wrote asking that provision should be made in the conditions for marking the load line of the yachts after measurement; and the Cup committee replied that the rules of the New York Y. C. already

provided for marking. On arriving in New York in September, 1895, he found that this marking was merely driving a copper tack into the deck, plumb with each end of the lead line (as near as could be). Accordingly, on Sept. 5, he wrote to the Cup committee as follows: "This contest may possibly extend over a period of ten days or a fortnight. It is obvious that alterations in the l.w.l. length of a vessel may under present conditions be made without an owner's knowledge and without possibility of detection. * * * For this reason I request that the measurer be instructed to mark each vessel's measured l.w.l. on the stem and stern." The committee assented to this; but there appears to have been some delay, and their instructions arrived at the dock too late for the marking to be carried out at the time of measurement on Sept. 6. However, Lord Dunraven and Mr. Iselin agreed that the yachts should return to the dock to be marked on the following day.

So far this seemed satisfactory enough; but as events turned out it proved most unsatisfactory. As the yachts were not marked, Lord Dunraven, Mr. Arthur Glennie, Mr. G. L. Watson, and Mr. T. Ratsey took notes of Defender's trim, and observed that a certain pipe hole was just awash, or visible out of water, that the bronze sheathing or "boot top" was well above water, and that the bobstay bolt was a certain distance (estimated at 14in.) above water. Previously to being measured, Valkyrie had some weight removed from her hull, and lead ballast substituted for the same. Defender had been similarly treated, and two tons of lead were put on board; but on weighing the material which had been removed it was discovered that she could have another ton. This additional ton was accordingly put on her cabin floor during measurement, and subsequently removed to her tug, where it was sawn in two for stowage and placed on board again—that one ton and no more, according to the evidence. The yachts went down to Sandy Hook the same day, and were berthed within 200yds. of each other. On the following day Mr. Arthur Glennie, at about 6 o'clock, had a look at Defender through glasses, and thought she appeared to be deeper in the water; he thereupon rowed round her, and found, he states, that the pipe hole was under water and could not be seen, also that the yacht seemed to be deeper in the water. He returned to Valkyrie, awoke Lord Dunraven, and informed him of what he had observed. Lord Dunraven later on rowed round Defender, when he put his representative on board, but failed to sight the pipe hole; he also thought the bobstay bolt much nearer the water.

This appears to be the whole evidence on which the charges were based, and it seems to have been sufficient to arouse the strongest suspicion that additional weight had been put on board the yacht after measurement. The tug incident first aroused suspicion, and the disappearance of the pipe hole seemed proof strong as Holy Writ that the yacht had taken in weight. Lord Dunraven did not, however, undertake to say how the supposed change of trim was brought about, whether by putting additional lead on board, or by means of water tanks, or any other means. It can, however, at once be said that the evidence shows pretty conclusively that no more than the three tons of lead allowed were put on board, and that was traced in the evidence through the carrier to the place of purchase. It also seems equally clear that no water tanks were on board as ordinarily understood; but how the hull below the floor was constructed, whether in watertight compartments or not, no plans were furnished to show. Mr. Herreshoff stated that she could not carry water ballast, and the evidence appears to be pretty conclusive that no water ballast was on board. In the course of the defense it was stated that the tug was alongside during the night for the convenience of riggers; that from ten to twelve tons of ballast would have been required to immerse the yacht 3in., and it would have been impossible to get such an amount on board without the fact being known to a large number of people; that the pipe hole was immersed because the crew went to the side to see Lord Dunraven, and that they were in the bow when the bobstay was noted. These things are of course possible. It should be pointed out, however, that the crew did not rush to the side at 6 o'clock in the morning to see Mr. Glennie; but then it was also stated that the main boom was carried a little on the quarter, which would account for some amount of list.

Certainly the general conclusion is, after a perusal of the evidence (600 pages), that the case was not made out; and this was impossible after such a lapse of time. The committee upon this say Lord Dunraven should not have reopened the charge after accepting the issue of the remeasurement on Sept. 8 in silence; to this Lord Dunraven has replied that he would not have done so had not the Cup committee gone into the matter in their report in October last, because he saw the futility of reiterating a charge which could only be satisfactorily proved or disproved at the moment it was made. The committee, in conclusion, state that they are unanimously of opinion that Lord Dunraven's charge had its origin in a mistake, and this is possibly the case; but we must bear in mind that his positive evidence was mostly disproved by evidence of a negative character. The club of itself, it appears, took no steps to investigate the matter, and the committee heard such witnesses as presented themselves. Upon this evidence, as we have already said, they compiled a sufficiently impartial report; but, while dismissing Lord Dunraven in a rather off-hand manner, they declare it "just to Mr. Iselin, and the gentlemen concerned with him, as well as officers and crew, to express emphatically their conviction that nothing whatever occurred in connection with the race which casts the least suspicion upon the integrity or propriety of their conduct." A great point was made in the inquiry that Lord Dunraven should have continued to race after he suspected he was being cheated, and found that the committee would not assist him in ascertaining if he was or not. We do not see what this has to do with the issue, but perhaps the object of bringing it forward was to show that Lord Dunraven himself did not, at the time, seriously believe in the charges. Of course, it was a difficult situation to be in, but we think Lord Dunraven did the right thing in accepting the result of the second measurement in silence and continuing to race. The one mistake he made was not making his protest and demand in writing or in person before the race was started, when he put his representative on board Defender.

Atlantic Y. C.

THE Atlantic Y. C. has announced the following events for the coming season:
Saturday, May 30—Decoration Day excursion, 16 classes. Prize each class, \$30. Total, \$540.
Saturday, June 6—Regatta for special prizes in Upper Bay. Ladies' souvenirs for winning yachts. Three cat classes, \$25 each. Also races for Adams's plate. Total, \$235.
Saturday, June 13—Regatta for special classes in Upper Bay. Nine sloop classes, \$25 each. Three cat classes, \$25 each. Also races for Adams's plate and Washington cup for 30 footers. Total, \$235.
Plate presented for competition by Vice-Com. F. T. Adams: Silver center piece for sloops, \$300; silver shell pitcher for cats, \$100. To be raced for off club house June 6 and 13, and in case of any tie races such yachts will sail off for the prize on Saturday, Sept. 5.
Washington cup, presented for competition by Allen C. Washington, to be raced for by special 30ft. class on June 13, \$200.
Tuesday, June 16—Annual regatta (open to all).

SCHOONERS.

Class I., cups to value of \$150; Class II., \$125; Class III., \$100; Class IV., \$75; Class V., \$60. Total, \$510.

CUTTERS.

Class I., cups to value of \$100; Class II., \$75; Class III., \$65; Class IV., \$60; Class V., \$55; Class VI., \$50; Class VII., \$50; Class VIII., \$40; Class IX., \$35; Class X., \$30. Total, \$560.

CATS.

Class I., \$25; Class II., \$25; Class III., \$25. Total, \$75.
Gould cup, presented by Com. George J. Gould, to be sailed for by all schooners and sloops. Schooner prize, \$1,000; sloops, \$300.

ANNUAL CRUISE.

Friday, July 3—Rendezvous at Larchmont at 4 P. M.
Saturday, July 4—Remain at Larchmont; races.
Sunday, July 5—Informal run from Larchmont to Black Rock, 27 miles.
Monday, July 6—First squadron run, Black Rock to Morris Cove. Start 9 A. M. Value of prizes \$863, distributed between eighteen classes, \$30 each class.
Tuesday, July 7—Second squadron run, Morris Cove to New London, 40 miles; eighteen classes, \$35 each class. Total, \$630.
Wednesday, July 8—Third squadron run, New London to Shelter Island, 25 miles; eighteen classes, \$40 each class. Total, \$720.
Thursday, July 9—Remain at Shelter Island; dress ship, gig races, etc. Appropriations for prizes, \$300.
Friday, July 10—Fourth squadron run, Shelter Island to Morris Cove, 37 miles; eighteen classes, \$70 each class. Total, \$1,260.
Saturday, July 11—Fifth squadron run, Morris Cove to Oyster Bay, 33 miles; eighteen classes, \$60 each class. Total, \$1,440.
Sunday, July 12—Disband at 10 A. M.
Banks Plate—Silver punch bowl, presented by ex-Com. David Banks for schooners, \$350.
Hanan Plate—Silver punch bowl, presented by Rear Com. Hanan for club sloops, cutters and yawls, \$250.
Saturday, Sept. 5—Regatta for special classes in Upper Bay; nine classes, \$30 apiece. Total \$270. All tie races will be sailed off on this day over special courses as directed by the regatta committee.

Larchmont Y. C.

THE annual meeting of the Larchmont Y. C. was held on Feb. 19 at Delmonico's, with Com. Gillig in the chair. The reports of officers showed the club to be in a most prosperous condition both in membership and finances. A number of amendments were made to the racing rules, by-laws and code of yacht routine, the classification being amended as follows:

Schooners, Series A.—Class A, all over 95ft. racing length; Class B, not over 95ft. and over 85ft. racing length; Class C, not over 85ft. and over 75ft. racing length; Class D, not over 75ft. and over 65ft. racing length; Class E, not over 65ft. racing length.

Sloops, Cutters and Yawls.—Class 1, all over 80ft. racing length; Class 2, not over 80ft. and over 70ft. racing length; Class 3, not over 70ft. and over 60ft. racing length.

Series B.—Class 4, not over 60ft. and over 51ft. racing length; Class 5, not over 51ft. and over 43ft. racing length; Class 6, not over 43ft. and over 36ft. racing length; Class 7, not over 36ft. and over 30ft. racing length; Class 8, special 34ft. rating class.

Series C.—Class 9, not over 30ft. and over 25ft. racing length; Class 10, not over 25ft. racing length; Class 11, all mainsail cabin yachts over 25ft. racing length; Class 12, all mainsail cabin yachts not over 25ft. racing length.

Open yachts.—Class 13, all mainsail yachts over 20ft. racing length; Class 14, all mainsail yachts not over 20ft. racing length; Class 15, all jib and mainsail yachts; Class 16, the special 21-footers; Class 17, one-half raters.

The following officers were elected: Com., Harry M. Gillig, schr. Ramona; Vice-Com., Clarence A. Postley, schr. Colonia; Rear-Com., Edward S. Hatch, cutter Huron; Sec'y, Charles C. Little; Treas., Wil. liam Murray; Meas., John Hyslop; Board of Trustees, Francis M. Scott, Edward J. Greacen, Augustin Monroe, Chester A. Munroe, C. McK. Lesser and W. B. Jenkins.

Chicago Yachting.

A NEW racing yacht has been ordered by a syndicate of the Columbia Y. C., of Chicago, including Messrs. Robert Keys, Frank V. Newell and others, to meet the new Vincendor. The yacht will be built by the Racine Boat Manufacturing Co., and will be 60ft. over all, 40ft. l.w.l., 12ft. 3in. beam, and 8ft. 6in. draft; the hull alone drawing but 2ft. 6in. The displacement is given at 14.5 short tons.

YACHTING NEWS NOTES.

Ex-Com. Thomas Sully, Southern Y. C., has designed and will build an 85ft. steam yacht to replace his well known steam yacht Helen, of 50ft.

At its annual meeting on Feb. 11, the Eastern Y. C. elected the following officers:

Com., William Armory Gardiner, schr. Mayflower; vice-com., Henry W. Lamb, schr. Marguerite; rear-com., Augustus Hemenway, slip. Chiquita; sec'y, Wm. S. Eaton, Jr.; treas., Patrick T. Jackson; meas., Henry Taggard; council-at-large, F. E. Peabody, George A. Goddard; regatta committee, William S. Eaton, Jr., Augustus N. Rantoul, P. T. Jackson, Thomas Nelson, Henry Buck; committee on admissions, C. F. Adams, 2d, Gordon Dexter, Theophilus Parsons, William Caleb Loring; house committee, Frederick E. Snow, Franklin Dexter, Robert Saltonstall and J. Prince Loud.

On Feb. 20 the news was received in New York from Bermuda that Cuthbert S. Johnson, a relative of Richard S. Palmer, owner of Yampa, had shot himself aboard the yacht, then at anchor at Bermuda. The sad news was confirmed a day or so later and further particulars given. Mr. Johnson, who was 30 years of age, was a New York man, but spent much of his time abroad, and last year joined Yampa at Plymouth for the voyage to New York. He was one of the party which sailed from Boston on Feb. 11, the others being R. S. Palmer, Theodore C. Zerega, George A. Cormack and Cambridge Livingston. He was suffering severely from neuralgia during the cruise, and remained aboard while the others went ashore, shooting himself in the head during their absence. The body was embalmed and sent to New York by the Trinidad. The yacht will continue her voyage to the West Indies.

Reports from Glasgow state that the keel of a large racing yacht has been laid in Henderson's yards on the old keel blocks of Valkyrie III., the design being by Mr. Watson. The yacht is probably for the Emperor of Germany, and rumor has it that she is to be a schooner, also that Mr. Watson has designed another large cutter.

Intrepid, steam yacht, Lloyd Phoenix, is now nearly ready at Tebo's for a trip to the Mediterranean, and will sail early next month with Mr. Phoenix in command.

Steam Yachts and Marine Machinery.

COMPLETE machinery "outfits" for boat builders, made by Marine Iron Works, Chicago. Light draft work a specialty. Catalogue free.

Rifle Range and Gallery.

HANDLING A REVOLVER.

Editor Forest and Stream:

Reading the articles lately published in your paper on police revolver practice and revolver shooting in general, I have been led to think perhaps there are a good many people in the world more or less familiar with rifle and wing shooting who are as deplorably ignorant of the proper handling of a revolver as the now celebrated awkward squad of Sergeant Petty's, and the thought has suggested itself to me that an article on revolver practice and the proper way of holding, together with hints on calibers, ammunition, etc., would be very acceptable to your readers.

Take my own case. I have done considerable wing shooting, some rifle work on the ranges, and more or less intermittent revolver shooting, as opportunity offered, though I know nothing of the methods pursued by experts.

My method is the natural one. I hold the revolver at arm's length, shut one eye, perhaps both at the instant of firing, and, holding 1ft. to 1½ft. below the bull, pull off. On going up to the target, I am not disappointed if I find the bullet hole 6in. or so above the bull or to the right or left.

I use a S. & W. target revolver and with 11grs. of powder, shooting at 20yds. I have to hold at least 12 to 18in. below the bull. If I grip very tight in my efforts to come up on the target, the revolver starts to wabbling, and I am obliged to ease up until it becomes quiet, and then if I hold on the bull I land away up, all out of reason.

One point I would like to know is, how do Mr. Petty and his class hold? Can they hold on the lower edge of the bull and get there?

As the rear sight of a revolver is not depressable, and as I have never seen or heard of an elevating front sight, how do two men, say, who are physically opposites, hold to obtain the same result?

Talking with an army officer a short time ago, who takes a great interest in the rifle practice of his regiment, I put the question, How do your men get along with the revolver? In what I thought a rather contemptuous manner he replied, "Oh, you don't do any aiming with a revolver. You just bring it down from a perpendicular position to a line on your object and fire." And I drew the conclusion, if the result was there or thereabouts they were satisfied.

Richard Harding Davis in his book "The West from a Car Window" describes the revolver shooting of the Texas rangers in much the same way, only he accords to them unparalleled accuracy.

There are numerous works on rifle shooting, going into every detail of the art, and not one, so far as I know, on revolver shooting that is of any value,

So, as I have indicated above, an article on revolver shooting in FOREST AND STREAM, gotten up by some one in whom we have confidence, would be very acceptable to a certain class of its readers, and perhaps stimulate others to take up the arm.

Do you think a request made to Mr. Walter Winans, Sergeant Petty, and the contestants in the competition for the Winans trophy, including also any other shot you may know of, to furnish an article on their knowledge of the subject, would be productive of any return?

BRASS BARREL.

[Our correspondent should procure a higher front sight. One should no more attempt to practice with a revolver that is not properly sighted than with a rifle under similar circumstances.]

San Francisco Riflemen.

SAN FRANCISCO, Feb. 9.—Yesterday being a lovely day Shell Mound Range was alive with riflemen.

Scores of the S. F. Schuetzen Verein:
Champion class, L. Bendel 420 rings; first class, D. B. Faktor 434 rings; third class, John Dewitt 403 rings; fourth class, J. D. Hesse 367 rings; first best shot, A. Mocker 25; best last shot, A. Mocker 24.

The Germania Schuetzen Club also shot scores as follows:
Champion class, D. B. Faktor 428 rings; first class, J. Alpers 413 rings; third class, H. J. Wicker 418 rings; fourth class, W. Garmes 335 rings; first best shot, H. J. Wicker 24; best last shot, J. Tredmann 24.

The Columbia Pistol and Rifle Club is much pleased with its new Columbia target, which they use for all weapons at both 50 and 200yds. This target is by far the most common sense one I know of. The center ring is 1in. in diameter, the other rings around this being ½in. apart. The center space is labeled 1 and the next space 2, etc. This system affords the shooter definite information on two points—first, the diameter of the circle struck by his bullet; for instance, if the marker wheels a 5 the shooter knows he has struck in a 5in. circle; secondly, it affords a close approximation to string measure; for instance, if the marker disks and wheels a 3 the shooter knows his shot approximates 1½in. from the center; if an 8 is shown the bullet hole is 4in. from the center. This target is also used for military rifles, preserving the old Creedmoor lines, 1 to 8 inclusive counting 5, 9 to 27 inclusive counting 4. I assure you there are very few ties made on this target, and by this system of numbering the rings the shooter gets the full and exact value of his shot. It is, I should think, almost an ideal target for rest shooting. The size bullseye used by the Columbia Club is 12in., but it could be made of any other size, as only rings count.

A. Strecker made a string of 9 in yesterday's contest for the diamond all-comers' medal, 3 shots. E. Hovey made 9 in 5 shots at 50yds. with a .22cal. rifle in the Rodgers medal contest. Some other good shooting was done with both rifle and pistol.

The medals of the San Francisco Schuetzen Verein were won as follows:

Scores: Pistol, club medal, 10 shots, no re-entry:
Champion Class, 10 shots: C. M. Davis 47, F. O. Young 52, Ed. Hovey 54, J. E. Gorman 56, A. H. Hape 64.

First Class: Dr. L. O. Rodgers 50, F. Dennis 55, F. Baumgarten 66, A. B. Dorrell 70, M. J. White 77, P. Bohr 81, Capt. J. E. Klein 83, D. W. McLaughlin 85.

Second Class: E. Jacobsen 66, G. Barless 82, A. E. Fetz 86, A. H. Kennedy 96, W. Unfred 102, A. H. Hesse 118, L. Zimmerman 132, L. Bremmer 183.

In the open-to-all match for the Blanding medal, 3 shots, the scores were: C. M. Davis 9, Dr. L. O. Rodgers 10, J. E. Gorman 10, F. Baumgarten 15, E. Jacobsen 18, A. Fetz 20.

The scores in the all-comers match, .22 caliber rifle, for the Rodgers medal, were: Ed Hovey 9, P. Bohr 10, A. H. Hape 17, Mrs. L. J. Crane 17.

Scores of the Unfred diamond medal: A. Strecker 9 and 10, W. Glander 11, A. Gebert 12, D. W. McLaughlin 14.

Military rifle, Glendern medal: F. O. Young 44.

Scores, rifle, 200yds., club medal, 10 shots, no re-entry:
Champion class: F. O. Young 57, D. W. McLaughlin 61, P. Bohr 75, A. Strecker 89.

First class: A. Gehret 78, J. E. Klein 102.

Second class: E. Jacobsen 70, J. E. Gorman 80, F. Dennis 102, G. Barley 104, O. A. Bremmer 105, F. E. Mason 107, L. Pingel 120, M. J. White 149, A. H. Hesse 150.

ROEEL.

Zettler Rifle Club.

NEW YORK, Feb. 18.—The unlucky number of 13 was the exact number of members of the Zettler Rifle Club, of this city, that took part in the club's weekly shoot this evening. Louis Flach, who scored a highest possible at the last meeting of the club, and H. D. Muller, were high to-night, with 248 each.

The scores made were:
R. Busse.....243 240 244 247 234 H D Muller.....237 246 240 242 232
Dr J A Boyken, 245 244 243 245 244 H Muemz.....227 232 233 218 230
S Buzzini.....233 234 234 232 235 G A Nowak.....242 233 240 245 241
G W Downs.....234 232 221 233 231 F O Ross.....246 247 241 245 243

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

March 18-21.—BAYCHESTER, N. Y.—Tournament of the Cobweb Gun Club; targets and live birds. F. L. Train, Captain.
March 24-26.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap, at live birds at Elkwood Park; \$1,000 guaranteed in the main event, all surplus added.
March 31-April 2.—ELIZABETH, N. J.—Target tournament under the management of Neaf Appar and C. C. Hebbard.
April 14-16.—CHARLESTON, S. C.—Tournament of the Interstate Association, under the auspices of the Palmetto Gun Club.
April 14-17.—ATCHISON, Kansas.—Thirteenth annual open to all, and second annual manufacturer's amateur tournament; \$1,000 added money and manufacturers' prizes. Lou Erhardt, Sec'y.
April 15-17.—PEEKSKILL, N. Y.—Annual spring tournament of the Peekskill Gun Club; first two days, targets; third day, live birds. O. J. Loder, Sec'y.
April 20-24.—HOUSTON, Texas.—Twentieth annual tournament of the Texas State Sportsmen's and Game Protective Association. J. Emmett Hancy, Manager.
April 21-24.—OMAHA, Neb.—Nebraska State Sportsmen's Association's annual tournament; \$1,000 added to the purses. Frank S. Parmalee, Sec'y.
April 22-24.—WELLINGTON, Mass.—Tournament of the Boston Shooting Association; targets. O. R. Dickey, Manager.
April 23-30.—JOPLIN, Mo.—Annual Owl Shoot of Kansas and tournament of the Missouri Trap-Shooters' Association; also open-to-all programme; \$1,000 added to the purses. W. G. Sergeant, Sec'y.
April 29-30.—BIRMINGHAM, Ala.—Interstate Association's tournament, under the auspices of the Birmingham Rod and Gun Club.
April 30-May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.
May 5-6.—BEDFORD, Ind.—Annual tournament of the Bedford Rod and Gun Club. R. R. Braxton, Sec'y.
May 5-6.—ALGONA, Ia.—Annual tournament of the Algona Gun Club.
May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; \$2,000 added money.
May 12-15 — MEMPHIS, Tenn. — Tournament of the Memphis Gun Club. \$2,000 added money.
May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co. R. S. Waddell, Agent.
May 20-24.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.
May 22-24.—MISSOULA, Mont.—Annual tournament of the Montana State Sportsmen's Association, under the auspices of the Missoula Rod and Gun Club. Will Cave, Sec'y.
May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.
May 28-29.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club; nobody barred; targets. Royal Robinson, Sec'y.
May 28-29.—BINGHAMTON, N. Y.—Annual spring tournament of the Binghamton Gun Club; first two days, targets; third day, live birds.
May 30.—CANAJOHARIE, N. Y.—Tournament of the Canajoharie Rod and Gun Club; targets. Chas. Weeks, Sec'y.
May 30-JUNE 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 2-6.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. B. Meyers, Sec'y.

June 3-4.—NATCHEZ, Miss.—Interstate Association's tournament, under the auspices of the Gaillard Sporting Club.

June 8-13.—BUFFALO, N. Y.—Thirty-eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 9-11.—DAVENPORT, Ia.—Annual tournament of the Iowa State Sportsmen's Association. R. B. Cook, Sec'y.

June 9-11.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.

June 10-11.—FARGO, N. D.—Second annual tournament of the North Dakota State Sportsmen's Association; targets; \$500 added money. W. W. Smith, Sec'y.

June 16-18.—URBANA, Ill.—Third annual tournament of the Crystal Lake Gun Club. Frank L. Bills, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company. Targets thrown free; \$770 in cash also added to the purses.

June 23-26.—PITTSBURG, Pa.—Tournament of the Pittsburg Gun Club; targets; \$500 added money.

June 30-July 2.—WOPSONONOCK, Pa.—Fourth annual tournament of the Altoona Rod and Gun Club; targets. W. S. Bookwalter, Sec'y.

July 22-23.—PORTLAND, Me.—Interstate Association's tournament, under the auspices of the Portland Gun Club.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Aug. 4-6.—CHICAGO, Ill.—Tournament of the Du Pont Smokeless Powder Company. E. S. Rice, Mgr.

Aug. 26-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 313 Broadway, New York.

E. C. Lashells, president of the Meadville, Pa., Gun Club, writes us: "The gun clubs of Meadville, Newcastle, Greenville and Sharon, Pa., and Warren and Youngstown, O., are about to form a league for the promotion of interest and rivalry in trap-shooting. A meeting of delegates from the above clubs is called for March 4 at Meadville. All of these clubs have good teams and the race for a trophy will be exceedingly close." There is no question that the formation of just such organizations as the one mentioned by Mr. Lashells, does really more to promote the best interests of trap-shooting than the holding of a dozen tournaments. The latter bring the cracks together, but league contests call out the rank and file and make scores of new devotees of the trap.

A circular in regard to the programme at the Nebraska State shoot, to be held in Omaha, April 21-24, has been issued by the managers of the tournament, George W. Loomis, Frank Parmelee and J. C. Read. It tells just how \$1,000 in cash will be added to the purses and for average money. The programme is a good one, but it's not that we want to refer to in this column; it's that little paragraph that brings the whole thing to a close: "We want you (it is a big YOU in the circular) to come and get a slice of the money, and at the same time meet a lot of good fellows." Go for the good fellows you will meet in Omaha, and if you get a slice of "this money, so much the better."

Under date of Feb. 21, Paul R. Litzke, of Little Rock, Ark., writes us from Memphis, Tenn., as follows: "The inaugural handicap of the Memphis Gun Club which was shot here to-day had 31 entries. Of this number only twelve got in for money. First money, \$124, was won by W. W. Watson, of Louisville, Ky., with a score of 23 out of 25; second money, \$93, was divided by F. P. Poston, T. F. Norton, E. C. Worrall, J. B. Duncan and A. P. Smith, who scored 23; J. C. Neely, Jr., Irby Bennett and Bland Ballard scored 21 and divided third money, \$63; while W. H. Allen, Phil Daly, Jr., and Thos. Callander, each of whom scored 20, divided fourth money, \$31. The weather was fine, and the birds were an excellent lot."

The King-Cundall series of live bird matches ended on Feb. 21 in a victory for Cundall, who won two out of the three races. The first match took place at Washington, Pa., on Feb. 7, Cundall winning by 89-87. King won the second match, which was shot at Pittsburg on Feb. 14, by scoring 94 to 85. The third match was won by Cundall, who scored 85 to 84. Dr. Cundall now says he is out of the running so far as individual live-bird races go, but says he'll take Alec King for a partner and shoot against any two men in Western Pennsylvania.

In sending us the announcement of a tournament to be held by the Crystal Lake Gun Club, of Urbana, Ill., on June 16-18, Frank L. Bills, the secretary of the club, says: "Our first tournament held in '94 was patronized by over 50 shooters; last year we had the pleasure of helping to entertain about 70 of the 'best fellers' that ever yelled 'Pul'. This year we shall not get out an elaborate programme, but will give the cash thus saved to the shooters who are present at our tournament. No one is barred; all are welcome."

The programme for the Chamberlin tournament is, as we predicted, an interesting one. We give a synopsis of the programme under an appropriate head, a simple "Driver and Twister" would not be a fitting tribute to Paul North's versatility. No one can say now that the Chamberlin company will make money at its tournament by charging 3 cents for targets. All blue rocks will be thrown free of charge at the above shoot!

A dispatch from Louisville, Ky., dated Feb. 22, says that Rolla Heikes did some great work with his Winchester repeating shotgun on that date. He gave an exhibition of quick target shooting, breaking 100 out of 111 targets in 5 minutes and 36 seconds. Rolla has been doing some practicing lately with a view to showing what the gun can do in the hands of an expert.

The Peekskill, N. Y., Gun Club claims April 15-17 as the dates for its annual spring tournament. On the first two days all the events will be at targets; on the last day there will be a full programme of live-bird events. For particulars as to programme, address Orrin J. Loder, secretary, Peekskill, N. Y.

The Cobweb Gun Club's shoot, set for the Sportsmen's Exposition week, should be a very successful gathering. It comes at the right time, and the Cobwebs have a big following in the vicinity of New York. It seems rather curious that such a live organization should have such a sleepy sort of title.

With all day shoots at Maplewood and at Marion, and with the Climax-Dunellen team race at Dunellen, Jersey trap-shooters had all they could attend to on Washington's Birthday, without mentioning a host of club shoots that were held that day.

The Sportsmen's Exposition, which will be held in Madison Square Garden the third week in March, will bring many sportsmen to New York City. All visiting shooters should bring their guns and go up to Baychester, N. Y., and become the guests of the Cobweb Gun Club. The week following the exposition is the Grand American Handicap week.

No handicaps will be awarded in the Grand American Handicap until Monday evening, March 23. Mr. Dressel, secretary of the Interstate Association, has received any number of queries from correspondents asking what their handicap distance will be in the above event.

Harry Vandergrift and Joe Glesenkamp, both Pittsburg shooters, had a friendly race at 50 live birds on Feb. 21. After tying on 34 they shot off at 10 extra birds, Vandergrift killing 10 to 9. Each man has now won two matches, so it looks as if there will have to be a fifth to decide matters in dispute.

February has been making up for the pleasant weather experienced during the month of January; trap-shooters in consequence have been obliged to put up with considerable discomfort and no little cold weather since the month opened.

The programme for the Grand American Handicap meeting seems to have met with very general approval. It is poor policy to prophesy, but, from the way things look now, the number of entries in the main event will top the 70 notch easily.

Neaf Apgar and Charlie Hubbard have almost completed the arrangements for their target tournament that will be held at Elizabeth, N. J., March 31-April 2; the programme will be ready for distribution in a few days.

A match has been arranged between George Work and Edgar Murphy. The date is March 3, and the place Wentworth Kennel Club's grounds, Babylon, L. I.

Among the entries for the Grand American Handicap received by Secretary Dressel to date are Annie Oakley, Old Hoss and Louis Schortemeier.

The Illinois State Sportsmen's Association's 23d annual tournament will be held on June 2-6.

Fred Hoey won a heat for the Knapp \$250 cup at the Carteret Club grounds on Feb. 19. His score was 19 out of 20 from the 31yds. mark. George McAlpin (29yds.) and P. H. Morris (25yds.) divided first money in the sweep shot in connection with the cup shoot, with Hoey, all

three being tied with 19 out of 20. Mr. Morris shot very well, killing 17 straight before dropping a bird.

Feb. 24.

EDWARD BANKS.

The Season at Monte Carlo.

PRIX DES MAGNOLIAS.

JAN. 31.—The Concours Préparatoire, a series of six events with 1,000 frs. added to each purse, was concluded to-day with the Prix des Magnolias. The weather was splendid and the light was good, but the wind was strong enough to aid the birds to such an extent that out of 85 entries 24 fell out in the 1st round, 16 more dropping out in the next round. At the end of the 8th round there were only 8 left in, and two of these succumbed in the 9th round. The 10th round was marked by successive kills on the part of the 6 men left in the race, but the 11th round was fatal to Mr. Vernon Barker. Capt. Wingrove and Count d'Elstoo lost their 12th birds, leaving Mr. C. Dolan, M. Demonts and Signor Grasselli to fight it out for the three prizes. Signor Grasselli dropped his 13th bird, taking the third money, £34. Mr. Dolan and M. Demonts divided the first and second moneys, £177 10s., with 13 straight kills. Scores:

Prix des Magnolias Handicap of £40, added to a sweepstakes of £2 each; second received 30 per cent. of the entries, third 20 per cent.; 85 subs.

Meters.		Meters.

Missed their first bird: Signor Benvenuti (29), Signor Guidicini (29), M. Drevon (28½), Signor Mainetto Ghido (28), Signor Asti Cesare (27½), Signor Ricci Batti (27), Mr. Duff (27), M. Duferron (26½), Baron de Montchoisy (26½), Mr. Robinson (25½), Signor Galetti (25½), M. Thome (25), Signor Sani (25), Signor Damssetti (24), M. de Maubenge (24), M. Verdavaine (24), M. Otho (24), M. A. Poizat (24), Herr Hans March (24), Mr. Halford (24), Mr. Mack (24), Mr. Erskine (24), Mr. Pearce (24), Mr. Slow (23½).

POULE D'ESSAI.

Feb. 1.—The series of events which form what are known as the Grande Concourse Internationaux were commenced to-day with the Poule d'Essai. This event was £4 entrance, £80 (2,000 francs) added to the purse. There were 85 entries in the Poule d'Essai, the same number that entered in the Prix des Magnolias. There was also another coincidence connecting the two events: at the end of the 8th round there were only 8 men left. Of that number 3 fell out in the next round, among the number being M. Journu. In the 10th round all killed their birds, but M. Poizat missed his 11th and retired. The 12th, 13th and 14th rounds saw no change, each man killing his birds. The change came in the 15th round, when M. Horodetzki missed an easy bird and had to be content with the fourth prize, £59. The struggle was a long one from this point, the 16th, 17th, 18th, 19th and 20th rounds being shot without a bird getting away. In the 21st Mr. Heygate (an Englishman) and M. Paccard (a Frenchman) killed their birds, while Count Trauttmansdorff (an Austrian) lost his, and took third prize, £80. Mr. Heygate, scoring his 22d bird, won first money, £159, and the gold medal, as M. Paccard lost his bird, taking second money, £105. Scores:

Poule d'Essai of £80 (with gold medal), added to a sweepstakes of £4 each; second received £20 and 25 per cent. of the entries, third £12 and 20 per cent., fourth £8 and 15 per cent.; distance 25 meters first pigeon, then 26 meters; 85 subs:

Missed their second bird: Signor Sani, Mr. Poutz, Mr. Manville, M. d'Ovari, M. Roberts, M. Gourmand, Mr. Hannam, M. Lonhienne, Mr. Henry, Signor Briasco, M. de Tavernost and Signor Calari.

PRIX D'OUVERTURE.

Feb. 3.—In the same glorious weather that has favored the Monte Carlo season of 1895 thus far, the Prix d'Ouverture was decided to-day under very favorable conditions. The number of entries was 95, among them the best shots in Europe. There was very little wind to aid the birds to-day, but so good were the pigeons, particularly in the first few rounds of the competition, that 28 shooters dropped out on the 1st round. At the end of the 8th round there were only 7 left in the race; of this number all survived the next two rounds, but Mr. Pheasant and M. Lonhienne lost their 11th birds and retired. M. Horodetzki and M. Paul Gervais missed their next birds and also retired, being tied for fourth money. The 13th round commenced with only 3 left to decide the fate of the other three moneys. Mr. Roberts lost his bird in this round and took the third prize, £93. This left M. d'Ovari and M. Verdavaine to fight it out. Both killed their 14th and 15th birds, and then both lost their birds in the 16th round. M. d'Ovari killed his 17th, but M. Verdavaine again scored a miss; the former therefore won first prize, a gold medal and £193, M. Verdavaine taking second prize of £125. The tie for fourth prize, £37, was shot off. M. Horodetzki winning in the 3d round. Scores:

Prix d'Ouverture of £120, and a gold medal, added to a sweepstakes of £4 each; second received £30 and 25 per cent. of the entries; third £20 and 20 per cent.; fourth £10 and 15 per cent.; first pigeon at 26 meters, others at 27; 95 subs:	
M d'Ovari (Guyot), J (first prize of £193 and gold medal).....16	Major Knightsbridge.....4
M Verdavaine (Purdey), E C (second prize of £125).....15	Signor Ticozzi.....3
Mr Roberts (Churchill), S (third prize of £93).....12	M d'Hayes.....3
M Horodetzki (Russian gun), J.....11	Mr Marsden Cobb.....3
M Paul Gervais (Guyot), J.....11	Mr Hannam.....3

Signor Colombo.....4	M de Maubenge.....2
M A Poizat.....4	M Poutz.....2
Capt Wingrove.....4	M R Gourmand.....2
Count du Taillis.....4	Signor Asti Cesare.....2
Missed their second bird: M. Bethune, M. Bruneel, Mr. Brinckmann, Herr Hans March, Count Esterhazy, M. Demonts, Signor Memmi, Count L. Gayoli, Mr. Henry, Mr. Bullets, M. Duferron, Mr. Harrison, Count Trauttmansdorff, Mr. Barker, Signor Gregorini, Mr. Mack, Signor G. Grasselli, M. Paccard, Count d'Elstoo, Signor Maldura, Signor Soldi and M. de Pomian.	
Missed their first bird: Signor Benvenuti, Count Szecsen, Mr. Wood, Signor Quairollo, Mr. Pearce, Signor Guidicini, the Grand Duke Peter of Russia, M. de Tavernost, M. Gourmand, M. Pierre Sergueyeff, Mr. Wingrove, Baron van Heeckeren, M. Drevon, Signor J. Grasselli, Mr. Dolan, Mr. Thorne, Mr. Howard, Signor Oliva, Signor Marconini, M. A. Ghot, Mr. Halford, Mr. Slow, Signor Farina, Count Voss, Signor Ricci Batti, Mr. Radcliffe, Signor Ratto and Mr. Berridge.	

GRAND PRIX DU CASINO.

In its account of the shoot for the Grand Prix du Casino on Feb. 5-6 at Monte Carlo, the London Field says: "That the contest for the Twenty-fifth Grand Prix would be, numerically at all events, the best since Mr. Lorillard secured for the United States a victory which has not since been repeated, was quite certain when we found 95 shooting for the Prix d'Ouverture on Monday, and with more than 120 names on the board, 102 answered to the call, this being seven more than last year, when Signor Benvenuti won for Italy, and nine more than in 1894, when Count Casimir Zichy secured the prize for Austro-Hungary. The latter was not among the competitors this time, but Signor Benvenuti, who, it may be mentioned here, has quite failed to reproduce his form of a twelvemonth ago, helped to swell the Italian contingent, which numbered eight-and-twenty, including the previous winners, Count Luca Gayoli and Signor Guidicini, to say nothing of Signore Nocca, Mainetto, Guido and Calari, who are nearly always dangerous opponents. The Italians were in about equal force numerically with the French and the English, the former being well represented by such shots as MM. Journu, Drevon, Verdavaine, Lo, Paul Gervais and Descharmays, while among the English were Mr. Roberts and Mr. Edwards, both winners of the Grand Prix, Mr. Heygate, Mr. Manville, Mr. Greville Ryan, Capt. Wingrove, "M. d'Hayes," Mr. Marsden Cobb, Mr. Berridge, and Mr. Barker. The Belgians, for some reason or other, were not in quite their usual force; for M. Dorlodot, who won the Grand Prix in 1885, M. de Robiano, and the Marquis du Chastelaar, second to Count Zichy in 1894, were among the absentees, the six Belgian competitors including M. Duferron, M. Ides van Hooberck, M. Lonhienne, and the Prince de Chimay. There were five Austrian and Hungarian competitors (including Count Trauttmansdorff, winner in 1892, Count Sibrick, and the veteran Count Esterhazy), three Germans (Count Voss, Baron Falkenhause and Herr March), two Americans (Mr. Harrison and Mr. Dolan), two Russians (the Grand Duke Peter and M. Horodetzki), one Portuguese (the Duke of Braganza), and one Spaniard (Señor Drago). It will be seen from the above that seven previous winners of the Grand Prix, including Signor Guidicini, who has three times been successful, were in the field, and the contest could not possibly have been more international."

A fresh breeze blew during the day, making the birds, which are said to have been the very best ever trapped at Monte Carlo, very fast indeed. So good were they that at the end of the 4th round only 23 out of the 102 subscribers had killed all their birds.

On Feb. 6, the second day, it was decided not to call up the two-miss men, consequently there were only 53 shooters in the 55th round. The birds were again very good indeed, 23 out of the above 55 missing their birds in that round, 16 out of the 23 retiring for good, as they had already one miss to their credit. The 7th round found only 26 survivors, 10 of that number dropping out on their 7th birds. In the 12th round M. Lo had only to kill to tie M. Journu for first place. This he failed to do, missing a bird that was by no means a hard one.

The shoot-off for second, third and fourth moneys resulted in M. Lo and Count Gajoli dividing second and third (£648) on 3 straight. Signors Calari, Oliva and Colombo divided fourth (£162) with 2 out of 3. Scores in the shoot were:

Grand Prix du Casino of £800, added to a sweepstakes of £3 each; second received £160 and 25 per cent. of the entries; third, £80 and 25 per cent. of the entries; fourth, £40 and 15 per cent. of the entries; 4 pigeons at 26 meters; 8 at 27 meters; the winner of 1895 to stand back 2 meters, previous winners 1 meter; 102 subs:	
M Journu (Purdey), S right bar.....11	M d'Hayes (Purdey), S.....10
rel, J left (first prize of £765 and silver service).....12	M Drevon.....10
M Lo (Guillot), S.....11	M Van Hooberck.....10
Count L. Gajoli (Greener), E C.....11	Signor Guidicini.....9
Signor Calari (Scott), S.....11	Count Trauttmansdorff.....9
Signor O Oliva (Greener), S.....11	Mr Mack.....9
Signor Colombo (Hollis), S.....11	M R Gourmand.....7
Signor Nocca (Greener), E C.....11	Signor Pederzoli.....7

Retired with five kills: Signor G. Grasselli, Capt. Wingrove, M. Etienne, M. de Tavernost, M. Heygate, M. A. Ginot, M. A. Poizat, M. Verdavaine, M. Thome, Herr Hans March.

Retired with four kills: Signor Galetti, M. Lonhienne, M. Bruneel, Mr. Duff, Mr. Manville, Signor Mainetto Ghido, Mr. Berridge, M. de Maubenge, M. Stéphane, Grand Duke Peter of Russia, M. Pierre Sergueyeff, Signor Asti Cesare, Baron de Montchoisy, Signor A. Memmi.

Retired with three kills: Duke of Braganza, Signor Soldi, Mr. Barker, M. Horodetzki, M. Paul Gervais, M. Demonts, Signor J. Grasselli, Count Voss, Signor G. Riva, Mr. L. Henry, Signor Zuppelli, Mr. Wingrove, Signor Marconini, Mr. Robinson, Mr. Thomas, Señor Drago, Count Chamarré.

Retired with one kill: M. Paccard, Mr. Poutz, Count Erdody, Signor Malfettano Guido, Mr. Dolan, Mr. Brinckman, Mr. Harrison, Baron van Heeckeren, Signor A. Grasselli, M. M. Gourmand, Count Cioleck, M. Otho, M. Descharmays.

Missed their first three birds: M. de Pomian, Earl of Carnarvon, Signor Ratto, M. Bethune, Mr. Halford, Signor Briasco and M. Verne.

PREVIOUS WINNERS.

The winners of the previous contests for the Grand Prix du Casino are given below:

1872. Mr Lorillard, American.	1883. Mr Roberts, English.
1873. Mr J. Jee, English.	1884. Count de Caserta, Italian.
1874. Sir W. Call, English.	1885. M. L. de Dorlodot, Belgian.
1875. Capt Aubrey Patton, English.	1886. Signor Guidicini, Italian.
1876. Capt Aubrey Patton, English.	1887. Count Salina, Italian.
1877. Mr Arundell Yeo, English.	1888. Mr Seaton, English.
1878. Mr H Cholmondeley Pennell, English.	1889. Mr V. Dicks, English.
1879. Mr Hopwood, English.	1890. Signor Guidicini, Italian.
1880. Count M Esterhazy, Austrian.	1891. Count L. Gajoli, Italian.
1881. M G Camauér, Belgian.	1892. Count Trauttmansdorff, Austrian.
1882. Count de St Quentin, French.	1893. Signor Guidicini, Italian.
	1894. Count Zichy, Austrian.
	1895. Signor Benvenuti, Italian.
	1896. M Journu, French.

Boston Gun Club.

WELLINGTON, Mass., Feb. 21.—The close proximity of the holiday affected the attendance at the Boston Gun Club, as not more than twelve appeared to shoot their different scores. The day, though quite stormy in the morning, cleared up beautifully for the afternoon's work, and while the winning scores were good, the general shooting suffered materially from the varied winds which so frequently haunt the vicinity of the club house. A most pleasant time was passed, the intervals during the events being interspersed with many stories of the rod, gun and target. The following tell the tale:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17
Targets:	10	5	10	6	10	5	6	10	10	10	10	5	5	6	6	6	10
Sheffield (15yds.).....	6	4	5	5	6	3	2	6	4	5	7	2	5	4	3	5	8
Sawyer (15).....	8	3	6	5	8	5	4	8	4	6	3	5	3
Avery (16).....	4	4	5	3	8	4	5	8
Gordon (17).....	9	3	7	5	6	2	4	9	7	7	8	3	2	4	3	3	10
Adams (16).....	5	3	7	3	6	2	2	7	6
Miskay (17).....	8	5	8	5	8	4	4	9	8	5	7	3	2	4	4	3	8
Williams (15).....	2	5	4	2	7	6	4	10	..	3	4	2	3	8
Kirkwood, 10-ga (20).....	4	2	3	3	7	5	4	1	3	3	3	8
Sewall (16).....	8	3	7	6	8	8	3	3	4	3	1	7

Nos. 1, 5, 8, 10 and 11 were at regulars; No. 10, 20yds. distance; Nos. 3 and 9 reversed angles; Nos. 2, 6 and 13 at unknown traps; Nos. 4, 7, 14, 15 and 16 at pairs; No. 12 at straightaways. Nos. 5, 6 and 7 composed the prize match, 21 targets, 10 regular, 5 unknown and 3 pairs; the following being the totals: Sawyer 17, Avery 17, Williams 17, Miskay 16, Sewall 15, Gordon 12, Sheffield 11, Adams 10, Kirkwood 9. Only two straight scores of 10 were made, one each by Gordon and Williams.

In New Jersey.
CLIMAX GUN CLUB.
Feb. 17.—The regular monthly shoot of the Climax Gun Club, of Plainfield, N. J., was held to-day. The weather was bitterly cold, the thermometer being down to the zero point. Notwithstanding the unfavorable conditions, 20 members shot their scores, the results being as follows:
Club shoot, 25 targets per man, unknown angles, handicap allowance of extra targets to shoot at: P. Jay (5) 24, L. H. Schortemeier (0) 22, T. Brantingham (1) 21, R. Manning (1) 21, J. Singer (9) 21, Aaron Woodruff (2) 20, D. Darby (5) 20, W. Terry (5) 20, W. Squires (5) 19, G. Trust (16) 18, C. Smith (0) 17, J. Darby (7) 17, Scott Terry (5) 16, T. Keller (0) 16, D. Terry (3) 15, J. Williams (7) 15, Neaf Appgar (0) 14, J. E. Goodman (9) 13, J. Zieglio (8) 13, Frantz (8) 11.

THE SOUTH SIDE TARGET HANDICAP.
Feb. 19.—Although there were only nine entries in the 100-target handicap race to-day, there were eighteen shooters present at the South Side Gun Club's grounds at Newark during the day. The light was trying to the eyes during the early hours of the shoot, while occasional snow flurries and gusts of wind made the flight of the targets erratic at times. Geoffrey shot very well as usual and broke 91 out of his 100 targets, sufficient to win without his allowance. Sinnerock broke 24 out of 25 in the second series, this effort landing him ultimately in second position by 1 target from Edwards, who had the same handicap allowance of targets—8—that he had. Miller was one short of tying for third money, while Dutchy should certainly have done better than 86 all told after breaking 67 out of his first 75. Herrington shot up well, considering that his gun broke down before the handicap started, causing him to use Parker's gun, a weapon that was strange to him, for the balance of the day. Jim Elliott was clearly out of form, his trouble in the fourth series being apparently the result to a great extent of a knowledge that he was out of it. Sinnerock, the winner of second money, is a member of the Forrester Gun Club, of Newark, and is a new man in the target sweeps of New York and vicinity.

Billy Hobart, the secretary of the South Side Club, and William Parker, secretary of the Elizabeth, N. J., Gun Club, took charge of the cashier's department and kept things moving. During the day 2,100 targets were thrown, showing that the club is capable of doing if there is a good attendance—something that was most unaccountably missing to-day. The scores were:

Events:	1st series.	2d series.	3d series.	4th series.	Handicap.	Total.
E. A. Geoffrey (103).....	22	22	25	22	1	92
Sinnerock (108).....	19	24	18	21	8	90
E. Edwards (108).....	22	19	19	21	8	89
E. D. Miller (103).....	24	21	19	22	2	88
Dutchy (104).....	23	22	22	17	2	86
Eddie Collins (105).....	19	19	19	21	5	83
M. Herrington (110).....	20	18	15	21	7	81
N. H. Astfalk (110).....	17	13	17	20	7	74
J. A. R. Elliott (100).....	21	19	21	9		70

The scores in the sweepstake events were as follows, all events being shot at unknown angles:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	10	10	10	10	10	15	15	15	15	15	15	15	15
R. H. Breintnall.....	7	6	9										
E. Edwards.....	9	9	9	10	11	15	11	12	11	15	14	12	
M. Herrington.....	5			7	4	7				11	13	12	8
C. Dutchy.....	9	10	10	9	14	12	14	12	13	13	14	14	
Sinnerock.....	8	8	8	7		13							
E. D. Miller.....	5	8	8			12	13						
Young.....		7											
Clark.....		7	7										
J. A. R. Elliott.....				8									
N. Astfalk.....				8	11	10				14	13	14	14
E. Sinnerock.....				0									
A. Sinnerock.....				7									
W. Parker.....				8									
E. Collins.....				9	13								
E. Geoffrey.....				14	10	12	13	12	15	15	14		
J. Roberts.....								8					
Dr. Jackson.....								8					
Hassinger.....										12	10	13	11

The day closed with a snowstorm and a sudden gale of wind. The drifting snow was blinding to a degree, but that did not quite stop all sport, as Astfalk, Edwards, Hassinger and Herrington thought it would be fun to see just how many they could break out of 25 targets thrown under such conditions; the agreement was that the low men should pay for the 100 targets. The scores were: Astfalk 16, Edwards 15, Hassinger 14 and Herrington 10. The latter was out \$3 in consequence.

ANOTHER TIE RACE BETWEEN HILL AND BUDD.
Feb. 20.—After shooting a tie race on Feb. 14 at Zwicklen's grounds, Yardville, N. J., Eddie Hill, of Trenton, and I. W. Budd, of Pemberton, N. J., met again to-day on the same grounds and once more the result was a tie. On Feb. 14 the scores were 84 each; to-day the totals were 87.

Notwithstanding the cold wind that blew very strongly, between 300 and 400 persons were at the Yardville grounds to see the match. The strong wind that made things uncomfortable for the spectators helped the birds, which would have been a good lot without a breath of wind to aid them. The totals made on such a class of birds must be considered as very good. The officials of the match were: John Rothacker, referee; W. G. Paddock, scorer, and D. Sprouls, trapper.

In the first 25 Budd led by 1 bird, increasing that lead to 4 at the close of the 50th round. Then Hill scored 22 out of his 3d 25 to Budd's 21, reducing the lead to 3 birds; at such a stage of the match it looked almost an impossibility for Hill to overcome such an advantage, but a streak of bad luck for Budd in his last 11 birds, combined with some very good work on the part of Hill, turned a sure defeat into a draw, Budd losing his last bird when he had only to kill to win. The high runs were: Budd—16, 13, 12, 12 and 11; Hill—16, 14 and 10. Scores:

SOUTH SIDE'S SATURDAY.
Feb. 23.—There was only a small attendance at the grounds of the South Side Gun Club, Newark, N. J., to-day. The weather was fine, but cold. I. H. Terrill distinguished himself by making 25 straight in the team race. Scores:

Events:	1	2	3	4	5	6	7	8	9
Breintnall.....		8	9	10	9	7	6	9	
Dawson.....		2	5	8	5	4	7	6	
W. M. Smith.....		2	7	2	2	5	6	7	6
Young.....		7	5	4	3				
I. H. Terrill.....		7	8			5			
D. D. Terrill.....		7			3		4		
Whitehead.....		8	6			8			
Thomas.....			4	5	7	7	7	2	
Heddon.....								8	

The team race, 25 targets per man, known traps and angles, resulted in a victory for Heddon's team by the score of 80 to 64, as follows:

Heddon's team: I. H. Terrill 25, C. M. Heddon 21, W. M. Smith 20, D. D. Terrill 14; total, 80.
Breintnall's team: Breintnall 23, Asa Whitehead 18, L. Thomas 12, Dawson 11; total, 64.

THE ENDEAVORS CELEBRATE WASHINGTON'S BIRTHDAY.

Feb. 22.—The Endeavor Gun Club, of Jersey City, celebrated Washington's Birthday by holding an all-day shoot on its grounds at Marion, N. J. There was a fair attendance of shooters considering the many counter attractions. During the day over 2,500 targets were thrown, this fact showing that the boys started shooting just as soon as there were enough of them on the grounds to make up a squad, and kept it up until sundown. It seems almost impossible nowadays to get shooters together anywhere in the vicinity of New York city before 1 or 2 P. M. The reason is not far to seek—there are any amount of gun clubs now, and a man who wants to shoot can join in a club shoot any day of the week without going very far by rail to do so.

Secretary Creveling and Capt. G. Piercy worked hard all day; the former raked in the cash and paid out the same to the fortunate winners; Piercy got up the squads and shot in every event. As a natural consequence the scores of both men suffered materially; no one can work and shoot. All events were at unknown angles, and all were 10-target events except the team race and Nos. 13 and 14. The day, especially the early part of it, was cold, with a strong wind blowing. Under such conditions Carl von Lengerke's record of 161 breaks out of a total of 175 shot at—an average of 92 per cent.—is an excellent one and shows what Carl can do when he gets down to business; out of his first 100 shot at he broke 95. Appgar was handicapped by having to shoot a strange gun with a very light trigger pull; when he changed to Corson's gun, he started in and broke 35 straight before letting one get away from him. Platt Adams shot irregularly, the

flight of the targets being something he was unaccustomed to, the traps throwing them very low and fast. Hegeman was a stranger to unknown angles; in addition to this he lost several targets by flinching.

The team race was a friendly affair for the price of the targets, the losing team having to pay for all shot at in this event. Appgar and Von Lengerke chose sides; Appgar's team lost by 13 breaks, the totals showing 160 to 147 in favor of the team chosen by Von Lengerke. In this instance the non-favorites won, the race being looked upon as a moral certainty for Appgar's team before a single target was shot at. Each man shot at 25 targets, unknown angles. The scores were:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

RIVERSIDE GUN CLUB.

Feb. 22.—There was a good attendance at the shoot of the Riverside Gun Club, of Red Bank, to-day. H. C. White won the club shoot by scoring his 7 birds straight. Sweeps were also shot, the results of all the events being given below:

No. 1, club shoot: H. C. White 7, E. W. Throckmorton 6, W. T. Conover, M. F. Cornwell, J. B. Bergen, James Cooper, George Low and John Polhemus 5, C. B. Worthley 4, Wm. Little, T. Davis, John Worthley and W. H. Conklin 3, I. W. Budd and C. E. Throckmorton 2, E. M. Cooper 1.

No. 2, miss-and-out, \$2.50: E. Cooper and Bergen 4, Budd 3, James Cooper 1, E. Throckmorton, E. Price, G. Low, Conover and Conklin 0.

No. 3, same: White and Price 3, Bergen and James Cooper 2, Low and Conklin 0.

No. 4, same: White and Conklin 10, James Cooper 6, Bergen 5, and Price 3.

RIDGEFIELD GUN CLUB.

Feb. 22.—The Ridgefield Gun Club celebrated Washington's Birthday by holding a large live-bird handicap sweepstake on its grounds. The conditions were 20 live birds, handicap rise, an allowance of misses as kills being also given to some of the shooters. J. H. Sloan, C. Henderson and H. H. Arthur were allowed 3 misses as kills, G. W. Gladwin receiving 1 miss as a kill. The purse was divided among the four high guns; first and second money was divided between G. S. McAlpin and F. Hall, each of whom scored 18; W. J. Simpson took third money on 17, Justus von Lengerke winning fourth on 16. The scores were:

G. S. McAlpin (30) 18, F. Hall (28) 18, W. J. Simpson (29) 17, J. von Lengerke (29) 16, J. H. Sloan (25), allowed 3 misses as kills, 16; J. M. Baker (28) 15, Dr. Edmonds (27) 15, H. R. Goesser (28) 15, C. Henderson (25), allowed 3 misses as kills, 15; J. Williams (28) 14, A. B. Gladwin (25), allowed 1 miss as a kill, 11; G. T. Mangaup (28) 11; H. H. Arthur (25), allowed 3 misses as kills, 10.

DEATH OF DAN TERRY.

Dan Terry (everybody called him Dan), the secretary of the Climax Gun Club, of Plainfield, N. J., is dead. His death was very sudden indeed, few even of his intimate friends knew that he was seriously ill. The cause of his death was pneumonia. He was present at the club shoot of the Climax Gun Club on Monday, Feb. 17, and shot his score in the bitterly cold zero weather that prevailed at the time. As soon as he had shot his score he left for home, his wife being ill at the time with pneumonia. That was the last many of the boys saw of him, as he was taken ill almost immediately, his death occurring at 10 o'clock on Friday night, Feb. 21; his wife died also at 10 A. M. on Feb. 22, just twelve hours later.

Dan was well known throughout New Jersey, and was a thoroughly popular man with the trap-shooting fraternity of that State. Through his death the Climax Gun Club has lost an enthusiastic secretary, who always had the best interests of the club at heart.

Bayside Gun Club.

KEYPORT, N. J., Feb. 18.—Owing to the extreme closeness of the scores, the shoot of the Bayside Gun Club held to-day was one of unusual interest. It was anybody's race up to the firing of the last gun, when it was found that H. E. Ackerson, Jr.—the youngest member of the club, a lad of 15 years—had tied the veteran, Watts, for the badge. The tie was shot off at 10 targets, Watts winning by one bird. This makes his third successive win. It was a cold, raw day, with a bitter east wind blowing in the face of the shooters. Below are the scores:

Badge shoot, 25 targets per man.

NON-EXPORT LAW UPHOLD

A TRIUMPH FOR GAME PROTECTION.

THE Supreme Court of the United States handed down its decision last Monday, March 2, in the case of Edgar M. Geer, plaintiff in error, vs. the State of Connecticut. The point at issue was the constitutionality of the Connecticut statute forbidding the export of game. The decision upholds the law and affirms its constitutionality. The importance of the decision cannot be overestimated. It is a great triumph for the cause of game protection.

In October of 1889 Edgar M. Geer, of New London, Conn., was prosecuted on the charge of having in his possession certain game birds with intent to procure their transportation beyond the limits of the State. The birds, it was conceded, had been lawfully killed in the open season. They were at the time of their seizure in transit from New London, Conn., to the city of New York, on board one of the boats of the Norwich Line. They had been bought by Geer in open market in New London, and were in course of shipment to the markets of New York under contract of sale. The statute under which the action was brought reads as follows:

EXPORTATION.—SEC. 2546. No person shall at any time kill any woodcock, ruffed grouse, or quail for the purpose of conveying the same beyond the limits of this State; nor shall transport, or have in possession with intent to procure the transportation beyond said limits, any of such birds killed within this State. The reception by any person within this State of any such bird or birds for shipment to a point without the State shall be *prima facie* evidence that said bird or birds were killed within the State for the purpose of carrying the same beyond its limits. SEC. 2547. Any person violating any of the provisions of the preceding section shall be fined not less than \$7 nor more than \$50.

Geer was found guilty and took his case up to the Supreme Court of Errors for Connecticut, which sustained the lower courts in the following words:

It being conceded that the State, under its general police power, may lawfully prohibit the killing of the game birds in question, it may, of course, control such killing and the times and purposes thereof. It may lawfully enact that they may be killed and sold and held for sale only for domestic consumption. The State in the exercise of its power, instead of prohibiting the killing altogether, permits the person killing them to acquire only a qualified right in them, namely, the right to appropriate them to his own use, and the right to sell or transport them for domestic use.

The birds in question never became articles of commerce within the meaning of the term contended for by the defendant. They became private property of a qualified character. The law limited the purposes for which they might be killed and become private property. The difference between property of this sort and the ordinary private property of commerce is obvious.

The case was then carried to the Supreme Court of the United States, the question at issue being this: "Can a State, after permitting the killing of game birds, and after allowing them to be bought and sold in the markets of the State, impose the restriction that they cannot be transported beyond the limits of the State. Or, in other words, can a State by legislative enactments constitute game birds an article of domestic commerce as distinguished from and as prohibiting inter-State commerce in them?"

The specifications of errors claimed to have been made by the Connecticut Court were as follows:

First.—In refusing to hold that so much of Section 2546 as may be construed to forbid the transportation from the State of birds lawfully killed and permitted by the laws of the State to become the subject of traffic and commerce is unconstitutional and void.

Second.—In refusing to hold that so much of the section as may be construed to forbid the receiving and having in possession, with the intention to procure the transportation thereof to another State, birds therein described lawfully killed and permitted by the laws of the State to become the subject of traffic and commerce is unconstitutional and void.

Third.—In holding that the defendant is guilty of an offense under said section, if such birds were lawfully killed in the State and were bought by the defendant in the market of the State, as articles of property, merchandise and commerce, and had begun to move as an article of inter-State commerce.

Certain minor questions relating to the phraseology of

the statute were brushed aside, and the case, as referred to the Supreme Court, by agreement had to do only with the question thus briefly stated:

Has a State such a proprietary interest in game that it can permit the killing and selling in open markets, and impose a restriction that they cannot be sold, to be taken out of the State? Or, in other words, has the State such proprietary interest in game that it can constitute game an article of commerce within the State and forbid its becoming an article of inter-State commerce?

The plaintiff in error insisted that the State has not such power, and that when it permits an article to become a subject of commerce it cannot restrict it territorially without conflicting with Article 1, Section 8, of the Constitution of the United States, which gives Congress control of inter-State commerce. It was contended that there cannot be articles of State commerce which may not become articles of inter-State commerce; that there is no such shadowy, uncertain, indefinable state where an article is for some purposes an article of commerce and for others is not; and it was argued that in the case under discussion the birds had commenced to move as an article of commerce from one State to another, and from that moment they became a subject of inter-State commerce and could be controlled only by national regulation, not by police power of the State.

For the defendant in error the points made were as follows, in defense of the statute:

"1. Merely having property in one's possession, with an intent to transport it beyond the limits of a State, does not make it a subject matter of inter-State commerce within the meaning of the term contended for by the plaintiff in error.

"2. The law in question relates only to game killed within the State, and is of that class of legislation where-by States seek to regulate killing of game and its consumption.

"The State of Connecticut has prohibited the killing of such game between the first day of January and the first day of October following in each year.

"And as above stated, it prohibits any one having such game in his possession at any time with an intent to transport it beyond its limits. It seeks by its game laws to preserve game from destruction and to limit its consumption to those within its territorial limits.

"3. No one has any property in such birds in their wild and unrestrained condition, and the right of the law making power to restrict or to prohibit the taking of such animals *feræ naturæ* as go under the denomination of game, has always been recognized.

"4. By the law of the State of Connecticut such game cannot be the subject of absolute ownership. No one can acquire other than a qualified property therein, and is deprived of the right to transport it beyond the State.

"It being unlawful for one to kill such game or to have it in his possession for the purpose of transporting it beyond the limits of the State, it follows that it could not become a subject matter of inter-State commerce, and the law complained of is not in violation of the Constitution of the United States or any law of Congress relative thereto.

"5. It is submitted that the State of Connecticut had absolute control of the subject matter of this suit, and that no one can acquire within its limits any right to game killed within that State other than it by law permits, or do anything with such game that it by law prohibits. Its power in these respects is supreme. It is a matter of internal police regulation."

The case was filed with the Supreme Court in the October term of 1895 and its decision was given out last Monday. The Connecticut courts are upheld. The law is sustained. The Supreme Court of the United States declares that a State may control its own game; that it may prescribe not only seasons and methods for taking game, but limitation as to the use, disposition and destination of game after it shall have been taken and acquired as property of a qualified character. If the State provides that its game may not be captured for export and that it may not be exported, such provisions, the Supreme Court says, are constitutional and are not in conflict with the principle which gives to Congress exclusive control of inter-State commerce; for game so controlled—and this is the basic principle—cannot become a lawful subject of inter-State commerce. Here is a brief of the decision, as wired by a special correspondent, and received just as we are going to press:

WASHINGTON, D. C., March 3.—*Special to Forest and*

Stream: In the Supreme Court decision in the case of Edgar M. Geer vs. State of Connecticut, it is decided that the State has power to make it an offense to have in possession for the purpose of transportation beyond the State birds which had been lawfully killed within the State during the open season; and that the statute, in creating this offense, did not violate the inter-State commerce clause of the United States Constitution.

That it was lawful under the United States Constitution for the State to allow the killing of birds within the State during a designated open season and to allow such birds when so killed to be used, to be sold and to be bought for use within the State; and yet to forbid their transportation beyond the State.

That the State had the power to regulate the killing of game within her borders so as to confine its use to the limits of the State and forbid its transmission outside the State.

The court discussed the authorities, foreign and domestic, showing the nature of property in game and the authority of the State in relation thereto. The court holds that the right to preserve game flows from the existence in the State of a police power to that end, which is none the less because inter-State commerce may be remotely and indirectly affected. That the source of the police power as to game birds flows from the duty of the State to preserve for its people a valuable food supply.

That the State may allow its own citizens the benefits of the property in game without permitting citizens of other States to participate.

That, the power of the State to control the killing of and ownership in game being admitted, the commerce in game which the State law permitted was only internal commerce not subject to the United States Constitution, and the restriction that it should not become the subject of external commerce went along with the grant and was a part of it.

This decision is precisely what we have so often declared that we believed would be the result of a non-export game case if it could be carried up to the court of last resort. The law is based on justice, and under existing conditions is essential to the protection of the game of this country. The principles set forth by the Supreme Court apply not only to Connecticut, but to every State in the Union which has a similar non-export law or may have one. The decision goes far toward the solution of the problem of game protection in this country. It points the way in which effort should be expended in game legislation. It provides a way for cutting off the shipment of game to market. It gives added significance to the FOREST AND STREAM'S Platform Plank, that the sale of game should be prohibited at all seasons. It enunciates anew the right of the State to control its own. It asserts once more that the interest of the many and the rights of the citizen in nature's bounty may be defended against the aggressions of the few. It should give new courage and confidence to all engaged in opposing the ruinous traffic in game.

The decision is particularly opportune at this time, when sundry well-meaning individuals and associations are petitioning Congress to remedy what they mistakenly believe to be a constitutional defect of State laws forbidding the export of game. We printed, some weeks ago, a bill prepared by City Attorney Williams, of Denver, Colo., for introduction by a Colorado Congressman, to forbid the export of game from Colorado, Wyoming and Utah; and the reason which Mr. Williams gave for asking Congress to take action in the matter was that such a regulation of game export was constitutionally beyond the province of the States concerned. But according to this decision of the Supreme Court the States themselves may provide all legislation requisite to effect the desired purpose. They may withhold the privilege of killing game for transportation from the State.

The National Game, Bird and Fish Protective Association is also engaged in the exploitation of a measure to be introduced in Congress to amend the inter-State commerce law by prohibiting the export of game from one State to another; and the reason put forward for the national movement is the same as that adduced by Mr. Williams, that the individual States themselves are powerless to provide such restrictions. This decision of the Supreme Court, however, shows that even if the measure sought by the National Association were practicable or might be beneficial, it is in no wise essential to game protection. Every State has in itself constitutional authority to forbid the taking of its own game and fish for any purpose other than consumption within its own borders.

The decision is a triumph for game protection. It points the way to legislation which if enforced will be most effective. Here is another Platform Plank: *Forbid the taking of game for export to market.*

The Sportsman Tourist.

IN WINTER WOODS.

FOREST AND STREAM turns up at my breakfast table just as regularly and twice as often as the baked beans that New England tradition, as well as present liking, prompt my good wife to provide for our Sunday breakfast, for nowadays the beans come only fortnightly, while I welcome FOREST AND STREAM every week. If I find anything signed Rowland E. Robinson, that of course I read first, otherwise I go through the paper regularly, barring some of the things about dogs and some about guns.

Mr. Robinson's sketches of New England characters are charming and his facility in expressing New England dialect has, I think, rarely been equaled.

Antoine's broken English is also excellent, although it has not been my fortune to come much in contact with precisely that form and degree of mixed languages and idioms. Here, as a rule, if one of a party hesitates or speaks English with difficulty we drop at once into French, although our French may sound quite as strange to Antoine as his English does to us.

I am reminded now that some time ago there was a discussion in FOREST AND STREAM over the fact that the French-Canadian people use their English in a semi-Irish and semi-cockney manner, almost invariably dropping their *hs*. If I recollect correctly, reference was made particularly to the French of the "Eastern townships," the counties on the borders of New Hampshire and Vermont. This, I take it, is very largely due to the fact that the English-speaking people of that region are largely of Irish descent and their vernacular is largely tinged with the Irish brogue. It also may come in part from the difficulty the French people have in using the English initial *h*. It is not much used in their ordinary speech, the words in which it is distinctly sounded being comparatively few and in most cases being followed by the vowel *a*. Before other vowels the aspirate is almost completely lost. A very bright Canadian girl found it very hard to say "Hire a hall," an expression that a jocose American taught her was a desirable one to use occasionally. She eventually learned it and very properly used it on him when his harangues proved uninteresting, but it was difficult for her to say otherwise than "Ire a 'all," although "Paint the town red" she could say quite easily.

Happily, she was not entirely dependent on such an unprincipled instructor.

When I come to Mr. Hough's account of trapping and snowshoeing in Wisconsin a shade of sadness comes over me, for I cannot do those things any more.

Trapping I have never done, although I have been among them and come across them hundreds of times. But in snowshoes I have been a sort of Prof. Emeritus for a score of years or more. I can lead the boys on a fairly good tramp yet, but am less anxious to climb steep hillsides just to see what is beyond than I used to be, nor do I hasten to put on the shoes in the morning when I know they are not to come off till nightfall. I go snowshoeing no more just for fun—only once in a good while the girls coax me out for a bit of a walk that is mere child's play. The days when I followed Bill Newberry or the faithful Nazaire as far as they wanted me to go are past. I didn't begin snowshoeing very early in life, but I made up for it afterward.

I cannot add anything of value to the discussion that has been going on about qualities and makes of snowshoes. I have always found Messrs. G. R. Renfrew & Co.'s "War-ranted" grade very satisfactory. They are made by the Indians of Lorette. I never yet found a pair that would not "bag" a little under some circumstances.

Common kerosene lamp wicking makes very good strings—in some respects better than leather—though I doubt if it is quite as handy about putting on and taking off the shoes without untying. So long as the same footwear is worn, it should rarely be necessary to untie the strings. Any considerable change in footgear, of course, involves a readjustment.

I still remember my first real hard tramp. It was in February, after a very heavy rain—a kind of January thaw—and Newberry was my guide. The first water we came to was a river so swollen that there were 10 or 12 ft. of open water all along the bank. We cut down a tree and clambered along it onto the ice, then dragged it across and made a similar bridge on the other side. I remember it was ticklish business climbing along that little sapin tree, encumbered as we were with packs and snowshoes. Then there was half a mile up an overflowed gully where we lifted pounds of slush and water on our snowshoes at every step, and another half mile along a sloping hillside that has always been a terror to the toughest traveler. By this time, as I remember, I was so faint that with one snowshoe off and one on I backed up against a tree and tried to nibble at a tough biscuit that I dug out of a pocketful of snow. It was hard lines for a tenderfoot. But by and by we reached a place where we could climb up the hill and at last came to a jobber's lumber camp. The men were all absent, but we found a chunk of half boiled pork in a kettle and a loaf of very black bread on a table. Not wishing to stop long enough to unpack and cook of our own provisions we ate of these, stuck a piece of silver in the remainder of the loaf and went on our way. The Chateau Frontenac Hotel has good cooks in these days, but they can never get up a dinner so good as that one.

We climbed hill after hill and crossed lake after lake until at last I gave out entirely, and finding a spruce tree that branched nearly to the ground signified my intention of stopping there for the night. Bill protested, saying that our camp was only a short distance away and that we could soon reach it. He also produced from his pack a flask of "whisky blanc"—almost pure spirits—poured a good dose into a tin cup and made me drink of it. It exorcised my mouth and my gullet all the way down, but by the power of it I made another spurt and we arrived, quite after dark, at our little 6x10 camp. It was occupied by three young chaps out for a fishing trip, but as they had no right there, and we had, we bundled them out, to find shelter in a lumber camp a couple of miles away; took possession of their beds of branches, stoked with wood they had prepared, and made ourselves as comfortable as we could. Bill spent a good part of the night stuffing cedar splints into that tiny sheet iron stove; but I know that my underclothing was still wet from my per-

spiration the next morning, and was not quite dry till the day after, for our second day's tramp was nearly as hard as the first and a good deal longer. I suspect that the finding of those young men in our camp, the cabin partly dried out and plenty of wood on hand, was just what "saved our lives." If I had been obliged to stand round while Newberry hunted up wood in the darkness, slept on bare ground with the moisture from the frost dripping over me, I should have stood a poor chance. I have done that sort of thing scores of times since, but always when I was in better condition as well as able to take a hand at the work.

Bill was succeeded by the faithful Nazaire, which was a great improvement. Nazaire didn't care for feather beds, but did like to be fairly comfortable at night, while if Newberry could wrap his head and shoulders in his blanket he would sleep like a pig on any cabin floor or wood pile. I used to say that Bill's idea of a pillow was a sapin log with a nice little knot to fit into either ear.

I liked the woods even under Bill's guidance, but I don't think I really enjoyed them until Nazaire began to look after my comfort o' nights.

What glorious days he and I have spent together! We did not hunt, and we only fished a little through the ice; but while attending to our duties we were alone in dense and almost trackless forests. Oh, the beauty of them!

And now comes Mr. Frederic Irland in last week's FOREST AND STREAM, and not only revives in me 10,000 memories, but also reveres my idol. And all the more that here I am, as it were, in Parkman's own country. I can almost see the island where Jacques Cartier and his men spent that first miserable winter, and on every side of me is ground of which he has given the best of histories. And besides, I know of some things that even he has not mentioned. On one of my beats the washing away of a lake shore not very many years ago disclosed a quantity of French crockery and arms mingled with Indian weapons and relics. What the whole signified we cannot now say, for the finders took no care to preserve their treasures, and the whole were dispersed and lost before the present writer had any knowledge of them. Was some terrible tragedy enacted there, or did some peaceful hunting party meet with disaster? No one will ever know. History has given no record, and even tradition is silent. The spot is now miles, as 100 years ago it was leagues, away from any habitation of civilized man.

And again, still further away in the deep woods is a simple wooden cross. Time and the elements have brought even the long-enduring cedar to decay, but the falling emblem doubtless marks the resting place of some semi-Christianized Huron or semi-savage Frenchman who met his death in that lonely forest. If ever I go there again I mind me to erect a shelter over this unsculptured monument.

I do love the woods.

G. DE MONTAUBAN.

QUEBEC, February.

THE LOST KINGFISHER.

THE camp of the Kingfishers, the past summer, on the Manistique lakes, in the upper peninsula of Michigan—visited by Jupiter Pluvius with exasperating frequency—furnished more than one amusing "episode" to jolly the boys from Ohio and Kentucky who daily offered up prayers that the rain god would give them a surcease for at least a day in the continued downpour. Jeems Mack-erel, the old Kingfisher, insisted on the disputed fact that water could hurt nobody—was good at any and all times—but the Kentucky contingent, raised in a land of Bourbon plenty, aided by a flattering Ohio brigade from just over the border, contended there were times when even water was an unnecessary evil.

The Manistique camp supplied a larger quantity of the evil in its sky origin than had occurred in any camp in the ten years past.

The *dramatis personæ* of this camp consisted of George L. Payne, single and marriageable; Richard Morris, deer-slayer and scout of the woods; Charles C. Furr, sweet singer of Israel, and Old Sam, all of Frankfort, Ky.; Willis Cochran, young and hopeful, of Louisville, Ky.; Jeems Mack-erel, or Kingfisher, pioneer and daddy of all fish liars; Clay Culbertson, the "colonel" and guardian of the camp-fire; George Murray, "lost man" and purveyor of patents; Henry Mueller, camp artist, and James Mueller, his brother, all of Cincinnati, O.; Dr. A. E. Elliott, the good samaritan, of Lodi, O.; and Mack Barney, cook and dishwasher *par excellence*.

Payne, whose gallantry found display in sundry walks with a pretty grass widow from the "Sou," on a visit to a farmhouse near by, was so unnerved by the frequent showers that he once avowed, with solemnity, it had rained sixteen days out of fifteen. His favorite rambles along the woodland paths and through the "potato patch," picking the blossoms for his fair companion, were interfered with so often he became almost a chronic despondent, verging to suicidal mania.

Despair is only a degree apart from the condition of *ennui* enforced by rainy days in a camp beyond the borders of active civilization. The woods dripping with wet, the rain drops splashing on the surface of the lake, the monotonous patter on the canvas of the tent, the little rivulets stealing along the grassy galleys and depressions between and around the tents, the heavy atmosphere and the shadows of night floating through the day—are productive of chilly sensations that crawl down the backs of the campers who strive to kill time by reading novels, writing letters to friends at home or swapping "fish lies."

Surrounded by such conditions, the active thoughts of restless Kingfishers more than once budded into the imposition of a "task" upon some victim who by accident or by plot had concentrated their attention. The incidents of such a "task," culminating in the accompanying photo, showing the heavy villains "caught in the act," I am about to relate. It was, in fact, the reception of the photo among others sent to the Kentucky boys by Mueller, the camp artist, that revived the memory and provoked this recital.

One day the awful fate had dawned upon the camp that the water supply was exhausted. With water all around—above, below, beyond, apparent in the atmosphere and obstructive of divers plans—there was "not a drop to drink." The knowledge created a raging thirst with the occupants of every tent.

"Oh! wat-er fate," said Payne. "Take me to where the crystal waters flow!" exclaimed Culbertson. Furr began his famous hymn, "I'm climbing up Zion's hill—climbing, yiming, yiming," as if earth had ceased to further afford

attractions for his soul. Morris and the Doctor discussed the different ways in which water might be made useful and the proportions of the useful that would be adapted to the constitutions of the various members of the band. With marked unanimity they decided that Kingfisher was entitled to all he could hold; that with due modesty, they themselves came in for second share; and as for the rest they could live without it, provided the supply of Kentucky "yarbs" did not wholly vanish.

Neither the song, nor the horrid pun of [Payne, nor the discussions of Morris and the Doctor—savagely denounced by the remaining members of the "gang"—served to develop the existence of the fluid called water. So a caucus was held, and by common consent it was agreed that Brother Murray had consumed more than his share of the drinking water for the day, and should at once depart, bucket in hand, for two rare springs, located on the edge of the larger lake, a half mile away through the woods.

These springs bubbled up through the white sand on the edge of the forest where it bordered the wide, flat beach, and with a temperature of 42° and 46° respectively furnished to the campers on hot days or when fatigued with fishing most refreshing draughts of cooling beverage.

Brother Murray responded to the request of his comrades with becoming grace. He even manifested pleasure in his mission—said he loved to wander through the pathless woods, where the wild deer roved and the pheasant sent his drum-beat-echoing through the forest aisles; that the bark of the squirrel from the hemlock bough and the quack of the big fat duck from the secluded pool under the pines were rhythmic music to his inner soul; that the solemn silence of the forest depths created a sanctity in his heart and a solemnity in his being that wafted him beyond earthly cares and opened to his vision the vast eternity beyond.

How long the enraptured Murray would have continued in this ecstatic strain cannot be told, for the whistling of a bootjack (stolen from me at Daddy Nolan's, on Carp Lake, by the president of the Cuvier Club, with the connivance of Kingfisher) and of sundry camp attachments, as empty bottles, old boots, tent pins, etc., about his ears, warned him of disaster imminent, and wheeling about he made hasty tracks up the road and through the gate by the hay loft, and disappeared in the deep woods he loved so well.

With his departure the camp resumed its monotonous droning existence, and for a time forgot that water was the one thing necessary to bring harmony and contentment. An hour passed on. The cook, ever alive to the necessities of life and the damnation attending a failure to rattle his pan at the dinner hour, and equally impressed with the curt conclusion, "no water, no dinner," made a round of the tents and enigmatically announced, "Mr. Murray—he has not come."

What Barney, the Cincinnati boiler of meats and turner of flapjacks, meant to say was, "there's no water in sight." With deft conception of the fitness of things he was shifting the responsibility where he deemed it belonged.

Sure enough, the water carrier was missing. Had he become lost in the pathless woods? No, they were not pathless, for the sandy road lead straight away through the gate by the hay shed, along Bill's bean patch, over the hill by the birch grove, down by the bars in the brush fence, under the forest aisles to the forks of the road, thence down the hill through the swamp bogs and out on the sandy beach, at the landing where ye writer once waded to shore after the sailboat had capsized and deluged himself and plunder. Ten rods to right of this terminal were the springs. "Adirondack" Murray, as some one had jestingly named the missing man, could not easily lose the road.

Had he been destroyed by wolves? A year or two before several had been killed in the deeper forest to the northward. A few had been caught in traps. Driven by hunger they might attack a man. But food was plenty and Dr. Elliott said no wolf in his right mind would ever assail a man whose life was spent in getting patents for windmills and baby cradles—that his teeth would get tangled in the tough muscles and, like the bucks with locked horns, he would die with his victim.

Had he been caught in a bear trap? If so, he might die from starvation or of thirst if in the excitement he had spilled his bucket of water. Or a passing buck, finding him a prisoner, might insert his horn under the fifth rib. Brother Murray had never been known to refuse a "horn," properly administered, and he might accept one *in extremis* as a blessing in disguise.

In any event it was thought best by the Kingfisher campers, ever alive to brotherly sympathy, to organize and send out a relief corps. The *Herald* had sent Stanley to search for Livingstone in the jungles of Africa. Why not, in modest but heroic spirit, send out and save Murray?

Morris and the writer were selected to search for the missing man. We were ordered to equip ourselves thoroughly for the journey and to take three days' rations. I suggested we take "a reviver," but was put off with a promise of one if successful. Morris took a gun and three rounds of ammunition.

Being interrogated as to his reasons for such deadly preparations, he responded that if Murray was found in a bear trap and badly wounded, it would be better to kill him and end his agony. If found alive and in distress, he would fire signal shots at intervals for succor. If alive and sound and loitering by the way, he would fire a single shot and leave the camp court martial to do the rest.

With this explanation and the blessings of the entire camp, including the cook, we departed. Plunging into the forest depths we followed the well-worn path leading to the larger Manistique lake. I urged Morris to look for tracks.

"Tracks the d—l," said he, "I'm not looking for tracks; I'm looking for a man; or," he added, thoughtfully, "what's left of him after the wolves and bears have had their share. Did you know," said he, confidentially, "I never did think Murray was altogether right in his upper story. He has been bunking in the same tent with Culbertson and Old Hickory (Kingfisher) and never has uttered a word of complaint. Now, any fellow that can be contented with that infernal log-saw chorus those two fellows set up every night as soon as they get asleep ain't level in the thinking shop. Several times I've had half a mind to send a load of shot through that tent and stop that big bass bullfrog business."

I agreed with Morris that Murray must be "off," and begged him to by all means try his shotgun panacea on the occupants of the nasal catarrh tent.

Kingfisher has basely denied that any sound ever crept from under his tent flaps or crawled up the ridge-pole during the silent hours of the night, but again and again the various members of the "gang" have been awakened by apprehensions of a storm brewing, evoked by the deep diapason of thunder that came rolling from the tent that held the vantage ground in the camps of the Kingfishers. At times the uproar was fairly terrific.

But to the search for the lost man. We had gone over the woodland path to the forks of the road and were descending into the marshy ground near the beach when full to the front, as large as life, sound in limb and body, stood the object of our search, bucket in hand. We waived our hats and shouted our joy with exuberant manifestations, while Murray simply gazed at us with that stolid look of innocence that seemed "childlike and bland."

"You once was lost, and now you're found," exclaimed Morris, paraphrasing the familiar hymn as he rested his gun against a hemlock tree and embraced the object of our search in a hug that a bear might have envied.

"Lost?" said Murray as soon as he could get his breath, "I wasn't lost!"

"Then where have you been?"

"Oh!" said he, "the blamed spring got lost, and I've been hunting for it."

Then he explained how he was unfamiliar with the country and had taken the left-hand branch when he came to the forks of the road, and had walked two miles

BRINGING IN THE LOST MAN.

over roots, stumps and bogs until his mind became sort of bewildered in trying to reconcile the "half mile away spring" with the two mile away man. Then he concluded to his own satisfaction that the spring was not only lost, but, in the wayside vernacular of his younger days, "badly lost."

Retracing his steps, he had taken the other road, landed on the lake shore, and after pulling his hair and wearying his soul in long search, had discovered the lost spring hidden in the cool recess of the overhanging cedars and bubbling up through the sand as unconcerned as if the tale of its being lost was merely another "fish lie."

While Murray was reciting his adventures and laying all the blame on the spring, several other members of the gang arrived, armed with clubs, bludgeons and other weapons of war, to protect the lost man from the varmints of the woods. Among them was Kingfisher, who straightway opened his mind.

"The hellrackin, Murray, whar hev yer bin? Did yer scoot to Alaska for ice water, or hev yer been to Kaintuck for a bucket o' wrath? Better shuck yer coat and pray for saints and sinners, for the Colonel says he didn't have no faith in the story about varmints gettin' yer, and he's going to give yer a drum-head court martial."

Murray wilted considerably at the mention of a trial, and his knees quivered visibly. He muttered something about "he could explain."

"Explain nothin'," said Kingfisher. "Put him in front, boys, and march him straight to camp."

Bucket in hand, Murray took the head of the procession, and at quickstep the march was made through the woods. Emerging from the bushes in sight of the tents, the Colonel was met, a stout cudgel in hand, and with that fierce glare of the eye that always betokened a state of war.

"Ah-ha! Got him, have you?" said he. "No claw marks on his body—no mangled limbs—no wolf bite nor bear scratches on his face—no blood on his shirt—sound in wind, limb and liver. Consider yourself under arrest, sir! Forward, march!" And the line, with arms at right shoulder shift, moved onward to camp.

It was just at this moment that the camp artist caught the procession with a snap shot of his camera—reproduced in the picture. Note the determined stride of the Colonel commanding the squad. The culprit is unfortunately hidden by the Colonel's bulky form, only his leg and foot being visible between the Colonel's legs. Close behind him is Morris, with shotgun heavily loaded; then Payne, with birchwood club; next Kingfisher in shirt sleeves carrying a cedar root torn from its parent stem; following is Old Sam, armed with fork from the camp-fire; next is Furr, the sweet singer, bearing a rail torn from Old Bill's fence (Old Bill was our nearest neighbor and guide), and the rear is brought up by Dr. Elliott, unarmed, but ready to bleed or blister or purge, as the court martial may order.

The latter was organized with expedition—the Colonel presiding in his famous camp chair covered with the glorious names of Nepigon, Carp Lake, Big Basswood, Platte Lake, Pe Lee Island, Florida, etc., while the prisoner sat on the ground in the center of the circle of judges with his bucket of water by his side. Hot, thirsty and excited, he was permitted to look at the cool, refreshing fluid, but not drink a drop.

The charge was brief: "Lost in the middle of the road."

After able speeches by Kingfisher for the prosecution and Old Sam for the prisoner, the case was submitted. The gang said afterward that Kingfisher never touched the subject—went off on next year's camping place about

some lake that had a spring with a trout stream near by, and milk and butter to be had for the goin' after—and that Old Sam's speech "would a hung anybody"; that he described the prisoner as a "poor orphan without father or mother, children or brother, no money, no friends, ragged, hungry, thirsty, dirty, cross-eyed and hip-jointed—a poor, miserable, mean wretch, and a lunatic loose in the woods."

A short conference was held by the judges and they were polled for the verdict.

"What say you, gentlemen, is the prisoner guilty or not guilty?" sharply demanded the Colonel.

"Guilty!" they responded, as each name was called.

"Has the prisoner anything to say why sentence should not be pronounced upon him?" inquired the Colonel.

"Not a word," sullenly replied the prisoner.

"Silence!" thundered the Colonel, "no levity in court."

"Stand up," said he, and Murray arose, bucket in hand. "Prisoner, you have committed a fearful crime against the peace and dignity of the camp—you had a fair trial—you were found guilty; at sundown you will be taken under the tree in front of Old Bill's house and there shot—and may the Lord have mercy on your soul!"

"Colonel," said Murray, "can't I select the place on my body where I'm to be shot? I think I'm entitled to choice of weapons too. I'd rather be shot in the neck with a bottle of old Kentucky bourbon."

The plaintive tone in which this appeal was made, with the thirsty expression in the eye, softened the feelings of the judges and they appealed for a lighter sentence. Kingfisher said he ought to live "for the good he might do hereafter—gathering camp wood, lighting the fires, catching minnows, washing dishes and the like."

Willing to be merciful, the Colonel commuted the sentence to hard labor in doing camp chores for three days and total abstinence. Even this was mostly escaped.

OLD SAM.

THE TIGER WE DIDN'T GET.

Six thousand feet downward (that's over a mile), and 250 miles eastward from my home, is where he lives. On a slight elevation between the rivers Tamesí and Pánuco, along which divide the Tampico branch of the Mexican Central zigzags, is Jackson's Wood Camp. Here ebony is just plain cord wood for the engines, notable only for breaking axes and being uncommonly tough to split. Northward the land slopes away very gently to the lagoons bordering the Tamesí, and southward to those of the Pánuco. In the dense jungle of these slopes, near the water-holes to which the deer and cattle resort from the upland prairies, the enemy was waiting for us—quite a number of him.

We had been getting ready for this trip for a year. In fact I think it is about six years that I have been trying to meet my engagement with this maculate son of the tropics. For his benefit I sacrificed my liking for a neat little '94 model Winchester, and bought a big, brutal .45-70. One of the other boys had seen him from his train a short time before, standing among the palm trees, with a chip on his shoulder and his tail in a convenient position to be stepped on. So, early in December the four of us got us two guns apiece, chipped in and bought a big box of groceries, loaded a few hundred cartridges, and one fine day set forth. Arriving after dark, Jackson allowed us to pile into his little box-house camp and sleep on the floor among boxes of tallow candles, bales of piloncillo sugar, sacks of beans and other such delicacies, kept for his axemen and their families.

About two miles further down the track—3½ kilometers, to be exact—the prairies begin. They are almost level and are perfectly open, forming beautiful little coves in the jungle, the playground of the deer, and covered with magnificent grass nearly waist high. The first morning in camp we went down the track early and murdered a spike buck just about the time the train came along on its return trip. This we sent home, a bloody symbol of how we were going to fix that tiger.

After one or two days of this, we decided to quit "hitting the ties" twice a day to get to and from our hunting, so we borrowed a push car, loaded her up and moved down to camp on the field of battle. A dry run—*raya*—skirted by a thin line of low trees—the timber is all low in that section—runs across the track in the midst of the prairie. Here we unloaded, hung up our coats and stuck our hunting knives in a fine ebony tree (which looks for the world like a mesquite), held up the first engine that came along for a barrel of water, and were at home to our friends.

For about a week we waded the dewy grass every morning, saw deer galore and killed a few; killed, ate up and sent home no end of turkeys; tried chachalacas, and decided that the patriarch Aaron who was our alleged cook had not got the combination on preparing this particular titbit; ate, slept, read, talked and had a most royal up and down all-around good time. The weather was of the charming, mild, autumn variety. The sun grew warm toward midday, but the nights were fresh. We could not keep game long, but we needed a lot for camp, and the rest we could send home any day. Freight trains got to happening along about meal time with great regularity.

But there is something wrong with the education of Sir Felis Onca. His people must have been negligent in the matter of etiquette. For though we could find the "lordly" stag and the "soft-eyed" doe in every *rincon*, his Spots remained invisible. This disregard of all our elaborate preparations to meet him was painful.

"Down at the water of Caboose is where the tiger lives." So said the cowboys, the guide, and gossip generally. Whereat various and sundry members of the invading force decided to reconnoiter that particular part of the field. They mostly got lost in the jungle, however, and saw so many turkeys and such a big buck (he got away) that the tiger was not interviewed. "It's no good for a camp anyhow," they reported.

"But down at the laguna on this side (south) there are many tigers too," quoth Don Justo, our guide and factotum. "Vamos á la laguna, pues," was the dauntless reply. I was in that. We packed some blankets and provisions on Don Justo's pony and walked till we were black in the face. At last we found the lagoon, a beautiful sheet of water shut in by palm groves and malaria, inhabited by alligators and herons, a wide glade bordering it all round, left by former high waters, and behind that the dense impenetrable jungle. Cattle and horses grazed all about. The solitary human inhabitant of the neighborhood am-

bled along on horseback, sallow, shy, soft of eye and of voice. "No, señor," he informed us; "the tiger has made no damage of late." There were deer, yes, and many turkeys, very many. Also *javalies*, which did his cornfields much damage.

All these we could find nearer camp, and the mosquitoes were awful. So next day, my companion half sick, we walked wearily back. The return trip was enlivened by killing four or five turkeys and missing a whole herd of deer. The latter was a daily feat with us.

Wilson being sick that night on the lagoon went to bed early. I sat up a good while listening to the bellowing of the alligators, fighting mosquitoes and pumping old Justo about the *tigre*. It had become a clear case: no dogs, no tiger. Living in that section, one might once or twice a year find a tiger by day. On rare occasions he might find the fresh kill of a calf or deer. Then with plenty of nerve the thing is easy; for the tiger will allow neither buzzard nor coyote about his prey. So he stays very close to it. But with dogs the matter is simpler still.

"Yes," said Don Justo, "I have been with this Lázaro of Pánuco after tigers. You comprehend, señor, that the tiger is a clumsy brute. He only climbs sloping trees like this," pointing to a gnarled and stooping old ebony covered with orchids, under which we had camped. "Besides he will not jump out of a tree as the lion does. He is too heavy. When he wishes to come down he climbs down like a cat. Why, this Lázaro does not use a gun. Once I was riding with him and we found a fresh kill. He brought the dogs and they seized the trail and soon had the tiger up a tree in a clump of bushes (*matilla*). We rode in, Lázaro ahead, cutting the vines with his machete. I was afraid, the animal growled so loud. But he did not notice us. He only looked at the dogs and growled very strong. Lázaro got down and tied his horse to a tree. With his machete he cut a stout pole, and took a *puntilla* like this," showing me the long knife which in one or another form all Mexicans carry, "only it was very slender and sharp at the point. This he tied in a slit at the end of the pole with bark, binding on his girdle to make it sure and strong. Then he crept up almost under the tiger, and while he was looking at the dogs gave him a big thrust under the ribs. With the thrust he dropped the pole and skipped behind a tree. But the tiger did not notice him. He only gave a sharp cry and looked at the knife. Then he sat still and licked the wound. Pretty soon he began to be drunk with loss of blood. Then he wobbled and fell out, already too weak to hurt the dogs. That's the way Lázaro kills them. He has killed about twenty." Thereupon I decided that Lázaro and his tiger dogs, which are nothing but little mongrels educated to the business, should form part of my outfit next time.

All of us saw tracks. The object of all this anxious thought roams around through those woods pretty freely, mostly at night. His big, round footprints could be plainly seen in the soft vegetable mold. A drizzly night is his preference. His voice is often heard on such nights, though we had not that privilege. Doubtless he often lies about the edges of the prairies by day, ready to slip into the brush at the slightest notice. But the woods are almost impenetrable—entirely so for still-hunting. The deer, though not very wild, had to be always given up when they reached the bush. Trying to follow, one made such a noise in dry twigs and thorns that any sane deer would take himself off. Since we were there Mr. Jackson came upon a tiger one day with a deer in his mouth, in an open glade of the prairie. Unfortunately he had only a shotgun, and lost the rare chance.

So our tiger is still there, large as life and tolerably numerous. Probably he will wait till next fall. And probably we will go after him some more. It took Hough a long time to get that bear. In fact, up to this writing it is not apparent that he ever got him.

Some Things we Found Out.

That when a deer is running with long bounds through grass as high as his back it takes an expert rifleman to hit him. Also that we were not experts.

That a scatter gun is not a deer gun. A moderate sized buck ran a mile after being peppered with buckshot, one of them through the neck, and then only stopped at the invitation of my .45-70.

That "el monte" is the woods, not the mountain; that "un Remington" is any kind of a breechloading rifle; that "una carabina de á doce" is not a 12-gauge shotgun, as you might suppose, but a '73 model Winchester carbine which holds 12 shots.

That the deer seem to average smaller and are much redder than those in the mountains near San Luis Potosí.

That the big game of those jungles—and there are thousands of thousands of acres of jungle—such as tigers, wild cattle, peccaries, tiger cats, etc., can only be approached when bayed by dogs. None of them are wilder than the cattle, *ganado ladino* the people thereabout call them. They are domestic cattle run wild.

That hunting stories expand in Spanish as well as in English. Don Justo was heard relating to an admiring crowd how I had killed a buck running with my rifle, on horseback, the horse at full speed! One morning I found the same Don in a state of vast excitement. He had lost his hat and his machete and most of his wits. He told me he had seen five does and eight bucks all together, and had wounded a spike buck *muy grande*. He was going after his dog (and thereby hangs a tale). The tracks indicated about four deer. A little later in the day I killed one of them, but saw only one that got away.

We learned some other things too: that the railroad boys are a capital set of fellows, that Mr. Jackson is a first-class host as well as a live wood rustler, that the way to cook a turkey is to make steaks of the breast and feed the rest to the dogs, that pinolillos can't live in the open prairie, that December is rather early for the duck shooting near Tampico, that—but this will do. Still if Brother Hough wants any more points on Spanish we will try to help him out.

AZTEC.

FEBRUARY.

REPORT YOUR LUCK

With Rod or Gun

TO FOREST AND STREAM,

New York City.

THE SUMMER HOLIDAY.

Where to Go—What to Do.

WHO can understand Mr. Herbert Spencer's "System of Synthetic Philosophy," or his definition of "Evolution?" The value, however, of his "gospel of relaxation" cannot be overestimated.

In the excessive hurry and excitement of this competitive stage of the nineteenth century, in the fever of life, when our well-earned holiday arrives—if it comes at all—we seek this relaxation, without time for reflection, in different directions, in various ways, and the question remains, do we find it?

It is only those who have gained that point of vantage in their career, middle age—who can compare the past with the present—that can adequately advise where to go and what to do in the annual summer holiday.

Happy is he who, in this matter, takes "the counsel of the old men"—the middle aged. Without this advice you may decide upon an Atlantic voyage—a European trip. During the voyage you are at least free from the routine of office life; no daily newspaper, no telegrams or telephones! You are a free man for a while—yes, for a while.

Your first voyage in a Cunard steamer, thirty years ago, was of eighteen days' duration. Now, before you are well settled down to find your "sea legs" you have landed at Queenstown, after five or six days' voyage in Campania or Lucania, and society vexations can scarcely be said to be absent during the short voyage.

You have but just arrived in London. You are met by Cook's or Gage's tourist agents, who would fain lead you, like a nurse with a batch of children, in your Continental trip. With or without Cook or Gage, you decide to renew your acquaintance with men and things on the continent of Europe.

The heat and turmoil of Paris bores you. You try to escape it. You ascend the Eiffel Tower, as you have already tried to avoid the London busy crowd, on the great wheel at Earle's Court; even here (on Eiffel Tower) you are hustled by the large family of tourists—even here you cannot "rest awhile." You go up in a balloon for a bird's eye view of Paris. Alas! you find it is a captive balloon—so-called—and before you have time to open your eye to the view you receive the word of command, "Time's up!" and the balloon is pulled down to mother earth by the rope which regulates its ascension.

You proceed to Switzerland. Surely nothing can rob the Alps of their picturesqueness, the flora of their beauty, the lakes of their charms. You climb the Regi or Pilatus once more to gather your favorite Alpine flowers—edelweiss or *Gentiana acanthis*. Modern science, however, has brought a cogwheel railway train to the highest points of these mountains, and the poetry of Alpine climbing has, in a great measure, departed.

At Grindenwald, prior to ascending the Jungfrau with its glaziers, you find there has been a "boom," and that hitherto isolated place has become a celebrated summer and winter resort, with all "modern improvements." You try back, in order to visit northern Italy, and you find that the St. Gothard Railway has brought "over civilization" even to those parts.

You have discovered that Geneva, on one side, and Brussels, on the other, are but miniatures of Paris.

Again you vary your route. You go east. You must find that eagerly sought "relaxation" down the Rhine! Here hosts of tourists drink their British beer on every Rhine boat. You stop off at some quiet village *en route*, say St. Goar or Bingen, in order to secure peace and quiet, and you have hardly landed before 'Arry on his bicycle plunges into your center of gravity and leaves you all of a heap. As soon as possible you move on to pastures new, if not vistas fair.

You take the P. & O. steamer for the Mediterranean. Again you visit that hotbed of British soldiery, Gibraltar, to find that "on foot or on horseback in southern Spain" is not what it was thirty years ago. Then there were no railways and there was a spice of danger—a bit of pleasant adventure about it. Now you elect to travel by railway train. Again you are disappointed. The train dumps you down at Grenada (the Alhambra), or Cordova, or Seville, with but "ten minutes for refreshment," or perhaps the train guard stops at that picturesque spot, Ronda, long enough to enable him to light his cigarette.

You return to America in despair, not having found the eagerly sought relaxation. On landing at New York after a too brief voyage, you are once more "electrified" by our civilization. The stream and counter stream of cars on Broadway still move on. There are a thousand and one signs of advanced civilization on the right and on the left, the desire for rest and quiet remains.

Where then can this relaxation be found? Accept the counsel of the old men. Come with me, say I, to the forest and stream, with the State of Maine or eastern Canada for your hunting grounds, "far from the dreary sounds of crowded earth, the cries of camp or town."

Let the Micmac or Milecete canoe be your means of transport, a small tent or wigwam your sufficient shelter from sun or storm, the redskins your sure guides. And allow me to lead, in thought, by offering the following extracts from camp notes on a very enjoyable round-trip canoe voyage from the Gulf of St. Lawrence to the Bay of Fundy during my autumn holiday.

Our party consisted of two ladies, an Irish friend skilled alike with rod and gun, my boy and myself. We found that to none was the trip more enjoyable than to the ladies, and shooting the rapids gave zest to their enjoyment, and they were ever ready for the business and pleasure of roughing it.

Four Milecete Indians accompanied the party as guides, and three bark canoes were the usual means of transport, while the Indians themselves were the means of transport for the canoes during the portage. On but one previous occasion (years ago) had a lady—Lady Head, wife of the then Governor—taken the round trip in question.

We proceeded from the harbor of Bathurst, on the Gulf of St. Lawrence, to the source of the Nepiseguit River, Nepiseguit Lake (100 miles); thence by portage three miles to Nictor Lake, the source of the Tobique River; thence nearly 200 miles to the St. John River; about 200 miles further is St. John Harbor; total distance of round trip about 500 miles, more than 200 of which are through wild forest lands.

The whole course of the Nepiseguit River (its name being derived from its rough waters and rugged rocks), as well as the upper part of Tobique River, may be said

to be wild and rocky and in consequence picturesque in the extreme.

The view from Bald Mountain (the highest point of land in the province, 2,500ft., overshadowing Lake Nictor) is very fine, millions of acres of forest are spread like a map, sinking and swelling in one dark mantle over hills and valleys, while Mars Hill in Maine, Tracadie Gash in Quebec and Green Mountain in Victoria are all distinctly visible.

There are some fine cascades on the Nepiseguit River. Grand Falls, twenty miles from its mouth, is a total height of 140ft., and thus completely bars the upward progress of salmon.

One member of our party here killed four salmon in one hour, one of which weighed (not by guess work) 30lbs. Splendid trout fishing can be had in every deep pool above the falls. From Nepiseguit Lake to the falls is a part of the river but little frequented and but little known, the limit of salmon fishing being the limit of civilization.

I pity those whose tastes can only be satisfied by excessive salmon taking, and who fail to appreciate good trout fishing with light rod and line. In proof of the excellence of the trout fishing in the Upper Nepiseguit I may mention that I caught three trout in succession whose net weight was 9½lbs.

Having ordered our Indians (Milecetes from the St. John River) to meet us with their canoes at Grand Falls, where is a lengthened portage, we appointed a time and place, meanwhile, to meet some French "habitants" with their canoes at some distance from Bathurst, desiring to spend a few days before the arrival of our Indians in fishing the splendid salmon pools at the Paheneaux, the Chain of Rocks and at Grand Falls. We failed, however, to make the connection. Our men came not.

Notwithstanding this, like old campaigners, the business of pitching camp, chopping wood, cooking, etc., proceeded in the most systematic manner, and when we had all assembled for our evening meal we were agreeably surprised, not that the Frenchmen had arrived, but that the usual camp fare of pork and fish, bread and beans, with "oceans of tea," had been supplemented by the thoughtfulness of the good wife by such luxuries as butter and condensed milk. A pot of marmalade, too, was actually produced.

It would be hard to say which camp during our trip was pitched on the most picturesque spot. This, our first camp, however, was beautifully situated on a hardwood plateau, the river running calmly and peacefully by at some distance beneath us. Vivid recollections of that evening will long remain. We sat for hours round the camp-fire in front of our tents (a small bell tent for the ladies, a lean-to for the gentlemen), and though we had done an honest day's work, we were loath to lose any moment of this enjoyment. Night was far advanced before, one by one, we sought the spruce bough couch.

Our Frenchmen, with so many excuses and such ample apologies that it was impossible to lose one's temper, arrived at our camp next morning. They had had no dinner on the previous day, no breakfast this morning, and they made short work of what remained of our condensed milk and pot of marmalade when having a "square meal." At this camp we spent the day in fishing the numerous salmon pools in the neighborhood of Middle Landing, while the ladies fished for trout and assisted in shifting quarters to Mr. Spurr's comfortable log hut at the Chain of Rocks, where we settled down for a quiet Sunday. What better place?

"Go sit on rocks, to muse o'er flood and fell,
Go slowly trace the forest's shady scene!"

After a day of perfect rest and perfect pleasure, we again resumed operations with rod and line; but owing to an unusual rise of water, neither the well-known Nicholson fly, nor the Jack Scot, Silver Doctor, Dusty Miller, nor any favorite fly we could produce, nor any skill my brother angler and myself could bring to bear would tempt the numerous salmon we could see in these pools to rise with a will; and not till we reached Grand Falls next day did we have the good sport I have referred to.

Unlike the Frenchmen, the Indians were most punctual in keeping their appointment. At the precise moment they were told to meet us their cheery voices were heard on the high bank above us; and, though we were agreeably occupied at the time in successfully fishing the large salmon pools at the Grand Falls, we soon bade farewell to this favorite spot. Ere night set in we had poled many miles up stream.

Day after day, for several days in succession, we poled steadily but slowly up this fine river, instinctively pulling up now and then at the best trout pools, and landing three-pounders till even my boy cried enough, when his arm had become tired, or when his rod required a fresh splice (results of playing monsters); or again, we disembarked to follow a covey of partridge (ruffed grouse) which, refusing to take to the tree, ran with all the speed of their red-legged brethren in Spain, and a general chase was the result. Now a halt was called, on the part of the ladies, to gather rare specimens of flowers—one of the pitcher-plant family in one place, one of the water plantain family in another. Ordinary wild autumn flowers (it was now late in August) were abundant in every direction, and ferns, mosses and lichens of rare kinds abound in the Upper Nepiseguit. Like practical people, too, we more than once stopped en route to gather blueberries for the pudding at our midday meal (always a certain excuse for a halt).

And, not so practical, one member of the party, ever ready with his sketch book, was wont to ask occasionally for five minutes "law," to commit to paper his idea of the beauty of some particular bit of landscape, much to the amusement of our canoe men, who seemed to enjoy being "thrown in" in the foreground.

Moreover, while enjoying a delightful reverie, building castles in the air, there was often a sudden check to our onward progress by the quick exchange of a pole for a gun, on the appearance almost in the midst of us of a flock of ducks; while one of our Indians, whose eyes are always open, on seeing a mink or otter retreating to his "fort" thrusts his pole lance like at his foe.

We found the Indian Rapids, Portage Brook and the Devil's Elbow delightful camping grounds, with capital trout fishing close by. At the last named place we met a trapper (it is unusual to meet anybody in these parts), he had just settled down for a month's trapping and had already captured a fine black bear and several otters.

We spent a pleasant half hour in his camp, admiring his furs and hearing all about his prospects of sport. His canoe men were Micmac Indians from the Gulf of St.

Lawrence, and there was no interchange of civility between them and our Milecete Indians.

We were desirous of reaching Nepiseguit Lake by Saturday night. We therefore had to push on, to ply pole and paddle, toward the end of this week. The sun was sinking fast when we entered this beautiful lake, and so taken up were we with the scenery that we allowed ourselves but little time that evening to pitch camp and catch the following day's supply of fish.

So abundant, however, are the trout in this lake that the supply was easily obtained, and ere night set in, with little effort on the part of the Indians and ourselves, we had our tents pitched in a deep pine forest, on a most picturesque spot on the edge of the lake. Having resorted to poetry to give an adequate idea of the delights of a previous Sunday (I admit that the Sunday spent here was not less enjoyable), I must give some prosaic details concerning this day. Instead of "sitting on rocks" we were all "sitting on a log" in a row, having our midday "square meal," when the faithful Noel—our pet cook—formally announced with long, serious face, as if he had lost his nearest and dearest friend, that the "pork was giving out," which means, in plain language, that soon we should have no "nice fried pork," varied by "nice pork fried," to delight our hearts. "The pork was giving out," we must soon go on our way down stream, 'twas true, amid beautiful scenery, yet it would really be up-hill work—"the pork was giving out." In estimating for provisions for a trip of this kind one should see that the supply is equal to the demand, and the unexpected arrival of the "waiting man"—our spare Indian—was the cause of this mishap. No other course was now open to us, sad to relate (as it is indeed a serious thing, and I have no intention of speaking of it in a frivolous manner), than to put ourselves on "half rations" of pork till we should reach the settlements, where we could replenish our stock.

Next day we made the portage to Lake Nictor, the source of the Tobique River, and during this portage the ladies for the first time received unwelcome visits from our old enemies, mosquitoes and black flies. A black bottle of "Angler's Defence," the gift of a thoughtful friend at our start, had the effect of keeping both mosquitoes and black flies at a respectful distance. Nothing could exceed the beauty of the scenery of Nictor Lake. It possesses more beauty of scenery than any other locality I have seen; close to its southern edge a granite mountain rises to a height of nearly 3,000ft., clothed with wood to its summit, except where it breaks into precipices of dark rock, or long gray shingle slopes. Other mountains of less height, but in some cases of more picturesque forms, are on other sides. And in the lake itself, in the shadow of a mountain, is a little rocky inlet of most inviting appearance. We spent a couple of delightful days in this region.

We camped one night on Hacmatac Brook, on the northern side of the lake, Bald Mountain and its hills on both sides being directly in front of our camp, the lake lying between us and the mountain. It would be hard to describe the beauty of this view, especially when at night the full moon rose over the top of Bald Mountain, and mountain and hills, forests and ravines were reflected upon the placid water, not a cloud was visible. Gladly should we have remained here many days, but we were often reminded of the rapidly diminishing piece of pork. We started early one morning down the Tobique River, and gently down stream is the order of the day. To anyone who has poled all day long up stream in midsummer at low water the delights of going down stream with an abundant supply of water are fully appreciated; they were by us on this occasion. The upper Tobique country has a wild and peculiar aspect, quite unlike the upper Nepiseguit country. Here the now narrow river turns and twists through cedar forests, the trees growing at every conceivable angle; some had fallen across the stream, others were reclining along the bank, while others were meeting above our heads, forming arches of every imaginable shape and size. Here and there blue hills, more or less remote, are to be seen.

The run to Cedar Brook (twenty-five miles), where we dined, was made in quick time. We afterward made the Forks (twenty miles further). Here the Momozeket River from the northeast and the Campbell River from the great Tobique Lake join our little Tobique River.

We now met a friendly Indian (Old Tom), whom we had surprised at his happy fishing grounds spearing whitefish, who gladly exchanged a piece of pork for some tea. Money appeared to be of no value to him. He also supplied us with whitefish, which never or rarely take the fly, and he threw in the bargain a few potatoes. Our fortunes were thus made; we had abundance of food; we went on our way rejoicing.

I can't say much in favor of fly-fishing in this branch of the Tobique. Trout and salmon and these whitefish appear to be abundant in the river. There are some beautiful salmon pools. I have, however, thrashed the waters for hours with but indifferent success. We soon found that we had gone too quickly down stream. We had left the favorite moose yards behind; we had seen lots of fresh tracks of both moose and caribou. And now, for the first time, it occurred to us that during this full moon was the most favorable time for moose calling. We, however, made fruitless attempts at this sport, so-called, the Indians making a doleful noise (artistic moose calling is doleful in the extreme) to attract the attention of the moose, we men and women shivering with cold the while.

We had some beautiful views during our voyage next day of Blue Mountain, eighty miles from the mouth of the river.

And as autumn advanced the forest became daily more and more beautiful, decked in its foliage coat of many colors.

From Blue Mountain to Andover, at the mouth of the Tobique, we pass the Gulquae River, navigable for canoes twenty-five miles, and later on thirty-one miles, the Waspekehegau—this Indian name means a river with a well at its mouth.

Some beautiful wooded islands are afterward seen, on one of which we camped and held "a levee," which was well attended by farmers' wives and daughters, who came to study the fashions, the cut of the dresses of the ladies of our party. I doubt whether they got many valuable hints; they, however, seemed quite pleased with their visit. We made an early start next morning, so early that when we pulled up with good appetites for dinner we discovered it was but 9 o'clock in the morning. As

fashions were the order of the day our dinner hour was not an exception to the rule. We passed the Red Rapids eleven miles from the mouth of the Tobique, and reached Andover, the shire town of Victoria, and beautifully situated, at an early hour. From this the canoe voyager can dispense with the services of the Indians, as it is all plain sailing to St. John, 55 miles to Woodstock, 130 miles to Fredericton, a total distance of about 200 miles to St. John from Andover.

To persons taking the trip that I have just described I strongly recommend Mrs. Newcomb's comfortable hotel at Andover. Her son will be found most obliging in securing Indians from the Indian camp at the opposite side of the river, and fortunate will any persons be to have as guides the same skilled Indians that he secured for our party.

MICMAC.

FREDERICTON, N. B.

LE MONDE BLANC.

THE man with the *skis* was just pulling his sweater over his head, when the other man, with a pair of moose-hide snowshoes under his arm, came up the path. His elongated footgear stood in a corner of the porch. A moment later the entire snowshoe club, consisting of two enthusiastic members, whose enthusiasm is the subject of various facetious remarks from their friends, was kneeling in the snow tying the thongs around their ankles.

When the gateways of the landscape are locked by the magician Winter, with his key of frost, and the snow, covering the fields and lying deep in the woods, repulses with drifted barriers the man afoot, who wastes his strength while floundering through the crystalline fleece which will not sustain his weight and is so heavy to struggle through; when fences are hidden and landmarks obliterated, and the green earth sleeps under its white coverlid, the one who is able to exclaim "the world is mine," and penetrate the frozen mysteries of the beleaguered woodland, is the man on snowshoes.

The "rambler's lease" of other men's property, which he holds, does not expire with the first snowfall, but is unlimited. The snowshoes—offspring of the stern mother Necessity—invented by some savage genius to satisfy the needs of his wild people—distribute the weight of the walker over a wide surface, so that he strides forth across the thin shell of crust, or at the most sinks only a few inches into soft snow which would otherwise prevent his progress.

The man on snowshoes sees the wintry world at its best. He is not limited by the boundaries of road or pathway. He goes whither his fancy dictates, his blood tingling and his body glowing with the exercise. His lungs draw in exhilarating drafts of pure, frosty air, and his moccasined feet, relieved of heavy shoes, seem as light as if his ankles bore the wings of Mercury.

This particular February morning was bright and clear. The thermometer registered several degrees on the wrong side of zero, but the sky was intensely blue, and the sun shone as brightly as it might in summer. The earth was as radiant as the sky, and every snow crystal scintillated like a jewel as it reflected the sunlight.

The snowshoe club pulled its toques well down over its ears and started down the slope toward the wooded hill across the road. The half of the club on *skis* put his long stick between his legs and coasted gayly down the walk, which was trampled hard, while the other half on the *racquettes* betook himself to the tops of the drifts beside the path, leaving a broad trail as if some immense web-footed fowl had passed along. But going up the hill the web shoes had the advantage of the *skis*, and their owner arrived at the top first, where he awaited his companion.

The gray trunks of the trees were silhouettes, and branches and twigs were etched in delicate tracery against snow and sky, while broad blue ribbons and finer threads of shadow were thrown across the white carpet of the woods.

The road winds down the slope and across the level toward the creek, and the timber masses along the stream were deeply purple.

"Now," said he of the *skis*, "just see how we do it," and he let go the brakes. Down he went swiftly, riding his long staff as the witches of old rode their broomsticks, the tassel on his toque streaming jauntily like a yacht's pennant. All went well till he neared the bottom, when one *ski* entered a rut, and before the lost equilibrium could be regained the late exemplar of the art of flying gave an interesting imitation of the fall of Icarus, the long *skis* waving in the air like the melting wings of the son of Dædalus. He who had remained on the hilltop, watching his comrade's descent and rather envying him his swift flight, laughed as he witnessed the final catastrophe, and secretly congratulated himself on the possession of the slower but more stable *racquettes*. Choosing the deep snow by the fence he also commenced the descent. Icarus at the foot of the hill was, so to speak, smoothing his ruffled pinions.

But the proverb says, "Pride goes before a fall," and the snowshoer, who erstwhile made merry at the misfortunes of another, stubbed his shoe against a stump ambushed under the snow and disappeared head first into a drift. Honors being easy, the club resumed its onward march toward Brush Creek, arriving on its banks without further misfortune. The broad pathway of the stream, white and level, stretched away between the leafless woods, the parallel marks of the *skis* and the hollow-shaped tracks of the web shoes breaking its immaculate surface for the first time, except where further up stream some frightened rabbit had written the story of its gambols in the moonlight the night before. Passing out from the shadow of the great gray ice-house, within whose weather-beaten walls was stored the frozen harvest of winter, the walkers kept on around the bend. Here there were no houses in sight, and the silent woods which bordered the sleeping stream were as lonesome and desolate as if the country was still wild instead of being within a few miles of a great city. Across the flats, where in summer the white water lilies come up out of the black mud to float in the sunlight, they turned their course toward the "high banks" which with their crown of trees rose like a wall before them. How white it was and still and cold; but down under the snow all the beautiful life of the vegetable world was awaiting the awakening breath of the spring and the south wind. Those dry stalks sticking through the snow, where the level of the ice met the steep slope of the banks, only a few weeks before planted the big showy blossoms of the *hibiscus moschentos*, and those bare, low bushes above them will a few weeks later perfume

the June air with the delicate scent of wild roses. Dead mullein stalks stood straight and tall, and the ghosts of last fall's golden rod nodded disconsolately. The day, however, was far too bright for melancholy thoughts. The Snowshoe Club, wending its way up Brush Creek, felt the joyousness and delight in life which those who love nature find no less in the time of cold than in the season of heat. At the bend where the brook flows under the arched stone bridge to join the creek a farmer was watering his cow at a hole cut in the ice, and his dog's deep note saluted the travelers.

Leaving the level of the stream, they now forsook its windings for the greater variety afforded by the woods.

They saw no bird life except two crows whose harsh voices broke the silence as they winged their way across the blue expanse above the tree tops, and the rabbit tracks were the only signs of the little dwellers of the woods. At the top of the hill, where sumacs and thickets of low bushes replaced the oaks and hickories, the snow lay deep in little glades which opened up in all directions, like the coves and inlets of an island-studded lake.

The sunlight, thrown back into the eyes from the dazzling snow, was almost blinding in its brilliancy, and the solitude of the place was enchanting as they wound in and out among the thickets. This course brought them back to the top of the "high banks," where they paused to allow their eyes to wander over the white world which lay before them. At their feet the frozen course of the creek twisted sinuously across the wintry landscape; in the distance a curl of smoke rising above the trees defined the location of some hidden farmhouse.

The blue sky, the white earth and the bare leafless woods—grayish brown near by and deepening to purple in the distance—filled the vision, the whole bathed in a flood of golden light. But several hours of exercise in a "below zero" atmosphere causes one to remember the fact that one's stomach is an organ which when empty requires attention, and the Snowshoe Club, seeking a path not too steep, plunged down the "high banks" and doubled back on its own trail.

"That was a walk to be remembered," observed the half of the club who wore the snowshoes.

"It was indeed. We will go again next week," replied the other half who wore the *skis*.

W. A. B.

A HUMID TALE.

Now I'll tell you about the snow here. Sometimes it does; and it isn't snow either, though it's white. It's rain porridge. Everything is saturated with water out here, and snow is no exception. Every individual flake—no, not flake—lump or gob is sodden clear through, and comes straight down like a plumb bob turned loose. No airy, fairy, swirling, swaying, graceful, poetical, beautiful snow out here. It'll cling to you like glue, and soak like water. Everything drips here—the heavens, the trees, the bushes and you, if you're out. I'm speaking of sea level, of course. I don't know how it goes upon the mountains, bleak and drear; but I guess it's the same as it is down here, for the wonderful, all pervading Japan current dominates everything.

It's mush and slush here anyway, and it's so nice to hunt in. The trees—and it's all trees here except the front porch—catch all the slush they can possibly carry, and it's drip, drop, drap continually, excepting when a half bushel or so of mush lets go and comes down kersplash, catching you, if you're thereabout, in the back of the neck. Bear in mind that all timber here, or ~~1000000~~ is fir or cedar, and doesn't let go of anything until it's absolutely necessary. Bear in mind, too, that there isn't a square rod nor yard of territory that isn't littered with dead brush or sticks, or disguised with sal-lal brush, excepting, of course, said front porch aforesaid. Then imagine the delights of trying to hunt, with some inches of mush over everything, concealing slippery sticks on a side hill, which sticks you will of course carefully step on, and then where are you? Wait until you stop floundering and sprawling, and trying to break your bones, and find out. And when you step on western Washington or Oregon most anywhere in the woods in the snow you don't know whether you'll hit solidity or go knee deep into a mess of sal-lal or fern that will kindly and carefully scrape all the snow on them into your boots.

It snowed (mushed) night before last and last night. It rained yesterday and dripped all last night, let up a little while this morning, and has alternately rained and drizzled and fogged and misted and tried to snow all the forenoon. Previous to this spell it rained almost steadily for two weeks, after endeavoring to get ready in occasional spits and downpours for another week. If anyone wants to go hunting here in the winter (they call it winter through force of habit), he wants a pair of hip boots (rubber), a rubber apron to shed the snow or mush from his waist over his boots, a gum coat or slicker, and a sou'-wester. Then, if he has just plain horse sense, he'll stay in the house. He won't get anything anyway but tired and disgusted and exasperated, and that's plenty. The grouse go into the firs, impenetrable to optics, and stay there, hibernating like bears.

There are no rabbits or hares in this country, or more than one to a section, and if corralled he isn't fit to eat. The bears have dened. The deer, oh! where are they? If the snow gets so deep away up in the mountains that starvation stares them in the frontlet, maybe they will sneak down here and there when it's raining and no one wants to go after them.

There's absolutely nothing abroad in the upland excepting a stray wildcat maybe, or a meandering mink along the creek. The pigeons have pulled out for fairer climes, the chilled water has driven the fish to the deeps, and naught but ducks tempt the taking of the gun, and when it rains always and mushes between times there isn't much fun in soaking while one knocks over an occasional duck that, when one has harvested him, smells to heaven of rotten salmon upon which he has gorged. Of all unsatisfactory and exhausting upland hunting, western Washington probably furnishes the poorest; of course, western Oregon stands pat.

I followed the devious track of a wildcat the other morning, as it showed where it had meandered during the night in search of hare or grouse in a long and crooked round, if such a thing can be; and while I crouched and dodged snow-laden branches, and slipped on concealed sticks, and crawled over reeking logs, and forded the stream, and wrenched my back and wearied my legs, the drizzle descended, the trees divested themselves of their white burden, straightening their crum-

pled limbs as they did so, and little by little the trail grew dim and finally faded out, or was so blotted by patches and splashes of fallen wetness that I ceased my quest, and calling to mind the fox and the grapes, though not from the presence of either in this sodden country, I sauntered homeward, shooting a red salmon in the creek to satisfy myself as to its sex, and the list of males is as yet unbroken. I shot a seal (hair) not long since in the salt water with buckshot, and concluded after skinning it that when I skinned another it would be when I couldn't find anything else to do. The fat is about an inch thick all over the body, as tough almost as the pelt, and the way it clings to the hide is away beyond description. If there were a way of boiling or burning it off I should be pleased, though I do not expect to amass sudden wealth in the business. It is raining. O. O. S.

AN AUTUMN NIGHT IN THE WOODS.

DID you ever pass a night in the woods alone away from civilization and all signs of man? If not, you have missed something which to me is one of the greatest treats in life.

We will suppose a man has been hunting or exploring in northern Minnesota, and toward evening has come upon the shore of one of those wild looking rock-bound lakes so common in that country. He looks around for a place to spend the night and selects a spot that is sheltered from the wind and near a leaning tree. He takes his hatchet and cuts a lot of boughs and saplings. When a sufficient number have been cut, he leans the poles against the tree about a foot apart and thatches with the balsam boughs till it is thick enough to keep the dew off. Then he scrapes the sticks and rubbish from under the primitive shelter and piles the remainder of the boughs in their place. His appetite has been telling him that the supper hour is at hand, so he starts a fire and slices a little bacon and bread, puts the bread near the fire so as to warm it and toasts the bacon till it is done to his taste. Putting the cooked slice between two slices of bread, he cooks another and does likewise with it. Thus the advantage of having the bread warm is obvious. He is hungry enough by this time to enjoy this simple meal as much as he would a three course repast in a down-town restaurant. When finished he goes to the lake and drinks a deep refreshing draught of pure cool water, which in ordinary times is a thousand times better than any other beverage.

His thoughts then turn to his pipe, that great companion and comforter of the woodsman; but he cannot take time to rest yet, so he lights up and takes the hatchet and goes for the largest pieces of green wood that he can carry or roll to the fire; then for that pile of dry driftwood on the beach. When satisfied that he has enough to last through the night he cuts a couple of stakes, sharpens one end and drives them about 3ft. apart for the back logs to rest against. He next rolls the two largest pieces against the stakes and puts the next smaller ones on top of them, and last one on top of all. This I find to be the best way to build a fire for a shed roofed camp. The fire has been badly disturbed by the rolling of the logs across it, so he rakes the embers up on the first log and adds some dry stuff, which makes such a good light that he can see very well to arrange the "feathers," Michigan ones, you know. When finished he comes out by the fire to enjoy the best part of woods life, namely, smoking and thinking before the fire, studying the stars and silently worshipping his Creator. He cannot understand how any person who has been in the woods can doubt the existence of a supreme Being that has control of all nature, when even the savages see it in their every-day life.

Scientists say that the mind is clearer in the morning than at any other time of the day, but I think we are better able to work out the problems of life before the evening camp-fire than at any other time or place that I know of.

Our woodsman is growing sleepy, and as his pipe shows signs of going out he knocks it thoughtfully against a log and prepares for sleep. Gathering his belongings together and putting them where he can easily reach them, and adding more fuel to the fire, he turns in and sleeps as peacefully as if at home, where indeed he is, though he does not call it so. Sometimes in the night he awakens with a feeling of coldness and finds the fire has burned very low, so he yawns and gets up to replenish the blaze and have another smoke. As he half sits, half reclines, in front of the fire he thinks of friends and loved ones far away, not envying, but rather pitying them and their hard fate to be shut up in a room, almost airtight, in the city on such a night as this. Arising, he puts on as much wood as he dares and then lies down to slumber peacefully till daylight, when he awakes feeling perfectly refreshed and able to cope with any task that may come to him during the coming day.

He has spent a good night.

CRUISER.

Acknowledgment.

It would be base ingratitude for one to get so much genuine satisfaction out of anything as I have had in Mr. Robinson's new series, and say nothing about it. I laughed till I disturbed the family circle the other evening at the result of Sam and Antoine's joint attack on the ducks. Haven't I been there? Antoine's abuse of his gun was calculated to strike a responsive chord in every hunter's breast. I am not personally acquainted with his lingo, but it is enough like "English as she is spoke" among these bland southrons where I make my home to inspire perfect confidence in its accuracy. The dialogues about the camp, the masterly delineation of marsh scenery and of the changing features of Dame Nature as she smiles or frowns, take one away from business, away from cities, away from everything, to the side of the little company on the Slang. If the unaffected admiration and regard of a reader in a far country will be any return to the gifted author for the genuine pleasure he has often and over given me, I hope the editor will kindly give place to these lines.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

Natural History.

AT THE WASHINGTON ZOO.

WITHIN the past few years there has come into operation at Washington, D. C., an institution of which most of us have heard, but which few of us have seen. This is the National Zoological Park, established by act of Congress, and supported in part by Government funds and in part by those of the District of Columbia. Its history is interesting, but more to the purpose just now is to sketch hastily what was seen there during a brief visit made early this month, and to remark upon the extreme interest of this collection of animals and its extraordinary healthfulness.

The bills passed by Congress in appropriating money for the maintenance of the park forbid the expenditure of any sums for the purchase of animals, though transportation charges on specimens presented to the park may be paid. The only way, therefore, in which additions can be made to the collections is by gift, or, temporarily, by specimens loaned to the park. It can thus be understood that, so far as species of exotic animals are concerned, the collections are poor, while some of the native forms are fairly well represented. Many very desirable animals, however, offered to the park at low prices, cannot be secured because of the law, and the collections grow but slowly. However, there is enough to be seen there to please and interest an American, and to please him doubly if he is a hunter or a lover of nature and of nature's wild creatures.

Down at the southeast corner of the park, at the bend of Rock Creek, are the bear pits, in one of which is a small brown or cinnamon bear and in another two black bears. The cages are built against the perpendicular face of a cliff, in which caves are hollowed out, which give the animals shelter from the weather. The floors are of asphalt, and in each there is a water tank for drinking and bathing. The cliff against which these cages are built is really perpendicular so far as the eye can judge, yet when the first bear was introduced there he promptly clambered up the face of the rock, escaped into the open fields above, and was only captured after a sharp chase. A repetition of this performance was prevented by the erection of a strong iron fence.

Passing across the bridge which spans the creek, and up the gentle ascent, one comes to the large, low stone building where the tropical animals are kept. Here are two male lions, a superb tiger, a leopard, a rhinoceros, a hippopotamus, various monkeys, a capybara, European porcupines, a cougar or two and some other animals. Most interesting of all was a superb lioness with two little cubs. These are about 2 months old and are as large as full-grown cats, but of course much heavier and clumsier. They were asleep in the inner room, and the lioness was lying down in the outer cage when keeper Blackburn, shutting the sliding door which separated the two compartments, opened the inner one and took out one of the cubs so that it might be more closely inspected. The mother at once became anxious and began to spring uneasily about the cage, and when the little one had been returned to its bed and the door opened, she ran in to see whether her young had been harmed. Finding them safe she came out again and the cubs waddled along after her and then lay down, and looking frightfully bored, yawned two or three times in our faces and then went to sleep.

The hippopotamus is a fine one, 12 years old, and has been in the garden for a year or more. He was very friendly, and on request opened his huge jaws, showing his shapeless tongue and great teeth. He was recently sold by his owner for \$1,500, being worth perhaps \$4,000, and if the park could lawfully purchase animals would have been a great bargain and a most valuable acquisition. Chances as good as this are constantly slipping through the fingers of the Washington Zoo, and for the same reason. It is a great pity.

In a little room of this house we were shown the armadillos—three of them—from the Southwest. They are nocturnal animals, and when we entered the room they were buried in a pile of hay in a pit made in the floor of the room. Mr. Blackburn felt round in this pit and soon hauled one and then another out by the tail until the three were exposed to view. They were quicker in their motions than I had expected, but seemed confused by the strong light, in which they blinked painfully.

Each of the principal cages of this house has a door leading to an outside cage for summer use. Each outside cage is separated from the adjoining ones by closely woven gratings of fine steel strips, which, while admitting light and air, do not permit next-door neighbors to get at each other. In each one of these outdoor cages is a large tree trunk planted in the ground, over which the animals may climb and play, or on which they may rest.

Not far from this house is a large tree, standing alone and surrounded at a considerable distance from its trunk by a fence of strong wire netting. In the branches of this tree and in the hollow log which lies at its foot are a dozen or twenty raccoons, sleeping, climbing and playing. They are thus out of doors and have abundant room for exercise, yet cannot get away. Beyond this tree are a number of open-air cages, one of which holds a pair of young mountain lions which had only been in the garden two weeks. They were captured in New Mexico and are supposed to be not more than a year old. Their appearance justifies this belief, for on the legs and flanks of one of them faint spots can still be seen. The lions are in superb coat and generally in the very pink of condition, and are still quite shy, dodging at any unexpected motion, and being very restless and uneasy. One of them, however, would often stop its hurried pacing to and fro to watch, with erected ears and every appearance of keen interest, a little child that was playing about near this cage.

One of the most interesting animals here is a huge grizzly bear in superb condition and splendid coat, which was captured two or three years ago in the Yellowstone National Park. It was taken in a trap cage sent out from Washington, and when captured weighed 730 lbs. Mr. Blackburn estimates its present weight at 850 lbs., and no doubt the average hunter, who might see such a bear wild, would say and believe that it weighed 1,500 lbs. It is very dark in color, with white claws, is enormously broad between the ears and very short coupled, with a tremendous body. It conveys an impression of great

massiveness. The other bears do not require special mention.

Not far from these cages is the inclosure in which are confined most of the beavers brought last year by Mr. Hofer from the Yellowstone Park. None of these were visible, but their dams, their houses and the trees that they have cut down are very much in evidence. The question as to whether they will breed this spring is one of great interest and should be decided now before very long. The beavers are very difficult to confine, and this inclosure is surrounded by two fences, the inner one being so arranged that it cannot be climbed over.

Elephants, Old World antelopes and cattle, a pair of ostriches—California bred—some llamas and some kangaroos were seen in their various houses; and we then passed on to two large paddocks on a steep side hill, in which are confined animals distinctively American—elk and bison. There are perhaps a dozen elk, one large, old and vicious bull, one large old cow, one or two younger cows and a number of young bulls. These are all in excellent condition, in good coat, fat enough, but not too round, and with eyes and hair showing good health. On account of his temper the old bull was confined in a pen by himself and the others were all together in the inclosure, which is too large to be called a paddock, yet hardly extensive enough to be a pasture. The situations of this and of the adjoining buffalo pen are admirably chosen. They are on a steep side hill, with a little level land above and below. The animals are fed at the foot of the hill and watered at the top, and so must necessarily climb up and down the hill two or three times a day. Thus they get exercise—something that wild animals in confinement seldom have much of, but which they need above almost anything else. When we were there the young bulls were fencing and fighting along the hillside, two or three couples being sometimes engaged at the

THE AMERICAN BOX-TORTOISE.

From a photo by Dr. Shufeldt.

same time, pushing and straining, and constantly giving vent to the low bird-like whistle of anger so characteristic of the elk.

The buffalo were in as good condition as the elk, but I was sorry to see among the six or seven specimens only a single cow. She is apparently heavy with calf. There was recently a contest for the supremacy of this small herd, and after many battles the young bull overcame him who till then had been the master of the herd. The last fight took place near the top of the hill already spoken of, and at its close the young bull knocked his senior down and then butted him all the way down the hill, rolling him over and over until he reached the foot.

Not far from the large animal house are small outdoor cages, in which are confined some admirable specimens of Esquimaux and other dogs, three gray wolves, two coyotes, one of them—if it is a coyote—red, like a red wolf, and half a dozen beautiful kit foxes. Here too is a great cage, built about a growing pine tree, in which half a dozen Clarke's crows have their home.

Below these animals—under the hill—are the deer, which, like all the other animals here, seem to be in perfect condition. Mr. Blackburn showed us a crippled doe, whose left hindleg had been broken in two places, about New Year's, by a vicious buck. Mr. Blackburn had put the leg in plaster and there seemed every prospect that the bone would make a good union and that the doe would get well.

No one thing impressed me so much during my visit to the park as the admirable condition of all the animals on exhibition there. The site is wonderfully beautiful, much taste, skill and judgment has been displayed in laying out the grounds, and there is ample room; but in a zoological garden all these things count for nothing if the animals, on account of which the garden exists, are thin, mangy and unhealthy. I have seen many collections of animals, but never one where the specimens were so universally healthy as at Washington. This may be accounted for in part by the season of the year at which the visit was made, and in part by the unusual amount of range which many of the herbivorous animals have, but there can be no doubt that the excellent health of the specimens here shown is due chiefly to the constant supervision and intelligent care which is given them by Mr. Blackburn, the head keeper. I talked a good deal with him and soon learned that he knows the secret of preserving the health of the creatures committed to his care. Such knowledge may fairly be called unusual among men occupying his position, who, however interested they may be in their specimens, too often lack the experience and the common sense to treat them as they ought to be treated.

The sun had set while we were standing looking at the buffalo, and I suppose that I had fallen into a reverie,

when suddenly the air was full of an old sound heard often enough in a buffalo country, the yelps and barks of the coyotes swelled after a little by the deeper howlings of the big wolves. For a moment I forgot where I was and looked across the flat to the bluffs beyond the stream, half expecting to see stringing down the hill a line of men and women and pack horses laden with meat returning from the buffalo hunt. Then one of my companions spoke—and I realized that it is twenty years later and that the buffalo is extinct.

THE AMERICAN BOX-TORTOISE.

BY R. W. SHUFELDT, M. D., C. M. Z. S.

FROM Maine to Florida our common box-tortoise (*Chelonia caroliniana*) is so well known to those living in the country districts that any description of this *Chelonia* would seem to be quite unnecessary. They are very abundant in the fields and woodlands lying about Washington, D. C., and the writer has had ample opportunities to study them upon many occasions. I have never been lucky enough to find one of their egg deposits here, but I did many years ago in Stamford, Conn., when I caught the female laying her eggs in the mire near a marsh, she having the hinder half of her body in the water and mud while she did so. These eggs were not numerous, over an inch long each and pure white. In form they were ellipsoidal. Old box-tortoises vary greatly in both form and color; occasionally the vault of the carapace is quite hemispherical in contour, while again it is much flattened behind. The shield beneath, or plastron, is usually quite flat, with the transverse hinge forward of the middle of the body. This tortoise also varies much in its coloration, sometimes the plastron is black, often light clay color, or various shades of brown and mottled. Some of them

have the blacks, orange and browns of the carapace or dome, often upper part of the shell, very bright and variegated, while in others they are dingy and poorly marked. Last summer I photographed some of these box-tortoises and found it by no means an easy thing to do. One of these pictures of mine is shown in the accompanying engraving. It was a beautifully marked specimen, about two-thirds grown, yet the yellow and black of the shell could not be made to show in the photograph. He would move his head as quick as a flash, and draw in his feet and tail on the slightest provocation. On the trial here shown, however, I got these all out in nice shape.

About the end of April or the beginning of May we sometimes begin to meet with the young of this species. They occur in the wood paths, under the leaves by the fences, or in the damp hollows in the timber lands. They are cunning little fellows, very gentle and vary greatly in size and color. Like their parents they will readily feed upon any of the garden berries, angling worms, bits of meat, insects or mushrooms. On warm days they enjoy a dip in cool water and doubtless take the opportunity to drink a little, though turtles and tortoises can go a long time both without food or water. A very foolish notion is still widely prevalent in the country about this tortoise and it is to the effect that one of them will drive out the rats if kept in the cellar of a house infested by them. Even so well known a naturalist as Dr. DeKay must have had a lurking notion that there might be some truth in this myth and he tried the experiment, with the result that in a few days he found the poor box-tortoise in his cellar partly devoured by the merciless rats. One of these *Chelonians* can be drowned by being kept under water for half an hour or so, but there is no truth in the story that they avoid water altogether. Indeed, I have found them wading in shallow streams, and I once tried one by placing him on a small island in a pond. As soon as he found out his predicament, the reptile took boldly to the water, which was several feet deep, and with great dispatch, but by very awkward swimming withal, soon swam the distance of several feet to reach the mainland. The full account of these experiments will be found in a brief contribution to *Nature* (Oct. 31, 1889), that I published a few years ago. As a rule the box-tortoise is a gentle animal, but then again specimens will be met with that are as cross and as vicious as they can possibly be; likewise, some of them make good subjects for the photographer of living animals, while others completely wear his patience out by their perversity.

All the land species of these reptiles are called tortoises, while those that inhabit either fresh or salt water are known as turtles. Some of the former are called terrapins. The word tortoise evidently arose from the old French, *tortis*, meaning twisted, referring to the form of

the front legs. I do not know the origin of either turtles or terrapin, though the former may have been derived from tortoise. As a whole they compose a very compact group of the *Reptilia*, termed the order *Chelonina*, about 250 species of them being known. Dr. Günther has very truly said that "*Chelonians* possess great tenacity of life, surviving injuries to which other reptiles would succumb in a short time. The heart of a decapitated tortoise continues to beat for many hours after every drop of blood has been drained from the body, and the muscles of the trunk and head show signs of reflex action twenty-four hours after the severance of the spinal cord. The longevity of tortoises is likewise a well-known fact." Several years ago I personally made some of these experiments on a few box-tortoises, and am prepared to fully confirm what Dr. Günther has said above. He is also right about tortoises living to a great age, some of the species over a century, and I should not be surprised that our box-tortoise might, under proper conditions, be kept alive in confinement for more than half that time. The breeding habits of these reptiles are truly extraordinary; every imaginable phase and fancy of them being characterized by great deliberation and utter disregard for the length of time it consumes in their accomplishment—quite in keeping, indeed, with their slow growth of body and the remarkable ages to which they attain.

RHODE ISLAND BIRD NOTES.

PROVIDENCE, R. I., Feb. 21.—*Editor Forest and Stream:* In looking over my note book for 1895 I find that I have a record of seventy-six species of birds observed, all but seventeen of which were found within the city limits.

In January we found the black-crowned night herons sitting like gray sentinels in the tall pines of the park swamp, where they have passed several winters safe from harm. They probably find subsistence in the open spring holes and the outlet of the park lakes.

This same swamp is a great place for birds; here in winter the little brown wren can be found playing hide and seek among the roots and dirt of the upturned trees, with unruffled plumage and tail always at the same angle. Flocks of tree sparrows winter here with their friends, the black-cap titmice and golden-crowned kinglets. These latter birds are very tame while with us. I have stood in a clump of pines in a driving snowstorm, and had them fly so close to my face that I could feel the wind from their wings. They are cheerful little birds, always hunting for grubs, apparently happy in the roughest weather. The brown creeper is another busy little bird, but a hard one to find, its markings are so nearly like the bark of the trees which it frequents. This bird starts at the ground and runs up the tree trunks to the lower branches, and then with a rolling note he is off for fresh hunting grounds.

In February I found all of the above birds with the addition of crows, bluejays and flickers. I watched a bluejay hold an acorn under one foot and hammer it until he succeeded in getting out the meat, when he dropped the shell and wiping his bill on a small twig he flew to his stone house for more.

On March 18 I heard the first song of the song sparrow, and recorded the arrival of my first purple grackle, and counted five flickers, and a number of juncos and white-bellied nuthatches were also seen. The first pair of bluebirds were found on March 24, within the city limits; the next were seen in April in the country while on a trout-trip; they were scarce last year, and we shall watch for them more carefully this spring.

On May 5 I found a screech owl's nest in an oak. The old bird was looking out of her doorway or I should not have noticed it, but I did not disturb her and hope she raised her brood in peace. In the spring and summer robins, orioles and vireos were very common, nesting in the trees of the resident portion of the city.

Scarlet tanagers and rose-breasted grosbeaks are becoming more common with us, and I saw more last year than ever before, but the grosbeaks are rather shy and have to be hunted for. In August the night herons were still in the park swamp, and I think they breed there in the tall pines, as a number of bulky nests can be seen in those trees.

We had a rubythroat that stayed around the flower beds all summer and into the fall, Sept. 23 being the last day we saw him on his favorite perch on the telephone wire.

On Nov. 3 while walking through a cedar and pitch pine grove I was startled by a *whir, whir!* a few feet in front of me, and looked up just in time to see a pair of Bob Whites disappear over the treetops. About 20ft. to the left I heard a rustle and carefully looking behind a small cedar saw Bob No. 3. He walked out in the open, looked at me for an instant and then went up in the air like a rocket. A little further on the fourth and last one went up and away.

I was almost home when *honk! honk!* came down to me from the sky, and looking up I saw a string of geese flying due south. There were about fifty of them, as near as I could count. Why is it that the *honk!* of the wild goose stirs the blood in our veins? Does it arouse the savage that still lies dormant in most of us? John Burroughs says: "I hurry outdoors when I hear the clarion of the wild gander; his comrade in my heart sends back the call."

In December we tramped down to where Gaspeel Point runs its long yellow finger out into the blue waters of Narragansett Bay. Here we found shore larks running along the sands searching for food; white gulls were flying low over the water, and far out in the bay a flock of ducks were resting, keeping a sharp eye open for gunners. In a hollow back of the point we found a downy woodpecker, black-capped titmice, tree sparrows and goldfinches in winter plumage.

NUTHATCH.

Grizzly Bears in Labrador.

DR. ROBT. BELL, of the Dominion Survey, says that a paradox to zoölogists is the presence of the grizzly bear in the forested area of Central Labrador, as he does not occupy the intervening country which lies between that peninsula and his Western home in the Rockies. Two hundred and nine species of birds have been noted, but with the exception of the two species of ptarmigan, game birds are not plentiful. Forty-five species have been discovered since Dr. Coues prepared his list thirty-six years ago.

Bird Notes.

SPRINGFIELD, Ill., Feb. 24.—Sunday, Feb. 16, I observed the first robin. A few days of zero weather followed, and after that and up to date mild and springy. This morning, while taking a three-mile drive in the country, I saw and heard a number of bluebirds, also meadow larks. I was informed afterward that the latter had been around for a number of days. Last year I noticed the first robin Feb. 27 and bluebirds March 8. T. M. S.

BELLEVILLE, Ont., Feb. 25.—Mr. A. Dulmage, fur buyer, recently purchased the skin of a small silver fox, which was shot within twenty miles of this city, also three cross fox skins. Pine grosbeaks, which are rare visitors, are here in large numbers. This is the third time within fifteen years that they have wandered hither from their Northern home. The birds are remarkably tame. A high-holder was seen here yesterday. This is the earliest visit of this migrant that has come to the knowledge of the scribe.

R. S. BELL.

ASBURY PARK, N. J., Feb. 28.—*Editor Forest and Stream:* I saw to-day near Woodbridge, N. J., a large flock of black-birds and robins, the first I have noticed this season. It is to be hoped that these harbinger of spring have not made their debut prematurely. Strange, isn't it? how those familiar sights stir up the blood and intensify one's longings for the fields, the streams and woodland delights.

LEONARD HULIT.

SPRINGFIELD, Mass.—On Feb. 15 I was riding in Chicopee Falls when a big red-breasted robin alighted on a tree right over the street. I stopped my horse, and my companion and I feasted our eyes on the rare sight. We were within 20ft. of him.

A. B. U.

Dr. Elliott's African Expedition.

DR. D. G. ELLIOTT, Curator of the Field Columbian Museum in Chicago, sailed on Wednesday, March 4, from New York, on his contemplated trip to Africa. As stated some weeks ago in FOREST AND STREAM, Dr. Elliott expects to visit Mashonaland for the purpose of there collecting specimens of large African mammals for the Field Museum. He is accompanied by the chief taxidermist of the museum, and there can be no doubt that, with reasonable good fortune, the results of this expedition will be important. Dr. Elliott goes from here to England, where he will learn all the latest news about the little-known country which he proposes to visit. He has recently been in consultation with Dr. A. Donaldson Smith, the well-known African explorer who recently returned from the Dark Continent.

Dr. Elliott's armament will consist of both English and American weapons. He expects to take at least two .50-100 Winchester rifles, and will probably purchase in London two 12-bore Paradox guns. He may also take some Männlicher rifles, of the effective work of which we have recently heard so much.

The news which Mr. Elliott receives in London about the abundance of large animals in the different districts of Eastern Africa will determine his course from there on. He may go to Mashonaland, or perhaps to Somaliland, and possibly even into the country of the warlike Masai. He can hardly reach East Africa before May or June next, and after he leaves the coast nothing will be heard of him until he returns to it again. It is likely that he will spend six months in the interior, and may return to this country some time next winter.

The Linnæan Society.

THE annual meeting of the Society will be held in the American Museum of Natural History on Tuesday evening, March 24, at 8 o'clock, and a public lecture will be delivered in the lecture hall of the American Museum of Natural History, Seventy-seventh street and Eighth avenue, on Tuesday evening, March 3.

March 3, public lecture, William Libbey, "Two Months in Greenland," illustrated by lantern slides.

March 24, L. S. Foster, "Remarks on Twenty Species of Birds frequently observed in New York City and Vicinity."

Walter W. Granger, "Mammals of the Bitter Creek Desert, Wyoming," postponed from meeting of Feb. 25.

WALTER W. GRANGER, Sec'y.

AMERICAN MUSEUM OF NAT. HISTORY.

Game Bag and Gun.

FIXTURES.

March 16 to 21, 1896.—Second annual Sportsmen's Exposition, under the auspices of the Sportsmen's Association, at Madison Square Garden, New York city. Frank W. Sanger, Manager.

REARING PHEASANTS.

HOLLAND, Mich., Feb. 20.—*Editor Forest and Stream:* Our game and fish protective association has lately completed an addition to our pheasantry, and as I have had the rearing of the pheasants in charge for the past two years I will, for the benefit of clubs or individuals desiring to rear these birds with which to stock our woods and fields, give a description of our yards and breeding coops and our method of rearing and feeding the young.

For a breeding pen of five birds our yards are 8×16ft. and 5ft. high, covered with 2in. mesh wire poultry netting. Perhaps 2ft. higher would be better, although I do not know as it would, for we have not had a bird killed by flying against the top when frightened. We had a supply of 4ft. netting on hand, so used that. The yards are boarded up 1ft. at the bottom; use 1ft. widest stuff sunk 6in. in the ground. In each run we have two perches, 1ft. and 3ft. from the ground; upon these the pheasants like to sit and preen themselves. At one end of each yard, and connected with it, is a coop or box 1½×3½ft., with a sloping roof to shed the rain. One-half of this roof serves as a door, and to make things safer a sliding door is arranged inside. Owing to the abundance of English sparrows, all grain fed is placed inside the box in a trough made by nailing a narrow piece of board at an angle on one side of the box. A small shelf upon which to place the drinking fountain may be put up. A door with a sort of entry to keep out rain or snow is made in the front of the

box; also a window, 8×10in., covered with glass and protected on the inside by wire netting.

The birds often resort to this box during heavy rains, or to scratch in the sand when there is snow on the ground. Always build your yards on high, dry ground, and arrange them so that the boxes will face the south. The different yards should be connected by gates, so that one may pass from one to the other, as it is sometimes necessary to do in gathering the eggs.

Our nesting or hatching boxes are 15×15×15in., with a sloping roof serving as a door. No bottom is made for these boxes; simply fasten a piece of 1in. mesh wire netting on, so cats or other animals cannot dig under and get the eggs or the sitting hen. Attach to this box a run 4ft. square and 18in. high, sunk 6in. in the ground, and covered with 1in. mesh netting. On top, at the end next the box, make a door 1ft. wide and the full width of the run; really, you make two doors by cutting this door in two about 1ft. from one end. You can use the small door for watering and feeding, and the larger one for convenience in catching the young pheasants when you wish to remove them to a larger run.

When the birds are 4 to 6 weeks old you will need to give them more room. Our runs for birds after this age are 4×8ft. and 2ft. high, boarded up 1ft. at the bottom and covered with 1in. mesh netting. The coops attached to this are 24×24×24in.

Now, as to sitting hens. Get bantams if you possibly can. I have used larger hens with success, but they are so clumsy and heavy that many eggs are sure to be broken and young birds stepped upon and killed. We have a fine flock of buff Pekin bantams which we will use this year. They are just the right size, have an abundance of fluff feathers and make good mothers and sitters. Should any one desire eggs or young stock next fall, we can supply them.

Before setting the hen dust her feathers full of Persian insect powder and place some in the nest, which is best made of a fresh sod hollowed out in the center beneath and covered with a little straw or chaff. Occasionally before the eggs hatch pour a little water around the edges of the sod so that they will not get too dry. Eggs will not hatch well without moisture.

All the eggs in a sitting do not hatch in the same length of time, therefore it is well to remove the young chicks soon after they are hatched to a warm place until you are sure no more eggs will hatch. If you do not do this your hen may leave her nest as soon as a few birds are out of the shell, for you know that pheasants run about soon after hatching, and the hen is apt to follow them.

For the first few days keep hen and chicks in a small coop or box, where the hen cannot move around much. In three or four days the chicks will be quite strong and will have learned the call of the hen. You can then put them back in the nesting box and run, and leave them there for about a month, after which remove to the larger runs. Do not crowd young pheasants too much; when 3 months old they require nearly as much room as the old birds. Do not allow the young chicks to get wet or they will die. I cover the smaller runs every night and during rains with old matting, oil cloth, etc. Keep plenty of straw in the boxes, so that they may have a dry and warm place in which to roost.

Food for the newly hatched birds should consist of eggs boiled hard, chopped fine, shells and all, and mixed with about an equal quantity of ground barley; add to this a little animal meal, and once a day some bone meal. For the first week feed four or five times per day. After that three times will be sufficient and then you can begin to add a little grain to their diet. At four weeks grain can compose half the food, after which you may give less and less barley and eggs each week. After ten or twelve weeks they will need no more of the egg. Wheat and cracked corn, with a little barley, is about all you need in the line of grain. From the first give plenty of green food, such as clover, grass, lettuce, etc., each day; also a little chopped meat every day or two. Keep plenty of pure, fresh water where they can get it. It is best to use the patent drinking fountains, for if you use an open vessel many young birds will be drowned.

We are stocking with the English ring-neck. I have had no success with the Chinese pheasants imported from Oregon. Out of thirty hatched none lived over a month.

Last year we sold a number of sittings of eggs from our English ring-necks to different clubs and individuals who wished to stock with pheasants. This year we have a larger breeding stock and can furnish a few sittings at \$5 per sitting.

The birds we liberated last spring have done exceedingly well, and we feel very much encouraged. One pair reared nine young, and all were alive a short time ago. Reports of flocks of five, eight, twelve and seventeen are frequently made.

Pheasants are our coming game bird, and those interested in game protection and propagation should investigate the matter. In my opinion money spent on importing Southern quail is wasted, for a hard winter kills them off.

ARTHUR G. BAUMGARTEL,
Sec'y-Treas. Rod and Gun Club.

Hard Times and Game Laws.

I HAPPENED to be in Peekskill last Saturday evening, and while I was walking up from the station two young fellows passed me, and I heard the following dialogue:

"I say, Jim, how 're you getting on?"

"Oh, very well."

"How the deuce can you say you are gettin' along very well when you haven't done a stroke of work in three months? These are the hardest times I have ever seen. The times are so hard that you can't go shootin' nor you can't go fishin'. Take these laws just as they are at the present time; now look at it; if a duck comes up the river I can't shoot it; if I do there will be one of those game detectors after me; and I read in the paper a little while ago that Grover went duck shooting and shot them by the back load. Then look at the fishin' laws. Why, a poor devil like me can't go down here and catch a bass that weighs ½lb. or less; if you do another one of these detectors is around. I tell you these times have got to change. Mills ain't a-runnin', can't get any work, can't go a-shootin' or nothin'; what the deuce are we goin' to do?"

H.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

ADIRONDACK DEER AND GUIDES.

SCHROON LAKE, N. Y.—*Editor Forest and Stream:* As to the number of deer killed being placed at 5,000, one writer with a great deal of discernment suggests: "The truth of these statements should be weighed with due regard to the motives which actuate them, when legislation is contemplated. It is obviously to the advantage of both hotel keepers and guides, wherever located, to sound the praises of their immediate section of the hunter's paradise. It is their common and not reprehensible object to lure the tenderfoot to their locality and induce him to leave as much cash as possible. For this reason it is good business policy to convey the impression that deer are lurking almost within sight of the hostelry, patiently waiting to be killed; hence the temptation to swell the number killed in that particular locality."

What is most favored by the guides is a restriction on hounding from Oct. 10 to Nov. 10, making jack-hunting illegal, and giving until Nov. 15 to dispose of all venison.

By this arrangement, you see, all still-hunting is done away with, and the reason for it shows the honesty of the guides advocating the change.

Hounding goes on for the full open season, the conscienceless guides of a certain class using what they call "still hounds," or dogs that run the trail without barking.

These guides hunt for market. Pass a law prohibiting sale of venison under any circumstances, and by putting the whole season into hounding give the honest hunters a chance with the dishonest or the former will soon follow in the steps of the latter.

The guides almost universally oppose killing deer in the water and call the slayer a club hunter, a name originating from a time when the hunters waited on bodies of water, and rowing up to the deer catch him by the tail and club him into insensibility; as one guide puts it, "If a man can't kill a loping deer on a runway he'd better shoot sheep."

The statement that deer are decreasing in the Adirondacks, whether there were 5,000 killed last fall or no, is essentially erroneous; the very fact that so many were killed shows that they are on the increase. I have asked innumerable club land-owners, residents and guides, and they vary from simply more to 5 to 1 more deer in their particular locality than there were five years ago.

The law is all right to-day, but if any changes are made it should be in the line of prohibiting all sale of venison, putting the season later, restricting it to thirty days, with five days more to dispose of the venison, do away with jack-hunting and the period of still-hunting, which gives dishonest hunters a chance to run their silent hounds, stop killing deer in the water and you will have a law which can be enforced; its very simplicity will be its recommendation, and it will receive in its enforcement the hearty co-operation of every resident and guide of the Adirondacks. In the end all will come to see that on the conscience of the guide depends the fate of the Adirondack deer; and despite his maligners he is a business man; his stock in trade is Adirondack game; he is a hard-headed business man and realizes the situation as well as another, and he will preserve the deer at all cost. But he says that when deer are so plentiful that 5,000 can be killed in a fall (on paper at least), and that when the wolves are returning to the Adirondacks because of the increase of deer, and when feed is not any too plentiful to support what deer there are now, he won't worry about their being enough deer to start his pup after for many a year.

In regard to the report of the number of deer killed, a veteran guide says: "I have known nearly as many as that number (5,000) killed around the bar-room stove in one night, besides b'ar and fishercats without number. At that time I rather doubted the truth of the reports of the different hunters, but when these same hunters are answering questions asked by a game commissioner who has previously primed the hunters for the occasion with a great many rounds of 'red-eye,' their awe for that great and mighty representative of the whole world of tenderfoots would be so great that they would break all previous records."

Whether the breaking of records would be in the line of telling the truth or otherwise I leave the reader to infer.

P. S. R.

Editor Forest and Stream:

In your issue of Feb. 15 one of your correspondents deplored a possible change in the existing deer law, excepting the repealing of that portion relating to hounding and jacking, for the reason that teachers and parents will be denied the opportunity of hunting deer, should the opening of the season be put off to Sept. 1. Surely this is a matter to cause much regret, but would it not be better to delay the opening of the school season for two or three weeks also, or even forego the pleasures of the chase, rather than permit poor does to be shot down at the time they are weaning their fawns, and while their meat is still unfit for use, leaving their young to die the slow death of starvation? I mention does for the reason that a buck can rarely be found during the last two weeks of August in the Adirondack Mountains, as everyone familiar with this animal's habits and customs at this time will acknowledge; but the does, feeding with their fawns on the lowlands of the mountains, are not a very difficult prey.

JOHN E. FORBES.

201 WEST FIFTY-FIFTH STREET.

Editor Forest and Stream:

Your last issue contains an article from J. M. Graves, Potsdam, N. Y., and I am fully in accord with his ideas that to protect our deer and stop the decrease both hounding and jacking should be prohibited by law. But in his statement of "greatest good to the greatest number" as a reason that the open season should include, as it now does, part of August, that it may accommodate teachers, parents and others who are obliged to report at home Sept. 1, it seems to my mind his idea for fair play exceeds his judgment, or at least is contrary to what should be if we are sincere as to protection for the deer as against our own pleasure and dates to gratify it.

I believe that no deer should be killed in August in any manner whatsoever, because the bucks at that date, by reason of horn maturing, are not often seen, and the killing in August is nearly all of does, which is of itself bad if we are sincere in our ideas for the increase. But there is yet another bad feature: all fawns born in the Adirondacks must have the nourishment of the mother the entire month of August, and the death of does then means death to the fawns at that time, not in every case, but in

the majority; and those fawns that do not actually die by being deprived of the mother's nourishment mature in a stunted manner, and as yearlings can be easily known. Either a small, poor male or a barren doe are the results of the mother's death in August.

Let our friend reconsider the harm done in August by lawful killing of does, and it will outweigh more than his argument to accommodate persons who cannot by reason of business give time to deer hunting at a later date. I go to the Adirondacks annually, and business requires it in May and June, but I do not want an open season just because I cannot go in September, for my principle is for deer protection and not for my own accommodation nor that of any man or set of men. But killing a doe in August is often as fatal to the fawn, as explained, as though my early dates of going to the woods allowed killing at that time before the fawns are born.

Both results would be about the same practically, and the increase of deer lessened by more than the death of the doe at any date before September. I am not in favor of supervisors' laws, or special waters excepted, etc., etc., nor constant dickerings with game laws, but both hounding and jacking should be prohibited, August entirely cut out, and possibly all deer killing stopped for five years; but I do not advocate the last measure, as there are bad features to it, one of which would make it an invitation that would be accepted by a horde from other States to come at the end of the closed period to the Adirondacks, and great would be the slaughter and bad would be the effects.

I do not believe with some that more deer are killed out of season than in season. While some are no doubt killed when season is closed, I believe the number far less, and there is no question that the law protects, yet would be better if better enforced.

S. E. STANTON.

CHICAGO AND THE WEST.

Minnesota Protection.

CHICAGO, Ill., Feb. 28.—A late decision of the Minnesota Supreme Court, which was duly mentioned in *FOREST AND STREAM*, has attracted much attention, as it was thought to open the way of Minnesota game dealers to enlarge their traffic in the game of other States, and thus incidentally to endanger the game of Minnesota. Mr. S. F. Fullerton, executive agent of the Minnesota Board of Game and Fish Commissioners, has been interviewed by mail by *FOREST AND STREAM*, and it develops that he does not share the general belief that the Minnesota law has gone to pieces. Mr. Fullerton says the game dealers made a great hurrah over this decision, which allowed them to bring in game from Dakota, in spite of the clause forbidding possession of game between certain dates in Minnesota. (The decision, it will be remembered, was merely technical, and held the Minnesota statute to apply only to Minnesota game, because its title was "An Act for the Preservation of the Game of Minnesota.") So sure were the dealers that they could walk through the Minnesota law that they at once flooded Dakota with circulars and began bringing illegal game into Minnesota.

And in spite of the Supreme Court, Warden Fullerton went right on seizing all such illegal game.

That would appear to be a pretty good kind of warden to have in the family.

Warden Fullerton says, "We didn't care if the game came from Honolulu, we have kept right on seizing it." He bases his action on a section of the law which states specifically that the possession of any game or fish out of season is *prima facie* evidence that it is the property of the State, to disprove which assumption it is necessary for the party holding such game to produce the evidence of the party who actually caught or killed it. It is a poor law which can't squint two ways, and it is a matter of congratulation that Warden Fullerton has succeeded in catching a wink from the other eye of justice. Of the success of his plan he says, "I am glad to say it has had a wonderful effect."

So we may believe that all is not yet lost in Minnesota.

Interstate Assistance.

Another interesting phase of protective work is brought up by Mr. Fullerton in his mention of the assistance rendered mutually by the wardens of Minnesota, Dakota and Wisconsin. Mr. Fullerton states emphatically the advantages of such co-operation. He says, "When illegal game is shipped out of Minnesota into any one of these States, the Minnesota Commission is furnished with the names of the shippers; we are then in a position to prosecute. The same way in Wisconsin and Dakota. When we find out the names of shippers, we furnish them to the authorities, and they in turn make it warm for the offenders. We consider this to be a most vital question, and we believe that if these States and a few others near by which have still some game left would co-operate and combine to regulate the laws regarding shipments of game from one State to another, the game law question would be solved for the Northwest."

Sportsmen will Fight It.

The Illinois State Sportsmen's Association will back the prosecution of the case against H. Clay Merritt, the Kewaunee cold storage man who won the suit against him last week in the Circuit Court, as reported in *FOREST AND STREAM*. The State Association will furnish what funds it can to prosecute the appeal to the next higher tribunal, the Appellate Court, and gun clubs will be asked to aid liberally as they can in fighting this case, so extremely important to the sportsmen of Illinois and the entire West. The case will probably come up at the May term of court, the same session in which Merritt's appeal will be heard. This will leave time to get into the Supreme Court by September or October, and the whole affair should be settled before next winter, so that the sportsmen can if defeated ask for a better law in the next legislature.

At the Seat of War.

At the seat of war some interesting things are to be learned regarding the complications in this singularly involved case. Mention was made last week of the fact that State's Attorney Emory A. Graves had filed libel suits against Warden Blow and two Chicago dailies. This action dates back to last summer, when Attorney Graves brought the criminal prosecution against Merritt which resulted in the fining of the latter \$805, and which had the further result of acting as a bar in the suit *in rem*,

which failed last week. It was an absurd thing to allege improper motives to Attorney Graves, though the action could not have been better to insure his popularity at home, where the city sportsmen have not been popular. As a matter of fact, it was the duty of the State's Attorney to prosecute Merritt, and, as he explains now, he had only three months within which to prosecute under the statutes. He therefore could not wait for the city sportsmen, and went ahead. In his bill he had over 27,000 counts, one charge for each bird Merritt had in possession. The document he prepared was therefore a most unique one in the history of criminal law. It made a mass of closely written type-written manuscript over 18 in. thick. This was bound together by iron rods fastened with nuts, and the whole made a tidy weight of over 60 lbs. The country jury to whom this was submitted knew they did not dare fine Merritt even the lowest amount on each count, for that would mean the ruin of a fellow-citizen. They fined him \$5 each for the 161 birds he was proved to have sold out of season, and as to the rest they decided they would not impose any fine. Merritt appealed this case, and the rest as to the suit over the birds left in the freezer is now ancient history. It may have been possible that Warden Blow feared the result which came last week, and so was hasty in charging Mr. Graves with acts and motives entirely foreign to his mind. Mr. Graves acted clearly as his duty dictated, and if Merritt eventually goes clear it will not have been his fault. There is a rumor that Mr. Graves will not push these suits, having only thought them necessary to vindicate his character. But so the war goes on merrily enough. The end of it we shall hardly see before next fall, but when it comes down from the Supreme Court there is every likelihood of a victory for the sportsmen, as we have one or two decisions already of record in this State which cover much the same point as that at issue.

Nebraska Sportsmen.

The Nebraska Sportsmen's Protective Association is engaged in organizing a mutual protective league against dog thieves, and is sending out cards soliciting membership at the nominal fee of twenty-five cents to cover printing and record expenses. The members pledge themselves to aid in the search for any dog reported lost, strayed or stolen. When a dog is lost by a member he at once notifies all other members by postal card, giving description of the dog, time of loss, etc. This plan is still young, but is expected to develop into a movement of great utility to owners of dogs. Good results are already obtained and the idea seems to be bound to spread. There are members in every county of the State. Mr. John H. Mooney, Arapahoe, Neb., is secretary of the association and should be addressed.

The game laws of Nebraska are inefficient and poorly observed, and the State has no warden. One of the purposes of the Sportsmen's Protective Association is to try to get a good warden and some better laws.

And they Cry Out even in Montana.

Even in far Montana they begin to realize that the game is going and that swift measures must be taken if it is to be retained. Mr. H. Percy Kennett, chairman of the State Board of Game and Fish Commissioners, at Helena, Mont., is in receipt of a letter from Mr. Sidney M. Logan, of Kalispell, Mont., which recounts a sad state of affairs in the great Flathead game country, and asks help from the State gun clubs to put in an active game warden in Flathead county during the four months when most of the game butchery is done. Mr. Logan says comparatively few elk and deer are killed until the snow has driven them in great bands out of the mountains into the lower lands in search of food. He paints a sad picture of what happens then:

"During the winter," he says, "when the snow is deep and the feed scarce in the mountains, these animals move down into the valleys in the neighborhood of settlements and are slaughtered by the hundreds. I could tell you of a great many instances where one or two hunters have killed from 80 to 300 deer in a single winter. The fact is, that during the deep snows all that is necessary for a man to do in the neighborhood of Tobacco Plains, Stillwater, Whitefish, Swan Lake, Liberty, Troy and North and South Forks of the Flathead River, is to cut down a few fir trees, and the deer will gather around for the purpose of eating the moss. It is no trouble, at such times, to kill as many deer as a person wants. It is simply a matter or question of ammunition."

"The ease with which deer are killed in the winter time encourages a great many persons to kill them for their hides alone. Last winter, within twenty miles of this place, two men killed over eighty deer with the view of shipping them to Eastern markets; but the officers were on the alert, and they found no opportunity of making the shipment. The consequence was that the carcasses were thrown into the Stillwater River, and the hides sold for 30 or 40 cents apiece."

"As I stated, it is impossible to secure sufficient protection from the county authorities alone. The county is a large one, is in debt, the expenses are heavy, a very small proportion of the land in this county is taxable, and the result is the Commissioners do not feel justified in going to the expense of maintaining the office of game warden."

"If you feel that the gun club will do anything toward adopting this suggestion, kindly advise me at once, and I will bring the matter before our club, of which I am a member."

In the above Mr. Logan unwittingly brings into view some of the principles involved in Warden Fullerton's opinions on interstate assistance. The idea is the same, though the field is narrower. The other portions of Montana are asked to help a good game country, which is too poor to help itself. It is a question of thick and thin. To-day the game is thick only in regions where the population is thin. Where the population is thin the people cannot afford to take care of their game. Since the regions of thick population have so great and direct an interest in the game of the thin regions, does it after all seem unreasonable they should be willing to help in preserving the game which they are willing to treat as though it belonged to them? So far from such help being a generous act, it is only one of thoughtful selfishness, and as such it should appeal to the bulk of shooters, they being made up of average humanity. It is the right thing for the thick country to help the thin. Unless this be the case, our game is as sure to disappear as that the night will come after the day. The artificial lines of State

county or township cut no real figure in this. The game of Maine was never protected and preserved by the State of Maine. It was really preserved by the thick population of New York and Boston, who took in money enough to incite and enable Maine to protect her game for them. The result all over the West can be figured out in a similar way to an absolute commercial certainty, a proposition of supply and demand. Game is to-day a luxury which a thin country cannot afford. If the thick country wants it, it will in one way or another have to pay for it, or see the luxury cease to be produced. The passage of every year will make the truth of this more apparent. The day of wild nature and wild game in America is passing very rapidly. Soon we must come to the less desirable and more artificial times of restraint and limitation. It is the fat kine which will then eat up the lean. E. HOUGH.

909 SECURITY BUILDING, Chicago.

MOOSE CALLING.

IN your issue of Jan. 25 Mr. F. A. Mitchell asks, "Is moose calling any better than deer shining?" Well, I don't know anything about deer shining, but I do know some few things about moose calling.

I do not want to be ranked as one who "pours forth a torrent of ridicule or abuse," because, as FOREST AND STREAM readers well know, Tiam is no stranger to either abuse or ridicule, but I am fond of moose calling and must say something in its defense, although without any hopes of converting Mr. Mitchell; we all know the saying "A man convinced against his will is of the same opinion still."

Let us take in order the apparent objections urged against calling. First, "it was a mighty cold and tedious piece of business." Had Mr. M. been with me one cold rainy day last fall, when I spent fully two hours crawling along on my stomach through snow 18in. deep (which went up my sleeves, and down my neck and into every crevice of my clothes), in my endeavor to get within shooting distance of a fine bull caribou feeding in front of us, had he been there he would have agreed with me in saying it was "a mighty cold and tedious piece of business."

Place against this instance my last successful moose hunt. We left camp a little before dawn on a beautiful mild morning in early October, when all nature in her beautiful russet brown robes was looking her loveliest and best, and going out on the barren we sat down in a convenient place all nicely wrapped up in our blankets and there watched the awakening of life, the coming of the day. Later came the intense interest and excitement occasioned by the sound of the gradually approaching moose; then, when it came out from the fringe of bushes, what a glorious sight it was, that noble animal standing there endeavoring to catch some sniff of danger; and then the uncertainty as to how close he would come, and if some whiff of wind might not carry down our scent to him.

Now of the two, which afforded most solid comfort and most enjoyment? I think no one will have much trouble in deciding.

Don't think for a moment, mind you, that I advocate the easiest method of hunting as being the best method; the foregoing is merely a comparison to decide which was most cold and unpleasant.

For that large class of moose hunters, men of business, who seldom enjoy a day afield except on their annual outing, and those also advanced in years, which number includes some of our most noted and most successful hunters, I think "calling" offers by far the easiest and best way for attaining their end.

I would like to see some of the many included in the above description cover sufficient ground to assure success in a short hunt by still-hunting on our ground here. I have youth and strength and a lot of outdoor exercise all the year round, and yet with it all, on a hunt this last year, in November, of two weeks' duration, on every day of which we covered about fifteen miles—all I wanted to do—the night would come finding me so heartily tired that I could hardly move. Yet we had good luck and still-hunting was good, and I go back to it as the best hunt I ever had, although by all means the hardest work.

Secondly, Mr. Mitchell says, in effect, that the guide does everything toward getting the moose, except the mere shooting (which he often does also, I think), in "calling;" but I ask, in still-hunting does not the guide just as often do the whole business too? All the sportsman does is to follow the guide wherever he leads, and to shoot when the time comes.

Probably we have better moose hunting here in Nova Scotia and New Brunswick than anywhere else in America. I know either personally or by repute every guide of any note and nearly all the local sportsmen, so I know what I am saying when I state that the number of men who do the still-hunting themselves is not nearly as large as of those sportsmen who can and do call themselves.

I can call myself fairly well, and I must say the mere calling adds but very, very little to the pleasures of success.

The bull moose may not be himself during the rutting season, he may have his judgment warped and his caution may be largely destroyed; but this I know, he is cute enough and cautious enough to suit the most of people, and entirely too cute and cautious for some. It is not the first time I have known them to outwit the most noted hunters.

Any man going into the woods and getting his moose either by calling or by still-hunting is, in my opinion, amply fitted to take his place at the table of the highest sportsmen in the land.

I know the above will not convince Mr. Mitchell, but if I had him down here for a week or two in September or early October I think he would go home a convert to the sport of moose calling.

TIAM.

NOVA SCOTIA.

Quail in Vermont.

A CORRESPONDENT writes: On the afternoon of Feb. 25, while driving in Vermont, having left the lake at Chimney Point and driving north, I saw two quail cross the road ahead of me and fly into a clump of alders, just back from a marsh on the lake shore. There may have been more ahead of them that I did not see, but these were good strong birds and the first I have seen this winter, although I have not been over to inquire or look after them. I am rather surprised that any lived through the cold snap of 30° below zero that we had last week.

CALIBERS OF HUNTING RIFLES.

NORWICH, Conn., Feb. 17.—*Editor Forest and Stream:* There is an article in the FOREST AND STREAM of Feb. 8, written by Mr. Cecil Clay, in which he rejoices in the excellent work which he has done with the .44cal. rifle. I am impelled to express my own views on this gun and also to make a comparison. In the first place I personally know of more than one deer hunter who regrets that he ever used such a gun. I recall incidents of animals having gone miles through the woods, suffering and bleeding sufficiently to be tracked, but not enough to lie down and die. It is not necessary to relate these particular incidents, as one is in a pleasanter frame of mind when not dwelling on such cruelty.

While it is perfectly natural for a man to become attached to some particular gun which has done him service, at the same time one should not become so infatuated with an antiquated firearm as not to be able or willing to see its faults, and faults which I consider serious ones.

While Mr. Clay has done excellent work with this gun on account of his skill as a marksman, I believe he could have done better with another gun.

When a moose would go 300yds. with a .44-40-200 he would probably go 100 with a .45-75-350 or 50yds. with a .50-100-450. If these guns I mention will make this difference there are reasons why they will. There are practical scientific reasons why one rifle and cartridge is better than some other one.

The rifle and cartridge must be adapted to each other. So we will put away all prejudices against new models and all reverence for old pets which have perhaps given us pleasure, and bring to us memories of many a pleasant vacation in Maine or the Adirondacks.

In selecting a hunting rifle certain points must be considered:

1. Caliber.
2. Penetration.
3. Trajectory.

In addition I may mention stunning power, twist and weight, also of greatest importance, accuracy.

A rifle must possess killing power; and as you lessen the caliber you lessen the killing power; therefore as you increase the caliber you increase the killing power.

In deer shooting death is caused more quickly by loss of blood on account of the exit of the bullet than at the point of entrance. Very little blood may be lost at point of entrance, while the deer will be bleeding profusely at the opening on the other side. Therefore it is of great importance that the bullet should go entirely through the deer in order to have great killing power, and this is just what it does not do with the .44-40-200, not only from my own observation, but also from the article of Mr. Clay. In regard to penetration I wish to give some figures of tests made on pine boards, same conditions for each cartridge: .44-40-200 penetrated 9in., .45-70-405 penetrated 14in., .45-75-350 penetrated 14½in., .45-90-300 penetrated 13in., .50-100-450 penetrated 16in.

With any of these guns and cartridges except the first-mentioned the lead will not "lodge just under the skin on the other side." It will go clean through.

The next point against the .44-40-200 is its high trajectory. It is much higher than any of the other guns mentioned in my list.

The greater curve which the .44-40 200 bullet describes makes a miss more liable in the woods, and especially on water, where it is almost impossible to judge the distance of a long shot accurately. A mistake in judgment of a few yards with this gun would insure a miss, while with a gun of flat trajectory it would not be as liable to occur.

I shall also allude to the .50-110 300 and .45-90 300, which Mr. Clay says he might use for target work at 500 or 600yds.

Either one of these guns is entirely unfit for such distances. They are both high-velocity guns and are not good beyond 200yds. While a high trajectory is not best, neither is a very flat one desirable for game shooting. Long-distance target rifles must have a high trajectory when they are accurate. The .45-90 is a third-class gun at 200yds., and the 50-110 a fourth-class gun at same distance, and at 500 or 600yds. you might hit a barn and you might not. The reason for this is that when a bullet attains a certain velocity it "drifts" or is driven out of its course. This is the trouble with these two guns for long range work.

Consequently, for hunting a bullet should have low enough velocity to avoid drifting and flat enough trajectory to avoid great curvature, with sufficient size and penetration enough to go through any American game.

I should recommend the .45 75-350, and better still the .50-100 450 rifle and cartridge. Personally I use a .45-70 rifle, loaded with 75grs. of powder and 350gr. bullet, and also find the 330gr. "Gould bullet" (hollow point) very effective in tearing capacity. It is good up to 200yds., and for long range work a regular .45-70-405 shell can be used.

However, the object of this article is to warn sportsmen who contemplate getting a new gun to avoid the .44-40-200.

H. W. BRANNOCK.

Non-Residents in Manitoba.

AND then as to these American shooters. These millionaire sportsmen—men who live for pleasure alone, who have plenty of time and money, and, if I may be pardoned for slang, money to "burn"—men who dote on a soft snap and know it when they see one. These are the individuals that are going to play havoc with our game unless we prevail upon the Government to nip it in the bud, and say you can't come and shoot. Some might say that this is a selfish motive to advance, but why should the sportsmen of Manitoba have their shooting season curtailed to a very limited period in order that our chickens may not be utterly wiped off our fields, and then leave the cream of our shooting to those people? It is not right or just that it should be so. These parties come here with private cars loaded to the brim with all the necessities of life, with ammunition and everything from their own country. They go to the choicest parts of the province, have relays of dogs and everything that goes to make a shooting trip a success, and they simply slaughter our game galore, and after they have satisfied their avaricious desires they bid good-bye to the country that they would not live in, but now they will come again. Manitoba has plenty of game for the people who live here, and I feel sure that every true sportsman will do his best to see it properly protected, and I cannot see why we should make our province the pleasure ground for American sports-

men. We should look upon it as one huge game preserve and do our best to carry out the game laws to the letter, and by so doing we should have the exclusive right and privilege of shooting over it.—*Correspondence Winnipeg News Bulletin.*

The provincial government, while anxious to protect the large and small game, seem to have overlooked the all-important matter of a paid official. It can only be that they have not fully considered the matter, in the light of the great value the game is to the country, and to my mind this cannot be overestimated. It affords food to many families who would fare badly without it. Life to many a man, by virtue of the healthy exercise obtained in pursuit of it, and a knowledge of nature in all its beauty and variety. I would like to see the arm of the game warden strengthened by an act of the Legislature, making it a punishable offense for any one to kill more than twenty grouse in a day's shooting. Such an act is in force in the Northwest Territories and works well. Then to ourselves, as sportsmen, let us not gauge our superiority of skill in the field by the number of chickens we can kill in a given length of time. Let us not justify the most unsportsmanlike act of killing chickens from the tops of trees or stacks on cold days when birds are unwilling to fly, because we want them for our winter's supply; let us be satisfied to kill in a manly way what we can use during the season, let the rest go to produce sport for another year.

Following this principle faithfully is a protection in itself, and will provide grouse for all time. Each one of us will have his share and to spare, and any birds that may be killed by gentlemen from the American side, in a manly way, and over dogs, will never be missed by us.—*Correspondence Winnipeg Free Press.*

Fourteen-Hundred-Pound Moose.

BOSTON, Mass.—Having had a good opportunity to learn about moose from one of the largest game dealers in Boston, and being prompted to get at the facts from several stories I read in the FOREST AND STREAM, I took particular pains to get the average weight of such moose as the firm had handled in years past. This season they had an average lot and the largest one weighed 823lbs. with head and antlers as well as feet and skin. Another one, a large bull too, was billed at 785, the clerk said. These two were as large as they usually got. The moose that was shot by Col. Barker, of Newport, was shipped on a weigh bill at 1,000lbs. Yet I believe he did not weigh above the average, or about 800lbs. We know that horses are all shipped at 2,000lbs., no matter what the actual weight is; and it may be so as regards moose. I believe it is an estimated weight owing to the difficulty of handling them. I asked a dealer why men guessed a moose to weigh more than a horse of the same size. He said, "The men were generally full when they guessed on a moose and sober when they guessed on the weight of a horse."

I also asked after the shipment of game from other States, and I was told that but very little had been received from the West, and particularly from Minnesota. I asked why and he said that the law in that State was so strong that game could not be handled with any safety whatever, and he said further: "I made a trip to St. Paul to buy game and I offered 17 cents per pound for it there, and all I got on an order for 100 saddles was three." This was very gratifying, as I was directly interested in the passage of that part of the law of 1895 which prohibited the shipment of game out of the State.

A few caribou have been offered for sale, and a fair quantity of venison, mostly from Maine. Some venison will be received this week from Arkansas. In all sections where game is usually found the winter thus far has been mild, and there is fair promise of a larger number wintering well than in many years.

ADIRONDACK.

Farmers and Game.

TORONTO, Feb. 14.—*Editor Forest and Stream:* The game laws of the United States and Canada are founded on right and justice, inasmuch as game is the property of the person owning the land on which the game is found, subject to the laws and regulations controlling the open and close seasons.

Game on public lands is public property, subject to the above mentioned laws and regulations. These being undisputed facts, I take the liberty of expressing my opinion why farmers should be game protectors. Farmers have no difficulty in renting the shooting rights over their lands at the present, and the desire of sportsmen to secure such rights will constantly increase, and it follows that the more game abounds on farms the greater remuneration sportsmen will be willing to give for the privilege of shooting it. If the farmers could be induced to care for and feed the quail during the winter months with the refuse from the grain, it would pay them better than allowing their boys to take a pot-shot at them when the poor things are driven to the vicinity of farm buildings by the inclemency of the weather.

There is no earthly reason why our game birds should decrease with the increase of agriculture. In England, where the most perfect system of agriculture prevails, game is more abundant than in any other country, and a prolific source of revenue, and I fail to see why the same results should not be obtained on this side of the Atlantic.

Game protection by farmers would also have the desired effect of bringing city people and them into closer community. There are few farmers in favorable localities but what would be occupied with summer boarders by city sportsmen and their families if game was plentiful, in connection with other inducements usually found during the summer and autumn in the country.

RANGER.

Quail at Mount Airy.

MOUNT AIRY, N. C., Feb. 1.—Although there was probably a greater number of birds in this vicinity this season than any other locality in the State and considering the general scarcity of birds the sport was fairly good, yet our people are so accustomed to great flocks of partridges that they deemed the supply inadequate and have purchased and liberated 500 quail. They are now happy in the knowledge that next season will afford better sport than any one for some time past. The large valley country and sparse population of this part of the State give the birds every chance to multiply, and it is only when they are frozen out as they were last year that any scarcity is noticeable.

QUINCY & GOFF.

Iowa Game.

SIoux CITY, Ia., Feb. 24.—In walking along the streets of Sioux City to-day I had my attention called to the titter contempt shown to game laws. In front of two of the principal restaurants of the city and situated in the most public streets were large signs advertising the fact that they would and were serving prairie chicken, and in one of them was an additional sign advertising quail as being on the day's bill of fare. It looks as if the State protective associations could do a little good work here if so minded.

W. R. HALL.

NEVADA, Ia., Feb. 17.—*Editor Forest and Stream:* This has been one of the finest winters ever known in Iowa. All game has wintered nicely. Prairie chickens, of which there was an unusually large number last year in this vicinity, have not been shot nor trapped so much as in past winters. Quail would be quite plenty in a few years if they were not hunted out of season. Game laws in this part of Iowa are not respected in the least. I have seen both quail and prairie chickens on sale in our markets this winter.

There is very little timber in Story county, yet there are more wolves here than there were twenty years ago, not the small prairie wolves, but big, fierce-looking timber wolves. Along East Indian Creek, about three miles east of this city, the farmers find it almost impossible to raise poultry on account of the depredations of these sly robbers. George Chapman, who lives about seven miles northeast of town, says that he has quit trying to raise turkeys, for the wolves caught them faster than he could raise them. It seems strange that wolves should multiply in a country so thickly settled.

Rabbits are very numerous, and as many of them "hole up" in the tiling which underlies most of our farms, there is not much danger of them becoming very scarce. Even the man with a ferret cannot get them in tile drains, which are sometimes a mile in length.

If one can judge from the present outlook, we will have the best chicken shooting next fall that we have had for years.

The more I read FOREST AND STREAM the better I like it, and surely no Western sportsman can help but enjoy the department edited by E. Hough, "Chicago and the West."

JOHN C. BRIGGS.

Spring Shooting.

I THINK that one of the most important and effectual things that could be done for the protection of ducks in the spring would be to have a United States law by which the season would be brought to a close all over the country at the same time. Of course this law would not prevent a State from making an amendment by which the shooting in that State could be stopped before the date on which the national law came into effect.

As affairs now stand, a man who lives in a State where the season ends on the 1st of April can go into a neighboring State where the season may not close until the 1st of May and kill his birds there. Protecting the birds in one State and leaving them unprotected in another is practically no protection at all.

The point is, at what date should this national law bring the season to a close? It seems to me that the question could be settled by laying it before the associations for the protection of game in the different parts of the country and letting them come to a decision on the matter.

Aside from the date on which the season should be brought to a close, I think that the law should include such birds as brant, geese, coot and sheldrake, which are made exceptions to the law in many States. Although it is a deplorable thing, it is nevertheless true that there are a great many men who go out after brant and coot who would shoot a duck out of season if they got the chance and wink the other eye. If one of these men be called to account, it is always "I got a good chance at the duck, and thought it would make no difference." It is bound to make a difference, and that difference will soon be only too appreciable.

In the future even the coot and sheldrake, which are now so numerous, may be materially decreased if the army of gunners continues to grow larger. Besides, the protection of such birds cannot but tend to increase their numbers and make better shooting.

In my opinion, a law is wanted which will protect waterfowl before they have begun to mate to any extent, and certainly before there could be any chance of a female bird having eggs in her.

J. L. S.

[The obstacle to the scheme of a national law is that such legislation is not within the province of Congress.]

A Side Hunt on Vermin.

TACOMA, Wash., Feb. 12.—*Editor Forest and Stream:* The Tacoma Rifle, Rod and Gun Club inaugurated an impromptu raid upon the enemies of game in Pierce county last Monday, Feb. 10. The destroyers of vermin were divided into two opposing parties, and a banquet to be paid for by the losers was hung up as an extra stimulus to exertion. About eight men actually participated in the hunt on each side, though for various reasons the score sheet shows twice this number. The hunters were captained by H. T. Denham for the Mascots, and E. B. Lanning for the Bazaars. The hunt lasted seven days, five of which were characterized by drizzling rain.

The score follows of game killed: 2 wildcats, 4 hawks, 36 skunks, 1 eagle, 3 mink, 9 owls, 2 coons, 2 magpies, 58 crows, 1 weasel; total, 123; Mascots 79, Bazaars 44.

The banquet will be given by the Bazaars Feb. 19, at the Tacoma Hotel.

J. A. BEEBE, M. D.

Sea and River Fishing.

AMONG THE GOLDEN TROUT.

LOOKING east on a clear day from the line of the Southern Pacific Railroad about Visalia in the great San Joaquin Valley of California, one can see many miles of the distant Sierras rising to a great height and falling away on the north and south, though still remaining very high. The very high portion thus seen is the region about Mount Whitney and has the greatest average elevation of any part of the United States. Fabulous reports have long been brought back from those who had explored it about the great numbers of trout in the streams and especially about the golden trout of Whitney Creek, said to be found nowhere else in the world, always a dubious claim. Last August I determined to see for myself.

From Visalia, sixty-five miles of good wagon road brought us to Mineral King, an old mining camp now used as a summer resort. This lies 8,000ft. high, with sharp rough ridges towering all around 5,000ft. higher, even the gap through which one must pass in the saddle lying 2,600ft. and looking rather alarming to one not used to rough country. Brooks that form the beautiful Kaweah River hiss in long streams of foam down almost perpendicular cliffs for hundreds of feet at a jump, and in the shoulders of the mighty hills far above the line of the last timber lie deep, clear lakes of a size one below would little suspect from a glance at the rough, steep hills above. In these are trout of immense size, over which many an expert has worried for days, exhausted all his tricks and inducements and finally fallen back on dynamite. They can be easily seen in the clear water and some have been killed weighing 10lbs., while 28in. is said to be no uncommon size. A very few have been caught on the hook at long intervals, but it is quite accidental, and the lucky man tries the same bait again in vain.

Where these streams unite at Mineral King the trout fishing is good, and so it is in miles of the Kaweah River, where large trout can be seen at almost any time lying in the clear depths. But when one goes so far he wants to see the best there is, and I was also anxious to see the golden trout and learn whether they were mythical or real; so at Mineral King we left the wagon and in the saddle climbed the high ridge and went over into the headwaters of Kern River, one of the largest streams of the Sierra Nevada. Through Farewell Gap, 10,600ft. high, we went, with huge bare cliffs of gray granite towering still above us, from the snow banks on which long lines of froth were streaming below to form the headwaters of the Kern. Where these combined into the first brook of any size the flash of the trout was seen, and a quick twitch on the line followed the first touch of the proper bait upon the water. Stream after stream went singing down the deep defiles into the West Fork of the Kern, which soon began to roar with the velocity of its increasing waters. For one who cares little for very large or rare trout there is probably no finer fishing than on this fork of the river, for it is passed by the great host of fishermen in the chase for something better.

Our ride lay all day on the old Independence trail, through stupendous mountain scenery on every hand. Peaks of 13,000ft. were everywhere, and some rose to 14,000, while long ridges of 12,000 and over were all about us. Above 11,000ft. even the spruce, becoming dwarfed and stunted at 10,000, runs entirely out, and only bare piles of granite shine in the sun. Almost all animal life disappears, though the old woodchuck that I had not seen for many a day I found fat and happy between 10,000 and 12,000ft., many of them entirely above timber line. As far as I could see without killing one they were exactly the same as the woodchuck the boy was after the day the parson was expected. We rode through long stretches of pine and over occasional open meadows green with grass, over a trail perfectly safe and in most places very good, and on the second day reached the main or North Fork of Kern River. Here we found nearly 1,000 cubic feet a second of clear cold water tearing over boulders and foaming in deep pools, and though it was midday when trout rarely bite anywhere in warm weather the first cast of a fly brought a flash from the seething turmoil and in a twinkling the light rod was bending and swaying as the line ran here and there. Standing on a boulder I could plainly see the fish as he dove through a clear spot between the frothy rapids. Not over a pound did he weigh, but he was lively and all the chances were in his favor, for boulders were plenty and the turns of the stream sharp. Careful handling he needed or in a twinkling he would be around some corner and under a big boulder, where I might speedily say goodbye to fish, hook and leader. But I was so high above that it was easy to turn him, while the banks were so free of brush there was little danger of entangling the line with any sort of evolution. In toward the shore he ran and out again, then he tried to make for under the boulder I was on, but the spring of the light rod soon checked that movement. When he drove for the depths of the pool he failed to overcome the spring of the rod, and when he rushed for the rapids he found the force of the stream a source of weakness rather than of strength, and it was not long before he came to the surface with open mouth. But still he was not conquered, but made several dashes for the deeper water every time I tried to tow him into some little bay where he could be easily landed.

Another cast of the line brought a lighter fish out of the depths, but still considerable of a fish, and it was for several seconds a question whether to pull him directly out or give him a chance to play among the boulders. The latter course seemed the safer, and though scarcely over 10in. long he made a lively run among the whirling rapids and the boiling pools among the boulders. Another, another and another took the hook so rapidly that it began to look as if the fish would spoil the sport by being too plenty. I had in the early days of Minnesota, Wisconsin and Southern California seen trout as plenty as here, but had never seen such large ones bite so rapidly and in the middle of the day, when the sun was bright and the air really warm. How many one could catch here by fishing all day no one knows. As there is no feed for the horses at this point, no one stops except for lunch and few catch any more than enough for the frying pan. A half an hour's fishing secured enough for the party of six after throwing back more than twice as many small ones. They are so plenty one should really throw back the big ones or the string will soon be too heavy.

In the afternoon we pushed on to Kern Lake, a pond about half a mile long by a quarter wide, formed in the river by a slide in the great flood of 1862. Into this the fish from above and below run and stay to grow large and fat. But as it is practically but a pool in the river the fish do not get lazy, as in reservoirs generally. Here we found two old dug-out canoes and were soon out on the deep, cold waters of the lake. We could see big trout drifting about below and lounging about on the bottom of the river where it entered the lake, but nothing in the line of a fly would tempt them to the surface. This was in the morning. But then why should not well-bred trout bite early in the morning? Only because they are a law unto themselves.

We found it quite different though when the old log trough pushed out on the water, when the sunlight had sunk behind the mighty peaks that engirdled the scene and glimmered in purple and rose on bare cliffs that towered thousands of feet above the last lines of stunted spruce. The trout did not bite so rapidly as in the river, but when one did it was a bite. The first one took my fly with a rush that ran out over 100ft. of line before I fairly realized what he was about, and away off on one side he broke water and threw himself out before I could collect my scattered senses enough to dip the rod. Fortunately I had seen him rise and hooked him well. The hook caught in the gristle of his upper jaw and was anchored too firmly to shake out with any amount of slack, or by his quick movements he would have out-generated me. I had been demoralized with too much easy trout fishing and the boat was so clumsy to move in that he would surely have escaped had he not been so luckily hooked. He dashed about from top to bottom under the boat and then way off on the side, coming in with a rush that gave me little chance to reel in well, then darting away again before the reeling was half done. After he came to the surface with open mouth it was some time before he could be brought to the side of the boat and then it was long before we could touch him without his darting below at a pace that looked alarming for the unstable canoe. By the aid of the hook on a large knife the fish was finally landed and turned out a full 4½lbs. trout.

From 30 to 50lbs. of trout was the common catch in this lake for about an hour and a half in the evening. We were satisfied with two large ones and threw back all the rest. Most parties here do the same, only those drying trout to take home try to catch many. Except in the immediate vicinity of good grass, which gathers too many campers, the trouble with the whole stream is the abundance of fish. You cannot give them away, for every party is in the same difficulty. If you throw back the small ones you soon have too many in weight. And if you throw back the large ones you are then destroying too many of these beautiful fish. The best way is to let but one of the party handle the rod while the rest sit down and look on. When he makes a miss he must take a seat and wait until the rest have missed. Even in this way a party of fair fishermen will soon have more fish than they can eat even with a mountain appetite. These trout are the common trout of the Rocky Mountains and kindred ranges to the westward. The large ones are much more gamy than the larger trout further south, nearly all of which are found now only in artificial lakes or reservoirs. Those in Kern Lake are the equal of any fish in dash and style. Though not quite equal to the red speckled trout of the East, these trout are very fine in flavor, for the water flows but a short distance from eternal snow banks. Those who have fished all over the United States and Canada say this is the finest fishing ground they have ever seen. The distance of the stream from all points of travel, the great number of tributaries abounding in trout that no one ever troubles, the great extent of river along which, for want of grass, or from inaccessibility, no one ever casts a line, make it quite possible that this is so. Whether the best, or not, it is impossible to see how any one could want anything better than the upper part of the Kern River. There are of course those who cannot catch a trout even here at first trial. But for those who understand it the only difficulty is to avoid making murder of it.

Some three miles above Kern Lake Whitney Creek, a stream of about 100 cubic feet a second, comes roaring down out of the upper world. One can ascend the cañon, but no one does if in his senses. This is easily avoided by a detour of some three miles on a fair trail up hill some 2,500ft., when you reach the stream above the main falls. Below this point it is said a few golden trout of considerable size yet linger in the main stream before it joins the Kern. But those who have fished the Kern for forty years say they have never been seen in the Kern, and very rarely have any been seen below the falls of Whitney Creek. A few have probably been caught napping, and carried over in a cloud burst. They are unable to ascend the fall and they will not go out into the Kern, although no mortal man can distinguish any difference in the water except that late in the season that of the Kern is a trifle warmer. Here they stay in about half a mile of their native stream, and it is said that all attempts to transplant them have so far failed. No matter how cold the water in which they are put or how pure it may be, they generally die, while the few that live generally lose the bright hues that make them the most beautiful of beautiful fish. Trout of the same kind, but of duller hues, are found in a few streams on the south fork of the Kern, but these will not stand transplanting any better.

As I looked at the rushing waters of the creek, across which we could hardly urge our horses, it looked so much like any other stream of pure water that I could hardly believe it contained a trout that lives nowhere else. We went on three miles to Long Meadow, containing several hundred acres of good grass land at an elevation of 10,900ft. above the sea. Around us mountains rose 3,000ft. higher, carrying plenty of snow in deep drifts, from which icy water came tearing down every ravine. After sundown it was intensely cold, and our coffee pot and string of fish froze solid at night. Yet this was the warmest water and air these fish ever see, and we found them as high as 12,500ft.

Through Long Meadow the creek wound in shining curves, with gentler rapids and more quiet pools, and here we cast the first line. We could see the trout drifting about in the clear depths with sublime indifference to our presence. But when we came to try our choicest flies they were equally indifferent to them. Grasshoppers were scarce in this climate, but after con-

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

siderable skirmishing I secured two. But they were of no use. No matter how carefully I hid or handled the line the trout would not yield to this bait, which is often so effective when the best flies fail. Angle worms were not to be thought of here, and it was too far to the timber for grubs. A fin or an eye might do, but we had brought no fish along and none of the new ones seemed disposed to a sacrifice on the altar of brotherly love. The trout did not try to run away, but either allowed the bait to drift around their noses or came out from under the bank and looked at it and went slowly back. In no case did they seem to care whether I were in sight or not, though later on they would not bite unless I were hidden.

I soon wearied of trying to fathom the mysteries of their tastes, played the grab game on one and slung him over 50ft. on shore at the first trial. I felt ashamed as a gleam of gold and silver sheen slid past me through the air, but really how much patience can a trout expect one to have who has come several hundred miles to see him? He was not over 7in. long, but such colors I had never before seen on a fish. The back was a combination of pearl and silver in fine scales on a background of very light olive green, looking little different from the back of a common trout while in the water, but shining in a hundred tints when brought to the sunlight in the air. Down each side were a dozen or more dark oval patches ½ in. or more in greatest length, with the longer axis upright. These seemed sunk beneath the skin, and over them ran a broad band of carmine from the gills to the tail and about ½ in. wide in the middle. The lower half of each side was of brightest gold, running into lightest lemon on the belly. Down the center of the belly was another band of carmine like that down the side. The black spots or speckles appeared about the middle of the back fin, increasing rapidly in number toward the tail. The whole seemed pellucid as a jelly fish, and against the sun was almost transparent.

And still they would not bite. Vainly I tried the eye and fin of the victim, such good bait many times when other things fail. Then I tried the larva of the salmon fly found in a case of concrete on the side of stones beneath the water. That brought a bite instant, and another and another was tried with the same result. In half an hour they began to take the brown-hackle, and soon they would take anything. In about an hour more they stopped all along the line as if by electric signal and would look at nothing. As we had all we could eat we were satisfied, and retired to camp to freeze until sunrise, for we were not prepared for such nights as we found here.

Further down the creek we found the fish larger, though none as large as many of the common trout in the Kern. The flavor of them we found superior even to that of the Eastern trout, while in dash and spirit they were not equal to the fish in the Kern. Some were quite dull biters, and the largest one I took (about 10in. long) I should never have hooked had I not seen him rise to the fly. It is said that in times past they have reached 3lbs., but they get no chance to attain that weight now. How they maintain the selves in that tearing stream, within a few yards of a fall that they cannot pass up, is one of the problems I leave to others. None of the common trout are found in the upper stream, though they are plenty up to the foot of the falls. And scarcely any of these are found below and none in the river. It is evident that a few have slipped over at long intervals and stay in their native stream below.

These trout present also an interesting study in biology. If life sprung from conditions instead of creation, must not heat have been one of the principal if not the principal condition. If so, is it not certain that the home of these trout was once higher and colder than it is even now? And why can they not exist in warmer waters? And when they already live under ice nine months of the year and in ice water the rest of the time, how cold do they need it for creative purposes? T. S. VAN DYKE.

ADIRONDACK FISHING.

Editor Forest and Stream:

I have been renewing my youth for the last few years by fishing over again the Adirondack streams in which I fished a generation ago. My preference has been for Hamilton county, and the streams within a dozen miles of Lake Pleasant. The streams remain much as they were, but everything else is changed. The woods that shaded them are gone, and the trout have almost disappeared; even establishing a hatching house in the heart of the region, the product of which was to replenish the streams, has not stopped the decrease.

I attribute this condition to a number of causes, the first and foremost of which is that the fishermen have increased in number enormously.

During my first visit, just forty years ago, in going from Lake Pleasant to the Lower Saranac, about seventy-five miles, by the streams and lakes, we met four parties, numbering nine persons, during the fourteen days we were on the way. Now one would meet hundreds in going over the same route, and if the dwellers in the hotels were included, thousands; not all fishermen, it is true, but all eager for trout.

Again in those early days the trout held the mastery in all the streams and ponds, and chub and sunfish were comparatively few and were seldom found of any size. But as all the trout taken were saved, and the occasional chub was returned to the stream by the humane fisherman, the chub has gained the mastery, and has become large and fat and self asserting, and will take the fly with all the dash of the former trout, and no doubt feed upon the fry and smaller fish, as they were formerly fed upon.

And then the hatching house authorities seine the large fish in all the adjacent ponds and streams for breeding purposes, and place the fry in comparatively few localities. The consequence is that the fishermen who supply the hotels know just what places to bait, so as to fill their orders most easily. I was told by one well informed that 40lbs. a day were taken during the height of the season by these fishermen from one lake alone, in the tributaries of which a large amount of the product of the hatching house was placed. And then the landlords, in their anxiety to please their guests, and furnish game of some sort every day, are not helping to preserve the trout. I don't know what is done out of season, as all my visits to the Adirondacks have been made during the fishing months, but they are not particular about the 6in. law. During a stay of five weeks in the North Woods last

summer, in every instance when we had trout on the table the majority of them were under 6in. The excuse was that they had been caught with bait, and as they swallow it they are too badly injured to be returned to the stream. The consequence is there are few left large enough to reproduce their kind and soon there will be none in public waters.

The remedies for this state of things are many. Let fishermen destroy the trash fish when they catch them. It is said chub and sunfish are good eating when taken from cold waters. They are the first spring delicacies in the South. Let the catchers eat them—at all events do not return them to the stream—enough will remain for food for game fish if every one taken should be used to manure the land.

When the hatching house authorities use a seine in a stream or lake let it be a State requirement to return a portion of the fry produced to the stream or lake from which the parent fish are taken. In this way the streams will be enriched instead of impoverished. The inlet and outlet of Elm Lake are favorite places for using the seine. Formerly a good fisherman could always obtain there some reward for an afternoon's work, with an occasional half or three-quarter pounder; but recently none—or next to none—can be caught, and a 4oz. fish is a monster.

And then if the landlords would resolutely buy no fish under 6in. the market fishers would soon cease to catch them. It is because every size finds a ready sale that so many baby trout are too much injured to return to the water, and small streams are fished for fingerlings.

The charges in the Adirondack hotels now vary from \$10 to \$30 per week. At these rates the landlords could well afford to put a few thousand fry in their streams every year. The cost to them would be transportation only. There is no investment that would produce larger returns. They might count on an expenditure on the part of visitors equal to \$2 per pound for all their streams would produce. The reputation for good fishing took a party of seven, of which the writer was a member, to a certain Adirondack resort year before last and they stayed four weeks. They paid the landlord over \$350. There were not 30lbs. of trout taken from brook or lake during their stay by the whole party, and they were all expert fishermen, using flies only for brook trout. The landlord couldn't understand it, of course. There must be something unusual the matter. It never had been so before, etc., etc. The fact was the streams and lake were fished out. An expenditure of from \$10 to \$20 per year would keep these streams and lake so supplied that fairly good fishing could always be had.

The consequence of this lack of enterprise on the part of landlords is there is no longer any fishing in public waters for those who fish for recreation. And the whole Adirondack region will in the near future be given up to private clubs and invalids, and the holiday fisherman be forced to spend his money in Canada or New Brunswick, as so many are now doing.

WALTON.

ANGLING NOTES.

Fish Killed by Lightning.

IN looking over the letters on my desk to-day, I found one from Mr. H. C. Ford, president of the Pennsylvania Fish Commission, containing an account of what he calls a "singular accident." The letter is dated Sept. 5, last. It seems that during a thunderstorm lightning struck one of the ponds at the State hatchery near Allentown, containing 5-year-old trout, and killing from seventy-five to one hundred of the trout. They were fish weighing from 2 to 4lbs. each. It was indeed a singular accident, the like of which I never heard of before. When I read the letter I marked it, "Look into this matter and get particulars," but I never have heard more about it by letter or in the newspapers, as I forgot all about it until to-day. It is not at all likely that such an accident as this would happen to trout in wild waters, as one might at first thought suppose, but I am curious to know if readers of FOREST AND STREAM have ever known of a similar accident in any waters either in a hatchery pond or elsewhere.

Only in a hatchery pond would such a large number of big trout be found together in a small space and in such shallow water as to feel the effects of a lightning stroke. Perhaps Mr. Ford will now give the conditions existing at the time and the details of the accident, which I neglected to ask for at the time it occurred.

Record Salmon.

Newspapers, particularly angling newspapers, devote considerable space to the capture of a big salmon, and if the fish happens to be a record-breaker it is usually photographed and every detail of its capture related at length, because the record is not broken every year. Last season, when the Marquis of Zetland killed a salmon of 55lbs. while fishing the water owned by Col. Sandeman on the Tay, in Scotland, the English papers had much to say about the fish in several successive issues, and a number of photographs of the fish, its captor, the owner of the water and the pool where the salmon was killed were reproduced, because it was claimed that it was the heaviest salmon on record taken with the fly.

When Mr. R. G. Dun killed a 54lbs. fish in the Cascapedia, in Canada, the FOREST AND STREAM reproduced a fine picture of it, because it was the record salmon of this country, beating by 4lbs. the salmon killed on the same stream by President Arthur, which was the record fish at the time of its capture.

With these facts in mind I was somewhat surprised to read in a New York daily newspaper of Feb. 16 that Mr. A. K. Sloane, of the Long Island Country Club, had last summer killed a salmon of 74lbs., presumably in the Romaine River, Labrador. Here is a fish exceeding the American record by 20lbs. and the British record by 19lbs., and its capture is announced without beat of drum or blare of horn. I wonder if the reliable compositor did not for once get his hand in the wrong box of type and put a 7 in his stick when he really meant to nail a facer. The Romaine has not been noted for its exceptionally large fish, and that it should suddenly spring a 74-pounder on an unsuspecting public in the dead of winter causes one to look with suspicion on the compositor and proof-reader until other evidence is forthcoming.

On the other hand, the grand Cascapedia is noted for its large salmon. Last year, while visiting Dr. W. H. Drummond, of Montreal, president of the St. Maurice Club, I noticed on the wall of his house a photograph of

a salmon from the Cascapedia which weighed 50lbs. 8oz., and was 52in. long. Dr. Drummond killed this fish on June 25, 1890, and its weight entitles it to rank between the fish of President Arthur and that of Mr. Dun.

Tarpon in Jamaica.

During my visit to Mr. Drummond in Montreal, already referred to, we talked of tarpon fishing in Florida and Texas, and he informed me that in Jamaica the tarpon furnished excellent fly-fishing. The fish do not run large, as they do in our Southern waters, but in the streams entering the sea the tarpon swarm fairly, as trout do in a well-stocked trout stream, and, averaging about 3lbs. in weight, take the fly readily. The only instance I can recall of a tarpon taking the fly in Florida waters was a small one taken by Dr. George Trowbridge, of New York city.

Record Trout.

A few years ago a friend of mine applied to the State for some brown trout fry, and when he received them planted them in a pond in Essex county, N. Y., containing no other trout than those he planted. Two years ago he and his wife fished the pond and caught trout weighing —lbs. He supposed they were brown trout and so called them, although they looked to him suspiciously like the native brook trout, but not being familiar with the European trout he was not able to note their peculiarities. Last spring he invited me to visit the pond, but it was just after the ice had left it and the water was high and thick and we caught nothing. A little later he sent me a trout from the pond "just like the other trout that had been caught out of it," and it proved to be a native brook trout. Naturally he was not disposed to find fault with a mistake at the hatchery in consequence of which he had received brook trout for brown trout, for there was but one species of trout in the pond. All the trout taken from the pond, so far as can be learned, have been large fish, 4, 5 and even 6lbs. being common, but the fish have not been abundant. To-day my friend writes me that he has learned from a reliable man, a farmer living near the pond, that last season, late in the summer, just at dusk one evening he caught a trout from the pond weighing full 7½lbs. If the trout are all like the one sent to me, and there appears to be no doubt of it, this fish was a brook trout, *S. fontinalis*, and therefore the record trout of this State, as I believe. The trout heretofore claimed to be the record fish of New York waters was found in a dying condition in Loon Lake, in the Adirondacks, and weighed 6½lbs.

Fly Tying.

Anglers in this country are not given to tying their own flies to any great extent, although it is a common practice among British anglers, where it is part of the fishing to be able to tie a fly on the stream to imitate the fly which happens to be rising at the time, provided the fly book does not furnish it. We Yankees find it much easier and a saving of time to purchase our flies of a dealer, and the trout of our waters accept them. If the trout happen not to take the flies provided by the fly book that ends the matter; "they are not feeding," and it rarely occurs to us to investigate the matter, find if the fish are really feeding, and what on, and then to tie a counterfeit on the spot. Mr. R. B. Marston, editor of the *London Fishing Gazette*, has written a paper for the first annual report of the Fisheries, Game and Forest Commission of New York, in which he illustrates the difference between fly-fishing in his country and ours. All who knew the genial, kindly Uncle Reuben Wood will admit that he was a past master in casting a fly for trout; but, in company with Mr. Marston, when he tried his American flies on the English trout Uncle Reuben got a goose egg, until he was forced to put his patriotism in his vest pocket and use an English imitation of the fly then on the water where he was fishing.

Once in a while we hear of some one who wishes to learn how to tie his own flies, or to be able to fashion a special emergency fly when the occasion arises, and for such there are a number of excellent manuals, fully illustrated; but the best method of instructing a novice in fly tying, to my mind, is one practiced in England. For a small sum of money a fly dresser will send a card, to which is attached an actual trout or salmon fly in all its various stages of construction. This seems to be next best to personal instructions from a practical fly dresser, and if it were taken up in this country it might create a demand for instruction cards. We are gradually but surely discarding the conventional fly that resembles nothing under the sun in the animal, vegetable or mineral kingdoms, and adopting imitations of natural insects. The "Joseph's coat" is still a killer in the backwoods of Canada, and so is a fragment of the tail of a shirt; but as trout become educated to the ways of the angling man they require a heap of fishing to kill them, and fine tackle and flies that resemble something other than a fantastic, disordered dream must be used or the creel will be light.

Sunapee Trout.

The fact that the State of New York is to receive some Sunapee trout or American saibling eggs from the State of New Hampshire, as announced in FOREST AND STREAM, does not meet with the unqualified approval of the New Hampshire press. An editorial article in the *Manchester Union* says: "We find the New York *Sun* and Mr. A. N. Cheney, the State Fishcultivist, rejoicing together over the promise of 15,000 eggs of the rarest fish found in our waters, a fish, too, which is found nowhere else in the world, with a single exception." Perhaps so, perhaps not, as there is an honest difference of opinion regarding the identity of the fish, all of which has been threshed out in the columns of this journal; but admitting that it is the rarest fish in the waters of the world, the protest of the New Hampshire newspaper appears to be narrow in its conception and unworthy of the commonwealth. Had a Chinese wall been built around the woods and waters of that State back in 1857, when fish propagation was first publicly advocated, it would not in all probability have created the surprise that such a suggestion does in this day, when the State has witnessed the beneficial results of exchanging fish eggs and fish with other States. To-day New Hampshire has natural fish food which came from New York; landlocked salmon which came from Maine; black bass which came from New York by the way of Massachusetts; Loch Leven trout which came from Scotland, the gift of a citizen of New York; brown trout which came from the United States Fish Commis-

sion, and obtained originally by exchange with England and Germany; and rainbow trout which came from California. Had the sentiments expressed in the *Union* been prevalent some years ago, New Hampshire would not have been able now to offer the varied and excellent fishing to her people and guests which she justly boasts of, but I am inclined to think that the case of the *Union* is a sporadic one, and that the people at large believe, as they have always done, in the courtesy of exchanging fish eggs with other States, even if they do possess the rarest fish in the waters of the world.

Blanks for State Fish.

People who apply to the Fisheries, Game and Forest Commission, of New York, for fish to be planted in the public waters of the State (and no fish are furnished by the State for private waters) should know that three kinds of blanks are provided for those who ask for them. "Trout fry" blanks should be filled out for lake trout, brook trout and brown trout. "Fish fry" blanks should be filled out for fish other than the trout mentioned, such as pike-perch, frostfish, bullheads; and a third blank is provided for black bass, of which the State furnishes no fry, as none are as yet hatched artificially. Each species of fish asked for must have a blank of its own, and the black bass application should specify whether the small-mouth or large-mouth black bass is wanted. The blanks are printed in black ink, except at the top of each one is printed in big red letters: "Application Blank for Trout Fry," Fish Fry or Black Bass, as the case may be. Again it says in red letters, "A separate application blank must be used for each kind of fish desired." Once again red letters inform the applicant that he must give a prompt and complete reply to the questions on the blanks, to enable the Commission to act intelligently on the application. In big black letters the applications recite that "All applications must be made prior to the first day of February." In spite of these warnings and injunctions one blank may be filled out for half a dozen kinds of fish, so it is almost impossible to enter it in the application book, or file it to know from the outside memoranda, with which the blank is provided to be filled, what it contains on the inside. Trout are asked for on black bass blanks and vice versa, all of which renders it difficult to keep a record of the application in its proper place in the office. Then the mixed and other applications continue to come into the office of the Commission for weeks or months after the fish are all distributed, and consequently the applications must wait until the next year. Feb. 1 is fixed as the time when applications must be in, because there is little time after that date to classify and arrange them and pass upon them before the distribution of fish begins. If applicants would give heed to the simple instructions of the application blanks the distribution of fish would be simplified.

A. N. CHENEY.

Kennebec Fish and Game Association.

Editor Forest and Stream:

It is with pleasure that I chronicle briefly the happenings of the annual meeting and banquet of the Association held at Waterville, Me., Tuesday, Feb. 25, at the Elmwood Hotel. About seventy-five or more gentlemen were present, and after the greetings of the evening had been extended to one another, a platter of fine white perch, with a noble 4½ lb. trout as a centerpiece, were duly admired. The delegation of hungry sportsmen retired to the banquet hall, where an excellent menu was discussed. After cigars were lighted Hon. W. T. Haines, of Waterville, secretary of the Association and prime mover in the foundation of the Association (indeed, he is affectionately alluded to as its "papa"), reported the business doings of Association for the past year, during which \$946 was expended in the interest of game and fish preservation in this county. The sum of \$2,738 has been expended in the five years since the organization of the Association. From the remarks of Mr. Haines it is evident that much has been done by this Association in protecting fish and game in Kennebec county.

The officers of the Association remain as last year with the exception of the resignation of Dr. W. H. Harris as one of the directors in favor of C. M. Harris. The officers are as follows: President, W. P. Blake, Oakland; First Vice-President, Nathaniel Meader, Waterville; Second Vice-President, P. O. Vickery, Augusta; Third Vice-President, L. T. Carleton, Winthrop; Secretary and Treasurer, W. T. Haines, Waterville; Directors—W. W. Edwards, C. A. Cochran, C. M. Harris, E. C. Farrington, A. D. Hall, G. Dexter Libby, W. P. Giddings.

Hon. P. O. Vickery spoke in an interesting manner of the work of the Association, and in conclusion presented the name of the Hon. L. T. Carleton, of Winthrop, to be our next fish and game commissioner in place of E. H. Wentworth, whose time soon expires. The following resolutions were unanimously adopted:

"Resolved, That we respectfully and earnestly ask Hon. Henry B. Cleaves, Governor of Maine, to appoint Hon. L. T. Carleton, of Winthrop, fish and game commissioner, to occupy the position of chairman of the board, and to personally look after the game department of the commission.

"Resolved, That the foregoing preamble and resolution be spread upon the records of this Association, and a certified copy of the same be forwarded by the secretary to Gov. Cleaves, and be published in every paper in the county."

E. H. Wentworth and H. O. Stanley, State fish and game commissioners, spoke respectively on "The Brown Trout in Maine Waters" and "Imported Game Birds in Maine." They were followed with interesting talks by Messrs. Arthur Merrill, C. F. Johnson, O. B. Clason, A. M. Spear, L. T. Carleton and G. W. Goulding. It was voted to hold the next meeting and banquet in Augusta. Everybody had a good time, and the banquet was voted a very successful and enjoyable affair. C. M. HARRIS.

New Jersey Marsh Sea Fishing.

ASBURY PARK, N. J., Feb. 28.—Striped bass are moving and beginning to take the hook in the headwaters of our bays and estuaries. A correspondent, whom I consider reliable, informs me that about forty have been taken in the vicinity of Morgan Station, C. R. R., N. J., within the week last past. If this be true it is something remarkable. While the bass, as is well known, are more or less active as soon as the ice begins breaking up, yet they rarely take the hook until somewhat later, usually in April, when the bloodworm, which is their favorite food,

leaving its bed in quest of a mate, presents itself an easy prey. However, the first favorable day will find me on the grounds and I will report what I find.

White perch are now plentiful in the bays and may be taken freely with the hook, provided the schools can be located. This fish is really a game fish and should be classed as such. Taken with lightest of tackle he makes a splendid resistance, and is a first-class companion for the ardent angler during the season when more attractive prey is not to be had. Regarding bait, he is not at all fastidious, taking readily the earth worm, bloodworm, a bit of clam or fish, as well as small minnows. But undoubtedly the best possible bait is the small beach flea, so abundant during the summer and autumn, but not procurable this early in the season. There is still another bait he takes with avidity, and when you have caught one perch you have two extra baits, namely, the eyes; there is nothing a perch will take more quickly than one of his fellow's optics, presented on the point of the hook. But there is repugnance in the thought, and I mention it more as a matter of information than of recommendation.

LEONARD HULIT.

Massachusetts Fishing Laws.

ON Friday, Feb. 21, a hearing was given at the State House by a committee of the Legislature on the pending House Bills Nos. 448 and 449. Bill No. 449 I described in *FOREST AND STREAM* of last week. No. 448 is an act to prohibit the taking of brook trout less than 8 in. in length. In opposition to these two bills there appeared before the committee J. Russell Reed, of the Massachusetts Fish and Game Association; Mr. E. J. Brown and several prominent Boston anglers. Mr. Brown spoke at some length, referring to the measures as special legislation, and suggesting that the season be lengthened rather than shortened, if a change must be made. Mr. Reed argued the matter from a legal standpoint, and Mr. Chamberlayne attacked the measures on the same grounds. Other gentlemen present spoke on the matter, and the impression was quite general that the opposition had thrown so much light on the proposed legislation as to raise serious doubt in the minds of the committee before reporting the bills for favorable action. HACKLE.

The aged angler, benign in countenance and alert in manner, was finishing a long discourse to a group of youths, whom he was teaching the mystic methods of the angler's art. "You may perhaps use a frog or a helgramite when flies are not obtainable, and perhaps there may be times when the use of the spoon may be condoned, but, gentlemen," he hurriedly continued, "when it comes to using worms, I draw the line."

The Kennel.

FIXTURES.

BENCH SHOWS.

March 10 to 13.—Chicago.—Mascoutah Kennel Club's bench show John L. Lincoln, Sec'y.
March 17 to 20.—St. Louis Kennel Club's show, St. Louis. W. Hutchinson, Sec'y.
April 20 to 23.—New England Kennel Club's twelfth annual show. D. E. Loveland, Sec'y.
May 6 to 9.—Pacific Kennel Club's fifth annual show. H. W. Orear, Sec'y.

FIELD TRIALS.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.
Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings Sec'y, Pittsburg.

CONVICTIONS FOR CROPPING AND DOCKING.

FOREST AND STREAM has pointed out with much insistence during recent weeks that the mutilation of dogs, as practiced by the fanciers of several breeds, was contrary to law, aside from the questions of cruelty and unnecessary mutilation.

While there was a moral certainty that there had been convictions for cropping and docking, the records of any convictions could not be obtained by us before the present time.

We pointed out, however, the danger to which those who practiced cropping and docking were constantly subject; that is, that sooner or later there was sure to be a conviction for such mutilations, and then what was plainly illegal under the law would be a legal certainty in the court records. It was, moreover, pointed out that the specialty clubs would gain a great deal of prestige and good opinion by doing voluntarily what the law required, and doing it before mutilations were known to be illegal as a matter of court record.

To give a resumé of all the arguments pro and con is unnecessary, in view of the fact that they are all of recent occurrence.

In striving to maintain what was lawful, humane and necessary, *FOREST AND STREAM* has nothing to regret. The recent action of the A. K. C. on unjustifiable mutilations of dogs is no defeat of the law of the land, or the better sentiments of humanity. It is but a check to a reform which cannot be defeated. That *FOREST AND STREAM* was correct is now a matter of court record.

On Feb. 28 Harry Cummings, of Brooklyn, was prosecuted by the Society for the Prevention of Cruelty to Animals, and convicted of cropping a terrier. He was tried before Justice John Walsh in the Adams Street Court. So that the matter may be brought more specifically before the public the complaint is given in full. The action was brought in the name of the People of the State of New York against Harry Cummings, of 40 Wallabout street, Brooklyn.

The complaint reads as follows: "Nicholas Grace, of No. 13 Willoughby street, of the City of Brooklyn, being duly sworn, deposes and says, that on or about the 5th day of February, 1896, at the City of Brooklyn, in the County of Kings, one Harry Cummings did willfully, unlawfully and unjustifiably mutilate a certain living creature, to wit, a dog, by then and there cutting the said dog's ears with a knife, wherein and whereby unjustifiable physical pain and suffering were caused to the said living creature in violation of the statute in such cases made and provided, wherefore the complainant prays that the said Harry Cummings may be arrested and dealt with accord-

ing to law, and more especially according to Title XVI. of the Penal Code of the State of New York, and all amendments thereto."

This was duly signed, etc., and other legal requirements observed. It was duly thereon indorsed that the defendant was arraigned on Feb. 28, had plead guilty, and was fined \$25 or 25 days. Fine paid.

Mr. Joseph Fitzsimmons, the owner of the dog in question, was tried at the same time on complaint of the officer of the S. P. C. A., "for willfully and unlawfully causing and procuring a dog to be unjustifiably mutilated," the complaint and affidavit otherwise being the same as that made against Harry Cummings. Mr. Fitzsimmons was fined \$25, which fine was suspended. Thus at one time it was proven that it is unlawful to crop a dog's ears, and unlawful to be accessory to the cropping. This is not the only case.

In the Second District Court, Brooklyn, Sept. 18, 1889 Valentine Kager was tried, convicted and fined for cutting off the ears of two dogs, and the owner, Philip Wolbruner, was also fined for causing Valentine to cut off the dogs' ears.

In the matter of docking, John Grattan, 52 years old, of Halsey street and Ralph avenue, was sentenced to six months in the penitentiary by Justice Connolly, Gates Avenue Court, June 12, 1893, for cutting off a dog's tail in the manner called docking. The tail of that dog and the scissors used in docking it are in the S. P. C. A. collection of the Brooklyn office.

A representative of *FOREST AND STREAM* called on Mr. Cummings at his home on the day following his conference with Justice Walsh, for the purpose of learning informally his views on cropping. He seemed an honest, simple-minded negro. He related the circumstances, and gave his opinions with a frankness which was admirable. He unreservedly admitted that he did crop the dog's ears. He said that he did not know that he was doing wrong, and that when on trial he plead guilty to cutting the dog's ears because it was true that he cut them.

"All my life," he said, "I have been honest and truthful, but it does seem as if truth sometimes doesn't help a fellow. The judge fined me \$25, and that's all right. I am glad he let me off at that. It might have been a lot worse. I don't cut off any more dogs' ears. But I think they fined the wrong man. I work 16 to 19 hours a day and my money is earned hard. There are plenty of men who have plenty of money who have their dogs' ears cut off. But I would like to have cross-examined that doctor (Dr. McLean) that testified against me, but the judge wouldn't let me. He is an educated doctor, but he don't know everything. Cutting off a dog's tail removes the worm and prevents the dog having sickness. But I didn't know that to cut off a dog's ears is against the law. I am glad I am out of the trouble, and I don't cut off any more ears."

It is unnecessary to dwell upon the far-reaching effect of these decisions, and the status of the offenses under the law. It now is not too late for the fanciers to determine officially to go on record in a manner conformable to law. It is a little late, but not too late. The only regret that we have in the matter is that our efforts in behalf of the observance of the written law and the humane sentiments were not heeded. Had they been heeded, they might have saved some humiliation in abolishing mutilations under stress, or avoiding a stigma if the law is not heeded.

We would presume to thank the men who so steadfastly endeavored to abolish unjustifiable mutilations from the dog world, and the multitude who were in sympathy with their principles and efforts, were it not supererogatory to thank men for sustaining what is lawful and humane and right.

A Card of Thanks.

WELLESLEY, Mass., Feb. 26.—*Editor Forest and Stream:* Pray allow me through your columns to thank the many gentlemen who so kindly helped me in regard to the anti-docking resolution at the A. K. C. meeting. I received so many answers that it is impossible for me to thank each individually, so beg to take this means of doing so.

H. H. HUNNEWELL, JR.,

Sec. pro tem. American Fox Terrier Club.

National Beagle Club of America.

AN executive meeting of the National Beagle Club of America was held at the rooms of the American Kennel Club, 55 Liberty street, New York city, Feb. 27. President Hermann F. Schellhass called the meeting to order; members present were J. W. Appleton, A. Wright Post, George B. Post, Jr., George Laick and George W. Rogers.

A standing committee on the Futurity Stake was appointed, consisting as follows: Geo. W. Rogers, chairman; A. Wright Post and J. W. Appleton.

The club will hold their seventh annual field trials at Hempstead, L. I., beginning Oct. 26, 1896, and will continue throughout the week. The trials will, as usual, be run on the Joshua Barnum Farm, which comprises many acres of well-preserved hunting grounds. The usual facilities for the care and handling of the dogs will be furnished by the club, and experienced handlers will be provided to run the dogs in case the owners do not care to handle them themselves, or cannot be there in person during the trials.

It is expected that the Futurity Stake, which is the first to be run at any trial, will attract a large number of entries in this event as well as in the others. Entry blanks are now being prepared, and will be sent to the 500 or more known beagle lovers throughout the country. The entry blanks can be secured from George W. Rogers, chairman Futurity Stakes, 250 West Twenty-second street, New York City.

The club's list of members is increasing in numbers very fast, and now ranks as one of the largest specialty clubs in the country.

Messrs. B. Waters and A. P. Vredenburg were elected honorary members. GEORGE W. ROGERS, Sec'y.

West Philadelphia Kennels, Philadelphia, offer, in our advertising columns, bull dogs and terriers. Muckross Kennels, Springfield, Vt., offer setter. G. B., care *FOREST AND STREAM*, wants to lease the breeding privileges of an English setter bitch. J. H. Parrott, Towanda, Pa., offers prize-winning bull dog. W. W. Astell, Amelia Court House, Va., offers pointers. W. Nelson, Brooklyn, N. Y., offers Scotch hunting puppies.

"Our First Dog."

Editor Forest and Stream:

As a new subscriber to, but a long admirer of your valuable paper, I want through your columns to thank Mr. O. H. Hampton for "Our First Dog," which appeared in FOREST AND STREAM of Feb. 8.

I had been up several days and nights, without being able to take my clothes off, watching over a very sick boy, not knowing what the final result would be. I thought I saw a change for the better, and pretty soon he asked me to read the FOREST AND STREAM to him; for my boys, like their father, are fond of hunting and fishing, and consequently much pleased with FOREST AND STREAM. In glancing over the paper to find a piece to read to him my eye fell upon that headed "Our First Dog," and mentally recalling my own experience as a youngster with my "first dog," and knowing that my boys had also had a "first dog," I read the piece aloud, and I feel assured, if Mr. Hampton could have heard the hearty laugh of that sick boy, the first for many days, he would have been fully repaid for writing the same, even without knowing a parent's gratitude for the pleasure it had given his sick son, as well as an evidence of his improved condition, which improvement, I am glad to say, has continued.

Well can I recall my "first dog." As a boy, living on a farm (and I have an idea, somehow, that a boy raised on a farm has an advantage over other boys), I managed to get hold of a rat terrier pup, called him Trip, and after many trials and tribulations he grew to be a dog, fearless and sagacious, and the attachment between that dog and myself was something that only a fellow who has "been there" can fully understand and appreciate. Often did he ride behind me on horseback, keeping his balance almost as well as I could, and many a time of a cold night did that dog go to bed with me, keeping my feet warm at first, but invariably in the morning would I find him with his head on the pillow with mine—as I write this my wife is sitting by and she remarks that it is a good thing that dog is not living now, else he would be kicked out of bed. I wonder if she means me or the dog. I remember on one occasion, when, to my surprise, I had caught a muskrat in a "gum" set for rabbits. Upon opening the door Trip put his head in and received a terrible gash from the muskrat's teeth, but nothing daunted, waited till the muskrat came out and soon made short work of him. He was always ready to fight, big or little, and when at last, old and decrepit but still beloved, he got into a mill-race, planked on both sides, and was drowned. He was given a decent burial, and although since that time I have owned many a dog, registered and pedigreed though he may have been and often was, I have never loved a dog as I did that "first" one, and now as I look out of the window and see one of my boys playing with their "first dog," I wonder if it's permissible to wish one were a boy again, freed from the cares and responsibilities of this "work-a-day world."

I note with pleasure the efforts that are being made, and so ably seconded by your valuable paper, for the protection and preservation of game. I regret to say that game in this State, especially partridges (quail), are almost a thing of the past, owing to the severe blizzard of last winter. A few years ago partridges were plentiful. I do not believe that there are now 150 in this (Fauquier) county. Our Legislature is now in session and I have made strenuous efforts to get a law passed to prohibit the killing of all game in this country for two years, but without success. A law has been passed to prohibit the killing of partridges in the State for two years from its passage (Jan. 27, 1896), but I fear it will not have the desired effect. We have no game wardens, and it is almost impossible to keep a certain class from killing prohibited game when the opportunity offers, hence one of the arguments for the prohibition of killing all game for a time, at least, especially when there is no game in abundance.

Well, one can console himself in part [that all the bass in the Shenandoah, Potomac and Rappahannock rivers are not extinct, and when one can show, as I can in my office, the head of a bass weighing 5½ lbs. (the bass, not the head), and caught on a light rod and reel, one can feel that life is yet worth living.

C. M. WHITE.

VIRGINIA.

Gordon Setter Club of America.

THE annual meeting of the Gordon Setter Club of America was held, pursuant to notice, at Madison Square Garden on the second evening of the New York dog show, Feb. 20, 1896. Present in person and by proxy—Messrs. Blossom, Oughton, Van Zandt, Lee, Billings, Meister, Seehusen, Hendee, Sperry, Bleistein.

Minutes of the year's meetings were approved.

The Secretary-Treasurer, Van Zandt's, report showed a balance of over \$80 in the treasury of the club, and was approved.

President Blossom's action in regard to the non-holding of field trials in 1895 was approved, and in view of the hope of better prospects in dogdom during 1896 he was empowered to make arrangements for field trials during the coming Autumn, if in his judgment sufficient inducement offered. It was again decided that the attention of dog show managers and judges be directed to the importance of holding competitions in the show-rings only by daylight, as proper consideration could not be given to correct tan-markings on Gordons by any artificial light. Attention was also requested to the standard of the club, so that while the characteristic head and body of the Gordon might be preserved in their original formations, the old type of heavy head and body might be modified.

The election of new members during the year was approved.

The following were elected officers and executive committee for the ensuing year, viz.:

James B. Blossom, New York, President; John R. Oughton, Dwight, Ill., Vice President; L. A. Van Zandt, New York, Secretary-Treasurer; E. H. Seehusen, New York; C. Cap. Hendee, Milwaukee, Wis.; Geo. Bleistein, Buffalo, N. Y.; E. K. Sperry, New Haven, Conn.

Also resolved that the managers of dog shows be again urgently requested to, as far as possible, give us new judges for the coming shows, so as to stimulate entries, as the judgments upon the Gordons likely to come up for decision are so well known by repetition year after year that there is little encouragement for exhibition of either the older dogs or new and younger specimens.

It was resolved that owners of Gordon setters be requested not to exhibit their dogs at any show where

Gordons were not put down upon exactly the same footing in premium lists as other setters.

L. A. VAN ZANDT,

Sec.-Treas., Gordon Setter Club of America.

Mascoutah Kennel Club's Show.

CHICAGO, Feb. 28.—The railroads in the territory of the Trunk Line Association, bounded on the south by the Potomac and Ohio Rivers, north to the St. Lawrence River, and from the Atlantic Ocean to Buffalo and Pittsburgh, but not including the New England States, have granted us a reduction of fare of one and one-third for the round trip; that is, visitors pay their full fare going, and procure certificates when they purchase their tickets, and if 100 of such certificates are presented, they receive order for return ticket at one-third fare, etc.

W. J. BRYSON.

POINTS AND FLUSHES.

The following is the entry list of the Mascoutah Kennel Club's seventh annual Bench Show, March 10 to 13: Mastiffs 28, St. Bernards (rough-coated), 90, St. Bernards (smooth-coated) 46, bloodhounds 5, Great Danes 48, Newfoundlanders 7, Russian wolfhounds 1, deerhounds 4, greyhounds 11, foxhounds 6, pointers 35, English setters 38, Irish setters 23, Gordon setters 37, Chesapeake Bay dogs 2, field spaniels 11, cocker spaniels 43, Clumber spaniels 1, Irish water spaniels 7, collies 82, Old English sheep dogs 2, poodles 28, Dalmatians 9, bull dogs 3, bull terriers 52, Boston terriers 18, dachshunde 26, beagles 12, fox terriers (smooth) 83, fox terriers (wire-haired) 16, Irish terriers 21, Scottish terriers 6, Black and Tan terriers 13, whippets 5, Bedlington terriers 4, Dandie Dinmont terriers 5, Skye terriers 3, schipperkes 2, Yorkshire terriers 16, toy terriers 11, pugs 22, King Charles spaniels 8, Blenheim spaniels 15, Prince Charles and Ruby 3, Italian greyhounds 7, miscellaneous 14; total 929.

Mr. J. Otis Fellows has been asked to name terms to judge at Los Angeles, Oakland and Seattle shows.

Mr. Henry Bottomly was arraigned before Judge Platt, Toledo, Ohio, on Feb. 24, for stealing a dog at the recent show held in that city. He pleaded guilty and was sentenced to pay a fine of \$75 and costs.

From a Connecticut exchange we learn that Mr. Seldon Minor purchased the foxhound Driver, which has distinguished himself both in the trials and on the bench. His former owner claims that he shot twenty-five foxes ahead of Driver in his first season. As bearing on the matter of sport, it is noteworthy that successful fox hunting as portrayed above from a New England standpoint would be considered an unpardonable infraction of the sport in other sections of the country.

Canoeing.

Modern British Canoeing.

As canoeing is pictured in the following extracts from the *Field*, it cannot be said that any material advance is being made in Great Britain; and as compared with absolute inactivity in designing and building in this country, it is hard to say which side is the worse off, the one which is making no effort for improvement, or the other in which this improvement takes such an extravagant and absurd form as a mercury-ballasted centerboard. It is through this class of freak improvements that canoeing has become almost obsolete.

With the first week of the new year we received the first news of actual building. The owner of the Solo, the fin keel canoe, which last season came from the Midland Club, Birmingham, to compete in the Royal Canoe Club Cup race, sends us information which will greatly interest those who look with favor and trust to the new cruising canoe class. Mr. Wale is building strictly within, not only the letter, but the spirit, of the R. C. C. cruising class.

The new canoe is 15ft. 10in. over all, and 13ft. 6in. on the waterline; 42in. beam, 14in. of freeboard amidships will give her a bold height of side and good internal depth. She will have a whale-back deck, made of two skins; it is a point which men who contemplate building should look to, is the whale-back or very much raised middle line of deck. In the Nautilus, which was built in the winter of 1893, the deck forward of the well was brought up to a high pitched ridge at middle line, instead of a rounded or bumped deck; this ridge gradually dies away as the stem is neared, until the deck becomes quite flat transversely, but it sheers up with the sheer of the gunwale to the stem head; there could well be 3in. rise of ridge of deck above gunwale level on a 42in. of beam at fore end of the well, some 2ft. 6in. forward of mid-length.

It is satisfactorily wonderful how neatly such form of deck casts aside heavy water; at first sight it might be thought that this form of deck would hold wind, but, as a fact, at 20° list of the boat the deck line or beam line is lying horizontal to the transverse water plane, and therefore hidden or under the lee of the gunwale, and when the wind is abeam, or forward of it, is the only time that body-surface exposed to the wind can be detrimental to speed. Mr. Wale has kindly offered to send for publication some important details of her fitment and mode of building, which he considers will hold many novelties.

Both in the case of the above-mentioned canoe, and of another shortly to be put on the stocks, we hear of the difficulty as to settling the exact situation and form of the rudder; Mr. Wale knows the sailing advantage of an under-body rudder fitted with direct tiller action; but as at the same time he wants fixed draft not to exceed 4in., he finds, and anyone would also find, it difficult, if not impossible, to get an efficient rudder operative within such draft. The way, however, would be, if a rudder housing case is objected to as cutting up the canoe's accommodation, to fit an under-body rudder when open water is the cruising or racing field, and for river cruising to have the ordinary stern post fittings and rudder ready for such work.

But in doing this care must be taken to keep the sail plan in proper balance to the very altered condition of the center of lateral resistance. There is far more virtue or viciousness in the balance of centers than commonly meets the eye, and a neat adjustment of the centers or powers above named to a balancing point is of more importance in a cruiser than in a racer; with a neat balance of sail plan to the joint effect of rudder and center-plate in a craft devoid of deadwood at stem and stern (where the rudder is held by gear at midships steady in line of keel or slight weather helm), she will sail her course, long spells at a time, without the constant handling which is necessary in an unruly boat. Of course, not so in a heavy sea, but even then she will be far easier to handle. With the old time form of fine wedged bow or deep forefoot, this was almost impossible of attainment, because as the water heaped up on the lee bow in a freshening breeze the center of lateral resistance traveled forward very fast; but with the latest models lateral resistance is almost confined to center-plate and rudder.

In the same connection, a point of great importance is to obtain a form of center-plate, whether simple or ballasted, which maintains practically the same position, as to its center of resistance, when partly lifted as when down. A slight travel aft is bound to be found in any keel-pivoted plate of folding type; but a very considerable shift is found in all pivoted single plates, and is extremely detrimental to balance, and if loaded is also fatal to trim of the boat. The difficulty, if not danger, of all vertical lifting plates is found when striking hard ground at good speed; the plate is then struck at its lower fore corner or bulb end, and if it cannot lift immediately and automatically, something must go or the boat must stop; but in most cases it would probably be a break up. There are several forms of lifting bulb or loaded plates in the market; but the automatic liftability on striking bottom, coupled with absolute immunity from pendulous oscillation when jumping seas, must be obtained, otherwise a weighted plate is not a safe shipmate, and a vertical dagger is an unpleasant one.

Quite the latest up-to-date idea in regard to ballasting may now be claimed by the canoe sailing fraternity. We mentioned on Jan. 18 that a member of the Midland Club, Mr. Wale, was building a "cruising class" canoe for the coming season, and we gave her leading dimensions. The Solo, which Mr. Wale brought out last year, was certainly novel in many ways, though she was not quite successful in

racing; but then the weather played the deuce with the sailing machines, and Solo was one of them. Another matter was that Solo at the last moment had her bulb keel reduced to feather weight, which gave her an all-round complete curve or circle of stability, for she had none comparatively, and she revolved in the water whenever a squall struck her.

Mr. Wale has not been slow to catch on to scientific ideas of ballasting and to blend them with the restrictions of the cruising class. This is as it should be, and unless the racing division better themselves they will find that a canoe, we assume complying in every way with the Royal Canoe Club class definition, has been produced which may prove a hard nut to crack. At present we know nothing about her model or details of design, but the ballast novelty has been opened out, and is both novel and highly ingenious.

Mercury is the ballast used, and though this metal has often been mentioned as possible ballast, and sometimes reported to be actually in use, we have never known of it as a fact. In the present case, however, we have it declared to be so by Mr. Wale. The mode of using the mercury is decidedly ingenious to a certain extent, but there are two great risks always present, which we will mention later.

The drop keel of Mr. Wale's canoe is a composite structure, shaped in what is commonly called the Hope dagger-plate form; it is composed of two very thin, hard-rolled brass plates, tightly riveted together near their edges. The mercury is poured in at a suitable hole at the upper part of the plate, which is subsequently properly closed or sealed. The weight of the mercury distends the plates, like water does when poured into a mackintosh water-bag, and consequently forms a gentle form of bulb keel, the mercury being of course located at the lower part of the (quasi) brass bag. When the keel is lifted, the mercury takes a new position in the keel, now along its front edge, but still at what has become, by lifting, its lower edge—i. e., the ballast always remains at the bottom.

Mr. Wale found, as might be expected, a tremendous difficulty in getting the plates riveted mercury-tight, for mercury will penetrate where water cannot; and herein lies danger the first. Of course the pinhole for pivoting the plate keel on at its fore edge can be so constructed, of solid metal flanged and the plates of the keel riveted thereto, as to be mercury-tight at first, as is the keel plate; but in sailing, a violent collision with ground or submerged obstruction throws an enormous strain on that pin connection; and at the same time the dagger-board is a form peculiarly liable to be twisted by ballast at its lower part. Herein the risk of starting a leak in the riveting along the edges of the plate is a constant source of danger of losing all or nearly all the mercury.

Mercury at about two shillings and threepence a pound, and some 25lbs. being used, is an expensive item to leave at the bottom of the sea; also mercury, in inexperienced hands, is a most difficult thing to handle; but, on the other hand, it is quite ideal ballast for such delicate toys as sailing canoes up to date are. For our own part a lifting lead bulb keel is sufficiently effective, and quite expensive enough. Of course the bulb and the case can be so formed as to house the bulb when up equally as much and snugly as the mercury bag can be housed.

The second danger point in the mercury-bag keel is that its stability properties are lost at the very moment when the sole value of bulb keel should come into action—i. e., when the boat is knocked down flat by a squall, or by a sea into her sails. With sliding-seated or even only deck-seated position of crew a plain center-plated canoe can be sailed without capsizing in all ordinary circumstances, and a bulb keel in such cases is useless; but when the heavy squall or sudden savage gust of wind comes down upon the sails, and the canoe is thrown over to a great angle of heel, the bulb keel comes into real action and rights her. Now, in the mercury-bag keel the very opposite may prove to be the action of the mercury. If the craft is suddenly thrown flat down with mast in the water, as they are often thrown—that is, with keel lifted clean out of the water—the mercury will shoot away from the outer point of the keel and into that portion which is in the case in the body of the canoe, hence giving impetus to the capsize instead of averting it. Of course, this is assuming that we have been told the whole construction of the plate keel.

Again the question has been put to us in relation to the meaning of the Royal Canoe Club rule as to sliding deck-seat length; the wording of the rule is, "Sliding seat, if any, when rigged in to be within the beam of the boat." There are, no doubt, several ingenious ways of forming a telescopic sliding seat which, when shut, does not overlap the side of the boat, but can open and extend out-board a long way further than a plain slide board of 42in.—the extreme beam. A plain board can only be extended some 20in., as its in-board end cannot pass the center in most forms of seat, and in any case must have and retain sufficient connection with the fixed seat to bear the man's weight out on its end. No doubt the fair interpretation of the rule is that only a single board was contemplated as practicable, and indeed the meeting which passed the rule had before it the suggestion of a telescopic slide, but thought it—and we think it—impracticable in real sailing. Probably such a seat could be worked, but with 42in. of beam and a slide of single plank of 42in. all the stability necessary would be gained, and the man would be in a better position for working and steering his craft. The inglorious days and ways of monkeying away out belong to and will probably stick to the 30in. racing machine.

As, however, the Royal Canoe Club challenge cup will probably be raced for by canoes under the rule quoted above, it would be well that the committee should as soon as possible give a decision thereon, and thus prevent a regrettable dispute at the starting line. In any case, those who are building or fitting out intending to race, whether they be members or visitors, should have early information.

The A. C. A. Race Programme.

We have received from Mr. Walter C. Witherbee, chairman of the regatta committee, the following draft of a proposed programme for the races at the annual meet in August. The programme is given out for comment and discussion, and we shall be glad to hear opinions on it.

Event No. 1: Paddling and sailing combined, ½ mile alternately; total, 3 miles; time limit, 1½ hours. Start to be made paddling.

Event No. 2: Paddling, ½ mile, straightaway.

Event No. 3: Sailing, 4½ miles; time limit, 2 hours.

Note.—Events Nos. 1, 2 and 3 are record races under Rule 5 of sailing regulations.

Event No. 4: Trophy paddling, 1 mile straightaway.

Event No. 5: Unlimited sailing, three classes, 6 miles; time limit, 2½ hours. Starters in trophy sailing race to be selected from this race according to elapsed time.

Event No. 6: Trophy sailing, 9 miles; time limit, 3½ hours. See Rule 5.

Event No. 7: Dolphin sailing trophy, 7½ miles; time limit, 3 hours. The canoe winning first place in event No. 5 will not be allowed to compete in this event.

Event No. 8: Hotel Champlain cup, 4½ miles.

Event No. 9: Orilla cup, 7½ miles. Limited to members of Northern Division.

Event No. 10: Jabberwock trophy, 3 miles. Limited to members of the Central Division.

Note.—Events Nos. 9 and 10 are to be sailed providing a Northern and Central meet is not held. Events Nos. 7 and 8 may be contested for at the same time, in the discretion of the regatta committee.

Event No. 11: Club sailing, three classes, 4½ miles; time limit, two hours. First three members of any club to count. A club to be represented must enter at least three men. All men entered must have become members of the club they represent before the first day of the 1896 meet.

Event No. 12: Limited sailing, 3 miles; time limit, one and one-half hours. Sail area limited to 100sq. ft., and sliding seat prohibited.

Event No. 13: Novice sailing, 3 miles; time limit, one and one-half hours. Open only to members who have not sailed a canoe prior to Sept. 1, 1895.

Event No. 14: Unclassified sailing, 4½ miles; time limit, two hours.

Note.—The regatta committee reserve the right to handicap in this race.

Event No. 15: Paddling; open canoes not under 50lbs. weight, ½ mile straightaway; single blades.

Event No. 16: Tandem paddling, ½ mile straightaway; decked canoe; double blade.

Event No. 17: Tandem club paddling, ½ mile straightaway; open canoes; single blade.

Event No. 18: Club four paddling, ½ mile straightaway. (Canoes not to be less than 28in. wide and 16ft. long.)

Event No. 19: Hurry-scurry; swim, paddle, run.

Event No. 20: War canoes, 1 mile; canoes not to be over 25ft. long nor contain more than nine persons.

Event No. 21: War canoes, 1 mile; canoes not to be over 35ft. long, nor contain to exceed 16 persons.

Event No. 22: Ladies' paddling; open canoes; ½ mile.

Event No. 23: Ladies' tandem; open canoes; single blade, ¼ mile.

Event No. 24: Mixed tandem, open canoes, single blade, ¼ mile.

Event No. 25: Novice paddling, open canoes, ½ mile; open to men who have never paddled a race outside of their own club races.

Event No. 26: Open four; tug of war.

Event No. 27: Tail-end race; open canoes, single blade; paddler to kneel in bow and paddle with the wind, bow first, 200yds.

Event No. 28: Hurry-scurry, obstacle or tournament.

Note.—The committee reserve the right to call any, except the more important and older A. C. A. races, at any time during the meet when in their judgment the conditions are right.

Note.—The right is also reserved by the committee of following the system of handicapping that was used at the last meet.

All events in which less than two starters present themselves at the line will be cancelled.

Yachting.

THOUGH long deferred, the final punishment of Lord Dunraven at the hands of the New York Y. C. has at last taken place, and is severe enough to satisfy even those who for a long time have found fault with the club for its delay and with the special committee for its leniency. It certainly cannot be urged against the club that it has acted either precipitately or unfairly. Lord Dunraven has been given every opportunity, in the first place, to prove his charges, to demand all possible evidence that might help his case, and to examine all the witnesses of the other side; in the second place, he has had ample time to consider the complete evidence, the finding of the committee, and to seek advice of his friends at home. The fears that have been openly expressed that when it came to the final action the club would back down, and that Lord Dunraven would be allowed to escape scot free under some trivial excuse, like another recent offender against it, find no indorsement in the resolution under which his name was dropped from the rolls. This resolution even goes so far as to give the lie direct to his Lordship, accusing him of "numerous misrepresentations of fact," of the most of which "he has been forced himself to admit the untruth."

THE various letters from Lord Dunraven throw no new light on any point, and, as we suggested two weeks since, they contain not the slightest intimation of apology or retraction. The one to Mr. Phelps contains a statement which is in every way characteristic of Lord Dunraven's method of argument; that relating to the employment of a diagram to prove that he did not see what he did see. This absurd, illogical and childish statement is disposed of by the special committee in its letter to Com. Brown; and a look at the evidence will show that the matter may be stated thus: Lord Dunraven and his witnesses actually saw that one side of the yacht was higher—or lower—at certain times, and claimed that this proved a less or greater total immersion. The diagrams and other evidence before the committee showed that the comparatively slight elevation or depression of one side, which, it is admitted, was seen by Lord Dunraven, would be the natural consequence of such a slight heeling of the yacht one way or the other as must happen from time to time with the ordinary movements of crew, boom and other legitimate weights. It was also proven that to accomplish the same variations of height by the bodily immersion or emersion of the yacht on an even keel would have required means which, it was proven, were not used.

THE comments of the principal British papers, with a few notable exceptions, have been against Lord Dunraven and in favor of the report of the committee, and now they take a similar stand as regards his expulsion.

What we have seen, however, of clippings from the smaller local papers of England and Scotland goes to show that, as we have from the first contended, the special committee made a serious error and defeated its own ends by the futile attempts at utter secrecy. These smaller papers have not seen the whole evidence or any part of it, they are entirely ignorant of its details, and their judgment is based solely on the report of the special committee. This of itself, unsupported by the evidence, gives a very inadequate idea of the investigation, and many hostile comments are based upon it.

Had the sittings of the committee been open to the press, as the importance and the national character of the case required, the same course would have been followed as in trials in a court of law—a stenographic report of all the material points of the evidence would have been published each day by both American and British journals, and the every-day reader would have had access to the bulk of the evidence. As the matter was actually arranged, while the members of the New York Y. C. and a few other yachtsmen are now able to read the evidence at their leisure, the world at large has no access to it. It is for this reason that we have lately devoted so much space to the publication of the evidence of the more important witnesses; but, though we shall continue the evidence for a week or two longer, there is much that is both important and interesting which we are compelled to omit for lack of more space.

THE continuance of the evidence which we print this week discloses one very interesting fact that has thus far been unknown: that an attempt was made, by Mr. Watson and measurer Hyslop, to measure Valkyrie II. by lamplight on the night of Wednesday, the day preceding Lord Dunraven's withdrawal from the races. An amount of ballast, from 1 to 1½ tons, was taken out of the yacht on Wednesday, when she was docked in the Erie Basin, in the hopes of improving her in the next race, and Lord Dunraven was desirous of knowing the effect on her measurement. It was proposed to have her afloat before night, but it was 10 P. M. before she was ready for measurement. The attempt was made to adjust the batten by lantern light, but Mr. Watson, after trial, agreed that it was impossible.

This offers additional evidence that Lord Dunraven was fully prepared to start next day until the adverse decision of the Defender's protest was made public.

It will be remembered that Valkyrie II. shipped about 2 tons of ballast on the eve of her last race in 1893, a perfectly legitimate proceeding, as was this change in the ballast of Valkyrie III. This is interesting in connection with Mr. Brand's various complaints of changes of ballast in Ethelwynn, as showing the recognized practice in racing.

The Dunraven Inquiry.

TESTIMONY OF CAPT. HAFF AND MEASURER HYSLOP.

AFTER being called to the stand, as narrated last week, Capt. Haff was asked to step aside for a time, and Mr. Herreshoff was recalled, he being desirous of returning home.

Nathaniel G. Herreshoff, recalled as a witness on behalf of Mr. Iselin, testified as follows:

By Mr. Choate:
Q.—It seems that you gave Mr. Iselin some weights of the tanks. Were they estimates, or actually ascertained in the construction? A.—The weights given to him were the actual weights. They were estimated and weighed besides.

Q.—How were those water tanks fastened, if at all, into the vessel? A.—The water tank was fastened—it fits in a V-shaped place permanently, and comes close up under the cabin floor, so that it can rise but very little. Besides that there are cleats from the cabin floor to the frame to hold it into place.

Mr. Rives—Will you try to speak a little louder? It is sometimes difficult to hear you over here.

By Mr. Askwith:
Q.—These plans are not taken from the original plans of the Defender? A.—No, not at all.

Q.—You know nothing about their construction—about their being made? A.—No; they were not made under my direction. They were made under the direction of Mr. Iselin.

Q.—Are the working drawings of the Defender in existence? A.—Certainly.

Q.—Are they in your possession? A.—Not here.

Q.—Are they in your possession? A.—Yes, sir.

Q.—Can you tell from your knowledge of the Defender what would be the necessary weight to lengthen her waterline 1ft.? A.—I haven't any figures. For 1ft. length of waterline?

Mr. Askwith—Yes.

A. (Continued)—I could make a rough estimation.

Q.—What is your rough estimate? A.—I have made an estimation for 1in. in depth and 2in. in depth, and 1ft. would be about 1½in. immersion.

Q.—One foot would be about 1½in. immersion? A.—Yes, sir.

Q.—What weight would be required for that? A.—I think I have a memorandum that would assist me. It would be a little over four tons and a half.

Q.—As much as that? A.—Yes, sir.

Q.—How much would 4in. deeper increase her load waterline? A.—It would increase her load waterline about 3½in.

Q.—As much as that? A.—Yes, sir.

Q.—How much would 3in. increase her load waterline? A.—About 2½in.

Q.—And 2in.? A.—Sixteen.

Q.—And 1in.? A.—Eight.

Q.—Supposing the trim alone was altered and the vessel put 2in. by the head, how much would that lengthen the load waterline? A.—Very little.

Q.—How much if she was put 3 or 4in. by the stern? A.—Very little either way.

Q.—What do you mean by very little? A.—Perhaps a fraction of an inch.

By Mr. Whitney:
Q.—Your meaning is, her line would increase as much at one end as it would lose at the other? A.—Precisely; yes, sir. It is about the same angle at each end, and of course the waterline is a little fuller at the stern, so that the immersion of the stern would carry the bow out a little more.

By Mr. Choate:
Q.—If she went down at one end she would go up at the other to a certain degree? A.—Yes, sir.

By Mr. Askwith:
Q.—How much weight would be required for this—suppose it was placed in the best position for lengthening the load waterline—to sink the vessel 1in. or 1½in. so as to cover this pipe and at the same time set her, say, 3 or 4in. at the stern? A.—I hardly understand that question. It is a little complicated.

Q.—How much weight would be required, if placed in the best position for lengthening the load waterline, to sink the vessel 1in. or 1½in. so as to cover the altered pipe, and at the same time set her 3 or 4in. at the stern? A.—I am unable to answer that.

Q.—You are unable to answer the question? A.—Yes.

Q.—It seems to me it is rather complicated? Were those tanks upon the Defender similar to the tanks upon the Vigilant?

Mr. Herreshoff—Which tanks do you refer to?

Mr. Askwith—The tanks that were taken out at New Rochelle.

Mr. Herreshoff—Which? There were three tanks taken out.

Q.—Were any of them similar to the tanks on the Vigilant? A.—The ice tank was similar, I think.

Q.—Had the Vigilant similar tanks? A.—She had tanks.

Q.—Were they permanent tanks? A.—No.

Q.—Were they around her centerboard? A.—In the vicinity of it—that is, the water tanks were.

Q.—The tanks upon the Defender were not arranged in the same way? A.—No.

Q.—What were those tanks on the Vigilant used for? A.—I do not know what tanks you have reference to.

Q.—You said there were some tanks upon the Vigilant around the centerboard? A.—Yes, sir; some water tanks. One each side of the centerboard on the Vigilant. They were intended to hold water.

Q.—Can you tell me, supposing that lead was stowed aft, and the stern trimmed by the stern, whether much lead would be required to considerably alter the appearance of the boat?

Mr. Herreshoff—Alter the appearance?

Mr. Askwith—Yes; to alter her appearance on the water. Is it not a fact that a comparatively small quantity would do that?

Mr. Herreshoff—Would alter her appearance very much—a small quantity?

Q.—Is it a fact that it would or would not? A.—Of course it would alter her trim; a small amount. In proportion to the load that was put in. A larger amount would alter her appearance.

Q.—I am asking you would a small amount alter her appearance much? A.—I should say not.

Q.—Were these tanks that were taken out of the Defender included in the 7,000lbs. weight of furniture? A.—Yes, sir.

Q.—When she had raced with them before was there any specified quantity of water in them? A.—No; I think not. I think they generally had only a very little.

Q.—Did you calculate that they should be full or empty?

Mr. Herreshoff—During the racing?

Mr. Askwith—Yes.

A.—They were to be nearly empty. I made an allowance for a small amount of water in the tank.

Q.—What was their size? A.—I don't remember the exact size.

By Mr. Rives:
Q.—You stated yesterday, I think, their capacity in gallons, approximately, did you not? A.—Roughly. I have the exact size at home, but I haven't it with me.

Mr. Choate—I suppose he may send that.

Mr. Herreshoff—What I stated was only approximate.

Mr. Rives—You can send them in a note to Mr. Choate, if you can get the exact figures.

Mr. Herreshoff—Yes, sir.

By Mr. Askwith:
Q.—Did you definitely convey the first two tons of lead on board at New Rochelle, and then the other ton that we have had evidence of that was bought by Mr. Iselin, on board the Defender, by weight?

Mr. Herreshoff—Did I convey it on board?

Mr. Askwith—Did you have it conveyed? Were you present when it was conveyed on board the Defender?

A.—I think not; I do not remember now that I was present. I may have been.

Q.—Did you order first two tons to be put on board of her? A.—I did not order any.

Q.—Was it at your suggestion that two tons were put on board of her? A.—Yes, sir.

Q.—It was? A.—After a consultation with Mr. Iselin.

Q.—Was it at your suggestion that one ton further was put on board of her? A.—Yes, sir; after Mr. Iselin's consultation. We decided together.

Q.—Were you present when the ton was put on board? A.—No, I think not.

Q.—Do you know whether there was the whole of it put on board? A.—I do not.

Q.—Or a part? A.—No, sir.

Q.—You do not? A.—I could not swear.

Q.—Do you know whether there was any more lead on the Hattie Palmer besides that? A.—I do not know whether there was any lead on the Hattie Palmer.

Q.—Were you asked, when that last ton was put on board, whether you wanted any more? A.—We decided to put that ton on board which was sent to the Erie Basin.

Q.—Were you present when that ton was put on board? A.—Yes, sir; I was on the boat.

Q.—Did they call out to you from the Hattie Palmer, asking you whether you wanted any more? A.—I do not remember that it was taken from the Hattie Palmer.

Q.—Where was it taken from? A.—I think it was taken from the dock.

Q.—Did anybody call out to you from the dock? A.—In fact, I do not know. I am not sure. I was busy at other things at the time.

Mr. Choate—Mr. Iselin testifies that it was waiting in a truck on the dock.

Mr. Askwith—Then I suppose it was loaded from the dock; but I want to know whether Mr. Herreshoff was present when that was loaded.

Mr. Herreshoff—I was simply with Mr. Watson and Mr. Hyslop. I do not recall now the exact incident.

By Mr. Askwith:
Q.—While the lead was being put on, were you not asked whether you wanted any more? A.—No, I think not. I do not remember being asked.

Q.—Do you know the time during the summer when the sail area of the Defender was increased? A.—Yes, sir.

Q.—Had you seen any plans of the Valkyrie at that time? A.—No.

Q.—Have you ever seen any plans of the Valkyrie? A.—No.

Q.—What lead you to increase the sail area? What was the object? A.—To put more sail onto her.

Q.—What was the object of putting more sail on? A.—To give her more power.

Q.—When the sail area was altered, which as you say was to give her more power, was her ballast at all altered by your direction? A.—No.

Mr. Askwith—Those are all the questions I wish to ask now.

By Mr. Whitney:
Q.—I seem to recall that the general judgment of experts upon the two boats before the races was that the Valkyrie would be at her best in light weather, and the Defender at her best in heavy weather. Was that so? A.—I think that was the general opinion, from what information we had from abroad at that time.

Q.—Was that your opinion? A.—Yes, sir.

Q.—Did you think you had a surplus of stability on the Defender as compared with that of the Valkyrie? A.—Yes, sir; that is, judging from other yachts, the Vigilant and Defender.

Q.—The Defender has turned out to have very great stability; greater power to carry sail, as I recollect it? A.—Yes, sir.

Q.—I saw her in a squall. What day was that? The first or second? A.—That was the last of the trial races.

Q.—What object would anybody have had to have increased the immersion of the Defender? A.—Of course, to make a longer vessel of her; a longer and larger vessel.

Q.—I mean, in fitting her to compete against the Valkyrie, would you have preferred at that time to have increased or decreased her ballast?

Mr. Herreshoff—You mean, taking the vessel just as she was?

Mr. Whitney—Yes, just as you had been racing with her.

A.—We felt very well satisfied with the trim.

Q.—But your danger, if at all, as I understand it, was in light weather? A.—Yes, sir.

Q.—Did you want more ballast then? A.—In light weather, of course, we would want less.

Mr. Choate—That is all. I would like to call another witness before I recall Capt. Haff.

The Chairman—Is it understood that any questions are to be sent to Mr. Herreshoff? Do you desire to send any?

Mr. Askwith—I really have not studied Mr. Herreshoff's evidence at all. I could not hear half of it, and I did not listen to it with that view.

The Chairman—I have no doubt Mr. Herreshoff will answer them, if you choose to send him any at his address.

Mr. Choate—I would like to call the captain of the Flint, who towed the Defender down at certain times.

Capt. E. Walter Brandow, of the tug Flint, was then called, and testified as to the towing of Defender to the Erie Basin on Sept. 6.

Capt. Henry C. Haff, being recalled, further testified:

Capt. Haff—You asked me in relation to the crew. I want to qualify the answer I made by saying—you asked me if I engaged the crew. I say, with the advice and consent of Mr. Iselin I did.

By Mr. Choate:
Q.—To what extent were the officers and crew that were on her during the trial races the same as were on her during the Cup races? A.—The same.

Q.—Were you at New Rochelle on Sept. 4 and 5, when the Defender was being stripped? A.—I was.

Q.—Did you sleep on board up there? A.—Yes, sir.

Q.—And you know what was done there in the way of taking out the trimmings and the tanks? A.—I do.

Q.—And the putting in of two tons of lead, as Mr. Herreshoff and Mr. Iselin have testified? A.—I do, yes, sir.

Q.—And you agree with the statements they have made? A.—Yes, sir.

Q.—Did you sail her, or go in her, from New Rochelle down to Erie Basin? A.—I did.

Q.—On the morning of the sixth? A.—I did.

Q.—And you were on board of her until the time of her measurement in the Erie Basin? A.—Yes, sir.

Q.—Had anything been taken out of her except what Mr. Iselin and Mr. Herreshoff have testified to, at New Rochelle or on the way down, or anything put into her, except what they have stated? A.—Nothing.

Q.—Before the measurement was she lightened at all for any purpose or by any means? A.—We had taken out the bedding. That is all, the cots—which we always had.

Q.—That is the rule always? A.—Always.

Q.—Will you state what there was in that shape to take out? A.—There were some beds, for about forty men. Forty cots, with the bedding and blankets; the mattresses and blankets.

Q.—Were there forty men besides the officers? A.—Forty all told, with the officers. I believe that is the complement, within one. That is about the number.

Q.—Those were taken out openly, in the usual way, before she was measured? A.—Yes, sir.

Q.—Where were they put? A.—On board the Palmer.

Q.—Did you observe anything about the Defender being on an even keel when she was measured, or did you not look? A.—I know there was some talk of her having a little list.

Q.—When was that? A.—That was while we were getting ready to measure.

Q.—Prior to the measurement? A.—Yes, sir.

Q.—You heard that? A.—Yes, sir; I remember distinctly a talk about it, and something was done about it, but what was done I do not remember. We shifted the boom a little; Mr. Leeds said she had a little list. He was astern of her, I believe, in a small boat.

Q.—When the measurement was completed, how long did you remain there until you started for Sandy Hook? A.—We started for Bay Ridge—I could not tell within half an hour. Probably about 3 o'clock.

Q.—In tow of the Flint? A.—Yes, sir.

Q.—How long did you stay at Bay Ridge? A.—We laid at Bay Ridge until very near sundown. Something in that neighborhood.

Q.—Where was the Hattie Palmer in the meantime? A.—The Hattie Palmer had left us after we were measured. The Hattie Palmer had to go for coal and water. She hadn't enough to go to the Hook with.

She went down to Twenty-sixth street, Brooklyn, and she was fitted out for Bay Ridge.

Q.—You waited for her with the Defender at Bay Ridge? A.—We did.

Q.—And she having come up, she was taken in tow also by the Flint? A.—Yes, sir. We waited for her there. We got tired of waiting. I put all the men on the Flint, as it was getting near supper time, and I sent them to meet the Palmer, and they met the Palmer. They came off and it was very near sundown. The Palmer went ashore and put our mainsail ashore. We had an extra mainsail on board, that was in the sail room, and it filled it up so that it didn't leave enough room to put the beds under cover on a stormy day. It was a small mainsail that we had on her previous to enlarging the sail.

Q.—Had you orders up to this time to cut the twenty-one pigs of lead that were received on board at the Erie Basin? A.—Yes, sir; we had.

Q.—Why did you not cut it while you were waiting at Bay Ridge? A.—We had no good solid block to cut it on, and there is not a suitable place on a boat's deck to cut it, and again the chisel that we cut with and the maul, and so on, were on board the Hattie Palmer.

Q.—You did not leave the Defender at all? A.—No, sir. I was on the Palmer long enough to get my meals; that is all.

Q.—That was always when the Palmer was alongside of you? A.—Yes, sir.

Q.—And the two made fast? A.—Yes, sir.

Q.—You went on to Sandy Hook or the Horseshoe and made fast there about 9 o'clock? A.—My recollection is about 8:30. Notwithstanding the log, 8:30 is my recollection.

Q.—Did you anchor there the Defender by herself? A.—Yes, sir; we anchored.

Q.—What did the Hattie Palmer do? A.—The Hattie Palmer came alongside.

Q.—As soon as the tow was loose? A.—Yes, sir.

Q.—And made fast in some way? A.—Made fast. Took a line out.

Q.—How long did the Hattie Palmer remain alongside of the Defender? A.—About an hour, until about 9:30.

Q.—It would make it about 9:30 or 10? A.—About 9:30. It might have been fifteen minutes from that. It was somewhere between 9 and 10, at any rate, when she left.

Q.—Left for the night? A.—Yes, sir.

Mr. Askwith—Which night was that?

Mr. Choate—The night of the 6th.

Q.—From the time of the measurement until the Hattie Palmer left was any lead or ballast or water taken on board the Defender? A.—Not a pound of anything.

Q.—What happened during the hour or more that the Hattie Palmer lay alongside of the Defender in the Horseshoe from 8:30 or 9 on? A.—This lead that we had on the cabin floor was taken out to the Palmer, on her sampson post, a good solid block, and we cut it. It was there cut in two and put back again on the Defender and passed below.

Q.—Had there been any opportunity until then to take it on to the Hattie Palmer to be cut? A.—No, sir; there had not. There had been no time when it was possible for us to do it.

Q.—Did you take part in the cutting? A.—I did. I held the chisel to cut every pig that was cut.

Q.—Was it a chisel or axe and hammer? A.—A chisel. Any wood-cutter will know what an old-fashioned wedge is to split logs. I held it while the man maulled it.

Q.—Your crew, or some of them, were engaged in bringing the pigs from the Defender to the Hattie Palmer, and assisting you, and taking them back in pieces, in halves, and packing them away? A.—Yes, sir.

Q.—Was all that done under your direction? A.—Yes, sir.

Q.—Was any lead introduced into the Defender from the Hattie Palmer, except what had been brought from the Defender to be cut and carried back? A.—Not a pound.

Q.—Or anything else of weight? A.—Nothing.

Q.—There was something, in the way of cots, that had been taken out? A.—They were put back in the Basin.

Q.—They were restored at Bay Ridge? A.—At Erie Basin.

Q.—Was there anything else carried backward and forward while the Hattie Palmer lay alongside of the Defender, except these twenty-one pigs of lead? A.—Nothing.

Q.—You saw to their being stowed away under the floor, where you say that the two tons were? A.—Mr. Berry, the mate, was in charge of it while we were cutting the lead.

Q.—Is he here? A.—Yes, sir. There were about twelve or fifteen pieces that were perhaps not already stowed. I went down in the hold and

supper, while the Hattie Palmer was alongside? A.—That was one reason why I placed them all aboard the Flint, to hurry up the Palmer and to get their supper while there.

Q.—To get their supper on the Hattie Palmer while being towed back? A.—No, sir, while they were going ashore to take the mainsail ashore. I got mine when she came back. She lay alongside long enough for the quartermaster and myself to get our meals, and then started on.

Q.—At Bay Ridge. A.—At Bay Ridge.

Q.—Did you turn in that night until after the Hattie Palmer had left? A.—No, sir.

Q.—Do you know where she stayed that night? A.—My impression is that she went into the Highland Dock. I won't be positive about it.

Q.—Did you turn in that night? A.—I did.

Q.—At what time, about? A.—I could not say. It was somewhere in the neighborhood of 11 o'clock, I should say.

Q.—What time were you out in the morning? A.—Between 6 and 7.

Q.—Do you know of no craft having visited the Defender in the mean time? A.—No, sir.

Q.—Who did you leave in charge of the Defender, or the deck, whatever you call it, when you turned in, from that time until you came out in the morning? A.—The quartermasters had charge of the deck then, on watch.

Q.—Are they both here? A.—They are here, yes, sir. Three of them are here now. They will all be here Monday morning.

Q.—You were on hand, on deck, two hours about before Mr. Iselin came with the gentlemen who accompanied him? A.—Yes; on deck and below and around—aboard the boat, at any rate.

Q.—During that time was anything whatever brought into the vessel? A.—Not anything.

Q.—Did any craft of any kind visit the vessel before Mr. Iselin came? A.—Not to my knowledge. Nothing came alongside. No craft.

Q.—Do you remember taking part with Mr. Herreshoff and Mr. Iselin in the examination to see whether the lead had been properly stowed? A.—Yes, sir.

Q.—About what time was that? A.—Somewhere a little after 8, I should think.

Q.—How was it got at? How was it examined? A.—The floor was taken up. The floor was down in sections, so that you could rip it up.

Q.—You had assisted in putting in the last fifteen half pieces of the extra ton, had you not? A.—I don't know as I took hold of the lead.

Q.—You saw it done? A.—I stood there and saw it done, yes, sir.

Q.—You saw in what condition that left the hold, with the lead in it? A.—Yes, sir.

Q.—When you made the examination the next morning with Mr. Herreshoff and Mr. Iselin, did you find it in the same condition? A.—The same condition it was in the night before.

Q.—And nothing had been added? A.—No, sir.

Q.—And then you sailed upon your race? A.—We did.

Q.—And came back. It is testified that you got up to Bay Ridge after dark? A.—Yes, sir. Somewhere in the neighborhood of—somewhere from 8 to 8:30, I think; probably 8:30.

Q.—During that return trip, or going down, at any time, from the time you made your examination with Mr. Herreshoff and Mr. Iselin to the time you got back to Bay Ridge, was anything thrown out of the vessel or taken out of her in any way? A.—No, sir; not anything.

Q.—Did you remain upon the Defender until she was remeasured the next day? A.—Except to get my meals on the Palmer, alongside, as I say.

Q.—You went no further from her than that? A.—No.

Q.—When did she get alongside the Palmer on her home trip? Capt. Haff.—The night after the race?

Mr. Choate.—Yes; the night after the race.

A.—Soon after we anchored. I think she was laying off there, waiting for us, somewhere around 8:30 or 8:40 perhaps.

Q.—Did you sail up to there, or were you taken in tow below? A.—Towed up.

Q.—By what boat? A.—The Flint.

Q.—Was anything taken from the Flint on the way up, or transferred on to the Flint? A.—Nothing but the end of a line to tow us with; that is all.

Q.—How long did the Hattie Palmer lay alongside that night? A.—She might have laid there until 9:30, I should think, probably. Long enough for the men to get their meals, and for them to transfer the boats.

Q.—Was there anything transferred from the Defender to the Palmer at that time? A.—Nothing from the Defender to the Palmer, no. She stayed there long enough for us to transfer the bedding again, and our boats that we wanted to use. The sail covers perhaps, and so on; everything that we usually put out when we sail on a race we took back.

Q.—That included everything besides the cots and you say some boats? A.—The boats we have ready to use. The gig; I don't remember whether we took the gig off that night though, or not.

Q.—Some ropes or cables or anything of that kind? A.—Whatever we put out for a race generally we took back. The sail covers, I don't think there was anything more than the sail covers, I think that we put out.

Q.—What were the movements of the Defender from the time the Hattie Palmer left her at 9 or 10 o'clock, the night of the 7th, until she was remeasured the next day? A.—She lay there anchored at Bay Ridge.

Q.—How did she get back into the Basin before Sunday afternoon? Capt. Haff.—Erie Basin?

Mr. Choate.—Yes.

A.—The Palmer towed her up.

Q.—When did the Palmer make fast to her to tow her up? A.—I think about in the neighborhood of 10 o'clock the next morning. I am not positive as to the hour; I could not say.

Q.—So that she lay at anchor from about 9:30 or 10 in the evening until 10 in the morning? A.—Yes, sir.

By Mr. Rives:

Q.—Half-past eight? A.—Half-past eight; I don't say within a minute.

By Mr. Choate:

Q.—Was anything put out of her during that time? A.—Nothing. Not a pound of anything.

Q.—When the Hattie Palmer joined her it was to take her in tow, was it not? A.—Yes, sir.

Q.—And nothing was put from her on to the Hattie Palmer? A.—Nothing.

Q.—When did you get your orders to go to the Erie Basin? A.—I think on Sunday morning.

Q.—From whom? A.—From Mr. Iselin. I am not positive now whether he sent a verbal order or sent me a note aboard. I could not say.

Q.—When the Hattie Palmer had towed you into the Erie Basin, did she leave you there where you were subsequently measured, or did she remain fast by you? A.—She lay off from us. She didn't lay alongside.

Q.—How far? A.—I couldn't say. She laid along by the dock after we had stripped ready for measurement.

Q.—During that time, up to the time of the remeasurement, was anything removed out of the Defender? A.—Not anything more than to strip for measurement.

Q.—No ballast? no lead? no water? A.—Not anything.

Q.—You have covered the whole period of time from Friday, before the first measurement, to Sunday, after the remeasurement? A.—I think so.

Q.—Where did you sleep on the two nights? In what part of the Defender? A.—I slept in the sail room; on a cot in the sail room.

Q.—If any ballast had been brought out or carried in on either of these two nights, could it have been done without your hearing it, where you were? A.—Not unless somebody gave me a little chloroform, or something of that kind. The end of my cot was, I suppose, within 2ft. of the hatch where this would have been taken up.

Q.—How is it about sounds on the Defender? Are they easily heard from one part of the vessel, or from where you were in the sail room, to the center of the vessel? A.—They are. On that boat it is heard with great distinctness. You can hear any step on the deck, in any position. It sounds all over the boat, from any part of the deck.

Q.—What do you say to the suggestion that before the measurement on Friday she was lightened to make her set more out of the water; that after the measurement nine or ten tons of some heavy substance was carried on board of her to immerse her deeper in the water, and as much taken out of her before the remeasurement to restore her to her original condition? A.—I say there is not a word of truth in it. There was no such a thing done.

Q.—You have personal knowledge of the whole time covered? A.—I do. I was there, sure.

Q.—It has been said here by some witness that he believed the Hattie Palmer anchored for the night within 100yds. of the Defender? A.—It is my belief that she did not.

Mr. Choate.—It was in the affidavits brought from England.

Capt. Haff.—I heard it; yes.

Q.—Is that correct? A.—No, sir; it is not.

Mr. Askwith.—Which affidavit is that in?

Mr. Choate.—The night before the race, at Sandy Hook.

Q.—How far was the place where you supposed she was from where the Defender lay that night? A.—If she went to the Highlands, as I thought she did, she would be two miles away.

Q.—Was there any communication between the Hattie Palmer and

the Defender from the time she passed off from you, at about 10 o'clock, until she rejoined you the next morning? A.—Not any.

Q.—Was there any work being done on the Defender after the Hattie Palmer left and while she was there independent of this moving and cutting of the lead? A.—There was.

Q.—What was that? A.—The riggers were at work attaching new wire straps to the main sheet blocks.

Q.—What was the matter with that? A.—It needed new ones, because the others had got stretched too long.

Q.—When did they begin the work? A.—They began on the work some time during the day, I believe, on the Palmer, and came aboard at Bay Ridge that night, and continued the work until they got through with it.

Q.—How late in the night were they working? A.—Somewhere up to 2 o'clock, I think—up to 2 or 3 o'clock.

Q.—Were they working when you turned in? A.—They were.

Q.—Did they make more or less noise? A.—Quite a little pounding; yes, sir.

Q.—What was it? Pounding on metal? A.—Pounding to pound the splices down, yes. To splice heavy wire.

Q.—Can you determine, from coming up port side to a yacht or vessel, or a vessel like the Defender, whether she has a list on of one or two degrees? A.—I would not like to say that I could.

Q.—Do you think that anybody could? A.—It would be doubtful.

Q.—What would you do to ascertain whether she had a list on of a small degree? A.—Either go fore or aft of her and sight her, on deck or away from her.

Q.—And you had a telltale on the Defender that would tell? A.—Yes, sir.

Q.—Had you noticed the discharge from the pipe on the port side while the Defender was under way, sailing? A.—When she was in racing trim? While she was sailing? I don't remember.

Q.—At any time? A.—I have noticed it when we have been pumping the boat out sometimes in the morning. I noticed water coming from it, from the deck.

Q.—Did you notice it at that time at all? A.—I don't remember that morning particularly. I know when we generally pumped the boat out I would look over the side to see whether the water was coming out or not.

Q.—You have seen that? A.—Yes, sir.

Q.—How did it come out? A.—It was just under water.

Q.—Were you present when an observation was made to see if she had any water in her the morning before the race? A.—Yes, sir; I was.

Q.—That was done by the carpenter, under the oversight of Mr. Iselin, and you were present? A.—I think the carpenter took up the floor, but I am not positive whether he or—I am not certain whether one of the men, Sellers, did not do it.

Q.—What was the result? Was any water found in her? A.—No water there.

By Mr. Askwith:

Q.—Where did you leave your boats? A.—I left one on the Hattie Palmer, the gig. Both of them; we had two boats on her.

Q.—You did not use the boats going backward and forward on that night, or perhaps generally during the races, did you, between the Hattie Palmer and the Defender? A.—One boat we could use if we wanted to. No, we never used the boats to go backward and forward to the Hattie Palmer, because she was always alongside of us when we boarded her.

Q.—How big was the pump for this hole? A.—I could not say what was the size of the pump. I know the discharge pipe was about an inch and a quarter, perhaps.

Q.—Can you give me the height of the pump? A.—I could not say exactly. We had to set a brake on board the deck to pump. The brake was screwed on flush with the deck.

Q.—Were there any other pumps in the boat? A.—No pumps. What do you mean?

Q.—On the Defender? A.—After the water tank was taken out there was none. We used to have a pump to pump the water tank out. Water closet pump.

Q.—We have heard that they were used on the starboard side forward? A.—There might have been a water closet pump there.

Q.—Had there ever been a tank there? A.—No tank there.

Q.—There was no pump in connection with it? A.—Water closet pump; there is always a pump connected with a water closet.

Q.—Was there a water closet forward on the starboard side? A.—One at the bow; yes, sir. I won't say whether that pipe is on the starboard or port. But there was a water closet there and a pump attached to it.

Q.—Was there not a pipe about amidships, and was there not another pipe hole in the starboard side forward? Was there or was there not? A.—I think there was. If there was any there it was a water closet pipe. I would not say whether it was starboard or port. I think it was starboard.

Q.—Had there been a water closet forward on the starboard side? A.—Yes, sir; it was on the starboard side.

Q.—Was that water closet taken out or not? A.—No.

Q.—How many water closets were left in? A.—Four.

Q.—Where were they situated? A.—One forward in the bow; the next one was forward of amidships on the port side; just about amidships on the starboard side, and one further aft on the starboard side.

Q.—You got three on the starboard side, did you not? A.—Yes, sir.

Q.—Was there a pipe to each of them? A.—There must have been?

Q.—An outlet through her skin? A.—Of course.

Q.—Was not the wind blowing rather strongly on the evening of Sept. 6? A.—No, a nice breeze; not very strong.

Q.—Was it not rising? A.—I didn't think so.

Q.—Did not the wind on the morning of the 7th rather suddenly drop away? A.—It died down some, I think. It died down some. I don't know that it dropped away very sudden, I don't know about that.

Q.—Was there not considerable sea left running? A.—I think there was.

Q.—Was not that the kind of weather, with considerable sea, in which it would be an advantage for the boat to be rather stiffer—of the type of the Defender? A.—No, sir; I do not think so.

Q.—Would she sail better if she were light, in a considerable sea? A.—I think so; a boat that had as much weight as she did; as much stationary ballast as she had.

Q.—As much stationary ballast in the form of lead? A.—As much in her keel. That is what I mean by stationary ballast—her keel was lead.

Q.—Had she had seas of the kind in any of the previous races during the previous summer? A.—Not very much, I think. One or two races we had.

Q.—Do you call to mind the sea that there was upon Sept. 6? Was that the kind of weather that you had had in several races during the summer? A.—I don't know that we had exactly the same kind of sea. We had had a sea that was nearly as bad, perhaps. We had had one or two races.

Q.—Can you give me any of the races during the summer which you would compare in roughness of sea? A.—The nearest to it was the first race we had with the Vigilant, outside the Hook. I don't remember the day, some time in July, I think. July 20, or about there. Another time, I think, was the first trial race.

Q.—The first trial race and the race about July 20? A.—Yes, sir.

Q.—Had she then the same amount of furniture and stuff in her as was put ashore at New Rochelle? A.—The same things.

Q.—Then the trim in which she sailed those races would be a trim that satisfied you? A.—Well, yes; nearly so.

Q.—Assuming that she was lightened before measurement, would it not be an advantage to get her back into the trim? A.—It would have been an advantage to have had her lighter than she was, anyhow.

Q.—Lighter than she was when she was sailing in July? A.—When she sailed.

Q.—Sailing in July and the first trial race? A.—In the last race, I mean.

By Mr. Choate:

Q.—The Cup races? A.—The Cup races.

By Mr. Askwith:

Q.—I am upon another point. Would it not be an advantage for her, assuming that she was lightened, compared with what she had been before the ballast was taken out at New Rochelle, to return to the same trim that she was in before the ballast was taken out? A.—We didn't know then whether she was in the right trim or not.

Q.—You had been sailing all summer. You told me that you were satisfied with the trim that she sailed in on this race in July and the first Cup race, did you not? A.—We were satisfied the boat had stability enough. In fact, more than she needed.

Q.—She was too stiff? A.—Yes, sir; plenty stiff enough.

Q.—Had you taken the whole summer to come to that conclusion? A.—No; I don't know as I had, altogether.

Q.—Have you ever altered a boat just before an important race by taking all her furniture out of her and putting in a new kind of ballast? A.—I don't remember any particular instance. I think we have some, yes.

Q.—Do you think it a wise sort of thing to lighten a vessel just before a race? A.—I do, yes. I thought her—

Q.—Altering the ballast and taking a ballast which you did not know what it came to? A.—A ballast that common sense would teach a man what to do better with.

Q.—Did you do it by rule of thumb? A.—I guess at it—what little experience I have had. Yes, that is it. I don't pretend to know so much about the theoretical part as some. I am not an expert about this business at all.

Q.—You like to have ballast in that suits best according to your practical views of sailing? Is that it? A.—Yes, sir.

Q.—When did they begin to cut these pigs up? A.—Immediately we got the Palmer alongside, after dropping her anchor.

Q.—What time of the day was that? A.—Somewhere near—we commenced to cut the pigs, I think it was about 8:35, if I remember right, or 8:40, or somewhere there.

Q.—Who told the men to cut the pigs up? A.—I did.

Q.—How many were occupied upon it? A.—Oh, I couldn't say; a good part of the men were around. Some were passing the pigs out about as fast as we cut them, and stood ready to pass them back.

Q.—With the chisel and hammer? A.—Yes, sir; chisel and hammer—or chisel and maul.

Q.—An odd way to cut up lead; an old-fashioned way? A.—I never saw any better way to cut them, unless you had a steam saw-mill to saw them. That is the only way to cut it. They cut it very nicely and very quickly, in about three-quarters of an hour.

Q.—Was there any more lead on the Hattie Palmer? A.—Not to my knowledge; no, sir. If there had been I would have known it.

Q.—You cannot tell me the weight of the cots that were taken out? A.—I could not tell. I would not like to say positively. I should judge that there was some—

Q.—What kind of cots were they? Iron? A.—They were these iron-framed cots, a part of them. Twenty-two—yes, there were thirty of those, I think, or nearly thirty. I should judge that they would weigh in the neighborhood of 40lbs. apiece, with the mattresses and blankets and all attached. Then there was some dozen or more cots that would be pretty nearly about the same amount. Twelve or fifteen hundredweight, probably.

Mr. Choate.—Is that all?

Mr. Askwith.—Yes, that is all.

The Chairman.—Is there any other witness that you particularly desire to discharge to-night?

Mr. Choate.—Mr. Hyslop would take about five minutes. We will examine him. I would like to ask Capt. Haff what the condition of the water about the Defender was on the morning of the 7th, when Mr. Iselin came on board, and from there until you left your position?

Capt. Haff.—Some little swell, coming in from the Hook. Naturally would be with the sea that was outside.

Mr. Choate.—The boat did not lie entirely still?

Capt. Haff.—No, sir. I want to say, gentlemen, that that boat sailed those races with just every pound of weight aboard of her that she was measured with, and not a pound more.

Mr. Choate.—If your opinion had been asked after she had been stripped, would you have put in the two tons or the three tons of lead—if you had had your way?

Capt. Haff.—If I had had my way I would have taken out every pound of lead she had in her to sail those races with, whether it blew high or blown low.

John Hyslop, being called as a witness on behalf of Mr. Iselin, testified as follows:

Direct examination by Mr. Choate:

Q.—I understand that you were the official measurer who made the two measurements of the Defender, one on Friday and the other on Sunday? A.—That is correct.

Q.—The 6th and 8th? A.—Yes, sir.

Q.—Were those two measurements correctly made? A.—They were.

Q.—On Sunday, after the remeasurement, she was marked upon the stem, and with a red disc on either side, at the waterline? A.—Yes, sir.

Q.—You saw that done? A.—Yes, sir.

Q.—You know that was correct, according to the measurement then taken? A.—Yes, sir. Let me say that all those measurements were made with the joint observation and concurrence of Mr. Watson and Mr. Herreshoff and myself; each and all of them.

Q.—Have you seen the Defender since those marks were put on? A.—I have.

Q.—When last? A.—Last Saturday.

Q.—At New Rochelle? A.—Yes, sir.

Q.—And is the mark upon the stem, and the two discs, exactly as they were placed there after the measurement was made? A.—They are there, to all appearances, identically as left.

By Mr. Rives:

Q.—I would like to ask you a question about the marking of the boat on the first occasion, on Friday. Did you put any marks on her deck? A.—The customary marking.

Q.—What is the customary marking? A.—Simply a round-headed copper tack, perpendicular to the intersection of the water with the stem or stern, as the case may be.

Q.—That was driven in on the deck of the Defender, and also on the deck of the Valkyrie III? A.—It was.

Q.—You speak of that as a customary thing. How long has that been the custom? A.—It has been the custom ever since I have measured for the New York Y. C.

Q.—How long was that? A.—I should say somewhere about ten years.

Q.—Was it the custom in 1893? A.—Yes, sir.

Q.—Did you measure Valkyrie II? A.—Yes, sir.

Q.—Did you mark with a tack on deck? A.—Yes, sir.

Q.—There were no external marks put on the Valkyrie or Vigilant; were there? A.—No, sir.

By Mr. Choate:

Q.—Did you preserve the batten that was used in measuring on Friday? A.—Yes, sir.

Q.—How came you to do that? A.—I did that as a result of a conference held between Mr. Canfield, Mr. Watson—I think Mr. Rogers took a part in it, I know as to the others—and myself.

Q.—What was the conference, and when did it take place? A.—The conference took place on Friday afternoon, Sept. 6.

Q.—Before the measurement? A.—After the measurement, and had reference to putting marks on the two boats that had been measured. There was not at that time an agreement as to which would be the best way of marking. It was seen that it would be exceedingly difficult to change any mark under the stern of either boat; and, if painted—I think it was allowed by every one engaged in the discussion—that if painted it would not be easy to observe any marked place at the intersection of the water at the stern. It was more easy to place such a mark at the stem and to discern it, and it was agreed that such mark would be satisfactory. Mr. Watson suggested that a mark placed on each side about the rudder, resembling, as he said, a Plimsoll mark, a mark customary, I believe, on the other side, and put on trading vessels, beyond which depth they are not permitted to be loaded. It is an arrangement of the Commercial Marine. Mr. Watson's suggestion was that that would be a satisfactory mark, and I was asked, if I came on Sunday morning, if the boats were there on Sunday morning, I could arrange to be there to mark them. At that time the Valkyrie, as I recollect, had gone away. I stated that I would be there on Sunday morning if the boats were there, and the best recollection I have is that an hour was named on Sunday morning that I should be there, and the two vessels should be there.

Q.—What hour was that? A.—My recollection is 10 o'clock.

Q.—Did you hear anything about a remeasurement to be made on Sunday, that evening, Friday? A.—No, sir. Nothing was known by me. Nothing was mentioned or suggested about a remeasurement, but to re-mark, to put those marks—to mark the spot to which the measurement was made on Friday—put those marks there on Sunday, it was necessary that the batten should be retained; and that—I first ascertained from some one connected with the yard, I do not remember who it was; but the first person I came across who could tell me as to the customs of the yard. I first ascertained whether it would be practicable to get into the yard, to secure entrance on Sunday. I was told it would be; that there was a man always there, who could enter the carpenter shop and procure the batten if it was deposited there. The batten was left in the charge of Captain Haff, to send up immediately to the carpenter shop for preservation, and it was found there on that Sunday following.

Q.—Will you look at this letter that I now show you and say if you received it from Mr. Canfield Saturday evening, the 7th? A.—Yes, sir. I recognize the letter.

Mr. Choate.—I will read this:

"SEPT. 7, 1895 P. M.—My Dear Mr. Hyslop: You have misunderstood my letter. I asked you to measure the two yachts to-morrow at 10 A. M. at Erie Basin, it having been arranged that you were to be there to mark them at either end of 1 w.l. with Mr. George L. Watson. I also asked you to go on the regatta committee boat during the racing days—not to-morrow, but next Tuesday—leaving at 8 A. M. foot o Twenty-sixth street, East River. Yours truly,

"A. CLASS CANFIELD."

Mr. Hyslop.—Yes, I remember that.

Q.—One more question. What do you say as to the practicability

of measuring yachts in the dark—at night? A.—Yes, sir; I have attempted that.

Q.—You have attempted it? A.—Yes, sir.

Q.—With what result? A.—The attempt was made with the Valkyrie.

By Mr. Rives:

Q.—Which Valkyrie? A.—The Valkyrie—the last boat here—Valkyrie III. The attempt was made on the night of Sept. 11 to measure the Valkyrie in that way. A ton or a larger quantity—it may have been a ton and a half—of ballast was, as I was informed, taken from the Valkyrie. She was in the dock. This was removed and it was desired that she should be remeasured, so that in the race that was intended to take place on Thursday, the day following, she could have the advantage of the lessened measurement on the load line. I went there. My information was that she would be afloat about 4 or 5 o'clock, I think. But I went over there at that time and found that it was misinformation. The boat was not afloat until after 9 o'clock that evening; probably nearer 10. Mr. Watson and myself had been discussing the possibility of measuring her when she should be afloat, and I think he conceded the point that it would be pretty well impracticable. But, desiring that no injustice should be done to the boat, and no occasion for complaint be given, I remained there, that there might be no doubt whatever about it, and prepared to make the attempt. Lanterns were secured, a certain number of electric lights were arranged about the yard, and Mr. Watson and myself made the best efforts to secure even an approximate measurement of the boat, but it was utterly futile, and so conceded by Mr. Watson, and, of course, acknowledged by me.

Q.—You do not consider it possible? A.—It is not. It is utterly impossible with a modern vessel such as the Valkyrie and Defender.

Q.—Did you understand this was to prepare the Valkyrie on the third race on which she went over the line? A.—Certainly, yes.

Q.—Who gave you the information?

Mr. Hyslop—Who asked me that I should measure it?

Mr. Rives—Yes; who told you what the plan was, for taking out a ton and a half or putting in a ton and a half?

A.—I do not know that I had the information, I may have had, until I went to the dock; but I didn't know that it was desired that a new measurement should be obtained. As to who informed me I cannot now state.

Q.—Was it to be made after the removal or the addition of a ton and a half? A.—A ton, or whatever it might be; I can't say as to the quantity. I presume that quantity of ballast was taken out on Sunday, the 11th, and the measurement was wanted to ascertain the extent to which her waterline was shortened.

Q.—Was Lord Dunraven aboard then? A.—He was not; not in my sight.

By Mr. Askwith:

Q.—All this new alteration of the Valkyrie that you are alluding to is, under the terms of the agreement and under the rules of the New York Y. C., that if a vessel desires either to increase her load waterline length or her spar measurements, she must obtain a new measurement by special appointment, before the next race, under that rule? A.—Precisely.

Q.—Are you the person who is responsible for the term "physically impossible" in the America's Cup committee report? A.—I do not remember the use of such a term.

Q.—The term "physically impossible" to remeasure her that night? A.—I had nothing to do with writing that report. I am not a member of the Cup committee.

Q.—You have not seen that? A.—I do not recognize the term. It is, nevertheless, true.

Q.—When did you arrange with Mr. George L. Watson, as alluded to in this letter of Sept. 7? Was that the arrangement made the evening of Sept. 7? That is the supplementary letter to the first one Mr. Choate read.

Mr. Hyslop—When did I arrange with Mr. George Watson to make the measurements here referred to? Is that the question?

Mr. Askwith—Yes.

A.—On Friday.

Q.—Was Lord Dunraven present? A.—I believe he was near by. That is my recollection. I have a further impression, I will not say it is a matter of distinct recollection, that there was some conference between Mr. Watson and his Lordship in reference to the matter.

Q.—There had been a conversation about marking upon the Friday with some members of the Cup committee and yourself, had there not? A.—That is precisely what I have been referring to, yes.

Q.—Was that after the Valkyrie had been measured? A.—Yes, sir.

Q.—Was she out? A.—Yes, sir.

Q.—And Mr. Watson stayed behind for the measuring of the Defender? A.—He was—yes, he stayed behind, and that may have been a part of his object. I do not know.

Q.—Was not Lord Dunraven absent? A.—I remember that Mr. Watson was behind and the Valkyrie was away.

Q.—The remeasurement came as a new thing to you on Saturday evening? A.—It did.

Q.—Are you aware that as long ago as January, 1894, attempts were made to suggest that there should be an alteration in the rules as to marking, after the races between the Vigilant and Valkyrie II in 1893? A.—I have no knowledge or recollection of that. It may have been within my knowledge at the time, but it is not a matter with which I should have officially to deal with.

Q.—Don you know that Mr. Tams, of this club, was requested to take the subject up officially, as it would be embodied in any rules that would be made to govern a contest between an English and an American yacht in the future. A.—Yes, sir. It would not be a matter that it would be necessary to bring under my cognizance in any way.

By Mr. Whitney:

Q.—In the statement of Lord Dunraven there is a reference made to you: "I may mention that according to Mr. Hyslop, the official measurer, the Defender was some 6in shorter when measured for the Cup races than when measured for the Goelet cup race." What do you say with reference to that? A.—I have not the slightest recollection of anything of the kind. As a matter of actual fact there was a remarkable coincidence between the measurement of the Defender—the first measurement, made about Aug. 16—and the Valkyrie measurement; they precisely coincided. I had no recollection of having mentioned anything—such as "previous measurement of the Defender"—to Lord Dunraven, but the matter was sufficiently remarkable, and it would not have been at all wonderful when I came to measure the Valkyrie to mention that coincidence; but I have not the slightest recollection of doing so or making any comparison between the first measurement of the Defender and any subsequent one. I have no knowledge of it whatever.

By Mr. Askwith:

Q.—Was the Defender measured for the Goelet cup? A.—No, sir; there was only one measurement of the Defender previous to that of Sept. 6. That measurement was made on Aug. 16.

Q.—Was that the first of the trial races? A.—Well, the measurement taken then, I suppose, would determine all preceding events, as between the Vigilant and the Defender. That was, however, the date of the first measurement.

Q.—Was that the first and only occasion on which you had made a measurement? A.—That was the first occasion on which I measured the Defender—Aug. 16.

By Mr. Whitney:

Q.—Have you the statistics showing the third measurement? You measured the Defender three times? A.—Yes, I measured her three times, Aug. 16, Sept. 6, and Sunday, the 8th, three measurements.

By Mr. Choate:

Q.—It has not been stated on authority yet how much difference you actually found in each vessel, between the Friday and the Sunday. Will you state? A.—The Defender was 1-16in. less. The Valkyrie was 1/2in. more.

Q.—And that was as near as you could expect they would come to it, with the same trim, condition and ballast as before? A.—Well, sir, it was commonly spoken of as a thing impossible to do.

Q.—To make them twice exactly the same? A.—It was done to my satisfaction; it was done, as far as there was any expression of it, equally to the satisfaction of the representatives of the contesting yachts, Mr. Watson on the one hand, and Mr. Herreshoff on the other; of course to my satisfaction.

By Mr. Rives:

Q.—I would like to call your attention to a statement on pages 4 and 5 of Lord Dunraven's pamphlet, in which he says that he was under the impression that the rule of the New York Y. C. meant that a vessel should be marked on the stem and stern in such a way as to make the marks externally visible; that he learned this at a meeting of the Cup committee on Aug. 30; that according to the practice of the New York Y. C., the l.w.l. length is marked by a couple of tacks on the deck. I understood you to say that same practice existed in the summer of 1893, when Valkyrie II was here? A.—It did, and for many years previous to that.

Q.—And at that time you did mark Valkyrie II in that way? A.—In that way.

Q.—And in only that way? A.—In only that way.

Q.—So that Lord Dunraven must be mistaken in saying that he learned this on Aug. 30, 1893? A.—Precisely. Most certainly the Valkyrie II was marked in the same way.

By Mr. Whitney:

Q.—Have you got the figures showing what your three measurements were of the Defender? A.—I can procure them very readily. I have got my note book in my overcoat pocket. I will get it. It is right here.

Q.—Do you mean the waterline measurement?

Mr. Whitney—The waterline measurement.

A. (continuing, after looking at note book)—Aug. 16, 88⁸⁵/₁₀₀ ft. Sept. 6, 88⁴⁵/₁₀₀ ft. Sept. 11, 88⁴⁵/₁₀₀ ft.

By Mr. Morgan:

Q.—Sept. 8 that was, was it not? A.—The last one was Sept. 11. I measured her on Wednesday, the 11th, also. I measured her on the 8th and also on Sept. 11.

Q.—The Defender?

Mr. Hyslop—Wait a minute; let me see!

The Chairman—You have given the measurement on the 8th.

Mr. Hyslop—There is an explanation there. I shall mislead you. I did measure her. I measured the rig on Sept. 11, but the waterline measurement was taken on Sunday.

The Chairman—On the 8th?

Mr. Hyslop—The waterline measurement was taken on the 8th, but there was a spar carried away and it was necessary to remeasure the rig on Sept. 11; 88.445 is the measurement of the waterline as taken on Sunday, the 8th.

Mr. Whitney—Then the three measurements of the Defender's waterline were, first 88.85, second 88.45, and the next 88.445.

Mr. Hyslop—Precisely.

Mr. Askwith—In respect to this rule that you are alluding to, Lord Dunraven only says: "I was under the impression." The rule itself is absolutely distinct. In reference to the interpretation that appears to have been, by custom, changed.

At 6 o'clock P. M. the committee adjourned.

New York Y. C.

THE adjourned meeting of the New York Y. C. was held on Feb. 27 with 240 members present, Com. Brown being in the chair. After the meeting was called to order the following letters were submitted:

No. 27 NORFOLK STREET, Park Lane, W., Feb. 8, 1896.—*The Honorable Secretary of the Special Committee of the N. Y. Y. C.*: Dear Sir—I have to acknowledge the receipt of a copy of the report and proceedings of the special committee of inquiry of the New York Y. C., and trust that you will express to the members of the committee my appreciation of the courtesy and patience with which the conduct of so difficult an inquiry was marked. I am, sir, yours very faithfully,

DUNRAVEN.

DUNRAVEN'S LETTER TO PHELPS.

No. 27 NORFOLK STREET, Park Lane, W., Feb. 12, 1896.—Dear Mr. Phelps: The attitude of assisting the inquiry as a witness and not prosecuting, which, in the nature of the case, I had to adopt, and which I have consistently maintained, prevents me from presuming to accept or reject or criticize, either affirmatively or negatively, the committee's report officially; but in view of the many misunderstandings which have occurred I have felt myself justified in writing briefly to you (as I should be sorry if you or the committee misunderstood my silence), and in saying a few words to which you may give such publicity as you think fit or necessary.

My complaint was made *bona fide* on the direct evidence of eyesight—my own and that of competent men—as to effects the cause of which we did not know or attempt to define. It would, in my opinion, be impossible to find stronger reasons on which action could be taken, or as justification for a complaint of like nature to that which I most reluctantly made, and I am unable therefore to agree that my complaint was unreasonably originated.

I cannot admit a mistake in observed facts, as is suggested by the employment of a diagram accepted by the committee as mathematically proving that we did not see actual objects which we did see.

The only time for absolute proof or disproof of my complaint that Defender did not sail the race on Sept. 7 on her measured l.w.l. length must have been the day of the race. My conduct after the first race; my attitude toward the inquiry when I offered to go to New York, and before the inquiry when I was present in New York, all show my belief in that proposition—a proposition in my opinion self-evident, and I think admitted in evidence by members of the Cup committee.

Feeling as I do on this point, I am unable to adopt toward the judgment of your committee the attitude I should have unhesitatingly taken had the inquiry been conducted at the proper time by the authority under which I sailed, to which I made my complaint, and whose decision I was bound to accept. But I fully realize the difficulties of the situation, which have arisen, I think, largely through mutual misunderstanding, and, on the evidence before them, I most willingly accept the main conclusion of your committee and am only too glad to consider the dispute closed.

I have throughout frequently stated that I made no charge against Mr. Iselin and the other owners of Defender, and I do not agree that he and his friends and all connected with the vessel must have been aware if Defender sailed the first race deeper than when measured. As this is a matter personal to them, I have written to these gentlemen, to make the point perfectly clear.

There are two less important matters to which I may briefly refer. I believed, and for reasons given in evidence think I was justified in believing, that the owners knew of my complaint at the time that it was made, but I fully accept Mr. Iselin's statement that he was only cognizant of it on Oct. 24.

I have also written to Mr. Canfield and Mr. Rogers, admitting the error of my belief that the vessels were ordered to be marked in deference to my request made to the Cup committee on the 7th. Though neither I, nor any one on Valkyrie, understood that the yachts were to be marked on the 8th, I fully accept Mr. Canfield's and Mr. Rogers's statements that they believed they had explained the intentions of the committee to me. I remain, dear Mr. Phelps, yours very faithfully,

Hon. E. J. Phelps.

THE COMMITTEE'S COMMENT.

NEW YORK, Feb. 26, 1896.—*To the Commodore of the New York Y. C.*: Sir—Enclosed herewith will be found a communication from Lord Dunraven. As the committee, at its request, was discharged at the last meeting of the yacht club from further consideration of this matter, this communication is transmitted to the club for such action as it thinks proper. The committee has acknowledged the receipt of the letter and has notified Lord Dunraven of its transmission to the yacht club.

They cannot submit this letter without observing that Lord Dunraven misstates their report in an important particular. He says that a diagram was "accepted by the committee as mathematically proving that we did not see the actual objects which we did see." Nothing in the report justifies this statement. It was not denied or doubted that he saw the discharge hole of the bilge pump above the surface of the water on the day before the race, and that it was below the surface of the water on the following day. The fact demonstrated by the evidence and found in the report is, that the hole could not be visible above the water when the vessel was on an even keel, and consequently it was made visible on the first day by the vessel having a slight list to starboard, the probable cause of which the evidence pointed out. The apparent change in the relative position, therefore, afforded no evidence whatever that the immersion of the vessel had been increased in the meantime. Very respectfully yours,

EDWARD T. PHELPS,
J. PIERPONT MORGAN,
WILLIAM C. WHITNEY,
A. T. MAHAN,
G. L. RIVES.

THE VARIOUS CABLEGRAMS.

W. M. 35.

London 12.

Oddie, New York Y. C., New York:

Forwarded letter Rives Saturday.

Phelps to-day.

Cable, Feb. 12, 1896.

Received at 3:45 P. M.

DUNRAVEN.

No. 27 NORFOLK STREET, Park Lane, W., Feb. 12, 1896.—Dear Sir: Seeing that the New York Y. C. was to meet on the 13th to consider the report of the committee of inquiry appointed on Nov. 18 last, I thought it right to inform you by cable that I had written to Mr. Rives on the 8th inst., and to Mr. Phelps on the 12th inst. I remain yours faithfully,

J. V. S. Oddie, Esq.

DUNRAVEN.

W. M. 18.

London 32

Secretary New York Y. C., New York:

According papers here Ledyard's motion postponed pending arrival letters. These in my judgment do not affect terms of motion. Request leave Rives Phelps publish them here.

DUNRAVEN.

No. 27 NORFOLK STREET, Park Lane, W., Feb. 14, 1896.—Dear Sir: I see by to-day's papers that a motion before the New York Y. C. affecting my position as an honorary member of that club was postponed pending the arrival of letters, the dates of the dispatch of which I had cabled to you.

Viewing that in connection with certain unfounded paragraphs which had lately appeared in the papers, I think it desirable that the contents of my letters should be known as soon as possible, and cabled to you to obtain permission from Mr. Rives and Mr. Phelps to publish them with a view to their being cabled to New York. I remain yours faithfully,

J. V. S. Oddie, Esq.

DUNRAVEN.

"No. 27 NORFOLK STREET, Park Lane, W., Feb. 12, 1896.—Dear Sir: I should be obliged if you would inform Mr. Iselin that while thinking myself fully justified in believing that he must have known of my complaint against Defender on Sept. 7 last, seeing that it was made to the Cup committee through Mr. Fish, I wish to express my regret for having fallen into an impression which is shown to be erroneous by

his statement in evidence that he first heard of my complaint on Oct. 24. Also that in respect of the alleged alteration in Defender's l.w.l. length affecting the owners of that vessel, I am in agreement with the report of the committee, an opinion which I have persistently expressed. I remain yours faithfully,

"J. V. S. Oddie, Esq."

DUNRAVEN.

Mr. Oddie's reply was as follows:

"Sent Feb. 24, 1896.—*To Dunraven, 27 Norfolk street, London:* Letters confirming cables received. Iselin abroad.

Oddie."

After the reading of the letters, Mr. Lewis Cass Ledyard addressed the club as follows:

"At the last meeting of this club I introduced a resolution which called upon the Earl of Dunraven to resign his honorary membership in the club. I thought at that time, and I think a great many members of the club thought, that that method of dealing with the situation—asking him to resign, instead of taking more summary action against him—was more in accordance with the way in which we had been dealing with this matter up to that time. It seemed then more consistent with the courtesies and dignified and careful way in which all this subject has been treated by the New York Y. C.

"I do not think there has ever been in the mind of any member of the club, sir, an idea that we should accept any resignation by Lord Dunraven unless it was accompanied by a full, complete and ample apology, and at the same time a retraction of his charges.

"I have seen in the papers to-night a statement that he has resigned. I suppose, sir, under the circumstances that the secretary has made no mention of any such communication, that none has been received by the club. When I suggested, by the introduction of my resolution, that Lord Dunraven's resignation should be requested, I had in mind a resignation to be given by him in answer to a demand by the club—not a resignation such as any member in good standing could voluntarily tender and expect to have accepted.

"I think, sir, that the communications which we have received since the last meeting have put a different aspect upon the matter. Lord Dunraven, by these several communications, has shown that he has not accepted the result of this inquiry. He is still carping, still hedging, still evading and still insisting that he saw with his eyes what we all know that he never did see, and what has been conclusively proven to have been impossible.

"I think his course has been such that it is due now to the dignity and self-respect of this club that action should be taken which will leave no room for doubt as to the attitude of the club. And with that view I shall ask the unanimous consent of the members of the club to withdraw the resolution which I offered at the last meeting, for the purpose of submitting in its place another and different one."

Resolved, That the secretary be instructed to inform the Earl of Dunraven that his resignation as an honorary member of the New York Y. C. is requested by the club.

The substitute was as follows:

Whereas, the Earl of Dunraven, an honorary member of this club, has publicly charged foul play on the part of the Defender in the recent races for the America's Cup, of such a nature as necessarily to implicate the managing owners of the vessel.

The charge has been investigated by a commission of the highest character, which has proceeded judicially, and before which Lord Dunraven has appeared and given his own and other testimony, and has been heard in person and by counsel. The commission has unanimously decided that the charge was false; that it was not merely unproved, but was affirmatively disproved by competent and uncontradicted evidence, leaving no possibility of doubt.

The commission has also found that the facts upon which Lord Dunraven acted, according to his own statement, furnished no justification for making such a charge.

We deem it to be among the unquestioned rules which regulate the intercourse of gentlemen that when one finds that he has been led by mistake to cast unjust imputations upon the character of another he should promptly make such reparation as remains in his power by acknowledging his error, withdrawing the imputations and expressing his regret. Such reparation to Mr. Iselin and his associates the Earl of Dunraven, after full opportunity, has failed to make.

It further appears from the evidence, including Lord Dunraven's own admissions, that at the time of the Cup races he intentionally refrained from making the charge formally, or making any protest, as required by the rules, because it was impossible for him to verify the charge, and he was unwilling to undertake the responsibility of maintaining it.

It is not open to discussion that when gentlemen are engaged in any sport, and one suspects another of foul play, he is bound to make the charge then, and in such form and manner as to assume full responsibility therefor, or thereafter to remain silent.

It further appears that in print and in public speech Lord Dunraven has sought to justify the making of the charge by numerous misrepresentations of fact. He has been forced himself to admit the untruth of most of these, yet he stubbornly refuses to retract the injurious inferences drawn from them.

The representatives of this club engaged in the international yacht races with Lord Dunraven, as the representative of English yachtsmen, upon the footing of mutual confidence and honor. He has requited their courtesy and confidence by distrust, suspicion, unfounded imputations of fraud and a refusal of reparation.

Lord Dunraven by his course has forfeited the high esteem which led to his election as an honorary member of this club; therefore, be it

Resolved, That the privileges of honorary membership heretofore extended to the Earl of Dunraven are hereby withdrawn, and that his name be removed from the list of honorary members of the club.

The motion was seconded by Mr. Lloyd Phoenix, after which a vote was taken.

Out of the 240 members present, forty were yacht owners and privileged to vote; all but one, Mr. Chester C. Munroe, voting in the affirmative.

After Com. Brown had declared the result of the vote, and that Lord Dunraven was no longer a member of the New York Y. C., the meeting adjourned.

The Chicago Challenge.

E. P. WARNER, of the Lake Michigan Y. A., has lately been in Toronto for the express purpose of arranging the terms of the proposed match between the Lincoln Park Y. C. and the Royal Canadian Y. C. The objections on the part of the R. C. Y. C. were on the ground that the new challenger was considerably larger than any yacht available on the lake, and that a specially constructed racing yacht would be of no use save for this one match. The challengers are very desirous of making a match, and after giving the length of the new Vincedor as 45ft. racing length, they have finally offered to guarantee that she shall not exceed a measurement of 45ft., or that if she does any excess shall rate at a double allowance. A meeting of the sailing committee of the R. C. Y. C. was held on Feb. 28, at which the following acceptance was drawn up:

TORONTO, Feb. 28.—*C. O. Andrews, Esq., Sec'y Lincoln Park Y. C., Chicago, Ill.*: Dear Sir—The Commodore, Rear-Commodore and myself had great pleasure in meeting Mr. Warner, chairman of your regatta committee, and hearing his suggestions as to meeting the difficulty as to the size of the Vincedor, which we felt was such a serious obstacle to our accepting your proposals for a series of races between yachts of our respective clubs.

We now feel, however, that the proposals made at that interview, and corroborated in Mr. Warner's letter of Feb. 24, will surmount the difficulty, and that we can now appoint the committee to arrange details suggested by you in your original letter.

We think, however, in order that there may be no misunderstanding of the subject, owing to changes and modifications of the challenge, it would be well to recite them:

1. We understand the Vincedor is designed to be 48ft. corrected length, being about 44½ft. l.w.l., and that her construction has proceeded so far that it is impossible to now alter the dimensions of her hull.
2. That you agree to reduce the Vincedor to 45ft. corrected length, by reducing her sail area.
3. That should Vincedor measure over 45ft. corrected length, double time allowance to be allowed on such excess, but in no event shall such excess exceed ½ft. corrected length.
4. That our club is to meet the Vincedor with a yacht 42ft. c. l., as near as possible, but in no event must she exceed 42ft. by more than ½ft. c. l.
5. That the sailing rules of the New York Y. C. to govern the races, subject to such modifications and alterations as shall be mutually agreed upon between the committee on details.
6. That it is understood that corrected length, wherever mentioned in connection with this match, shall mean the racing length for time allowance, and shall be obtained, as per Lake Yacht Racing Association rules, viz., to the square foot of the sail area, add l.w.l., and divide by 2.

From the above you will see we do not contemplate that you can meet our representative with a new Vincedor designed to be 45ft. c. l. My committee greatly regret that it is impossible to make the match with similar sized yachts, as where a difference of size exists, to be adjusted by time allowance, the result is never so satisfactory.

If the above is your understanding of the subject, we would suggest that your committee draft what other conditions they think expedient, and forward for the consideration of our committee to E. J. Jarvis, chairman.

I might mention that we have appointed Messrs. C. A. B. Brown, our vice-commodore; E. J. Jarvis, our rear-commodore; and E. H. Ambrose as our committee on details, and that Mr. Jarvis is chairman, to whom kindly address all further communications.

P. S.—I am sending by concurrent mail a copy of the Lake Yacht

Racing Association book for 1895, which is the last issued, there being no changes since.

This arrangement, while all that is possible under the circumstances, will by no means make a fair match between the new yacht and Zelm, the only yacht available for the R. C. Y. C. The latter is but one stage advanced beyond Minerva in model and construction; and it has been conclusively proved about New York as well as in British waters that such craft can by no possible means compete with the modern fin-keels of the same size; much less with larger ones. Minerva has no chance whatever with Gloriana, to say nothing of Wasp, and yet the latter are far from being bulb-fins. The 35-footer Norota, a semi-fin with no bulb, is practically as fast as the old 40-footers; and yet she would be outsailed by an extreme fin-keel. It is out of the question to make a fair and satisfactory match between a new bulb-fin of 45ft. l.w.l. and an old cutter of but 37ft. waterline; the larger yacht may give an amount of time which seems very liberal and yet outtail the smaller and older one; or, on the other hand, should the latter win, all the credit will be discounted on the grounds of her excessive allowance.

It of course remains to be seen how fast a yacht the new designer Mr. Poekel will turn out, but it seems probable that she will be as speedy as her modern design and construction and his long experience with the Herreshoffs should warrant. It is in every way unfortunate that the matter was not started in a different way, by a mutual agreement with the R. C. Y. C. as to the best size of yacht before the design was completed and the work of construction begun. Now it is too late to alter the size of the new yacht.

Lord Dunraven's Resignation.

THE following letter reached New York on the Britannic on Feb. 28, the day after the meeting of the New York Y. C.:

"27 NORFOLK STREET, Park Lane, W., Feb. 19, 1896.—*To the Secretary of the New York Y. C., 67 Madison Avenue, New York.* Dear Sir—In supplement of my cablegram and letter of Feb. 14, I wish to emphasize the fact that my letters to Mr. Rives and Mr. Phelps were written and dispatched before I heard of the motion made by Capt. Ledyard.

"Without commenting on the grounds and terms of a motion with the justice of which I do not agree, I wish to say that in view of the fact that a motion of such a nature has been made and is upon the Agenda book, I do not desire to remain a member of the club, whatever the result of the motion may be.

"I therefore beg that you will lay my resignation before the club, a course which will probably be approved by the majority of the members. I remain yours faithfully,

"DUNRAVEN."

The same letter, with several differences in the wording, was cabled from London to the New York papers, by whom does not appear, and was published on Thursday afternoon preceding the meeting. Although the club had no official knowledge of the letter or warrant of its authenticity at the time of the meeting, it has been blamed for not accepting the resignation. The London *Globe* is quick to insinuate foul dealing, as follows:

"We are at a loss to understand why it was that the club had not received the letter at 9 o'clock last evening which had been published in the New York papers of that afternoon. We are strongly inclined to the belief that if the letter had not reached the secretary it was for the reason that arrangements were made to prevent his receiving it. It will be remembered that in the earlier stages of the controversy the period at which a certain note was received was the subject of some dispute and the cause of a deal of trouble."

Some of the other London papers, and Sir George Baden Powell, echo the same charge. The fact that the letter arrived by the Britannic on Friday is proof enough that it was not in the hands of the secretary on Thursday evening, in addition to which are the postmarks on the envelope. Sec'y Oddie has indorsed the envelope as follows:

Copy of a communication from the Earl of Dunraven, bearing mark, P. O., N. Y., 2, 28, '96, 3:10; also F 2, 28, '96, 4:12. Received at the club house Feb. 28, at 7:10 P. M.

This note means that the letter was received at the New York post-office at 3:10 o'clock on the afternoon of Feb. 28, at station F at 4:12 o'clock and at the New York Y. C. at 7:10 o'clock, Feb. 28.

In view of the fact that the resignation would not have been accepted, even had it been before the meeting, the whole incident is of little moment.

YACHTING NEWS NOTES.

The seventh annual meeting of the New York Y. R. A. was held on Feb. 5, the following officers being elected: Com., A. J. Prime, Yonkers; Vice-Com., E. Langerfeld, H. R. Y. C.; Sec'y, G. Parkhill; Treas., R. K. McMurray; Executive Committee, A. F. Adams, Newark Y. C.; A. F. Roe, Jersey City; Dr. Brandt, Pine Ridge; Capt. J. Ellsworth, Bayonne; A. C. Longyear, Newark Bay B. C.

The following amendments to the sailing rules were adopted:

Resolved, That Rule 2 of the sailing rules be amended so as to read as follows:

Rule 2. Measurement and Allowance.—All races or regattas given by any club a member of the Association or by the Association open to one or more club members of the Association shall be sailed under the rules of the Association, and the measurement for allowance for time shall be by one of the following systems, which shall be known respectively as the "Hull measurement" and "length and sail area measurement," which are as follows:

Section 1. Hull Measurement.—"The measurement for allowance for time shall be the length of the load waterline measured when in sailing trim, to which shall be added one-third of the overhang forward and aft, which shall be the sailing length."

Section 2. Length and Sail Area Measurement.—Yachts shall be rated for time allowance according to the following measurement:

To the load waterline length add the square root of the sail area and divide the sum by 2.

The load waterline length shall be the distance in a straight line between the points furthest forward and furthest aft, where the hull, exclusive of the rudder stock, is intersected by the surface of the water, when the yacht is afloat in racing trim, with all persons on board when the measurement is taken amidships. The measurer, at the time of taking the measurements, shall affix a distinctive mark at each point.

Section 3. In all races or regattas given by any club belonging to the Association open to one or more clubs, members of the Association, notice shall be given in the notice or invitation for such race or regatta of the rule of measurement to be used in such race or regatta, and this rule shall not prevent races or regattas being given under the length and sail area measurement for cabin yachts and hull measurement for open yachts, provided notice thereof is given in notice or invitation for such race or regatta.

Section 4. Allowance for time shall be figured according to the table of N. G. Herreshoff.

The Oceanic and Shrewsbury clubs were dropped from membership. The Association will hold its annual regatta on Labor Day.

The annual meeting and dinner of the Huguenot Y. C. was held on Feb. 15 at the Hotel Logerot, New York, the following officers being elected: Com., Charles Whann; Vice-Com., O. M. Connolly; Rear-Com., S. K. Gorman; Sec'y, R. T. Badgley; Treas., A. L. Laukuta. Trustees—For two years, W. H. Jacob and N. Pike, Jr.; for three years, A. F. Townsend and L. C. Ketchum. The club will lay out new courses, including a special one for the 15-footers.

The engines of the new Higgins steamer Varuna will be in charge of Chief Engineer Thompson, formerly of the steam yacht Sapphire II., who has sailed for Glasgow to overlook the yacht while under construction.

Col. C. McK. Loeser, a well-known New York yachtsman and member of the New York Y. C., died very suddenly at his home on Feb. 23.

The Council of the Yacht Racing Union held a meeting on Feb. 24 preparatory to the general meeting of the association on March 9, at the Fifth Avenue Hotel. The following definitions were suggested after much discussion: "Corinthianism in yachting is that attribute which represents participation for sport as distinct from gain and which also involves the acquirement of nautical experience through the love of sport rather than through necessity, or the hope of gain. It is consistent with the motive, higher than mercenary, found in the ranks of naval officers and naval architects, notwithstanding the remuneration they receive, while it is inconsistent with the trade of the shipwright or the fisherman, even though one following such a trade has never been a paid sailor. In this spirit (and with special cases subject to interpretation by competent judges) the following general definition is given: A Corinthian yachtsman is one who has never received pay for sailing a yacht or vessel, and who has never followed the water as a means of livelihood. No person who follows the sea as a means of livelihood, or who by calling is a shipwright, sailmaker, or rigger, and one who has accepted remuneration for services rendered or serving on a yacht, or who is a professional in other sports, shall now be considered a Corinthian yachtsman." A definition of what constitutes a cabin yacht was given as follows: "A vessel to be considered a cabin yacht must have substantial cabin accommodations, forming part of the permanent structure of the boat." At the meeting action will be taken on the proposed racing rules, the dates for races and the assignment of permanent racing numbers.

We have received notice of the coming publication of a guide to the rivers and canals of Great Britain and Ireland, edited by F. E. Prothero and W. A. Clark, and intended for the use of oarsmen and canoeists. The publishers are George Philip & Son, London.

The annual meeting of the Interlake Yachting Association was held at Detroit on Feb. 15, with about twenty-five delegates from different lake clubs in attendance. The following classification by waterline length was adopted: First class, 50ft. and over; second, all over 42ft. and under 50ft.; third, over 35 and under 42ft.; fourth, 30ft. and under 35ft.; fifth, 25ft. and under 30; sixth, all 20ft. or under. The following officers were elected: Com., George H. Worthington, Cleveland; Vice-Com., C. J. Lichtenberg, Detroit; Rear-Com., Henry Tracy, Toledo; Fleet Capt., George Bliss, Erie; Sec'y and Treas., Frank R. Frey, Toledo; Meas., Joseph Hepburn, Toledo; Fleet Surgeon, Dr. George Duffield Stewart, Detroit; Race Committee: Schulze, Bean and Nicholson, of Detroit; Potter, of Toledo, and Hubbard, of Sandusky.

The annual meeting of the Milwaukee Y. C. was held on Feb. 21, the following officers being elected: Com., C. J. Williams; Vice-Com., B. A. Coleman; Rear-Com., Thomas Camp; Treas., John J. Ovs, Jr. The club resolved to hold a regatta on July 4, regardless of the dates of the Lake Michigan Y. A., and also that yachts holding legs for the club cups must enter in this regatta or forfeit their rights.

The latest addition to the new 30ft. class is a yacht for Com. Gillig and Vice-Com. Work, of the Larchmont Y. C., designed and built by Sibbick, at Cowes.

The annual meeting of the New Rochelle Y. C. was held on Feb. 3, the following officers being elected: Com., Henry Andruss; Vice-Com., Henry Doscher; Rear-Com., William H. Simonson; Sec'y, J. C. Lippincott; Treas., E. B. Strong; Meas., Henry A. Doude. Trustees—1896, J. W. Adams; 1897, E. T. Smythe and G. W. Fuller; 1898, D. J. Krackehl and John T. Rough. The regatta committee was increased from three to five members by an amendment to the constitution, and the following were elected: C. T. Power, B. Talbot, W. N. Davier, P. A. Myrowitz and A. P. Weston. The Membership Committee are Eugene Lambden, W. S. Spencer and W. E. Moore, and Law Committee, J. W. Lambden and C. W. Voltz. These appointments were made: Fleet Captain, E. H. Kingsland; Fleet Surgeon, Dr. G. W. Chandler; Fleet Chaplain, the Rev. J. Ernest McGill. Some important changes were made in the club courses.

The body of Cuthbert S. Johnson reached New York on the steamer Trinidad last week, Mr. Marion Story accompanying it. The following account of the unfortunate occurrence is given by the *Bermuda Colonist*: "About 8 o'clock in the afternoon, Mr. Palmer and his other guests not then being on board, Culford, Mr. Palmer's valet, brought Mr. Johnson some beef tea and milk, which he took, and rubbed him with some liniment which Dr. Curtis had prescribed. He then helped him to change from the bed in which he was lying to another one. Mr. Johnson then put on a suit of pajamas, and complained to the valet of feeling very ill. About 4:30 deceased rang for the valet and inquired of him whether Mr. Palmer was on board. The servant told him the gentlemen had not yet returned, but were expected soon. A few minutes later Mr. Johnson rang again and put the same question to Culford, who had answered the summons, and received the same reply. No more than three minutes at the most had elapsed when the ship's crew were startled by the report of a pistol shot. Culford and the steward immediately ran to Mr. Johnson's cabin and found him lying on the floor on his right side against the dressing table, with his head close to the floor, the carpet around his head being saturated with blood. The servants, greatly frightened, reported to the captain that Mr. Johnson had committed suicide. The captain immediately sent for Dr. Trott and Mr. Palmer." Preparations were under way for a reception on board of Yampa on Feb. 22, but they were abandoned. The yacht sailed from Bermuda for Barbadoes, Eugene A. Willard, son of E. A. Willard, having joined her by steamer from New York.

At the meeting of the Seawanhaka Cor. Y. C. on Feb. 25 the following letter from Mr. Linton Hope was read: "GREENWICH, Feb. 8.—*Charles A. Sherman, Esq.,* Dear Sir—Many thanks for your letter of Jan. 24. I much regret that the races cannot take place before Aug. 20, as it will make it impossible for me to race this year now. Will your race committee allow me to postpone my challenge till next year, when we could no doubt arrange dates? Please accept my best thanks for the trouble you and your race committee have taken to try and arrange a race: Hoping to have better luck and more time next year, believe me, yours faithfully, LINTON HOPE." The annual dinner of the club will take place shortly.

Toronto C. C.

THE annual supper of the Toronto C. C. on Jan. 24 was a record-breaker. The club house was gayly decorated with flags and bunting and was filled by a jolly crowd of canoeists and their friends. A very enjoyable programme of music, songs and athletics was provided by the house committee, during an interval in which supper was served. Tables were arranged for 225 and every seat was occupied and a small overflow meeting arranged in one corner. There were no speeches except one by Com. Wilkie which dealt briefly with the prosperous condition of the club, showing a membership of over 200 and assets of \$1,100 and no liabilities. The main part of his speech was in reference to the coming A. C. A. meet at Gridstone Island. Elaborate arrangements are being made for a big turn out of Toronto canoeists which is expected, and the probability is that not less than 100 members will go down to the meet.

The T. C. C. Minstrels have since been organized and will probably give an account of themselves there.

Taking it altogether the supper was the most successful yet given by the club, and a pleasing feature of it was the enthusiasm manifested in connection with the A. C. A. meet.

CANOEING NEWS NOTES.

Mr. W. H. MULLINS, Salem, Ohio, has just made an offer of one of his stamped and embossed sheet bronze boats to "Overingenior" Andree, of Stockholm, Sweden, for use in his proposed expedition to the Arctic regions, which will start about June 1. Mr. Andree's party intends making this trip by the use of balloons and boats. This boat will be constructed especially, being braced and strengthened to prevent being crushed by the ice, etc.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the *FOREST AND STREAM*.

Rifle Range and Gallery.

Zettler Rifle Club.

NEW YORK, Feb. 25.—The Zettler Rifle Club's regular weekly competition came off this evening at the club's headquarters, 219 Bowery. Fourteen members put in an appearance and shot their scores, three of them, R. Busse, Dr. W. J. Furness and Gus. Nowak, shooting up a back score in addition to their regular five strings of 10 shots. Dr. Boyken, who is shooting in excellent form just now, was high with two scores of 249 out of a possible 250. The scores made were as follows:

R. Busse.....	244 237 239 240 241	H. Holges.....	233 240 247 244 243
245 237 238 244 242		H. D. Muller.....	241 241 231 237 240
Dr. J. A. Boyken.....	243 246 249 245 249	H. Muenz.....	227 233 235 236 230
S. Buzzini.....	233 238 239 233 232	G. Nowak.....	235 243 234 239 241
G. W. Downs.....	232 234 229 237 232		242 240 246 246 240

	231 241 237 238 246		

Pittsburg Rifle Club.

PITTSBURG, Pa., Feb. 25.—The Pittsburg Rifle Club held its regular weekly shoot this evening at its Sixth Avenue range. Nine members were present and shot their scores, which averaged better than usual. The conditions are: 40yds., off-hand, standard American target, 100 points possible:

Schmidt.....	74 65 63 66 64 ..	66	Whiting.....	73 77 82 79 81 ..	78
Sorg.....	76 62 67 63 ..	67	Hurlit.....	65 62 62 67 ..	64
Lawrence.....	70 65 68 67 64 ..	67	Itel.....	90 77 89 79 85 84	
Hofmeister.....	69 79 62 63 76 ..	70	Preston.....	51 66 71 70 ..	65
Lincoln.....	78 81 77 64 73 78 76				

New York Rifle Club.

NEW YORK, Feb. 26.—The New York Rifle Club's regular weekly shoot was held this evening at Zettler's, 219 Bowery. Only three members shot their strings, the following being the two best scores made by each man, together with his score on the honor target:

Honor Target.

D Crocker.....	242	241	67
William Uhler.....	242	240	..
R. J. Young.....	245	243	65

On Feb. 12 R. J. Young scored 247, 247, and on the honor target 71; William Uhler, the only other member of the club present, scored 242, 240, and 66 on the honor target.

Revolver Club.

A MEETING of all those interested in the proposed revolver club, of which Sergt. W. E. Petty and Wm. Maynard are the prime movers, has been called for Friday, March 6, at 8:30 P. M., in the range No. 12 St. Mark's place, New York.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES

March 12.—FANWOOD, N. J.—Second monthly tournament of the New Jersey Trap-Shooters' League, under the auspices of the Climax Gun Club. League team race at 2 P. M.

March 17.—ELIZABETH, N. J.—100-target handicap race, \$5 entrance, birds extra; handicap commences at 11 A. M. sharp.

March 17-18.—MORRISTOWN, N. J.—Tournament of the Morristown Gun and Athletic Club, at the driving park; live birds.

March 18-21.—BAYCHESTER, N. Y.—Tournament of the Cobweb Gun Club of New York city; first two days, targets; last two days, live birds. F. A. Kerker, Sec'y.

March 24-26.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap, at live birds at Elkwood Park; \$1,000 guaranteed in the main event, all surplus added.

March 31-April 2.—ELIZABETH, N. J.—Target tournament under the management of Neaf Appgar and C. C. Hebbard.

April 6.—PHILADELPHIA, Pa.—All-day shoot of the Forest Gun Club; grounds at Twenty-seventh street and Lehigh avenue. Wm. Morison, Sec'y.

April 14-16.—CHARLESTON, S. C.—Tournament of the Interstate Association, under the auspices of the Palmetto Gun Club.

April 14-17.—ATCHISON, Kansas.—Thirteenth annual open to all, and second annual manufacturer's amateur tournament; \$1400 added money and manufacturers' prizes. Lou Erhardt, Sec'y.

April 15-17.—PEEKSKILL, N. Y.—Annual spring tournament of the Peekskill Gun Club; first two days, targets; third day, live birds. O. J. Loder, Sec'y.

April 20-24.—HOUSTON, Texas.—Twentieth annual tournament of the Texas State Sportsmen's and Game Protective Association. J. Emmett Haney, Manager.

April 21-24.—OMAHA, Neb.—Nebraska State Sportsmen's Association's annual tournament; \$1,000 added to the purses. Frank S. Parmalee, Sec'y.

April 22-24.—WELLINGTON, Mass.—Tournament of the Boston Shooting Association; targets. O. B. Dickey, Manager.

April 28-30.—JOPLIN, Mo.—Annual Owl Shoot of Kansas and tournament of the Missouri Trap-Shooters' Association; also open-to-all programme; \$1,000 added to the purses. W. G. Sergeant, Sec'y.

April 29-30.—BIRMINGHAM, Ala.—Interstate Association's tournament, under the auspices of the Birmingham Rod and Gun Club.

April 30-May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

May 5-6.—BEDFORD, Ind.—Annual tournament of the Bedford Rod and Gun Club. R. R. Braxton, Sec'y.

May 5-6.—ALGONA, Ia.—Annual tournament of the Algona Gun Club.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; \$2,000 added money.

May 12-15.—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club. \$2,000 added money.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co. R. S. Waddell, Agent.

May 20-24.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

May 22-24.—MISSOULA, Mont.—Annual tournament of the Montana State Sportsmen's Association, under the auspices of the Missoula Rod and Gun Club. Will Cave, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 28-29.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club; nobody barred; targets. Royal Robinson, Sec'y.

May 28-28.—BINGHAMTON, N. Y.—Annual spring tournament of the Binghamton Gun Club; first two days, targets; third day, live birds.

May 30.—CANAJOHARIE, N. Y.—Tournament of the Canajoharie Rod and Gun Club; targets. Chas. Weeks, Sec'y.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 2-6.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. R. Meyers, Sec'y.

June 3-4.—NATCHEZ, Miss.—Interstate Association's tournament, under the auspices of the Galliard Sporting Club.

June 8-13.—BUFFALO, N. Y.—Thirty-eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 9-11.—DAVENPORT, Ia.—Annual tournament of the Iowa State Sportsmen's Association. R. B. Cook, Sec'y.

June 9-11.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.

June 10-11.—FARGO, N. D.—Second annual tournament of the North Dakota State Sportsmen's Association; targets; \$500 added money. W. W. Smith, Sec'y.

June 16-18.—URBANA, Ill.—Third annual tournament of the Crystal Lake Gun Club. Frank L. Bills, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company. Targets thrown free; \$770 in cash also added to the purses.

June 23-26.—PITTSBURG, Pa.—Tournament of the Pittsburg Gun Club; targets; \$500 added money.

June 30-July 2.—WOPSONONOCK, Pa.—Fourth annual tournament of the Altoona Rod and Gun Club; targets. W. S. Bookwalter, Sec'y.

July 22-23.—PORTLAND, Me.—Interstate Association's tournament, under the auspices of the Portland Gun Club.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to *Forest and Stream Publishing Company, 318 Broadway, New York.*

The North Side Gun Club, of Pittsburg, Pa., is one of the go-ahead clubs of a city where, Elmer Shaner says in a letter dated Feb. 23, "Shooting in this neck of the woods is booming." The North Side Club has its grounds on Marshall avenue, Allegheny City, Pa., just across the river from Pittsburg. It has decided to hold a monthly series of 100-target races, open to all, \$5 entrance, targets included in the entrance fee. Seven of these contests are already arranged for and occur on March 11, April 16, May 14, June 11, July 16, Aug. 13 and Sept. 10. The American E. C. Powder Company has donated a silver cup which will become the absolute property of the shooter who makes the highest aggregate score in 5 out of the above 7 shoots. The circular announcing the shoots says: "It will be the aim of the management to have all shooters placed on an equal footing, and the right to use a handicap, if deemed necessary, is reserved by the club.

Trap-shooting along the border between the United States and Canada is on the boom. A communication in regard to the prospects for sport in the vicinity of Sutton Junction, Province of Quebec, Can., appears in our trap columns. From it we gather that four new clubs will keep things moving in that locality during the coming season. The clubs named are: Waterloo Gun Club, Sutton Junction Gun Club, Sutton Gun Club and the North Troy Gun Club of Vermont; the three first named clubs are located in Canada.

William Morison, secretary of the Forest Gun Club of Philadelphia writes us under date of Feb. 19 as follows: "The annual meeting of the Forest Gun Club was held recently and officers for 1896 were elected as follows: President, Stephen J. Hotherhall; Vice-President, Arthur Baum; Secretary-treasurer, Wm. Morison; Field Captain, W. N. Stevenson; Assist. Field Captain, J. A. Ross; Official Scorer, Wm. Collins. Our club would like to arrange some matches with nearby clubs. On Easter Monday, April 6, we will give an all-day tournament; will send you programme later."

W. G. Sergeant, secretary of the Joplin, Mo., Gun Club, under whose auspices a 3-days' shoot will be held April 28-30, sends us the following communication: "We do not think that it is fully understood yet just the kind of a shoot we intend to give in April, and for the purpose of setting matters right we desire to make the following statement: With the exception of one event, our shoot will be open to all comers. This exception will be the Owl Shoot, consisting of one event only, and which is a contest between teams of three from any club in either Missouri or Kansas. We ask you to make this statement for us in order that there may be no misunderstanding as to the kind of a tournament we will give. We desire to emphasize the fact, that this tournament will be wide open (except as above stated), and that no one will be barred, and that we add \$1,375 in cash."

The West Newburgh Gun and Rifle Association, of Newburgh, N. Y., had a small live-bird shoot on Washington's Birthday. The chief feature of the day's shoot, aside from the regulation dinner at Jake Gidney's, was a friendly race at 50 live birds per man, the contestants being Jas. S. Taylor and Capt. George Taggart, both members of the club. Taylor won easily, scoring 42 to 36. The wind was blowing a gale, which accounts for some of the birds getting away. Jack Halstead and M. Perry, of Peekskill, N. Y., were among the visitors. A couple of \$3 miss and outs were shot; the first was divided between Taylor and Taggart, Taylor and Halstead dividing the second.

C. H. Calhoun, of Weir City, Kan., has challenged E. W. Hoffman, of Galena, Kan., the present holder of the Kansas live-bird championship trophy, to shoot a match for the same, under the conditions that govern the contests. Hoffman has accepted, and has named March 12 as the date, and Galena as the place where the contest shall be held. It will be remembered that Hoffman won the trophy from W. W. McIlhany, at Weir City, last December.

An amusing story is going the rounds about a shooter who made a big record on 50 live birds while shooting shells which he believed were loaded with a powder he wanted to try. After having cracked up the powder as just exactly what he was looking for, he opened one or two of the shells only to discover that he had been using the powder that he always shoots! We understand it took more than one bottle to settle it.

At the Eureka Gun Club's Washington's Birthday shoot, an account of which is given in these columns, the single-trigger gun shot by F. P. Stannard attracted much attention, and was closely examined by all the shooters. This gun was made for the firm of Montgomery Ward & Co., which firm Mr. Stannard represents, after a model furnished by Mr. Stannard, whose ideas were embodied in the model.

The second monthly meeting of the New Jersey Trap-Shooters' League will be held on Thursday, March 12, on the Climax Gun Club's grounds near Fanwood station on the line of the Central Railroad of New Jersey. A special programme will be gotten up for the occasion.

The Elizabeth, N. J., Gun Club announces that it will hold a 100-target handicap race, \$5 entrance, targets extra, on Tuesday, March 17. An optional sweepstake will be shot on each series of 25 targets. The time for the shoot to commence is 11 A. M. prompt. Other events will be shot if time permits.

The officers of the Huntington, Pa., Gun Club are: President, J. A. Fleming; Vice-President, John McOahan, Sr.; Secretary, R. K. Foster; Assistant Secretary, H. V. Johnston; Treasurer, L. R. Leister; Captain, G. S. Williams. The club is one of the live organizations of Western Pennsylvania, having been reorganized on April 5, 1895.

Rollo Heikes has been doing some record work in the way of rapid smashing of targets. His last record of 100 targets out of 120 in 4 minutes and 20 seconds is an eye-opener, and will take some beating.

Tom Callander says that the Nashville Gun Club will get in line this season. It intends to give a 3 days' target tournament some time in September, and will add \$1,300 to the purses.

We understand that in future an entrance fee will be charged at Willard Park, Paterson, N. J., whenever there is any shoot in progress.

MARCH 3. EDWARD BANKS.

Repeating Shotguns and Balks.

THE following case has been stated to us for the purpose of obtaining our views upon it:

A shooter enters in a live-bird event and uses a Winchester repeating shotgun; he fires his first cartridge, but is prevented from firing his second cartridge by the brass head of the first cartridge breaking away from the paper, lodging in the mechanism, and thus causing a non-ejection of the paper case. The bird escapes over the boundary. What should the referee decide in such a case?

Our answer is: Were we referee, and should such a case occur, we would allow another bird, as provided in all cases where a missfire has occurred in the second barrel of a double gun, or where a shooter has been balked when using any gun.

Being informed that the Interstate Association might be asked to make a ruling on the above point prior to the commencement of the Grand American Handicap, on the ground that such a case might actually arise during the meeting at Elkwood Park to be held under its auspices, March 24-26, we wrote to Mr. John S. Hoey and Mr. Elmer E. Shaner, manager of the Association, stating the case, and asking them to favor us with their ideas on the point involved. Mr. Hoey will act as one of the referees in the Grand American Handicap, and is, without doubt, one of the ablest referees in this or any other country. Mr. Shaner has had great experience as a live-bird shooter and as a referee, and while his opinion would not be official, his really national reputation in trap-shooting circles would add much weight to that opinion.

Mr. Hoey's answer to our letter is dated Feb. 26, and runs as follows: "As to that pump gun decision: In the first place, I don't think any man ought to use such a gun, for he is always or rather sometimes liable to have it not work properly. I have seen it happen at clay-bird shooting. However, it is not for me to condemn any gun. Pumps will be used, though I think a man who uses one handicaps himself. *Chacun a son gout.*

"As to a pump gun catching in its mechanism through a defective cartridge after the first cartridge has been fired at a live bird, which was not killed, I should say: The shooter should have another bird, with powder only in the first shell (if the referee was confident that the bird was not hit with the first barrel). A shooter should be protected. I am not thoroughly posted on the A. S. A. rules, but the generally accepted rule of all gun clubs I go to is as I have quoted touching the case in point. No man should be penalized for defective ammunition. Anyway, in view of so many pump guns being used, a definite decision should be arrived at aient the case in point."

Mr. Hoey's letter, the main part of which is given above, and which was written while he was slowly recovering from a very serious attack of the grip, closes with the following postscript: "There may be something in the claim that a defect in the gun is the shooter's loss, but my head is too weak to reason it out just now. However, it seems to me that every man should have an equal chance—and if one man can only fire one shell at a bird, where is his equal chance?"

In the second paragraph quoted from Mr. Hoey's letter we have italicized a sentence that was placed in brackets by the writer. We made use of the italics to mark what we take to be a very important point indeed; not so much as relating to the case in question, but to all guns, double or repeating. As we interpret Mr. Hoey's meaning, the sentence implies that if the referee was confident that the bird had been hit with the first barrel, he would then allow, in case of a missfire with the second, another bird and give the shooter the benefit of using two good shells. We think such a decision would be news to most of our readers, but there is just that amount of equity in it that characterizes all Mr. Hoey's rulings on similar points—"A shooter should be protected."

We thus have Mr. Hoey's opinion to back up our own. Mr. Shaner's letter was a complete surprise to us; we stated the case to him in almost precisely the same terms we did to Mr. Hoey, being perhaps a trifle more explicit in our communication to Mr. Shaner. As will be seen by a perusal of the following letter, he takes directly the opposite view of the case to that which is held by Mr. Hoey and by ourselves: (For the sake of ready reference later, while considering Mr. Shaner's arguments, we have designated each paragraph by a letter of the alphabet.)

(a) "Referring to the pump gun decision: 'I'm ferninst ye.' Old Hoss says: 'Me too.' According to my way of reasoning, I don't know of a set of live-bird rules that would allow a contestant another bird in a case of that kind. I'll admit that much can be said in favor of the decision for the pump gun, but we should not forget that the rules as framed at the present time are for double guns, and until they are changed to cover the point you raise, and others, my ruling would be, 'Lost bird.' To go back to the point in question: The shooter's gun, or rather shell, does *not* miss fire, in fact, the gun was not loaded at all to fire the second time. Would a contestant using a double gun be allowed another bird if he went to the score with but one shell in his gun? Never in the world! A contestant by using a pump gun handicaps himself by choice, and takes the risk of being able to do with a single gun what another contestant does with a double gun.

(b) "You say: 'Our claim is that the missfire is the fault of the ammunition. * * * No man will use shells that burst at the rim if he can help it, as it handicaps him too much' (italics are mine). Can't he help it? Will the ammunition companies sustain him in this? Why did the shell burst? Was it not because he was using more powder than the shell would stand? Or was the shell really weak? Will the ammunition companies say that their shells are faulty? Never in the world! They will say: 'These shells will stand a certain amount of powder, and if you use more than that it will be at your own risk.'

Therefore, cannot the shooter help it by using a stronger shell or less powder? Another case: If the shooter using a double gun has a shell burst at the rim, or where the paper joins the brass, and he does not shoot the second barrel, failing to kill with the first, will he be allowed another bird? If not, why not, according to your reasoning? The ammunition was just as faulty in the double gun as in the single.

(c) "Coming down to solid fact—is it really the shell's fault or the gun's fault through the chambers being a little larger than the shell? Would a shooter using a pump gun be allowed another bird in the following cases: If a shell got wet and got swollen, or if large wads were used, making a shell bulge so that it could not be fed properly? If the shells were poorly crimped, leaving a frayed edged, so that they would go into the chamber of the gun from the magazine? Or, if the extractor failed to grasp the head of the shell and did not extract the same? This same point in question came up at Grand Rapids, Mich., May 30, 1894, while I was refereeing, and Capt. Bartlett was at the score shooting doubles. His gun failed to extract a shell from some cause or other, and the first time it acted that way I allowed him another pair of targets; he shot and broke them. I then and there said that I would not allow another pair under the same conditions, as upon thinking it over I considered it wrong to do so. So you see this decision of mine is not made upon the spur of the moment, but has been talked over many a time. You will, of course, understand that the foregoing is my personal opinion, and does not come from the Interstate Association. I don't know what ruling it will make."

As a postscript to the above letter, Mr. Shaner adds: "Upon reading your letter over again, and my reply to it as well, I honestly believe that the very best that a shooter could hope to get in a case of the kind mentioned would be to allow him another bird the first time it happened, on account of a *defect in the gun, not ammunition*; but should he continue to use the same gun another bird should not be allowed, as he knew his gun was defective and he should remedy it. Understand me though—were I the referee, it would be lost bird *all the time*."

Replying to Mr. Shaner's arguments categorically, let us first consider what he advances in the paragraph marked a: " * * * We should not forget that the rules as framed at the present time are for double guns * * * " A. S. A. rules, revised 1893, certainly do not specify any style of gun, single or double; they merely say: "Rule 16. No gun of larger caliber than a 10-bore shall be used, and the weight of all guns shall be unlimited." Thus Mr. Shaner's statement in this connection is personal assumption not borne out by the rules.

The use of the terms "first barrel" and "second barrel" should often more correctly read "first cartridge" and "second cartridge." For example: "Rule 20. If a missfire occur with the second barrel, the shooter shall have another bird, using only a full charge of powder in the first barrel." Construing "barrel" as cartridge, a common sense construction as it seems to us, the present set of rules can be made to apply to repeating shotguns equally with double guns. Proceeding: "To go back to the point in question: The shooter's gun, or rather shell, does not missfire; in fact, the gun was not loaded at all to fire the second barrel." While it does not actually missfire, the occurrence is of the same nature as one, in that it is a balk. The only importance of a missfire is that it balks the shooter. The loading of a gun is complete when the shells are in their proper place, whether it be chamber or magazine. Mr. Shaner makes a great mistake when he says that the gun was "not loaded at all to fire the second barrel;" he might as well contend that a double gun was not loaded because a shooter cannot fire the second barrel owing to the safety bolt having jarred safe when the first shell was fired.

Mr. Shaner's query as to the man with the double gun and only one shell in it is a matter entirely irrelevant to the point at issue. The closing sentence of paragraph a would be scarcely worth noting were it not for the fact that he wrongly terms a repeating shotgun a "single gun." A repeater is no more a single gun than a Maxim, Nordenfolt or a revolver is a single rifle. In shooting a double gun the cartridges are shot one at a time, each cartridge having its own barrel; but in a magazine gun the cartridges are shot successively through the same barrel. Everyone knows the difference between a single gun and a repeater. A conclusion based on the assumption that a gun is a single gun because it has a single barrel, even though a multiplicity of shots can be fired through it more rapidly than is possible in a double gun, is not warranted by the facts and partakes of the nature of a quibble.

In paragraph b Mr. Shaner quotes from our letter to him. If we are correctly quoted, the two words "or balk" should have been written after the word "missfire." Mr. Shaner then puts into italics the words "if he can help it." We are glad that he has done so, as it emphasizes a very strong point. No man is going to use faulty ammunition if he knows it, simply because if he gets a missfire, or balk, through such faulty ammunition, he is severely handicapped by having to use a blank cartridge in the first barrel. No man is likely to use shells that are liable to missfire or blow the brass head off unless he wants to drop a bird or two for financial reasons without laying himself open to the charge of dropping for place. Such an act, however, would come under the head of misconduct, not balk, and is therefore an outside matter. Mr. Shaner is well aware that shells of good make do sometimes missfire or blow the head off in double guns as well as in repeaters. His query as to what should be done to a man who has a shell go to pieces in his first barrel, and who does not fire his second barrel, is decidedly funny. We fail to see that the question has any weight, as the shooter could not possibly claim a balk, missfire, or water on the brain, not having been prevented from pulling the trigger by the mishap to the shell in the first barrel. What a shooter voluntarily does is foreign to the issue, and a shooter could not tell that a shell had gone to pieces in his first barrel until he opened his gun. What the ammunition companies would say is not to the point either, but we don't think that any of them will deny that shells do missfire or part where the brass head joins the paper case, whether the gun be single, double or a repeater.

In paragraph c Mr. Shaner gets down to "solid fact." For his information we will state that the chambers in Winchester repeating shotguns (the gun in question) are standard size. As for Mr. Shaner's next few queries in regard to decisions where shells swollen by moisture, bulged by wads, or poorly crimped, were used by a shooter, such queries are totally irrelevant and altogether so much outside the question that we are surprised at his quoting them. The question at issue is whether the brass head of the shell separating from the paper case and lodging in the mechanism of a repeating shotgun, so as to prevent a shooter from using his second shell, constitutes a balk in the same degree that a snap of a primer in a double gun causes one. The cases quoted by Mr. Shaner in paragraph c are plainly instances where the shooter and not his ammunition is at fault.

Mr. Shaner's first decision in the Bartlett case was, in our opinion, correct. If, upon examination, the referee in a similar case found that the fault lay with the gun and not with the shell—in fact, that the extractor was faulty—and if the shooter continued to use the gun, such referee would be bound to call "lost bird" if the case occurred again. This decision, however, would only be based upon a common sense construction of any of the trap-shooting rules now in the hands of the shooters, there being no rule that actually covers the point. The fact that Mr. Shaner's opinion, as expressed in his letter to us, is his personal and not his official opinion must not be overlooked. The Interstate Association has its own set of rules, under which the Grand American Handicap and other live-bird events at Elkwood Park will be shot during the last week of March. It will be well for the association to consider the point raised, since it is possible that the referees in the various events may have a case of the kind to adjudicate upon.

The postscript to Mr. Shaner's letter is very much on the same order as the inevitable postscript to a young lady's letter which is said to contain more meat than all the rest of the communication. In it Mr. Shaner says positively that were he "the referee it would be lost bird all the time;" he also states that another bird could only be allowed for "a defect in the gun—not ammunition." That's the very point: Which is defective in this case, the gun or the ammunition? Can a gun be said to be defective when it works satisfactorily as long as the shells hold together? Is a missfire always the result of a faulty primer?

The Interstate Association rules (Hurlingham rules, revised 1894), as stated above, govern the referees' decisions during the Grand American Handicap week. These rules say:

Rule 6. A missfire is no shot under any circumstances.

Rule 8. If the missfire occur with the second barrel—the shooter having failed to kill with his first—he shall have another bird, but must shoot an ordinary charge of powder without shot in the first barrel, firing in the direction of the bird, which must be on the wing.

Rule 9. The shooter's feet shall be behind the shooting mark until after the gun is discharged. If in the opinion of the referee the shooter is balked in any way, he may allow him another bird.

Rule 25. The standard bore of the gun is No. 12, and no guns larger than 12-bore, or over 5 lbs. in weight, shall be allowed; 1 1/2 oz. of shot is the maximum charge.

American Association rules, revised 1893, Rule 23 says: "If a contestant is balked or interfered with, or there is other similar reason why it should be done, the referee may allow another bird."

In target-shooting rules the Interstate Association rules provide: "Rule 22. If the shooter fails to shoot after calling 'Pull,' the target shall be scored 'Lost,' unless the target fails to fly at the proper time, the gun shall be found at fault, or the shell properly loaded fails to go off when the primer is hit by the firing pin. The gun is not considered at fault when a hammerless gun is loaded and not cocked."

Rule 19 of the A. S. A. rules, revised 1893, says: "Section 1. The shooter shall be allowed another target for the following reasons: (a) For a target broken by the trap. (b) For any defect in the gun or load, causing a missfire. (c) If the contestant is interfered with, or balked, or there is other similar reason why it should be done, the referee may allow another target." A note is added to the above rule, as

follows: "When a shooter, in breaking his gun to put in the shells, fails to break it far enough to cock the gun, it is considered his own carelessness, and not sufficient excuse for the allowance of another target."

We have purposely quoted the rules that can be construed as bearing on the case, in order that the public may see on what grounds we base our claim of another bird in the point at issue. "When doctors differ," etc., and we have shown above that they do differ, some final decision must be arrived at, as the case may come up in some important match, and a referee should have some precedent to go upon. We believe that a referee has decided in a match shot within the past year that a bird lost under the conditions stated was a "lost bird," the bird so lost having probably cost the man shooting the repeater the match. We are also aware that in the recent Elliott-Morley match Elliott shot the race under protest, in case the point came up for decision (which did not happen), the referee agreed upon not being willing to say that he would give another bird under the circumstances.

Although under Rule 19 (target rules) of the A. S. A., quoted above, a referee may allow another target "for any defect in the gun or load, causing a missfire," in the case under consideration it is immaterial whether the fault is that of the gun or ammunition. The question really is, Was it a balk? Discussions as to the merits of ammunition, chambers of guns, etc., are really foreign to the issue. No matter whose make of ammunition is used, there will sooner or later be a missfire or some other defect in the shell, causing a balk, and it is in this connection that the matter is under discussion. No man can tell whether a shell will missfire or blow the head off until he has used it. Such occurrences, as stated above, happen in double guns as well as in repeaters. To penalize a shooter, therefore, for something he cannot know nor avoid, is an absurdity and contrary to all the principles of equity. Of course, if it can be shown that a shooter willfully uses swollen or bulged cartridges, or cartridges that are otherwise manifestly defective, then he should be punished. But that is another matter.

Further, in regard to Mr. Shaner's argument that the present rules were drawn up solely with a view to double guns: It can be assumed that the framers of the rules had in mind a common equity to all guns and all shooters. To assume that the framers of the rules had in mind in the matter of balks only such as could happen to double guns is to assume discrimination in favor of a class of guns and a class of shooters. The mechanical construction of a repeater and its use may induce some happenings impossible to a double gun. If the repeater is a factor in trap-shooting and the rules do not recognize it, as Mr. Shaner claims, it would seem to be the proper move to revise the rules at once to meet the conditions. The rules should treat all guns and all shooters impartially alike. If, as Mr. Shaner says, a contestant handicaps himself by using a repeater, there is nothing inherent in the sport that compels him to do so. Any legislation which imposes a handicap in the matter of balks for which the shooter is blameless is class legislation. It is arbitrary ruling, not a ruling on the equity and necessities of the competition.

Rollo Heikes's New Records.

THE great shooting done by Rollo O. Heikes, of Dayton, O., on Feb. 22 and 26, has been the subject of much comment among trap-shooters. We have been asked many times since he made his record in Louisville, Ky., on Feb. 22, just how many guns he used in accomplishing his task of breaking 100 targets out of 111 in 5 minutes and 35 seconds, his record on that occasion. Since that date, he has on the 25th, on the grounds of the Limited Gun Club at Indianapolis, Ind., made a far better record as far as speed is concerned, scoring 100 out of 120 targets in 4 minutes and 20 seconds.

Mr. Heikes uses in these exhibitions six Winchester repeating shotguns; each gun carries one shell in the chamber and 5 in the magazine. While the exhibition is in progress, these guns are loaded by assistants and placed on a table where Mr. Heikes can take hold of them readily. The incessant crack of the gun may be imagined from the fact that the 120 shots at Indianapolis were fired at the rate of a fraction over 27 to the minute!

That fancy shooting does not spoil Rollo's form for unknown angles is shown by the fact that at Louisville, though barred from taking part in the division of the purses, he shot along with the boys and broke 99 out of 100. At Indianapolis, he, Ralph Trimble, the champion of the Blue Grass State, and Ed. Rike, Heikes's fellow townsman from Dayton, O., gave an exhibition 100-target race, unknown angles. Some idea of the form these three men were in may be gathered from the following scores: Heikes 99, Trimble 99, Rike 98!

Staten Island Trap-Shooters.

GERMANIA ROD AND GUN CLUB.

Feb. 25.—The Germania Rod and Gun Club held its regular monthly shoot to-day at New Dorp Grove, Staten Island. The scores made were as follows:

Club shoot, 15 targets per man, handicap rise: William Glander (18) 14, G. H. Becker (16) 13, J. Knoebel (16) 12, C. L. Meyers (18) 11, C. A. Gurlech (16) 11, A. O. Schmitt (18) 10, H. J. Wolfine (18) 12, R. V. Wagner (16) 10, W. H. Schneider (16) 9, J. O. Brehm (16) 6, J. H. Dreuss (16) 4, T. L. Murphy (16) 3.

CLINTON ROD AND GUN CLUB.

Feb. 26.—The regular shoot of the Clinton Rod and Gun Club was held to-day at New Dorp Grove, Staten Island. The club shoot is at 7 live birds, handicap rise; in this event George J. Kingsland scored his 7 birds straight, being the only man that accomplished this feat. The scores were:

G. J. Kingsland (26) 7, Dr. Emil Schraeder (26) 6, H. J. Williamson (27) 5, T. P. Longrief (26) 3, E. W. Schraeder (26) 3, L. G. Wilson (26) 3, S. G. Porter (27) 3, R. S. Williamson (27) 2, J. O. Henderson (26) 2, A. W. Barton (27) 1, D. J. Schneider (26) 2, T. P. Lee (26) 2, R. D. Morgan (26) 2, W. H. Smith (26) 3.

The E. C. Tournament.

We have received the following communication from the American E. C. Powder Company, relative to its tournament next May:

"The E. C. Powder tournament which will be held at Guttenberg Race Track during first week in May promises to be an immense affair. Inquiries from all over the country are being received concerning it.

"Four sets of traps will be run continuously during the whole tournament; two sets of bluerock targets and traps and two sets of empire targets and traps. Guttenberg Race Track is an absolutely ideal place to hold a shoot. There is plenty of accommodation, while Elmer Shaner and Jack Parker, who will look after the running of the shoot, are prepared to manage any crowd, no matter how big it may be.

"Eastern shooters have invariably received such a lot of hospitality and had such a pleasant time socially at the numerous large tournaments held in the South and West that it is hoped that all New York sportsmen will join together as much as it is possible and aid the E. C. Powder Co. in making visiting shooters from a distance have as pleasant a time during the first week in May as possible. The following representative New York sportsmen have been requested by the E. C. Powder Co. to serve on an entertainment committee: T. H. Keller, New Utrecht Gun Club; Col. Heber Breintnall, South Side Gun Club; Col. Chas. Lenona, Passaic Gun Club; Louis H. Schortemeier, Emerald Gun Club; H. Folsom, Elizabeth Gun Club; H. Thurman, Keystone Shooting League; W. N. Drake, Maplewood Gun Club; E. D. Miller, Union Gun Club; Chas. Smith, Climax Gun Club; August Schmitt, N. Y. German Gun Club."

Grand American Handicap.

Editor Forest and Stream:

The Interstate Association is in receipt of numerous communications from sportsmen who represent firms other than those who are members of the association, inquiring as to whether they would be permitted to take part in the Grand American Tournament. For the benefit of all concerned, we desire to announce that all sportsmen are cordially invited to participate no matter what firm they may represent. A hearty welcome is assured, and every consideration consistent with fairness and equity will be shown them.

While on this subject it might be well to state that at the present writing every indication points to the complete success of the Grand American Handicap for 1896. The new method of dividing the purse has grown in popular favor so rapidly that it is highly probable this year's handicap will prove to be the greatest shooting event ever held in America, if not in the world.

PITTSBURG, Pa.

ELMER E. SHANER, Manager.

Joplin Gun Club.

JOPLIN, Mo., Feb. 22.—At the last shoot of the Joplin Gun Club six 20-target events were shot, unknown angles, the scores made being as given in the table below:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Huntley.....	19	16	20	18	19	20	Frye.....	18	18	19	20	17	20

W. G. SERGEANT, Sec'y.

In New Jersey.

MORGAN VERSUS WILLEY.

Feb. 18.—Allen Willey and Eddie Morgan, the latter a shooter from Paterson, N. J., shot a race to-day at Arthur Bunn's hotel, Singac, N. J. The conditions were rather severe for Willey, who was conceding his opponent no less than fyds. The birds were a good lot, and were aided by a strong wind. Willey, who was using a new gun, lost his second bird by going to the score without any shells in his gun. He was thinking too much about the safety bolt, something to which he was not accustomed, as his old gun was automatic. The race was very close, Morgan winning by just one bird, scoring 42 to 41. W. Dutcher, of Paterson, acted in the dual capacity of referee and scorer. The scores were:

KEYPORT DEFEATS SOUTH AMBOY.

Feb. 22.—The Bayside Gun Club, of Keyport, N. J., was royally entertained to-day by the members of the South Amboy Gun Club. The occasion was the return match between the two clubs, the first having been won by the Baysides on their own grounds. The South Amboy Gun Club's grounds are located directly on the shore of and facing the bay, there being thus a good background. After a most enjoyable afternoon of sport the Baysides were victorious by 52 breaks. The conditions were: Teams of 18 men, 25 targets per man, unknown angles. Below are the scores:

Bayside Gun Club.—Jas. Walling 20, T. Compton 14, H. Bennett 13, Jos. Vigne 15, D. A. Heyer 16, C. Ackerson 13, J. R. Walling 14, J. Aumack 10, H. E. Ackerson, Jr., 20, Wm. Brower, Jr., 7, P. M. Force 12, J. Crammer 22, A. Carhart 18, D. W. Walling 20, G. G. Hoagland 15, Wm. Watts 22, Nitro 17, Baritan 16; total 284.	
South Amboy Gun Club.—E. Ivins 12, S. Newton 13, F. Disbrow 13, A. Alcott 10, J. Deworth 16, J. Nau 16, J. Wallace 20, W. Dill 13, J. Edwards 9, H. Bloodgood 15, H. Greene 11, W. Mundy 9, J. Jacobs 14, J. Bloodgood 13, C. Rea 18, B. Dominick 10, F. Jacobs 8, L. Green 12; total 232.	

MAPLEWOOD GUN CLUB.

Feb. 22.—The attendance at the Maplewood Gun Club's shoot to-day was small, but those present had lots of sport and spent a thoroughly enjoyable day. Scores:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	10	15	10	20	10	10	10	10	10

Colquit.....			8	13		6	8	5	8	

No. 1 was at known angles; Nos. 2, 3, 5, 7 and 8 at unknown angles; No. 4, reversed order; No. 6, expert rules; Nos. 9 and 10, doubles.

BOONTON GUN CLUB.

Feb. 22.—The newly organized Boonton, N. J., Gun Club held its first live-bird shoot to-day. The weather was bright and clear, but rather cold; the coldness of the wind may have had something to do with the comparatively small attendance. Those present were: Lewis van Dune, Geo. B. and A. J. Neafie, D. R. Conklin, Wilbert Garrison, C. E. Banta, E. Fitzgibbon and W. H. Cole. G. B. Neafie scored 23 out of his 25, one of his lost birds falling dead out of bounds. The pigeons trapped were only a fair lot of flyers. Scores:

Van Dune.....	21110—4	01222—4	112122011—8	No. 4.
Conklin.....	20110—3	01011—3	211220100—6	10010—2

FORRESTER GUN CLUB.

Feb. 22.—The Forrester Gun Club, of Newark, N. J., held an all-day shoot at targets to-day. There was a fair attendance of shooters, who kept the traps busy all the time. The scores were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19
Targets:	10	10	10	10	15	10	10	10	10	10	10	10	10	10	10	10	10	10	10
F Sinnock.....	5	7	9	8	13	8	9	7	6	14	7	4	7	11	6	8	8	8	8
J Fleming.....	8	5	7	2	9	6	4				5	3							
J Sinnock.....	6	6	5	3	10														
H Wambold.....	6	8	5	7	11	9	6	4			8	6	7	13	8	9	7	6	6

J H Cummings.....							9	7	7	6	8	5	10						
C Smith.....							7	9	13		7	9							
T Smith.....										10	6	6	5	2					
Backus.....											4	6	5	5					

A team race was also shot between teams of six men, captained respectively by Wambold and F. Sinnock. Wambold's team won by 57 to 54. Each man shot at 15 targets, 90 to the team. Scores:

Wambold's team: Wambold 13, Dr. Cummings 11, D. Fleming 10, Hopper 8, Winans 8, J. H. Cummings 7; total 57.	
F. Sinnock's team: Hayes 12, F. Sinnock 11, C. Smith 11, T. Smith 10, Backus 7, H. Smith 2; total 53.	

In the above events Nos. 1, 2, 5, 7, 9, 11 and 17 were at known angles; Nos. 4, 8, 12, 14, 15, 16 and 19 at unknown angles; Nos. 3, 6, 10, 13 and 18 at reversed order. H. E. WINANS, Sec'y.

THE ELIZABETH BI-MONTHLY TOURNAMENT.

Feb. 25.—This was the opening day of the Elizabeth Gun Club's sixth bi-monthly tournament. As usual the club was favored with fine, clear weather, but a strong wind that blew nearly all day made the shooting very hard, particularly during the first eight or nine events. All events were at targets and at unknown angles (with the exception of No. 4, which was reversed order, and No. 6, which was shot expert rules, both barrels). Altogether 2,500 targets were trapped during the day, although shooting did not commence until after noon. Considering the number of shoots held recently, and to be held in the near future, in this vicinity, an attendance of twenty-five shooters should be very satisfactory to the management of the Elizabeth Gun Club.

A special feature of the day was the work of squad 1 in event No. 8, 15 targets, unknown angles. The squad was composed as follows: Appar, Edwards, Dutchy, Piercy, Miller and Breintnall; their scores were: Appar 15, Edwards 14, Dutchy 15, Piercy 13, Miller 14, Breintnall 15, a total of 86 out of 90 targets. This total would be good in any kind of weather, but to-day, with a good wind, and with the targets thrown hard and low, it is worth recording. As a matter of fact the targets to-day were thrown a little too hard; not too fast, but too low and too much up and down the screen; with a good background it would not matter much, but the Elizabeth Club's background, when targets are thrown low, is a hard one.

Before closing this necessarily brief account of the day's sport something must be said in praise of the management of the shoot. The president of the club, Robert E. Chetwood, acted throughout as scorer, and for a portion of the coldest part of the day stood at the score and kept tab until driven inside the club house by the bitter cold of the north-west wind. Nate Astfalk, one of the moving spirits of the club, shot along in every event save one—No. 7; his absence from the score in that event was due to the attention he was bestowing on a breakfast that needed his entire attention. Wm. Parker, secretary of the club; Billy Hobart, secretary of the New Jersey Trap-Shooters' League, and J. Roberts, of the home club, acted respectively as receiving teller, paying teller and referee-puller, etc. The scores in to-day's events are given in the table below:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Targets:	10	10	15	10	20	15	20	15	25	10	15	15	10	10	10	10

A Sickle.....								15	9	19	7					
Jewell.....									7	11	5	9				
Meisel.....										7	9					

The second day of the Elizabeth bi-monthly tournament was not favored with the same kind of weather that has hitherto been such an important feature at these popular New Jersey gatherings. Instead of bright and clear weather, snow fell pretty nearly all day, and at times the fall was so heavy as to make it decidedly uncomfortable outside the club house.

There was a good attendance of shooters, and while the birds were not so fast as usual owing to the climatic conditions, some excellent shooting was done, notably by Morfey and Woodruff. The former killed 52 out of 54, while Woodruff was answerable for 48 out of 51.

The scores are given below: Nos. 1 and 5 were 7 birds, \$5; No. 2, 10 birds, \$5, birds extra; No. 3, 25 birds, \$10, birds extra, handicap; No. 4 was also a handicap, 5 birds, \$5; No. 6 was a \$1 miss-and-out.

NEW JERSEY TRAP-SHOOTERS' LEAGUE.

Feb. 27.—The first meeting of the New Jersey Trap-Shooters' League for 1896 took place to-day at Dunellen, N. J., on the grounds of the newly organized Dunellen Gun Club. After the snow of yesterday, to-day was simply a perfect one from a target-shooter's point of view. Not a breath of air was stirring, and there was a bright, clear sky overhead; the sun, too, was so warm that the snow which fell yesterday was only left in shady spots by the time the whistle blew for dinner. The beautiful weather, coupled with the fact that this was the first league shoot in 1896, brought together a good attendance of shooters, although only 7 out of the 10 clubs composing the league were represented by teams of 6 men. The missing clubs were: Boiling Springs, of Rutherford; Union Hill, of Weehawken, and the Riverside, of Red Bank. The number of shooters that took part in the team race and the sweeps shot during the day was 46, and 3,650 targets were thrown between the hours of 12 M. and 6 P. M.

The Dunellen Gun Club is a new organization, so that any little imperfections in the way of lack of management at this shoot should be pardoned. This was the first shoot of any size yet given by the club, and it is no easy thing for veterans in the business to handle comfortably some forty odd visitors, all of whom want to shoot at the same time. There is one thing that this club has which might be copied with great advantage by pretty nearly every club in the league: It has a solid platform that is wide enough to accommodate everybody without a fear of the shooters being interfered with.

The scores to-day were somewhat disappointing. The Maplewood Clubbed as usual, but its score of 123 out of 150 targets, known traps and angles, is not what we had looked for in the way of a winning score under the conditions that existed at the Dunellen grounds to-day. When 23 is high out of forty-two shooters, and when only four men score that number it looks as if something was wrong with the light. As a matter of fact the background was a hard one, notwithstanding a bright sun behind the shooters' backs. There is something else to consider: To-day's contest was at known traps and angles, a style of shooting that has almost dropped into disuse. It is too mechanical and too monotonous for most shooters, and as a natural consequence many get slow and lose their time entirely. No doubt one result of to-day's race will be to make the clubs practice up a little on known angles. Then look out for some high scores, because there are some very warm shots in this portion of New Jersey.

The league management did a capital thing to-day in splitting up the squads; each squad was composed of men from different teams. This method of shooting off so large a team race, as this one always is, has many things to recommend it. In the first place, it does away almost entirely with the chances of weather, such as a sudden change in the wind, a cloud coming up and obscuring the sun, a heavy rain-storm, and all similar occurrences which would be important factors in scores on targets. In the next place it entirely removes all chance of a suspicion that the home team is being favored by the trappers; this is more particularly the case when team races are shot at unknown angles. At known angles, however, the slackening or tightening of the tension on the main springs of the traps has a great effect on scores, and it might be suggested that the trappers favored the home team that way. Splitting up the teams is a little more trouble, but it gives the best satisfaction after all. Manager Drake, of the N. J. Trap-Shooters' League, who takes charge of the team race, showed very conclusively that he was well able to handle the men under the changed conditions. The scores in the team race were:

Maplewood Gun Club, of Maplewood: E. Sickle 23, Dean 22, O. Yeomans 21, A. Sickle 20, W. N. Drake 19, Parry 18—123.	
Climax Gun Club, of Plainfield: C. Smith 23, Neaf Appar 22, T. H. Keller 21, R. Manning 21, L. H. Schortemeier 17, D. Darby 16—120.	
Elizabeth Gun Club, of Elizabeth: N. Astfalk 23, J. Williams 21, W. Parker 19, H. Folsom 19, A. Woodruff 19, Heiney 17—118.	
Endeavor Gun Club, of Jersey City: Edwards 22, C. von Lengerke 19, G. Piercy 19, E. Ingram 18, Al. Heritage 17, E. Collins 15—110.	
South Side Gun Club, of Newark: Asa Whitehead 25, C. M. Heddon 22, R. H. Breintnall 20, E. A. Geoffroy 17, L. Thomas 15, I. H. Terrill 11—108.	

Union Gun Club, of Springfield: M. Herrington 18, E. D. Miller 16, Dr. Jackson 16, T. W. Morfey 16, G. S. McAlpin 15, Ed. Young 14—95.

Dunellen Gun Club, of Dunellen: T. H. Brantingham 22, Henry 18, Brokaw 15, Runyon 12, Grey 13, Sisty 12—95.

Records of Hartford Shooters for 1895.

THE secretary of the Colt Gun Club, of Hartford, Conn., Mr. M. F. Cook, has compiled very carefully a tabulated statement of the performance of his fellow club members during the season of 1895. The table, which unfortunately we are not able to give in full owing to the pressure on our trap columns, shows each man's score at every shoot he attended; it also shows the handicap allowances or deductions. The following table, however, gives the general averages for the year:

	Targets shot at.		Broke.		Scores that count with handicap.		Percentage.		Shoots attended.

In regard to the programme carried out during 1895 Mr. Cook adds some explanatory remarks, showing just how the club runs its prize competitions, which we give below, as we think many secretaries and others interested in furthering their clubs' welfare will be glad to read to examine the system:

"The club had a series of twenty-four shoots, having one shoot every two weeks, for which the club donates \$55 in cash, divided as follows: \$6 for best attendance, \$4 for second best; \$6 for ten best scores without handicap, \$4 for second best. The remaining \$55 to be shot for with a handicap divided into six prizes. The handicap is on the basis of 18. To the poorer shooters broken targets are allowed to be added to their scores; to the better shooters targets are deducted from their scores, and if their scores made are good enough after taking off their handicap not to go below 18, they have perfect scores. If the poorer shots break enough with their handicap added to make 18 or better, they also have perfect scores. It is necessary for any shooter to compete ten times out of the twenty-four shoots to qualify for any of the prizes. For the merchandise prizes any shooter that qualifies has an equal chance, as they are drawn by lot."

At the annual distribution of prizes the cash prizes were distributed as follows: J. Pitkin got \$6 for best ten scores; F. Bishop, \$4 for second best ten scores; C. Bailey, \$6 for best attendance; J. Pitkin, \$4 for second best attendance; M. F. Cook, \$11 for ten best scores with handicap; C. Bailey, \$11; J. Pitkin, \$11; A. Bailey, \$11; F. Bishop, \$11; A. Bailey, \$11.

Twenty-three members qualified for the merchandise prizes, the necessary qualification being attendance at ten out of the twenty-four shoots. The names of the lucky 23 will be found in the table given above, being the first 23 men on the list, C. Bailey leading with an attendance record of 23 out of 24.

New Haven Gun Club.

NEW HAVEN, Conn., Feb. 22.—The New Haven Gun Club held an all-day shoot to-day with about 30 shooters on hand. Some good shooting was done, although some of the boys seemed to find lots of space on both sides of the targets. Uncle Edgerton, of Willimantic, had a new kind of gun with two barrels and three holes, and even then he couldn't seem to get them all. Old man Sherman and his pump didn't seem to agree with each other as to the proper way to hold the handle, Deacon Potter plodded right along in his usual manner, and got there most of the time. Scores:

The Eureka's Annual Gathering.

CHICAGO, Ill., Feb. 22.—The usual Washington's Birthday shoot took place to-day, only it was not usual, but very unusual in the large attendance that gathered in the afternoon to take a fall out of the festive empires.

The wind was strong and chilly, and made all sorts of angles. All shooting was at unknown angles, traps changed every shot, birds thrown hard and swift. These grounds are justly celebrated as being one of the hardest to make a good score on; the fast, keyed-up traps and perfect arrangements generally all no doubt contribute.

After a jolly time before the traps, where all sorts of sweepstakes for cash, watches, etc., were shot, the club adjourned to the Leland Hotel for the annual meeting and banquet. After discussing the elegant menu, cigars were lighted, the glasses filled, and with Patty (who does not know Patty) as toast master, the speeches began. Before this Secretary DeWolf distributed some elegant souvenirs of the occasion, in the shape of hand-painted satin badges, the product of his wife, who enjoys considerable reputation as an artist on game, dogs and horses. If Mrs. DeWolf could have heard the praises the badges brought forth, she doubtless would have been overcome by them; it was particularly laughable when Secretary DeWolf was duly ordered to write the resolutions adopted, and "forward them by mail, providing he could obtain the lady's address," and cautioned "not to slight them either."

Patty addressed herself to the subject of "Women as Shooters," and called on Fred Gilbert, the Iowa shooter, who responded with a talk on "Pigeon Shooting." Mr. DeWolf spoke on "Trap-Shooting in the Western States." W. O. Morgan appeared in "What I Know About Watches" (he won the watch in the shoot this afternoon). O. von Lengerke spoke on the "Trap-Shooters' League." Chas. Grimm, of Clear Lake, Ia., and S. A. Tucker, the only Tuck, of Parker gun fame, were bashful and could not be prevailed upon to speak. Covers were laid for twenty-five.

The secretary's report showed the club membership to be full, and several on the waiting list. It also showed no debts and a balance in the treasury, and that the club had not lost a contest during the year.

The election of officers resulted in the choice of the following to serve for the next twelve months: President, John T. Glover; Vice-President, W. A. Jones; Secretary, W. F. DeWolf; Treasurer, O. J. Buck; Captain, F. P. Stannard; Board of Directors, W. O. Morgan, Dr. O. W. Carson, J. L. Jones, Oswald von Lengerke and Eddie Bingham; Classification Committee—John T. Glover, W. F. DeWolf and F. P. Stannard; Trophy Committee—W. D. Stannard, A. C. Patterson and O. von Lengerke.

The scores made in to-day's shoot were as follows:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

The Braden-Canon Match.

THROUGH the kindness of Mr. J. G. Messner, of Pittsburg, Pa., who acted in conjunction with H. W. Nair as official scorer at the Braden-Canon match at Beaver Falls, Pa., on Feb. 22, we are able to give the score in full of this unique match. The quality of the birds is well shown by the trap score type. Scores:

Cobweb Gun Club.

NEW YORK, Feb. 22.—There was a large attendance to-day of members of the Cobweb Gun Club at Miller & Zorn's grounds, Baychester, N. Y., where all the shoots of the club are held. The occasion of to-day's shoot was, of course, Washington's Birthday, and as a result of the national holiday 20 shooters took part in the several events shot during the day. F. L. Train, captain of the club, did the best work, scoring 51 out of 56 birds shot at. The scores were:

Lynchburg Gun Club.

LYNCHBURG, Va., Feb. 22.—The weekly shoot of the Lynchburg Gun Club having had to be postponed on account of bad weather, it was decided to hold it to-day, the weather having moderated and the day being a national holiday. There was only a small attendance, five shooters taking part in the events, each man shooting at 150 targets in six events of 25 targets each. Scores:

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, SATURDAY, MARCH 14, 1896.

VOL. XLVI.—No. 11.
No. 318 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page v.

The Forest and Stream will shortly remove to new offices in the New York Life Building, No. 346 Broadway, entrance on Leonard Street.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

A FORESTRY COMMISSION.

THE Secretary of the Interior has deserved well of his country for many reforms inaugurated under the present Administration. He has striven to manage the enormous business of the Interior Department on business principles, and in many respects he has been most successful. Perhaps nothing that he has done promises so great an economic return as his last stroke for reform in forestry methods. He has asked the National Academy of Sciences to appoint a committee of experts to go into the field and study the existing forest conditions, and then report as to these conditions, and to recommend what the Government ought to do to conserve and to increase our forests and to make them of the greatest benefit to the country.

The wisdom of this action is obvious. Mr. Smith has been farseeing enough to ask for light on this difficult subject from that body best able to give it, and the men chosen are so eminent in their various departments of science that their conclusions will carry the greatest weight with the country and with Congress.

The chairman of the committee appointed will be Prof. Charles S. Sargent, well known as professor in Harvard University, and director there of the botanical garden and the Arnold Arboretum. He is the author of the volume published by the Tenth Census on "The Forest Trees of North America," and of "The Silva of North America"—two works either of which would be sufficient to establish any man's reputation. Prof. Oliver Wolcott Gibbs, President of the Academy and so *ex-officio* member of the committee, is one of the first of America's investigators in chemistry and physics. Prof. Alexander Agassiz is conspicuous as an authority on natural history subjects, and was long Curator of the Natural History Museum at Harvard. He is a man of wide experience and of admirable judgment. Gen. Henry L. Abbot, of the U. S. Engineer Corps, retired, is perhaps the first expert on rivers in the United States. Prof. William H. Brewer has been Professor of Agriculture at Yale for more than thirty years, and before that was Professor of Chemistry in the University of California, and connected with the Geological Survey of that State. He is the author of a part of "Walker's Statistical Atlas of the United States" and editor of the "Botany of California." Mr. Arnold Hague, of the U. S. Geological Survey, was for years connected with Clarence King's Survey of the 40th Parallel, was Government Geologist in Guatemala and subsequently did Government work in the mines in China. Since 1883 he has been in charge of work in the Yellowstone Park and adjacent country, especially the forest reserve. His experience of the Rocky Mountain region is wide, and no man is better equipped for the work of this committee than he. He is the author of many works. Mr. Gifford Pinchot is of all the members of the committee the youngest, and the man who has had the most recent and most careful schooling in modern forestry methods. He has been trained in foreign schools of forestry, and for some years has had charge of the forests of Mr. Geo. Vanderbilt's estate in North Carolina.

The list of names here presented is most impressive, and will command universal respect. These experts cover not merely the subject of forestry, but all the collateral subjects on which forestry bears and by which it is influenced. The ground is fully covered, and for once in America the men chosen to do a certain piece of work for the Government are the very best that could have been selected.

This committee will devote itself to inquiry and recommendation on the following questions:

Is it desirable and practicable to preserve from fire and to maintain permanently as forested lands the wooded parts of the public domain, for the supply of timber?

How far does the influence of forests upon climate, soil and water conditions make a policy of forest conservation

desirable in those regions where most of the public domain is situated?

What specific legislation is required to remedy the evils now existing?

When this committee shall have made its report we shall have answers to these questions furnished by a body of investigators most qualified to give them. When these answers have been given the country will know the truth, and Congress may give us the needed legislation.

For many years individuals and associations have been working with might and main to remedy the evils which all acknowledge exist in our forestry system. This desultory individual effort accomplished nothing adequate. Secretary Smith has had the genius to see what the country needed, and with a stroke of the pen he has moved us years onward in the direction of true reform.

THE SPORTSMEN'S EXPOSITION.

THE second annual Sportsmen's Exposition in the Madison Square Garden, this city, will open on next Monday, March 16. Everything points to a collection of interesting exhibits superior to that of the initial exhibition of last year, and the managers anticipate that the public support will be more generous this year than last. It was no uncommon thing after the initial exposition to hear expressions of regret on the part of those who did not realize the extent and importance of the affair and so had failed to visit the Garden. The chief value of the enterprise is educational, and if the aims of the managers shall be carried out, this annual exposition will constitute an invaluable and instructive display of the development of field sportsmanship in all its several branches. We urge every sportsman within reach of New York city to visit the Garden next week and study the exhibits he will find there.

THE FOREST AND STREAM has made preparation to do its share toward the entertainment of the week. Last year the most conspicuous feature of the FOREST AND STREAM exhibit was the collection of Indian arms, implements and utensils illustrative of the Primitive American Hunter and of his evolution from the stone age to the latest phase of Indian hunting with the arms of the white man. Supplementing this display of last May, we have this year secured the attendance of Chief Bear, the council chief of the Blackfeet, and of Two Bear Woman, one of the oldest and most distinguished members of the tribe. With them comes William Jackson as interpreter, and the tribe has provided a pappoose. They have brought with them a very complete outfit of clothing, arms and hunting implements, by means of which they will show very fully the actual plains life of the Primitive American Hunter as it was followed in the days of the buffalo.

Unless we have misjudged the popular interest in the FOREST AND STREAM's Indian exhibit, Chief Bear, Two Bear Woman and the stolid little pappoose hung up on its board by the side of the lodge will hold a continuous levee.

And do not fail to see the FOREST AND STREAM's exhibition of outdoor and field scenes, shown with the electric light stereopticon at 4, 4:45, 8 and 8:45 P. M. daily.

Both of these features will be distinct from and apart from the FOREST AND STREAM exhibit in our spaces Nos. 62 and 63, where old and new friends will be welcomed.

SNAP SHOTS.

It is somewhat of an anomaly that for the last two years New York has had no representative revolver club and no revolver range open to the public, and this in the face of the fact that probably no other city in the Union has more pistol and revolver shooters. While the need of such a club has long been apparent, the efforts made to supply it heretofore have not met with success. The latest, that of a well-known athletic association, failed because the revolver club was simply to be made subsidiary to the larger organization which the shooters were called upon to support in addition to the heavy expenses involved in the conduct of the range itself.

The newly organized Gotham Revolver Club has started on a radically different principle. Its object is to provide abundant facilities for practice and competition at the smallest possible expense to the individual member. As the sport itself is the sole reason for the existence of this club, there is no reason why it should not gain the success which it deserves.

NON-EXPORT GAME LAWS.

UPHELD BY THE SUPREME COURT OF THE UNITED STATES.

LAST week we gave a special telegraphic summary of the decision of the Supreme Court of the United States, rendered March 2, in the case of Geer vs. The State of Connecticut. To-day, in advance of its publication elsewhere, the full text of the decision is here printed as procured for us by our special representative in Washington.

The decision is one which merits and will have careful study. As was said last week in these columns, it is the most important and far-reaching decision in relation to the protection of game that we have ever had in this country. The points at issue were such as to involve in their determination a consideration of fundamental principles. The decision, then, is not simply a finding on the disputed constitutionality of the Connecticut non-export law; it is an elaborate exposition of the basic principles upon which rest the right of the State to control its game and the power of the State to extend that control even after game has been reduced to possession and has become the qualified property of its captor.

The decision written by Mr. Justice White is admirable in its comprehensiveness, lucidity and convincing logic; it commends itself for its good reasoning and has the authority of the court of last resort. The principle is now set forth from the Supreme Court of the United States once for all that Connecticut, Massachusetts, New York, Arkansas, Illinois, California, any and every State in the Union, may restrict its game to its own limits by non-export statutes; nor is this control to be nullified or vitiated by any further questioning of the constitutionality of a non-export statute.

The Constitution of the United States has had its day as a palladium of license for game commission men. From this time henceforth game protection may no longer be resisted by the market dealer with the old objection that a non-export law was counter to the interstate commerce clause of the Constitution. The Supreme Court has settled that.

We have said that this decision points the way in which efficient game protective effort may be directed. If we have stringent non-export laws, and if we enforce them, the problem of keeping up a game supply will be near to solution.

Objection has been made that the FOREST AND STREAM's original Platform Plank—*The sale of game should be forbidden at all times*—is too radical and is impossible of achievement. In view of all the circumstances it certainly is not too radical, however difficult may appear the attainment of it. Some day it will be of ruling force. Meanwhile effort may be expended toward the attainment of the prohibition of the export of game for sale, with reasonable confidence in the speedy attainment of a non-export system.

As a means then toward accomplishing the condition of things sought by the absolute prohibition of the sale of game, why should we not direct our efforts, as associations, clubs and individuals, to put into effect the new Platform Plank—*Forbid the taking of game for export to market?*

SUPREME COURT OF THE UNITED STATES.

NO. 87—OCTOBER TERM, 1895.

Edgar M. Geer, Plaintiff in Error, } In error to the Supreme Court
vs. } of Errors of the State of Connecticut.
The State of Connecticut. }

(March 2, 1896).

The statutes of the State of Connecticut provide (Section 2,530, revision of 1888):

"Every person who shall buy, sell, expose for sale, or have in his possession for the purpose, or who shall hunt, pursue, kill, destroy or attempt to kill any woodcock, quail, ruffed grouse, called partridge

or gray squirrel between the first day of January and the first day of October, the killing or having in possession of each bird or squirrel to be deemed a separate offense * * * shall be fined not more than \$30."

It is further by the statute of the same State provided (Section 2,546):

"No person shall at any time kill any woodcock, grouse or quail for the purpose of conveying the same beyond the limits of the State, or shall transport or have in possession, with intention to procure the transportation beyond said limits, of any such birds killed within this State. The reception by any person within this State of any such bird or birds for shipment to a point without the State shall be *prima facie* evidence that said bird or birds were killed within the State for the purpose of carrying the same beyond its limits."

An information was filed against the plaintiff in error in the police court of New London, Conn., charging him with on the 19th day of October, 1889, unlawfully receiving and having in his possession, with the wrongful and unlawful intent to procure the transportation beyond the limits of the State, certain woodcock, ruffed grouse and quail killed within this State after the 1st day of October, 1889. The trial of the charge resulted in the conviction of the defendant and the imposing of a fine upon him. Thereupon the case was taken by appeal to the criminal court of the Common Pleas. In that court the defendant demurred to the information on the ground, among others, that the statute upon which that prosecution was based violated the Constitution of the United States.

The demurrer being overruled, and the defendant declining to answer over, he was adjudged guilty and condemned to pay a fine and costs, and to stand committed until he had complied with the judgment. An appeal was prosecuted to the Supreme Court of Errors of the State. The defendant on the appeal assigned the following errors: "The court erred—

"First—In holding that the allegations contained in the complaint constitute an offense in law.

"Second—In holding that said complaint was insufficient in the law without an allegation that the birds therein mentioned were killed in this State for the purpose of conveying the same beyond the limits of this State.

"Third—In refusing to hold that so much of Section 2,546 of the general statutes, under which this complaint is brought, as may be construed to forbid the transportation from this State of the birds therein described, lawfully killed and permitted by the laws of the State to become the subject of traffic and commerce, is unconstitutional and void.

"Fourth—In refusing to hold that so much of said section as may be construed to forbid the receiving and having in possession, with intent to procure the transportation thereof to another State, birds therein described, lawfully killed and permitted by the laws of this State to become the subject of traffic and commerce, is unconstitutional and void.

"Fifth—In holding that the defendant is guilty of an offense under said section if such birds were lawfully killed in this State and were bought by the defendant of this State as articles of property, merchandise and commerce, and had begun to move as an article of interstate commerce.

"Sixth—In not rendering judgment for defendant."

In the Supreme Court the conviction was affirmed. The case is reported in 67 Conn., 144. To this judgment of affirmance this writ of error is prosecuted.

Mr. Justice White, after stating the case, delivered

THE OPINION OF THE COURT.

By the statutes of the State of Connecticut, referred to in the statement of facts, the open season for the game birds mentioned therein was from Oct. 1 to Jan. 1. The birds which the defendant was charged with unlawfully having in his possession on Oct. 19 for the purpose of unlawful transportation beyond the State were alleged to have been killed within the State after Oct. 1. They were, therefore, killed during the open season. There was no charge that they had been unlawfully killed for the purpose of being transported outside of the State. The offense, therefore, charged was the possession of game birds for the purpose of transporting them beyond the State, which birds had been lawfully killed within the State. The court of last resort of the State held, in interpreting the statute already cited, by the light afforded by previous enactments, that one of its objects was to forbid the killing of birds within the State during the open season for the purpose of transporting them beyond the State, and also additionally as a distinct offense to punish the having in possession, for the purpose of transportation beyond the State, birds lawfully killed within the State. The court found that the information did not charge the first of these offenses, and therefore that the sole offense which it covered was the latter. It then decided that the State had power to make it an offense to have in possession, for the purpose of transportation beyond the State, birds which had been lawfully killed within the State during the open season, and that the statute in creating this offense did not violate the interstate commerce clause of the Constitution of the United States. The correctness of this latter ruling is the question for review. In other words, the sole issue which the case presents is:

Was it lawful, under the Constitution of the United

States (Section 8, Article 1), for the State of Connecticut to allow the killing of birds within the State during a designated open season, to allow such birds, when so killed, to be used, to be sold and to be bought for use within the State, and yet to forbid their transportation beyond the State?

Or, to state it otherwise, had the State of Connecticut the power to regulate the killing of game within her borders so as to confine its use to the limits of the State and forbid its transmission outside of the State?

In considering this inquiry we of course accept the interpretation affixed to the State statute by the court of last resort of the State. The solution of the question involves a consideration of the nature of the property in game and the authority which the State had a right lawfully to exercise in relation thereto.

The writer of a learned article in the *Repertoire of the Journal in Palais* mentions the fact that the law of Athens forbade the killing of game (*Rep. Gen. J. P.*, Vol. 5, p. 307), and Merlin says (*Repertoire de Jurisprudence*, Vol. 4, p. 128) that "Solon, seeing that the Athenians gave themselves up to the chase to the neglect of the mechanical arts, forbade the killing of game."

Among other subdivisions, things were classified by the Roman law into public and common. The latter embraced animals *feræ naturæ*, which, having no owner, were considered as belonging in common to all the citizens of the State. After pointing out the foregoing subdivision, the *Digest* says:

"There are things which we acquire the dominion of, as by the law of nature, which the light of natural reason causes every man to see; and others we acquire by the civil law, that is to say, by methods which belong to the Government. As the law of nature is more ancient, because it took birth with the human race, it is proper to speak first of the latter. 1. Thus, all the animals which can be taken upon the earth, in the sea, or in the air, that is to say, wild animals, belong to those who take them. * * * Because that which belongs to nobody is acquired by the natural law by the person who first possesses it. We do not distinguish the acquisition of these beasts and birds by whether one has captured them on his own property or on the property of another; but he who wishes to enter into the property of another to hunt can be readily prevented if the owner knows his purpose to do so."—(*Digest*, Book 1, Tit. 1, De *Acquir. Rer. Dom.*)

No restriction, it would hence seem, was placed by the Roman law upon the power of the individual to reduce game, of which he was the owner in common with other citizens, to possession, although the Institutes of Justinian recognized the right of an owner of land to forbid another from killing game on his property, as indeed this right was impliedly admitted by the *Digest* in the passage just cited. (Institutes, Book 2, Tit. 1, s. 12.)

The inhibition was, however, rather a recognition of the right of ownership in land than an exercise by the State of its undoubted authority to control the taking and use of that which belonged to no one in particular, but was common to all. In the feudal as well as the ancient law of the continent of Europe, in all countries, the right to acquire animals *feræ naturæ* by possession was recognized as being subject to the governmental authority and under its power, not only as a matter of regulation, but also of absolute control. Merlin, *ub. sup.*, mentions the fact that, although tradition indicates that from the earliest day in France every citizen had a right to reduce a part of the common property in game to ownership by possession, yet it was also true that as early as the Salic law that right was regulated in certain particulars. Pothier in his treatise on Property speaks as follows:

"In France, as well as in all other civilized countries of Europe, the civil law has restrained the liberty which the pure law of nature gave to every one to capture animals who, being in *naturali libertate*, belong to no person in particular. The sovereigns have reserved to themselves, and to those whom they judge proper to transmit it, the right to hunt all game, and have forbidden hunting to other persons. Some ancient doctors have doubted if sovereigns had the right to reserve hunting to themselves and to forbid it to their subjects. They contend that as God has given to man dominion over the beasts, the prince had no authority to deprive all his subjects of a right which God had given them. The natural law, say they, permitted hunting to each individual. The civil law which forbids it is contrary to the natural law, and exceeds, consequently, the power of the legislator, who, being himself submitted to the natural law, can ordain nothing contrary to that law. It is easy to reply to these objections. From the fact that God has given to human kind dominion over wild beasts it does not follow that each individual of the human race should be permitted to exercise this dominion. The civil law, it is said, cannot be contrary to the natural law. This is true as regards those things which the natural law commands or which it forbids; but the civil law can restrict that which the natural law only permits. The greater part of all civil laws are nothing but restrictions on those things which the natural law would otherwise permit. It is for this reason; although by the pure law of nature hunting was permitted to each individual, the prince had the right to reserve it in favor of certain persons and forbid it to others." (Pothier, *Traité du Droit de Propriété*, Nos. 27-28.)

"The right belongs to the king to hunt in his dominion; his quality of sovereign gives him the authority to take possession above all others of the things which belong to no one, such as wild animals; the lords and those who have a right to hunt hold such right but from his permission, and he can affix to this permission such restriction and modifications as may seem to him good." (No. 32.)

In tracing the origin of the classification of animals *feræ naturæ*, as things common, Pothier moreover says:

"The first of mankind had, in common, all those things which God had given to the human race. This community was not a positive community of interest, like that which exists between several persons who have the ownership of a thing in which each have their particular portion. It was a community which those who have written on this subject have called a negative community, which resulted from the fact that those things which were common to all belonged no more to one than to the others, and hence no one could prevent another from taking of these common things that portion which he judged necessary to subserve his wants. Whilst he was using them others could

not disturb him, but when he had ceased to use them—if they were not things which were consumed by the fact of use—the things immediately re-entered into the negative community, and another could use them. The human race having multiplied, men partitioned among themselves the earth and the greater part of those things which were on its surface. That which fell to each one among them commenced to belong to him in private ownership, and this process is the origin of the right of property. Some things, however, did not enter into this division, and remain therefore to this day in the condition of the ancient and negative community." (No. 21.)

Referring to those things which remain common, or in what he qualified as the negative community, this great writer says:

"These things are those which the jurists called *res communes*. Marclen refers to several kinds—the air, the water which runs in the rivers, the sea and its shores. * * * As regards wild animals, *feræ naturæ*, they have remained in the ancient state of negative community."

In both the works of Merlin and Pothier, *ub. sup.*, will be found a full reference to the history of the varying control exercised by the law-giving power over the right of a citizen to acquire a qualified ownership in animals, *feræ naturæ*, evidenced by the regulation thereof by the Salic law already referred to, exemplified by the legislation of Charlemagne, and continuing through all vicissitudes of governmental authority. This unbroken line of law and precedent is summed up by the provisions of the Napoleon Code, which declare (arts. 714, 715): "There are things which belong to no one, and the use of which is common to all. Police regulations direct the manner in which they may be enjoyed. The faculty of hunting and fishing is also regulated by special laws." Like recognition of the fundamental principle upon which the property in game rests has led to similar history and identical results in the common law of Germany, in the law of Austria, Italy, and indeed it may be safely said in the law of all the countries of Europe. (Saint Joseph Concordance, Vol. 1, p. 68.)

The common law of England also based property in game upon the principle of common ownership, and therefore treated it as subject to governmental authority.

Blackstone, while pointing out the distinction between things private and those which are common, rests the right of an individual to reduce a part of this common property to possession, and thus acquire a qualified ownership in it, on no other or different principle from that upon which the civilians based such right. (2 Bl. Com., 1 and 12.)

Referring especially to the common ownership of game, he says: "But after all there are some few things which, notwithstanding the general introduction and continuance of property, must still unavoidably remain in common, being such wherein nothing but an usufructuary property is capable of being had; and therefore they still belong to the first occupant during the time he holds possession of them and no longer. Such (among others) are the elements of light, air and water, which a man may occupy by means of his windows, his gardens, his mills and other conveniences; such also are the generality of those animals which are said to be *feræ naturæ* or of a wild and untamable disposition, which any man may seize upon or keep for his own use or pleasure." (3 Bl. Com., 14.)

"A man may lastly have a qualified property in animals *feræ naturæ*, *propter privilegium*—that is, he may have the privilege of hunting, taking and killing them in exclusion of other persons. Here he has a transient property in these animals usually called game as long as they continue within his liberty, and he may restrain any stranger from taking them therein; but the instant they depart into another liberty this qualified property ceases. * * * A man can have no absolute permanent property in these, as he may in the earth and land; since these are of a vague and fugitive nature, and therefore can only admit of a precarious and qualified ownership, which lasts so long as they are in actual use and occupation, but no longer." (2 Bl. Com., 394.)

In stating the existence and scope of the royal prerogative, Blackstone further says: "There still remains another species of prerogative property founded upon a very different principle from any that have been mentioned before: the property of such animals, *feræ naturæ*, as are known by the denomination of game, with the right of pursuing, taking and destroying them, which is vested in the king alone, and from him derived to such of his subjects as have received the grants of a chase, a park, a free warren or free fishery. * * * In the first place then, we have already shown, and indeed it cannot be denied, that by the law of nature every man from the prince to the peasant has an equal right of pursuing and taking to his own use all such creatures as are *feræ naturæ*, and therefore the property of nobody, but liable to be seized by the first occupant, and so it was held by the Imperial law as late as Justinian's time. * * * But it follows from the very end and constitution of society that this natural right as well as many others belonging to man as an individual may be restrained by positive laws enacted for reasons of State or for the supposed benefit of the community." (2 Bl. Com., 410.)

The practice of the Government of England from the earliest time to the present has put into execution the authority to control and regulate the taking of game.

Undoubtedly this attribute of government to control the

taking of animals *feræ naturæ*, which was thus recognized and enforced by the common law of England, was vested in the colonial governments, where not denied by their charters or in conflict with grants of the royal prerogative. It is also certain that the power which the colonies thus possessed passed to the States with the separation from the mother country, and remains in them at the present day, in so far as its exercise may not be incompatible with or restrained by the rights conveyed to the Federal government by the Constitution. Kent, in his Commentaries, states the ownership of animals *feræ naturæ* to be only that of qualified property. (2 Kent Com., 347.)

In most of the States laws have been passed for the protection and preservation of game. We have been referred to no case where the power to legislate has been questioned, although the books contain cases involving controversies as to the meaning of some of the statutes. (Commonwealth v. Hall, 128 Mass., 410; Commonwealth v. Caruth, 139 Pa., 219; People v. O'Neill, 71 Mich., 325.) There are also cases where the validity of some particular method of enforcement provided in some of the statutes has been drawn in question. (State v. Saunders, 19 Kan., 127; Territory v. Evans, 2 Idaho, 634.)

The adjudicated cases recognizing the right of States to control and regulate the common property in game are numerous. In McCrady v. Virginia (94 U. S., 395) the power of the State of Virginia to prohibit citizens of other States from planting oysters within the tide waters of that State was upheld by this court. In Manchester v. Massachusetts (139 U. S., 24) the authority of the State of Massachusetts to control and regulate the catching of fish within the bays of that State was also maintained. See also Phelps v. Racey (60 N. Y., 10); Magnier v. People (97 Ill., 320); American Express Co. v. People (133 Ill., 649); State v. N. O. Express Co. (58 Minn., 403); State v. Rodman (58 Minn., 393); *ex parte* Maier (103 Cal., 476); Organ v. State (56 Ark., 270); Allen v. Wyckoff (48 N. J., 93); Roth v. State (51 Ohio St., 393); Gentile v. State (29 Ind., 415); State v. Farrell (23 Mo. App., and cases there cited); State v. Saunders (*ub. sup.*); Territory v. Evans (*ub. sup.*).

While the fundamental principles upon which the common property in game rest have undergone no change, the development of free institutions has led to the recognition of the fact that the power or control lodged in the State, resulting from this common ownership, is to be exercised like all other powers of government as a trust for the benefit of the people, and not as a prerogative for the advantage of the government as distinct from the people, or for the benefit of private individuals as distinguished from the public good. Therefore, for the purpose of exercising this power, the State, as held by this court in Martin v. Waddell (16 Pet., 410), represents its people, and the ownership is that of the people in their united sovereignty. The common ownership and its resulting responsibility in the State is thus stated in a well considered opinion of the Supreme Court of California: "The wild game within a State belongs to the people in their collective sovereign capacity. It is not the subject of private ownership except in so far as the people may elect to make it so, and they may, if they see fit, absolutely prohibit the taking of it, or traffic and commerce in it, if it is deemed necessary for the protection or preservation of the public good." (*Ex parte* Maier, *ub. sup.*)

The same view has been expressed by the Supreme Court of Minnesota, as follows: "We take it to be the correct doctrine in this country that the ownership of wild animals, so far as they are capable of ownership, is in the State, not as a proprietor, but in its sovereign capacity as the representative and for the benefit of all its people in common." (State v. Rodman, *supra.*)

The foregoing analysis of the principles upon which alone rests the right of an individual to acquire a qualified ownership to game, and the power of the State, deduced therefrom, to control such ownership for the common benefit, clearly demonstrates the validity of the statute of the State of Connecticut here in controversy. The sole consequence of the provision forbidding the transportation of game, killed within the State, beyond the State, is to confine the use of such game to those who own it—the people of that State. The proposition that the State may not forbid carrying it beyond her limits involves, therefore, the contention that a State cannot allow its people the enjoyment of the benefits of the property belonging to them in common, without at the same time permitting the citizens of other States to participate in that which they do not own. It was said in the discussion at bar, although it be conceded that the State has an absolute right to control and regulate the killing of game as its judgment deems best in the interest of its people, inasmuch as the State has here chosen to allow the people within her borders to take game, to dispose of it, and thus cause it to become an object of State commerce, as a resulting necessity such property has become the subject of interstate commerce, hence controlled by the provisions of Article I., Section 8, of the Constitution of the United States. But the errors which this argument involves are manifest. It presupposes that where the killing of game and its sale within the State is allowed, that it thereby becomes commerce in the legal

meaning of that word. In view of the authority of the State to affix conditions to the killing and sale of game, predicated as is this power on the peculiar nature of such property and its common ownership by all the citizens of the State, it may well be doubted whether commerce is created by an authority given by a State to reduce game within its borders to possession, provided such game be not taken, when killed, without the jurisdiction of the State. The common ownership imports the right to keep the property, if the sovereign so chooses, always within its jurisdiction for every purpose. The qualification which forbids its removal from the State necessarily entered into and formed part of every transaction on the subject, and deprived the mere sale or exchange of these articles of that element of freedom of contract and of full ownership which is an essential attribute of commerce. Passing, however, as we do, the decision of this question, and granting that the dealing in game killed within the State under the provision in question created internal State commerce, it does not follow that such internal commerce became necessarily the subject-matter of interstate commerce, and therefore under the control of the Constitution of the United States. The distinction between internal and external commerce and interstate commerce is marked, and has always been recognized by this court. In Gibbons v. Ogden (9 Wheat, 194) Mr. Chief Justice Marshall said:

"It is not intended to say that these words comprehend that commerce which is completely internal, which is carried on between man and man in a State, or between different parts of the same State, and which does not extend to or affect other States. Such a power would be inconvenient and is certainly unnecessary.

"Comprehensive as the word 'among' is, it may very properly be restricted to that commerce which concerns more States than one. The phrase is not one which would probably have been selected to indicate the completely interior traffic of a State, because it is not an apt phrase for that purpose; and the enumeration of the particular classes of commerce to which the power was to be extended would not have been made had the intention been to extend the power to every description. The enumeration presupposes something not enumerated; and that something, if we regard the language or the subject of the sentence, must be the exclusively internal commerce of the State.

"The genius and character of the whole Government seem to be that its action is to be applied to all the external concerns of the nation, and to those internal concerns which affect the States generally, but not to those which are completely within a particular State, which do not affect other States, and with which it is not necessary to interfere, for the purpose of executing some of the general powers of the Government. The completely internal commerce of a State, then, may be considered as reserved for the State itself."

So, again, in The Daniel Ball (10 Wall., 564) this court, speaking through Mr. Justice Field, said:

"There is undoubtedly an internal commerce which is subject to the control of the States. The power delegated to Congress is limited to commerce among the several States, with foreign nations and with the Indian tribes. This limitation necessarily excludes from the Federal control commerce not thus designated, and of course that commerce which is carried on entirely within the limits of a State and does not extend to or affect other States."

The fact that internal commerce may be distinct from interstate commerce destroys the [whole theory upon which the argument of the plaintiff in error proceeds. The power of the State to control the killing or an ownership in game being admitted, the commerce in game, which the State law permitted, was necessarily only internal commerce, since the restriction that it should not become the subject of external commerce went along with the grant and was a part of it. All ownership in game killed within the State came under this condition, which the State had the lawful authority to impose, and no contracts made in relation to such property were exempt from the law of the State consenting that such contracts be made, provided only they were confined to internal and did not extend to external commerce.

The case in this respect is identical with Kidd v. Pearson (128 U. S., 1). The facts there considered were briefly as follows: The State of Iowa permitted the distillation of intoxicating liquors for "mechanical, medicinal, culinary and sacramental purposes." The right was asserted to send out of the State intoxicating liquors made therein on the ground that, when manufactured in the State, such liquors became the subject of interstate commerce, and were thus protected by the Constitution of the United States; but this court, through Mr. Justice Lamar, pointed out the vice in the reasoning, which consisted in presupposing that the State had authorized the manufacture of intoxicants, thereby overlooking the exceptional purpose for which alone such manufacture was permitted. So here the argument of the plaintiff in error substantially asserts that the State statute gives an unqualified right to kill game, when in fact it is only given upon the condition that the game killed be not transported beyond the State limits. It was upon this power of the State to qualify and restrict the ownership in game killed within

its limits that the court below rested its conclusion, and similar views have been expressed by the courts of last resort of several of the States. In State v. Rodman, *ub. sup.*, the Supreme Court of Minnesota said:

"The preservation of such animals as are adapted to consumption as food, or to any other useful purpose, is a matter of public interest, and it is within the police power of the State as the representative of the people in their united sovereignty to make such laws as will best preserve such game, and secure its beneficial use in the future to the citizens, and to that end it may adopt any reasonable regulations, not only as to time and manner in which such game may be taken and killed, but also imposing limitations upon the right of property in such game after it has been reduced to possession. Which limitations deprive no person of his property, because he who takes or kills game had no previous right to property in it, and when he acquires such right by reducing it to possession he does so subject to such conditions and limitations as the Legislature has seen fit to impose." See also State v. Northern Pacific Express Co., *supra.*

So also in Magnier v. The People, *ub. sup.*, the Supreme Court of Illinois said:

"So far as we are aware, it has never been judicially denied that the Government under its police powers may make regulations for the preservation of game and fish, restricting their taking and molestation to certain seasons of the year, although laws to this effect, it is believed, have been in force in many of the other States since the organization of the Federal Government. * * * The ownership being in the people of the State, the repository of the sovereign authority, and no individual having any property rights to be affected, it necessarily results that the Legislature as the representative of the people of the State may withhold or grant to individuals the right to hunt and kill game, or qualify or restrict, as in the opinions of its members will best subserve the public welfare. Stated in other language, to hunt and kill game is a boon or privilege, granted either expressly or implicitly by the sovereign authority, not a right inherent in each individual, and consequently nothing is taken away from the individual when he is denied the privilege at stated seasons of hunting and killing game. It is perhaps accurate to say that the ownership of the sovereign authority is in trust for all the people of the State, and hence by implication it is the duty of the Legislature to enact such laws as will best preserve the subject of the trust and secure its beneficial use in the future to the people of the State. But in any view the question of individual enjoyment is one of public policy and not a private right."

See also *ex parte* Maier (103 Cal., 476); Organ v. The State (56 Ark., 270). It is indeed true that in State v. Saunders (19 Kan., 127), and Territory v. Evans (2 Idaho, 634), it was held that a State law prohibiting the shipment outside of the State of game killed therein violated the interstate commerce clause of the Constitution of the United States, but the reasoning which controlled the decision of these cases is, we think, inconclusive, from the fact that it did not consider the fundamental distinction between the qualified ownership in game and the perfect nature of ownership in other property, and thus overlooked the authority of the State over property in game killed within its confines, and the consequent power of the State to follow such property into whatever hands it might pass, with the conditions and restrictions deemed necessary for the public interest.

Aside from the authority of the State, derived from the common ownership of game and the trust for the benefit of its people which the State exercises in relation thereto, there is another view of the power of the State in regard to the property in game, which is equally conclusive. The right to preserve game flows from the undoubted existence in the State of a police power to that end which may be none the less efficiently called into play, because by doing so interstate commerce may be remotely and indirectly affected. (Kidd v. Pearson, *ub. sup.*, Hall v. De Cuir, 95 U. S., 485; Sherlock v. Allings, 93 U. S., 99, 103; Gibbons v. Ogden, *ub. sup.*) Indeed, the source of the police power as to game birds (like those covered by the statute here called in question) flows from the duty of the State to preserve for its people a valuable food supply. (Phelps v. Racey, 60 N. Y. 10; *ex parte* Maier, *ub. sup.*; Magnier v. The People, *ub. sup.*, and cases there cited.) The exercise by the State of such power therefore comes directly within the principle of Plumley v. Massachusetts (155 U. S., 461, 473). The power of a State to protect by adequate police regulation its people against the adulteration of articles of food (which was in that case maintained), although in doing so commerce might be remotely affected, necessarily carries with it the existence of a like power to preserve a food supply which belongs in common to all the people of the State, which can only become the subject of ownership in a qualified way, and which can never be the object of commerce except with the consent of the State and subject to the conditions which it may deem best to impose for the public good.

Judgment affirmed.

Mr. Justice Brewer and Mr. Justice Peckham, not having heard the argument, took no part in the decision of this cause.

The Sportsman Tourist.

UNCLE LISHA'S OUTING.—XV.

Talk Around the Camp-fire.

THE company had been sitting around the fire for some time in meditative silence, Antoine especially in such deep thought that the pipe between his teeth had gone out for lack of draft. He was racking his brain for the invention of a change in the bill of fare, which had become monotonous with continual repetitions of roast duck, fried duck and stewed duck till each variation needed a good deal of Spartan sauce to make it palatable. At last he spoke, without removing his pipe from his mouth or his gaze from the fire.

"Cheekin pie was good, an' Ah'll b'lieved dawd pie was good, but Ah'll a'n't tas'e. 'F Ah'll gat hoven or bake pans an' somet'ing for mek crus', an' board for roll it, an' peg too, an' some pepper we'll freget for brought, an' t'ree, four necessity t'ing, Ah'll can't rembler, Ah bet you head Ah'll was mek you pie to-morry you can' heat'nough of it, probly. Ah'll got de dawd."

"It kinder seems," said Joseph, his mouth watering for the prospective feast, "as it looks naow, you'd hafter make us a pie aouten clear duck, but I d' know fer sartin."

"You might spare him some feathers for crust," Sam suggested.

"Wal, M'ri' couldn't, though I da' say they'd make tol'able light top crust."

"Ann Twine's pie is some like the feller's soup 'at I hearn tell on," said Uncle Lisha, fumbling absent-mindedly on the log beside him for a shoe-peg. "He was a-travelin' an' got short o' money, or mebbly he was a reg'lar beggar, I do' know, but ary way, he stopped tu a haouse an' ast for somethin' tu eat, an' they wouldn't give him nothin'. So he ast 'em if they wouldn't lend him a kittle a spell an' a spwun, so 's 't he c'd make hisself a kittle o' stun soup, an' so they did just tu see what he'd du. Wal, he built him a fire side o' therwud an' sota kittle o' water a-b'ilin', an' he took an' washed a stun 'baout 's big as his fist an' popped it int' the kittle, an' sot an' watched it 'b'ile a spell, an' then he dipped up a spoo'f'l an' tasted on't."

"It's proper good," says he, "but it's kinder fraish, an' I wish 't I hed a leetle grain o' salt tu put into 't, an' they went and fetched him a han'f'l an' he put that in."

"That's a gre't improvement," says he, a-tastin' ag'in, "but it wouldn't hurt it none if the' was a hunk o' meat in 't; any sort of a scrap 'at you was a-goin' tu heave away. I hain't partic'lar." An' so they fetched him a good hunk o' meat an' he hove that int' the kittle, an' then says he, 'I s'pose you'd jes' 's live 's I'd pull one o' them 'ere turnips over there? This 'ere soup 's goin' tu be putty strong o' stun if it don't ha' some vegetables in 't."

"So he went an' got him a turnip, an' whilst he was about it he got an onion, an' he cut 'em up an' chucked 'em in. An' when he got it b'iled he eat 'nough tu last him tew days, an' says he, a-rubbin' of his stomaerk, 'The' hain't nothin' 'at makes better soup 'n a good stun, wi' a few leetle additions, an' I'm much obleeged tu ye for the use o' your kittle,' say he."

"Dat was mek me rembler of one man Canada," said Antoine, scooping up a coal with the bowl of his pipe and pulling at it with resounding smacks.

"I'll warrant ye," said Uncle Lisha, "I never knew nothin' 'at didn't."

Antoine gave no heed to the remark, but at once began his story when his pipe was in blast.

"You see, dar was one mans a'n't very good up, an' he'll a'n't gat not'in' for heat on his haouse 'cep' one pea for all his waf an' ten chillens. He tol' hees whomans for put de pot on de stufe an' full him up wid water an' put dat pea on it. Den bambye w'en he beegin fo' bile he look on de pot an' see dat pea jomp raoun' all 'lone, he say, 'Dat leetly pea was look lonesick, an' Ah'll goin' see 'f Ah can fin' somet'ings for hees company."

"So he go in de naght to 'nudder man's barn, where dey was keel big critter an' hang it for cold off, an' he was cut good chonk an' take it on his haouse an' trow it in de pot 'long to de pea w'en his waf he'll a'n't see. Bambye w'en de pea was bile plenty an' his waf beegin tas'e for heat, he say:

"'Bah gosh, Ah'll a'n't never see so pea lak dat for mek soup, me.' An de mans tol' him:

"'You'll a'n't never gat raght kan' o' pea 'fore.'"

"I guess it must be the water in your tew soups 'at makes me think o' the way that 'ere little Wat Palmer got a pint o' rum aouten Hamner here a spell ago," said Sam, as he broke a dry branch across his knee and slowly fed the fire with the pieces.

"It wa'n't good rum, I'll bate ye," said Uncle Lisha.

"Wal, sech as it was, he got it aouten Hamner for nothin', which is more 'n most c'n du, an' he got drunk as a bee on't an' then tol' haow he done it."

"Wal, haow 'd he come it on him?"

"Wal, Wat he was dre'f'ly dry an' not a red cent in his pocket nor nob'dy tu treat him. So he gits him tew pint bottles jest ezactly alike an' fills one on 'em wi' water an' sticks that intu one cut-tail pocket an' the empty one int' t'other an' marches up to Hamner's bar 's promp' 's a major an' calls for a pint o' the best rum. Bein' so promp' Hamner cal'l'ated 'at of course he was goin' tu pay ri' daown, an' so he drawed the spirits an' handed it over to Wat, an' he tucked it in his pocket, and says he, 'Mr. Hamner, you jest chalk this daown ag'in me an' I'll pay for 't the nex' job o' fiddlin' I git,' and Hamner said not by a jugful, he wouldn't, an' if Wat wa'n't goin' tu pay for 't then tu jest hand it right back. Wat, he begged hard, but it wa'n't no use, the money or the liquer Hamner would hev', an' so Wat gin him the bottle o' water a-partin' with 't as 'ough 't was his heart's blood, an' off he went wi' the rum, an' in an haour was drunker'n a hatter, an' Hamner poured the water intu his barrel, never mistrustin', but a-ticklin' himself 'at he'd saved ninepunce, an' so he hed, r'al'y. But it bothered him haow Wat hed got so all-fired drunk."

"Wal, seh, boy, if de folks dat was went to Hamny a'n't gat more as pant water in de barrel rawm, it won't hurt dem."

"Wal," said Joseph, "it kinder seems as 'ough another pint o' water was a leetle mite more'n Hamner's rum 'ould stan', accordin' tu my rec'lections o' the taste on't, but I d' know, mebbly it will."

The company became silent again, each busy with his

own thoughts, till Antoine began to sing as if to himself what may have been an improvisation, but was more likely a free translation of an old song.

All tam w'en de leaf turn yeller
It mek it kan o' lonesick, me,
For t'ink w'en Ah'll was leetly feller
An' go sleep on mah mudder's knee,
"Dor, dor, dor, petit! Dor, dor, dor, petit!"
Same hol' song she sing to me.

Den de folkses an' de medder,
An' de ribber an' de tree,
Beegin swimmin' raoun' togedder
W'en mah mudder sing to me,
"Dor, dor, dor, petit! Dor, dor, dor, petit!"
So he sing his song to me.

Long tam 'go Ah'll lef' mah mudder,
An' mahsef' beelone to me,
An' de whomans was anudder
Rock mah chillens on her knee.
"Dor, dor, dor, petit! Dor, dor, dor, petit!"
Sem mah mudder sing to me.

Antoine pocketed his pipe and yawned sleepily, "Wal, dis a'n't mek any dawd pie. Ah'll b'lieved Ah can mek it jus' as fas' 'f Ah go sleep," and he made his way into the tent, whither the others presently followed, Sam lingering last to scan the patches of starlit sky between the branches and forecast the morrow's weather.

Then, while the dying fire snapped itself out and the dancing shadows sank into the universal gloom, the tired hunters were lulled to sleep by the slow wash of waves and the low song of the cedars.

ROWLAND E. ROBINSON.

A DAY IN CENTRAL IOWA.

VINTON, Ia., Feb. 26.—*Editor Forest and Stream:* I am full, and not wishing to explode I turn for relief to the columns of FOREST AND STREAM.

I went out this morning to mend fence and was whacking away at it when I thought I heard a sound over in the cornfield that made me drop the tools and turn my ear that way mighty quick. "Yes! That's it, ducks! ducks!" And I pitched into that fence, giving it a whack here and shoving a stick in there, and all the time trying to think where the cartridges were and wondering if that "chip of the old block" had used them all up on rabbits. And then I began to think that I did not wish to shoot any ducks after all, I would sooner think that this summer they would be paddling along the shore of some Northern lake with their families of little ones. So I wandered over to where the horses were grazing, and while I listened to the boo-hoo, boo-hoo, boo-hoo-hoo of the prairie chickens, one milks colt after another came up and I rubbed their noses, pulled their ears, pinched them in the ribs with my thumb and asked them what they were good for anyway. Then just as I got to the house over went a flock of ducks quacking and gabbing to each other, and I leaned up against the corner of the house and sort of went to pieces—couldn't saw wood or do any work after that. Several flocks went over, and one flock of forty geese.

It was bright and warm, the thermometer indicating 62° above zero. The outside doors were open. Now and then an adventurous bee or blue-bottle would come buzzing around, and every time I would yell ducks out would come my wife on a run, for she is full of it too.

It has been one of those dreamy spring days that makes one glad to be alive, with not a breath of air stirring, and nothing to be seen moving around the numerous farm-houses in sight. But the air is full of sounds. On the creek bottom the crows are calling and lazily flying from tree to tree. All day the prairie chickens have been crowing. In some cedar trees in the yard some bluejays are squalling and chattering.

And now comes the mellow lowing of cattle from some distant field. I hear chickadees and the everlasting English sparrow. I see my thirty-six bronze turkeys and the seventeen gobblers are bunched together, a number of them weighing over 25 lbs., and with tails spread they are strutting around and reflecting their bronze in the sun, and when I say "gobble" they come in heavy on the chorus. I keep a few geese just to hear them talk, and they are picking grass and holding a very animated conversation. I keep a few ducks just to hear them quack, and their quick eyes and ears tell them that others are passing over, and they are shaking out their wings and are very noisy. And so too I keep some Guinea fowls just to hear them yell, and I can hear them to-day all right, and so can any one else within ten miles or less. The doves are cooing and carrying straws to their nest boxes, and I am so glad that I am alive.

During the forepart of last December a flock of ten blackbirds came to my place. This was some time after the straggling flocks had gone, and I think they came from the far regions of the North. These birds have been here ever since, feeding with my stock, and it has been cheerful to see them and hear them sing. They have red on their wings, the tops of their heads are brown and they are speckled all over with the latter color. To-day I miss them; have they taken the fever and gone?

The last day of December a mourning dove was in my corn crib, and I have known these birds to stay here for a short time into January. But never before during my forty-one years of life have I known a flock of summer birds to live through a winter in the North.

But while my eyes and ears have been taking in all this to-day, my mind has been away up in Minnesota, wandering along the shores of those wooded lakes. I know what they are like, I have been there; but I wonder where the snow line is, and if these ducks will reach those lakes to-day.

Well, I am somewhat relieved now; but I would be glad to say to Kelpie, who lives in northern Michigan, and to Mr. Cooly, who lives at Detroit Lake, Minnesota, that the waterfowl are on the way to their breeding grounds.

MOUNT TOM.

In Mr. Holyoake's recently published volume on public speaking, he gives the following instances of how these august luminaries were accustomed to allude to each other: "The Times" calls its neighbor, the *Morning Chronicle*, "that squirt of filthy water," and the *Chronicle* calls the *Post* "that slop pail of corruption." The *Standard* describes the *Globe* as "our blubber-headed contemporary," the *Morning Post* assails the *Courier* as "that spavined old hack," while the *Morning Advertiser* hurls its wrath against the *Times* as "that bully of Berkshire and braggadocio of Printing House Square." The *Times*, not to be outdone, commenced one of its leaders on June 18, 1853, with "The Liberal Liars."—*London Truth*.

Natural History.

EDUCATION, NOT INSTINCT.

Editor Forest and Stream:

"A nuthatch put a nut into a knot hole on a limb the better to break the nut. It may have been instinct or luck that prompted this nuthatch to use a knot hole for his vise, but it looks like brains" ("Nuthatch," FOREST AND STREAM, Feb. 8, 1896). That Nuthatch should really think the nuthatch had brains is remarkable. It looks as if Nuthatch had brains too, and not ordinary ones at that. He is almost Indian in that respect, for Indians gave birds supernatural powers, the ability to think, and language or ability to convey ideas to one another. Once in a while, say every two weeks on an average, somebody writes like Nuthatch did to the FOREST AND STREAM, telling of something remarkable a bird did, then winds up with "It looks like brains," "Marvelous development of instinct," "Wonderful intuition," "Something akin to thought," but never a once so far as I know has any one said straightforwardly that a bird "thought." "Did it think?" is common enough, but no "It thought."

"Instinct?" a bluejay would say. "Instinct be heud! Say, you ought to hear Grandpop Cut Wing tell about warning that old big buck over on Metcalf Mountain eight cold seasons ago. I s'pose he did everlastingly holler and laugh. Then the Indians, long before you whites came, used say evil things of us, as you do, for warning our brothers of your approach. Instinct! Eheu-u-u!"

The cowbird is a lazy tough by instinct—all instinct, of course. Mr. M. A. Walton says that the mother cowbird takes the young cowbird from nest to nest of other birds, evidently telling what lots of labor other birds have to do, and telling the pupil that it must not do such things if it wants to keep in good cowbird society. Mr. Walton tied a bit of copper wire around a young cowbird's leg, which had been raised in a yellowbird's nest by the yellowbirds, but was daily visited by a female cowbird. The female cowbird at last disappeared with the young cowbird. The following year Mr. Walton saw the cowbird with a copper bracelet going from nest to nest in company with another cowbird, "probably the mother" (FOREST AND STREAM, Vol. XXXVIII., p. 271). Thereafter (that young cowbird was, of course, instinctively adverse to building nests.

Bert Titus, a 12-year-old lad, was fishing in the Hudson near Albany. A catbird came to a nearby rock and began to cut up such capers as attracted the boy's attention. Then the bird flew toward a clump of bushes, back again, then toward the bush. The boy's instinct told him that the bird wanted him to go to the bush and so went, and found a 3 ft. snake making for the catbird's nest. The boy killed the snake, as the bird's instinct (inherited from its ancestors presumably) had told it he would (FOREST AND STREAM, Vol. XIX., p. 485). Down in South Africa is a bird very fond of honey, hence its name of honeybird. To get the honey the bird shows "marvelous intuition." It finds a bee tree and with coaxing like a catbird's entices a man to it. Then the man and bird enjoy a feast together. Some one not instinctively acquainted with the bird thinks it is sick and pays no attention to it, but if he is told of the bird's habit he follows it because then his instinct has been developed. If another honeybird should appear, the guide ceases guiding till the rival is driven away. Why do honeybirds do this? It is instinct, of course, because it is not possible for a bird to tell another bird how its greatgrandfather found a man eating honey and then was told by "natural inward impulse" to take the man to another bee tree it knew about (FOREST AND STREAM, Vol. XV., p. 127). It is preposterous to suppose these birds told one another about men liking honey; fairly silly, in fact.

Last summer chimney swifts had a nest in a chimney of my house in Northwood, N. Y. Eventually the two young instinctively flew after the mother had done everything instinct suggested to make them—ordered, begged and dared them to, flying herself to show how easy it was. They flew more and more every day, till along about migrating time the three were flying almost constantly all day long, often with visitors from neighboring chimneys and barns (swallows). The mother led in these mad instinctive flights, and her twistings and turnings were calculated (by instinct) to make the young birds hustle. If a man expects to take a long walk at some time in the future against time, the first thing he does is to exercise every day, more and more, till the time when he walks "in earnest." The man knows that unless he exercises he won't be able to stand the strain when the time comes. Experience may have told him this or perhaps other athletes. I have read somewhere that the parent storks of Europe keep their young on the move for weeks before going South to beyond the Mediterranean. And that the young birds are killed if evidently too weak to stand the journey. (I don't believe the last about the killing because it puts a stork on a level with the barbarous man who kills his deformed children.)

Then there is the deep, dark, insoluble instinct of migration; the impulse that enters the (what?) of our "summer birds" and impels them to go to the south, some unerringly into lighthouses at night and others to be lost at sea. Their (what?) rises like a man's chest and they feel that they must go when the days grow cooler and the nights cold, as in the "mellow days of autumn," when they remember the warmth and joys south "toward the sun." Is there any sign of approaching winter in the weather that we notice and birds do not? Migration is more regular than the seasons, because birds know cold is coming. They know instinctively, because straggling birds—robins, for instance—are seen north at times all winter long. These robins—young birds most likely—look for their beautiful summer homes, not believing the old birds and instinct when they told them it was no longer pleasant there.

The sudden appearance of birds new to a locality is often the cause of comment by naturalists. "Ten years ago there was not one seen. I saw a small flock nine years ago. A few more came the next year. Five years ago there were hundreds, but a year later they were fewer in numbers, and I have seen only seven this year. Where have they gone to?" No story is commoner on the pages of ornithological history than this. They come, go, and are gone. Of course it is the "wandering instinct" (distinguished from migration). A feathered Columbus alone, perhaps with a hardy band, had set sail in the sea of air, braving the unknown west, looking for the wealth of the

seed trees in unheard-of lands. The careful observer welcomes them in his note book and in a newspaper of field sports. This Columbus returns to tell of a fair land, and the next year leads to it a band of colonists, and so on, till another and richer land is discovered. A man shooting into a flock of strange birds has no doubt given many an exploring party cause for never again coming there, the tale of death being kept alive in a gawsome myth by the bird magicians, or as our darky friends down South would say, by the "Witch birds," and effectually deterring other birds of like species from visiting it again. Prairie chickens once flew North, were in thousands around Duluth, hundreds were drowned in Lake Superior, others kept on till in the barren lands or plains, an old big burning north of Grand Marais, I think, or of lakes west of there, where it is said the chickens stayed. A theory of the reason the chickens had migrated was that they had been hunted so much by market hunters (D. D. Banta, *FOREST AND STREAM*, Vol. XXXIX, p. 443). It was the instinct of self-preservation that prompted these birds to get up and get to a land out of reach of money makers.

One would naturally suppose that if there ever was an instinct in any race of vertebrates it would be love. Particularly would one think that the birds love instinctively. That a young bird should fall in love would be only natural. But instinct is remarkably like knowledge, it is scattered most confusingly and unexpectedly in lumps and splashes all over, and not the least is the lover's. Shadow, an old-time and well-known contributor of the *FOREST AND STREAM*, once put a yearling male pine grosbeak into a large breeding cage with a 3-year-old female. All went well till along in the spring, when Shadow put a kingbird's nest into one corner of the cage "to see what they would do." The male glanced at it, then resumed his song. The female looked at it most carefully, inside and out, from a distance and close by. Then she went over and nestled up alongside the male. He was astonished and edged away. She chirped low and expressively and drew up alongside again. He went for the food dish and began to eat. She followed with a plaintive chirp. He slid around behind the bath tub. She ruffled up her feathers and with a discordant crook went for him and everlastingly whipped and pecked him. The poor fellow didn't know what to do. Shadow at last took the male out of the cage for a week, but no sooner was he back than the vixen hit him and knocked him a foot. Shadow hit her with a stick and she fled out of reach, whereupon the male asserted his malehood and whipped her and paid up old scores. They found the female dead—she had refused food and drink. Soon after one morning, and after languishing a while—two or three weeks—the male died too. After the female ruffled up her feathers the first time neither bird sang again, though they had sung sweetly and long before. It was a "marvelous instinct" gone wrong (Vol. XIV., p. 125, of *FOREST AND STREAM*). Perhaps if the young bird had been in a position to observe the courtship of his relatives he might have been different—who knows but what he was faithful to a love of his youth? He had been captured not long before, in midwinter.

A young eagle's nest is never so good or perfect a one as the mature bird's, and this is true, I am confident, of all birds. "Practice makes perfect," and I doubt if a pair of captive birds that had never been in any communication with the experienced birds would build a nest. But so keen is a bird's brain that should it see the nest of any bird it would build a nest resembling that nest as nearly as possible. It is on record that a robin built a nest out of moss instead of mud once, and this in the same orchard where another robin was building an ordinary mud structure. This robin of the moss nest had thought a moss nest better than a mud one or had never seen a mud one—had been raised a parasite in another kind of bird's moss nest—phoebe's, for instance.

Much that is ascribed to instinct is due to nothing less than thought. When a bird builds a nest long before discarded by its ancestors (see article by B. Horsford in *FOREST AND STREAM*, Vol. XIX., p. 485, telling of canopied English sparrow's nest), it did not do so because of a long dormant instinct's dictation, but because of tradition. Thought as genuine as ever a man had, though less in volume, is in the heads of birds—the subdued song of a catbird at night in its dream proves that.

RAYMOND S. SPEARS.

BIRD FLIGHTS.

O. W. HAMPTON, in his short paper on this subject in *FOREST AND STREAM* of Feb. 29, has shown himself to be a careful observer of facts, and as such deserving of such further light as a brother student of the subject can throw on this interesting and for the future of aeronautics very important subject. He has observed that the bird steers himself by his wings, and that in circling flight "the under part of his body is partly turned toward the circumference of the circle"—in other words, that the bird circles on wings spread vertically to the horizon. This is in accordance with simple mechanical laws; the under surface of the wings being now exposed to lateral instead of vertical pressure, the bird is deflected from his course in a circle the size of which is determined partly by the measure of the angle of incidence, the circle diminishing in size as the angle of incidence increases; partly also by the tail, which in circling is no longer horizontal, but exposed to lateral pressure also. In this position, raising or depressing it aids in steering the bird laterally, that is in decreasing or increasing the sweep of the circle, precisely as the corresponding movements operate to raise or depress the line of flight when the wings are horizontal. The circling is the resultant of two forces—the required momentum, and the steady lateral pressure of the atmosphere. By reversing the angle of incidence of the wings at the semicircle, circling flight becomes sailing flight, which is available for travel, the course being sinuous. If the tail is depressed on this flight, the arc of the circle is flat, and the distance traveled over is not nearly so much in excess of the actual distance accomplished as would be the case if the bird flew in semicircles. This is the secret of the albatross's erratic flight, in which the angle of incidence of the wings is reversed at irregular intervals. The bird is quartering the water for game, with a side glance at the slow sailing ship, which he keeps constantly abreast of, while sailing three or four miles to her one.

But how, asks Mr. Hampton, does a bird rise or even maintain his level in circling or sailing flight after his

momentum is used up? A pertinent question this. Not by muscular energy, certainly. Force is required to maintain the momentum, and the only available force is the wind. The bird can circle in still air, but he can circle only downward, as ducks do when alighting, to moderate the force of their rapid flight.

The wind is no aid to the bird rowing or gliding on level wing. He must outspeed it or he will be at its mercy. In outspeeding it he becomes conscious of one current only, the current generated by his speed, which rushes with uniform force under the front edge of his wings, and as he outstrips the wind it can have no effect on him. If it blows from behind it does not overtake him; if it blows from one side the stronger rush under the wings from the front deflects it. If it blows from ahead at a speed greater than his own it lifts him, but uses up his momentum, and he has to dive downward to recover it. The bird on level wings can no more be aided in flight by the wind than a ship can be aided by its awning spread to the breeze. But when the bird is on oblique wings he may be compared to a ship with fore and aft sails spread. He cannot then sail before the wind; but while sailing across it, or in its teeth, he opposes resistance to it, and the immediate resultant of his acquired momentum and this resistance is that he would be lifted at a tangent if he did not carry the center of his gravity well forward. The second result of the wind beating under the wings is due to the parabolic curve of the concavity under the wings, which being deepest near the forward edge—about one-third back—determines the pressure forward, no matter what angle it blows from, as long as it strikes under the wings. He can sail nearer to the wind, deriving aid from it, than a boat can; but when the wind comes from aft he turns his back to it, deriving no support from it for about one-third of the circle, during which he loses level. The speed of the bird is not limited by the speed of the wind, but by the acquired momentum. This enables the bird to oppose such resistance to the wind, when crossing or facing it, that its force is multiplied many fold—in fact by the resistance—so that, the shape of the wing determining the pressure forward, a very light wind, say five or six miles an hour, is sufficient to maintain a bird in upward circling flight at a speed of twenty-five or thirty miles an hour. At any rate, cranes and vultures do circle upward when the wind is blowing at not more than five or six miles an hour at the surface, but it is true they do not begin to circle near the surface, and the current is generally stronger as we ascend. The albatross does not attempt sailing flight in such light winds.

As regards the speed of birds in flight, very few exceed forty miles an hour, but ducks and falcons can achieve sixty and more. The swoop of some of the falcons on half-closed wings is almost like the flight of a meteor—something incalculable.

C. F. AMERY.

Albino Squirrels.

BELLEVILLE, Ont.—Squirrels of unusual colors were more numerous than ever before known in this part of the country during the past hunting season. Mr. Hull Austin and Mr. Joseph Stoneburg shot a piebald black squirrel; another party got a fox-colored black squirrel, and Mr. James Munro shot a black squirrel with a red tail. A black squirrel with a large white patch on its breast and another on its back was seen by a reliable informant.

Inclosed are photographs made by Mr. T. W. R. McRae, a amateur, of two albino black squirrels which were set up for me by Mr. James Munro.

One photograph represents the one shot by Mr. Austin. Commencing with an almost snow white in the back, its color shades down through cream to fawn, of which color are its nose, ears, tail, sides and paws, as the photograph pretty well indicates, while the shade gradually deepens into a rufous brown on the belly.

The other is pure cream color, the under parts merging into a red—brown on the belly. This specimen was shot by Mr. Wm. Clarke some twelve miles from the city.

Both of these squirrels are evidently freaks of the black squirrel family, their tails being precisely the same in form as those of the "black," namely, much more round and bushy than those of the gray squirrel. Their eyes are of the color usual in black squirrels, namely, very dark brown or black.

RICHARD S. BELL.

When the Birds Arrive.

GENESE, N. Y., March 6.—The annual spring migration of North American birds has already commenced, and every lover of outdoor life is anxiously looking forward for their arrival. We have already noticed in *FOREST AND STREAM* some brief notices of the early appearance of some of the birds further South. It occurred to us that if the many readers of *FOREST AND STREAM* scattered everywhere over the United States and Canada would send brief letters to your journal, it would greatly interest its readers to know of the arrival of the more prominent species in different localities, and be of great value as a record of the extent and movement of the spring migrations. Every one is on the lookout for the first robin and bluebird, and with what pleasure we greet him, as we stop wherever we are, to gladly welcome the first harbinger of spring as he comes back to us from his winter home.

SONG SPARROW.

[We heard a song sparrow in New York city on Sunday, March 8.]

Alligator Hunt at Punta Gorda.

PUNTA GORDA, Fla., March 4.—A party of the Hotel Punta Gorda guests, composed of Mr. and Mrs. W. F. Veysey, Mr. and Mrs. L. E. Lovejoy, Mrs. F. H. Abbott and Mr. J. H. Concanon, and a guide started out for Alligator Creek this morning to capture an alligator and bring him in alive. Teams were taken to within a short distance of where several alligators were known to have their home. The first one espied was too close to the creek, into which he disappeared with a splash. A short distance further on the shore brought the party to a cave which was inhabited. Sundry diggings only served to drive the saurian further into his hole, and the men of the party proceeded to dig him out. After a little while the head of the beast was observed, and soon enough of him was uncovered to permit of the introduction of a hook fastened to the end of a pole, and he was caught by one foot and ignominiously dragged into the light of day. That he was a fighter early became evident when he

turned upon his captors and gave them a battle royal before they were able to tie him. He was not a beauty even when tied, while before this operation his countenance was just a little too open to give much encouragement. An occasional vicious swing of his powerful tail seemed to indicate that his feelings had been outraged, and his eyes scintillated with fury. While the men of the party were absent for a few moments a scream from the ladies attracted them back, and it was found that the monster had succeeded in loosening the rope from his jaws and had climbed on to the dashboard of the wagon with the intent of feasting upon one of the horses. The rope was still secured to his body, however, and he was dragged off before doing any damage. His entry into town was the signal for a gathering of the curious, who followed the wagon to the hotel door, where the guests of the Punta Gorda were assembled. This alligator did not seem to relish the attention he was receiving, as was to be seen from the nervous swings of his tail; unlucky the mortal to come within reach of it. In the afternoon he was taken outdoors and tethered to a tree, where he manifested his displeasure by sundry jumps and evolutions. He is an immense beast, in fact the largest caught this season, and will be placed in the gator tank in rear of the hotel. H.

Deer Antlers.

LANSING, Mich., Feb. 25.—Last week's *FOREST AND STREAM* contained an article giving a description of a pair of antlers having twenty-four distinct points.

Some years ago Mr. Wells, of Saginaw, Mich., the gentleman who was drowned while duck hunting in Minnesota, had a pair of antlers with thirty-six distinct and well-defined points. I am inclined to believe that Mr. Mershon, of Saginaw, can give the facts in the case. My informant is Mr. Davis, of this city, one of the old-time "Saginaw Crowd."

Mr. Davis has three beaver in a pond near his house, and on Sunday last he witnessed the mating of the beavers—quite likely a process seldom or never observed before by any man. Any person who is interested in this line of natural history can learn full particulars by addressing Mr. Davis.

JULIAN.

Wild Geese Flying North.

WATKINS, N. Y., March 2.—On Feb. 28, about 3 P. M., a flock of wild geese passed over our place (about two miles northwest of the village of Watkins); they were well bunched up and heading northeast, and keeping up a tremendous honking. Is it not rather early for geese in this part of the country?

"That reminds me."

Any Other Birds of this Feather?

SEATTLE, Wash.—*Editor Forest and Stream:* I have again just read the query by F. A. Mitchell on moose calling, and I am pleased to know that there is at least one other person who thinks as I do on this question. I have not missed a copy of *FOREST AND STREAM* in ten years, and have followed all the discussions of what constitutes a true sportsman, and stopping the slaughter of game, and who constitutes the pot-hunter, etc., and I can see only selfishness depicted in every article. Anybody knows that there is just as much true sportsmanship in shining deer as there is in calling moose. The question cannot be argued.

You talk of the great slaughter of wildfowl going on and advertise decoys. To my mind there is not one particle of true sportsmanship displayed by a man who uses these invented devices to allure the game to destruction. The name decoy itself is only suggestive of trickery and of its very nature illegal. That poor old imprisoned gander that somebody had for an educated decoy seemed to be a wonderful acquirement to the paraphernalia of a sportsman in the eyes of that writer, in the issue of Jan. 18.

Consistency in the average writer in sportsman's journals is away in the background and selfishness crops out boldly in every article on these questions. Abolish the sale and use of decoys. Fine a man for having them in his possession, and you will not have to legislate for the protection of the wildfowl. It is just as consistent to allure a deer to his death by using the salt lick as it is to decoy a flock of mallards with a false duck. In condemning the mode of capturing game of one sort, why approve the same thing in another kind of game?

I will stand with Brother Mitchell on the moose calling proposition, but will he be radical enough to stand by me on the decoy question? Who of your many readers will?

E. E.

A Specter of the Deep.

STOCKTON, Worcester Co., Ind.—A very laughable thing occurred here a few weeks ago, an adventure which has fixed a joke upon one of our oystermen that I suppose he will not escape from this side of his grave. We will call him Jack B—, and will say that he was duck hungry, so he fixed a morning to go for wildfowl far out on the shoals, where he had a blind stuck. When he left the shore for his long row there was a soft south wind rippling the water, the stars were shining, and as yet the deep darkness that comes just before dawn had not settled down. When he got to there he fixed his decoys in the most taking way, pushed back into the blind, pulled the bushes all in around his boat and stood up. As he looked out over his decoys, nodding on the rippling water, the far-off honk honk of the geese or the harsh cackle of brant came to his ears, and within he felt that peace with himself and all the world which in the early morning comes to the happy ducker (it generally goes away before night).

All was well. He slipped a couple of shells in his gun and sat down on the bow of the boat, then from one pocket took his pipe, from another a plug of hard tobacco and his knife, and slowly and cheerfully chipped off the tobacco. *Chug!* What was that? A duck lighting in the decoys? He dropped tobacco and knife, picked up his gun and peered over the bushes. Not a thing in sight. Yes, there was a heavy swirl in the water just outside his

decoys; the duck must have gone under. He waited, but there was no sign; the water rippled just the same, the decoys bobbed just as before. Down he sat again, and picked up his tobacco and knife to cut another pipe full. He cut a little faster this time, wishing it would get light. He did not like that queer swirl in the water; it could not be a fish, for no fish are in Chincoteague Bay at this season of the year.

"Heigh!" called a husky voice just beside him. "Hello!" called Jack as he jumped up and again looked over the bushes, expecting to see a boat and some friends. There was not a thing in sight; not a human being within five miles of him; he was all alone on that vast expanse of water. The water rippled, the decoys nodded, and all was still. "I don't like this," he said aloud, "I guess I will go home, it isn't a good morning anyhow; I don't see a duck. I will light my pipe; and by George! over by that rock there was where those three fellows from the life-saving crew were drowned.

"Heigh!" it came again just in front of him. He was on his feet in a second; his legs shook so that he could hardly stand as he thought of the hopeless call of the drowning men. He looked, and there in front of him slowly rising from the water was a face, its great black eyes fixed on him, its long hair floating behind, and around its mouth a most fiendish grin.

With a yell that echoed and re-echoed from the far-off shores Jack dropped in his boat, seized his oars and struck for home, ducks, decoys, all forgotten, anywhere so he could get away from those big eyes and that awful grin. No one knows how fast he rowed, he does not know himself what time he made; but dawn was breaking when he rowed up to the wharf. A crowd of oystermen getting ready for the day's work greeted his coming. "Hello, Jack! Got a boat full? You quit early, Jack. Ain't enough wind for ye?"

"Hold on, men," says Jack, "I came back 'cause I seen the devil. I looked square at him just as I am looking at you fellows. He hollered 'Heigh!' and grinned at me, and then sunk slowly, like a drowning man going down the last time. I am sick, boys; I am going home."

The man was sick and as white as a ghost.

For two or three days it was all the talk of the oyster houses. Jack's devil was finally set down as a mermaid, and some of the knowing old salts wondered it had not thrown its arms around Jack and pulled him under. Then would come the story, "Down off the Brazils me and my mate Bill," etc.

About a week after this some six or eight scows were tonging together, Jack among them, when something behind them called "Heigh!" Jack dropped in his scow, his tongs fell from his hands, and he cried, "Oh, Lord, save us, there is that mermaid now!" All looked, and sure enough, there was the round head, with the big black eyes, the grin and all. One of the men called out, "You fools, that is only a seal!" and so it was. In some way or other it had gotten into the bay and could not find its way out. The men chased it and finally killed it with a gun they happened to have with them. It was the first ever seen inside here. The seal is gone and the skin has been sold, but it will be a long while before the people forget Jack and his "mermaid."

O. P. FOULKS.

One morning in the early spring of '95 and during a freshet in the Housatonic, I secured a large muskrat, and knowing that a personal friend, C., who is a noted joker, had just repaired his gun and had it in his closet, I went to him and told him that I had just seen a big rat on the river bank. Hurrying to get his gun, and taking two shells which I kindly gave him, he hastened out to the bank in his shirt sleeves. It was a fearfully cold day and a strong north wind swept down the river. Sneaking along some 500ft. or more, benumbed with the cold, he caught a glimpse of the game, half buried in a pile of rubbish. Backing off a little and calculating as to where his head was, he pulled! Out bounded the muskrat, striking the water splash! He had blown a hole as big as his own head. With that satisfied expression he turned to me: "Pretty good guess, eh? He never kicked!"

"No," said I, "he never kicked. You are a great hunter and a great shot!"

Climbing down and securing the potted game, I said: "Why, you never hit him! He's been dead a week!" One look at me, one look at the dead muskrat, then a roar of laughter from a dozen boys, and as he disappeared around a corner of the mill he muttered: "That's a good one, but you just wait."

Well, all I could do was to wait. I did wait and he had his reward. I will try and give it to you later, for it was a good one on

DARBY.

SHELTON, Conn.

Game Bag and Gun.

FIXTURES.

March 16 to 21, 1896.—Second annual Sportsmen's Exposition, under the auspices of the Sportsmen's Association, at Madison Square Garden, New York city. Frank W. Sanger, Manager.

THE BOSTON MARKET.

Mr. Reed's Argument.

FOLLOWING is the argument made by Mr. Russell Reed, attorney for the Massachusetts Fish and Game Protective Association, in advocacy of the Association's bill to forbid the market sale of game in the close season. The presentation of the case by Mr. Reed is convincing and should have influence to secure the desired amendment:

Mr. Chairman and Gentlemen of the Committee:

You have listened patiently for many days to the presentation of views on the subject of game protection. You have noticed by this time that the people who have appeared before you can be easily divided into two distinct classes, one of which, as represented by the Market-men's Association here, is comprised of gentlemen whose interest in the matter is, on their own admission, entirely a pecuniary one. They are engaged in the business of selling game as well as other articles of provisions, and their interests are necessarily those affecting their pockets. From their point of view the selling of game at all seasons should be encouraged. The other class is composed of men, some of whom might be called practical sportsmen, and others who take what may be called a sentimental view of the subject, and who, while not shooting at all

themselves, wish to see the game of this State protected as far as reasonable. Among this second class there is naturally quite a variety of opinion, as you have noticed. One man may think that December is a proper and good month for shooting. Another man, living in a different part of the State, has the honest opinion that December should be made a close season.

There is no question at all but what as our game decreases laws for its protection must be made more stringent from time to time. In my own experience I have seen the season for woodcock shooting, which formerly opened the first of July, gradually shortened so that for several years it was made to open the first of August, and then later still to the first of September, and then shortened still more to our present season, which opens Sept. 15; while on partridges the law which for a great many years opened on the first of September has also been shortened so that it opens on Sept. 15. It is quite probable that it may be necessary even now to shorten that still more, and possibly to go as far as the bill proposed, which allows simply the months of October and November for shooting. As I have said, there is a very natural difference of opinion as to whether December should be made a close month or not. I am inclined to think that even if you leave that open a few years longer it may then become necessary to close it. These gentlemen with their somewhat diverse views as to shooting all believe, however, that the seasons for allowing shooting and for allowing sale should coincide.

In this place it is proper that I should briefly state to you the position which the Massachusetts Fish and Game Protective Association takes. This Association has been in existence some twenty-two years, and although for the first four or five years of its existence it confined its attention entirely to matters pertaining to fish, for some seventeen years at least it has taken an equal interest in matters pertaining to game. It is an association of gentlemen who from their own pockets voluntarily contribute such sums as they feel able to in order to further the interests in which they believe, and who voluntarily devote such time and work as they can to help the good cause. It has a membership varying somewhat from year to year. It had at one time as many as 400 members, at another not over 100, and at present about 250. These gentlemen live in various parts of the State, from Cape Cod to Berkshire, but naturally the larger part of them in the vicinity of Boston, because there are other kindred local associations in various parts of the State interested in the same work and more or less affiliated with this one. It would be impossible to say just how many of the citizens of this State are interested as sportsmen in this matter, but the number runs at any rate into thousands. These men believe that it is a proper thing to do a certain amount of shooting. Naturally, game is of no value except for food purposes, and to capture it in a proper and sportsmanlike manner gives pleasure and health to those who attempt it. To the majority of sportsmen this pleasure comes not from getting large bags of game, but from the skill required in shooting, and from the exercise which they get in their tramps over hillside and through woods during the crisp and bracing days of the fall. From my knowledge of many of these men, I am sure that perfect satisfaction is obtained by them if after a day's good tramping they bring back two or three birds. It is very rare in this State that any man gets more than eight or ten birds in a day, and that probably happens to most sportsmen not oftener than once or twice a season. Five birds is considered a most excellent result of a day's shooting.

Our friends the market men have spoken to you of the magnitude of the commercial interests involved in game, and I have no doubt of the correctness of the statement made here that the business amounts to \$400,000 a year. I would suggest to you that that sum does not begin to represent the actual cash value of the sport to those who indulge in it. It is said on the best authority that in the State of Maine over \$2,000,000 a year is left behind by sportsmen from other States who go there for health and recreation. Of course people do not come to Massachusetts for that purpose to any great degree, but our own people—those who for business or money reasons are unable to go away long enough to take a vacation in the large Northern woods—get that which they would not sacrifice for much money here at home. I feel sure that double the amount stated by the market men as their business in game would be a small sum to represent the pecuniary value of shooting to those who value it as a sport. It is by no means a rich man's sport exclusively; far from it. The majority of our rich men who shoot and fish go far away from home for their sport. It is the man of limited means who gets the pleasure here at home. As to the standing of sportsmen as a class, it is sufficient to say that Presidents Arthur, Harrison and Cleveland have for the last sixteen years shown that it is at least respectable to get recreation and health shooting and fishing.

Some of the men who shoot in this State sell their game. There is no objection perhaps to this, if it is done in a proper manner. But there are men, however, who shoot, and they comprise a class spoken of as "pot-hunters," who care more for the pecuniary return than for the sport. These men are dangerous to the community because they are tempted to shoot before the season opens, when they have a better chance to get the game than honest sportsmen do, and to shoot after it closes, because it is to them a question then of getting better returns. This class of "hunters" would shoot very little if it were not that the market is open to them. As long as the markets are open they will shoot without regard to law, and not only shoot, but snare. I am glad to say that the "pot-hunter" does not do as much harm now as he did fifteen or twenty years ago, because there is no question but what the sentiment of the community has grown in the right direction; and where twenty years ago woodcock and partridge could be easily obtained at the market or hotels in the close season, it is now comparatively difficult to find them there. By long experience we have found that the only way to limit the ravages of this "pot-hunter" is to limit the sale of his birds. It is practically impossible to detect or catch him in the act of shooting, as you gentlemen can readily see, from the fact that his violation of the law is committed in the remoter parts of the woods and where, as a rule, he is necessarily alone.

Now I wish to say a few words as to the change which has been made in our laws recently. For many years our law stood without much change upon the subject of possession and sale of game. It allowed the sale and possession of woodcock and partridge during the open season,

and in addition allowed the sale of quail and of pinnated grouse, which are practically extinct in this State, up to the first of May. This law has always been regarded by our Association as a bad one, and it was in its purpose a worse law, from our point of view, than that of any State in the Union. There was no other State which allowed so long a period for selling game after the shooting season ended. But this law, bad as it was, was made still worse by the act of 1894. This act allowed persons engaged in selling game or in the cold storage business, in addition to their previous rights, to have in possession quail at any time of the year, and to sell and also possess pinnated grouse, as well as other birds, at all times of the year, with the only proviso that they should not have been taken or killed in this Commonwealth contrary to the provisions of the act. And let me say, gentlemen, that this law of 1894 was brought about through a petition of these same market men who are asking you now to extend their privilege still further. They have stated to you several times at these hearings that they come up here to defend themselves and their business against legislation proposed by our Association. Let me say to them and to you that they are the ones who proposed both the legislation of two years ago and who introduced this year a bill before the Association introduced one.

The market men and commission dealers are a strongly organized body, with great power of membership and with great power in politics. When united with the hotel keepers they are doubly strong. We who oppose them have comparatively small resources in either way. To them it is a question of profit; to us it is a question of principle.

Now, a large part of the testimony which has been brought before you has related to the comparatively insignificant place which the game killed in Massachusetts holds in the market, and it is probably true that taking the whole State through not over 20 or 25 per cent. of the game sold is killed here in Massachusetts. The proportion of Massachusetts game sold in the city of Boston is undoubtedly much smaller, and very likely may not go over 10 per cent. of the whole amount.

Your attention has been called heretofore almost exclusively to the point of protecting our own birds alone, and nothing has been said to you in regard to the birds brought here from other States.

I wish now to call your attention particularly to the change which our Association recommends in the present law. It is a very simple one. As the law stands to-day, certain birds may be sold through the winter and spring, and kept through the entire season, provided they are not killed contrary to the laws of this Commonwealth. We wish to add to this another proviso, and that is that these birds should not be allowed to be sold or kept here if they are brought illegally into the Commonwealth, that is, if they are transported into this State from States which prohibit their export.

I am positive, Mr. Chairman and gentlemen, that the matter being once called to the attention of this Legislature, you and your fellow-members will be very averse either to passing laws which encourage criminals in other States to violate the laws of their respective States, or to keeping upon our statutes existing laws which do the same. I am positive that the dignity of the Commonwealth of Massachusetts will not be lowered by you, but that it will be upheld with all your force in strongly repressing the connivance at and encouragement of crime.

And now, are you aware to what extent the other States of the Union have gone in this matter of protecting their own game? We have, you know, on our own books a law which prohibits the exporting of game birds. Do you know that a similar law exists in the States of Maine, New Hampshire, Vermont, Connecticut, New York, Delaware, Maryland, Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, North Dakota, South Dakota, Montana, Nebraska, Arkansas, Washington, Kansas, Missouri, Oregon, Colorado, California, Tennessee and North Carolina, and the Territories of Arizona, New Mexico and Oklahoma, and that the laws of these States and Territories forbid their export at all times of the year, even when shooting is allowed? In addition to this the States of Nevada, Wyoming, Utah, Idaho and West Virginia forbid the export of large game.

Now, let me refresh your minds with the testimony which the market men have given in reply to my questions as to where they got their game. You will remember very fully one thing, that whereas the first four of their witnesses answered my questions on this point with comparative readiness, after that they refused to answer them. But those who did answer them gave us information which is extremely valuable.

Mr. Hosmer stated that he obtained partridges and other game from New York and Illinois, both of which States forbid their export.

Mr. Bigelow stated that he received game from Maine, New Hampshire, Illinois, Iowa and Wisconsin, all of which make it a crime to export game from their States.

Mr. Rand stated that he received partridges from Iowa, Wisconsin and Illinois, quail from the same States, and pinnated grouse from Nebraska, North and South Dakota, all of which States make it a crime to export any of these birds.

Mr. Patch stated that he received partridges from New York State—not from New York city, but from places outside the city in the State. That is also forbidden by law. He also stated that he received quail from Missouri, which State forbids their export from the State or even from one county to another in the State.

From that time on, Mr. Chairman and gentlemen, it was impossible to get a definite answer to my questions on this point with the exception that Mr. Davis said that he understood that partridges came from New Mexico, which also forbids their export. These gentlemen refused to answer at all, excepting a general statement from several of them that their game came principally from west of the Mississippi River. I would call your attention to the fact that States west of the Mississippi River in which game abounds have laws just as stringent against its export as States which lay east of that river, and I submit to you that it is fair to suppose that the other dealers obtain their game from practically the same places from which the preceding witnesses obtained theirs.

The only part of the country where the export of game is allowed with any freedom is in the Southern States. The Northern States of New Jersey, Rhode Island and Pennsylvania have no law against it, but as you well know from the nature of these States the amount of game

in them is and must be small. New Jersey and Rhode Island are thickly settled communities, and Pennsylvania while having to some extent heavy woodlands in certain portions, has thickly settled populations and has not enough game to supply the demand in the State itself. From the South, leaving out the question of ducks, which we have not considered at this hearing at all, comes practically no game except quail. These come rarely to our markets because climatic conditions are such that they do not keep to be brought here.

This game, which is sold in Boston, 90 or 95 per cent. of it, as the dealers testified to you, comes from outside the State, coming almost entirely from those States which prohibit its export by law.

You have heard the testimony of Mr. Mackay, a most expert ornithologist, as to the regions inhabited by the birds spoken of. Our partridge, which is the bird mostly under consideration, does live in the mountain regions of the Alleghany south of Pennsylvania, not in the lowlands; but there it is by no means an abundant bird, and but few of them are killed. The partridge is more common in the Northern countries. The Canadian Provinces, the New England States, New York, Pennsylvania, Wisconsin, Michigan and Minnesota are the places where it is found abundant. It is found, but not to any great extent, in the other States.

I may say here that the export of any game is forbidden at all times by each and all of the Canadian Provinces just as strongly as it is by Maine and Massachusetts.

The 95 per cent of partridges sold by these men, on their own testimony, was all (excepting what one man says he received from Pennsylvania) brought here in violation of some law.

The 99 per cent. of quail sold by these men, on their own testimony, was all brought here in violation of some law, excepting what one man says he received from Virginia, and by a statute passed last month that State forbids their killing for the next two years.

The entire amount of pinnated and sharp-tailed grouse sold by these men, on their own testimony, was all brought here in violation of law, with no exceptions.

The market men, in the bill which they have presented, ask you now to allow them to sell all game from abroad at all seasons, and to stretch the mantle of Massachusetts legality still more widely over their attempts to corrupt the citizens of other States. We ask you to use the power of Massachusetts in its legislation so as to preserve our own good name, and not make this State an accessory to criminal action.

There is one other point to which I would call your attention. Mr. Stoddard, one of the officers of the Cold Storage Company, testified that he did not now have nearly as much game on storage throughout the summer as he did eight or ten years ago. When I asked him if he did not know that it had been, until 1894, contrary to law to keep game on storage through the summer, he answered "Yes," but that he had to keep it or lose money; thus admitting that he had knowingly for many years violated our existing law.

Mr. Chairman and gentlemen, he who comes into court asking favor or asking justice should do so with clean hands. The market men, commission dealers in game, and cold storage men who have appeared before you have testified that they have either violated the laws of this State, or have encouraged the violation of the laws of other States, or have done both, all to their own pecuniary profit.

Will you, do you dare to, legislate to help their unlawful gains? Will you not rather so act as to protect at one and the same time the interest of Massachusetts and her sister States?

I will also add a word on another point which has been discussed before you, although it does not come within the scope of the bill which we present, that is as to protection of birds of the plover species. To them we think should be given the same measure of safety that is given to the other birds. Forbid, we ask you, traffic in them upon the same lines which you apply to the others. Remember that killing the spring birds, heavy with eggs and ready to breed, in Texas and Kansas, tends to exterminate the species and to deprive us of the proper fall shooting that would otherwise come here.

RIFLE AND GUN CLEANING.

THIS is undoubtedly a subject which brings forth an opportunity for considerable discussion, and as it would seem to be a very important factor in the proper work of a rifle or gun, I make a few suggestions which I have found of value.

In the first place, I believe that a rifle or gun should be kept as clean and free from rust and spotting as possible. In a rifle barrel this is especially important, as rust causes roughness, and roughness causes leading, and we all know what that means in the accuracy of the arm. As to a shotgun, I am not perfectly clear that a spotted gun will not shoot as well as one without blemish. Possibly with the allowable variation in the accuracy of a shotgun the difference would amount to nothing. I know that our three guns are slightly spotted, still I believe they are as good shooting as ever. Living near the salt water, and using a gun for duck shooting, it is almost an utter impossibility to keep them bright despite what care may be taken. Now in the old days of the muzzle-loader, how many strong shooting guns were there which were perfectly bright and clean near the breech? How could one tell whether his gun was spotted, pitted or rusted? With a breech-loader the first impulse is to look through the barrels, and if one sees spots he is likely to have a bad impression, not only of the gun, but of the owner's way of taking care of it.

Now a good many claim that a gun should be cleaned at once after a day's shoot; others do not clean for weeks. A friend of mine has just cited an instance of a man who tried this experiment on two guns, shooting both for a season, cleaning one after use and leaving the other until the close of the season, and the result was that the gun frequently cleaned was spotted the worst.

Now as regards cleaning, I do not believe that a drop of water, either hot or cold, should be put into a barrel. For several years I have always washed out the barrels of our guns with hot water, wiping dry with cotton rags until I was assured they were ready for oiling, and am now inclined to lay this to the condition they are now in. And now as to the oiling question, I am fully convinced that too much oil is a frequent cause for rusting. Why? Because if you will note a barrel that has a surplus of oil,

you will see that the oil collects in drops, as it were drawing together and thereby leaving parts of the barrel exposed to the air. I know this has been my experience, and now use the following method in the cleaning of guns and rifles. I take equal parts of sperm oil (the best obtainable) and alcohol, and swab out the barrel thoroughly with this mixture. The alcohol cuts out the dirt and quickly evaporates, leaving a thin film of oil evenly distributed over the surface of the steel. This is more especially serviceable in rifle shooting when wiping frequently. When through shooting, I wipe the barrel perfectly dry after using the mixture, and then run through a rag saturated with a little vaseline. I have pursued this method on a new rifle purchased some time since and used almost constantly, and thus far not a speck of rust shows. This is a .22 barrel, and of course the more likely to show rust. Benzine, naphtha, paraffine oil, etc., are good cleaning agents, but are apt to rust a barrel if care is not taken to wipe dry, and then oil with sperm oil or vaseline. I believe the alcohol and sperm oil the best cleaning mixture one can find, and although it is an old formula, still I hardly think it can be improved upon.

ART.

CHICAGO AND THE WEST.

Arkansas Game.

CHICAGO, Ills., March 7.—Mr. Joseph Irwin, an experienced and observing sportsman of Little Rock, Ark., says of the quail situation in this country, at the end of the season, March 1: "I am satisfied that the big snow that we had last winter, together with the efforts of trappers and pot-hunters, destroyed more birds than we can raise in five years." Mr. Irwin hunted over some good ground during this snow fall and found eighteen beavies, but the birds were too weak to shoot and were not disturbed. At the end of the season on the same ground he found only three small beavies. The snowstorm was heaviest about fifty miles northwest of Little Rock. About seventy-five or one hundred miles south of Little Rock the birds were not injured so much.

The same informant states that snipe shooting is now going on in eastern Arkansas, and that a good many woodcock are being killed there also. The duck flight was not coming by way of Little Rock at last accounts.

The Flight of the Fowl.

The ducks are making their way well to the north this week on their spring flight. They have appeared on the lower Illinois River and on the Mississippi in considerable numbers. They have been hanging over some of our larger lakes where the ice was not yet out. One or two warm days will let them into the lakes all over northern Illinois and southern Wisconsin, provided there is wind enough to take out the ice.

Frozen Fish.

The water in a number of Wisconsin lakes was extremely low last fall, so that they froze nearly to the bottom during the winter. The worst fears seemed to be realized in regard to destruction to fish life in such waters. It is reported that a man chopped a hole in Beaver Dam Lake last week and found no water, but found a layer of frozen bullheads a foot thick. Kekoskee has not yet been heard from.

Shooting with the Camera.

Mr. A. M. Weinhardt, of this city, writes interestingly about some of the possibilities of sporting photography. He comments on the growing desire of many sportsmen to photograph game rather than to kill it, and suggests a method by which such objects can be obtained more easily than has heretofore been possible. Mr. Weinhardt thinks that one of the miniature cameras now on the market could be attached to the barrels of a gun in front of the fore end, and operated upon flying birds or moving animals with the same aim as that used in shooting. He says: "You are always sighting your game over a direct line with your camera, and you are following the game with this line at its fastest speed. Thus no attention is needed for the camera, and you can press the spring any moment you see fit, so that it may be possible to even kill your game after you have photographed it." He adds: "I may have made a wild suggestion in this, but perhaps brother sportsmen may show us how to improve and perfect the idea. In order to make my ideas plain I could send a few pen drawings showing how the instrument could be fastened. I have not yet tried the experiment myself, but some one else may perhaps take it up and find in it a source of pleasure and benefit."

Mr. Weinhardt's idea is not absolutely new, except in the application he suggests of a small camera on a regular sporting weapon. It would be very interesting to see his idea of the proper mechanism for operating the camera, and should such experiments ever be tried, it would of course be gratifying if we could hear of them.

Favorite Dog Dead.

Mr. A. H. Morgan, of the Illinois Central Railway, who is recently back from Memphis and vicinity, informs me that old Henry, Capt. Bobo's pet bear dog, has at length gone the way of all bear dogs. Henry died as he had lived, morose, independent and solitary. He went off by himself, lay down in a corn crib and just died. I have often before spoken of the peculiarities of this old veteran. He would never associate with the other dogs, and was the only one of the pack allowed in the house. He would not eat unless his food was brought to him on a clean plate, and in all ways his singular aristocracy formed marked contrast to the democratic ways of the fighting bear pack. Henry was a red, shaggy-faced mongrel, but he evidently knew more about his ancestry than any one else did, and was proud of it. It will be some time before Capt. Bobo takes on another self-appointed bodyguard in his place.

E. HOUGH.

309 SECURITY BUILDING, Chicago.

North Dakota State Game Warden.

FARGO, N. D., March 5.—*Editor Forest and Stream:* Governor Allin to-day appointed Geo. E. Bowers, of Fargo, State Game Warden for North Dakota for a term of two years, commencing April 1.

This appointment receives the indorsement of the State Sportsmen's Association, and we believe that Mr. Bowers will make an excellent warden, and that game law violators will have to be extremely careful in the future to avoid detection.

C. E. ROBBINS.

FOREIGN GAME BIRDS FOR MAINE.

COMMISSIONER HENRY O. STANLEY, of Maine, writes me under date of March 1 from Dixfield, Me.: "The capercailzie and black game I ordered from Sweden last fall passed through Auburn yesterday in charge of American Express Co., en route for Aroostook county, where they are to be turned loose. The express company telegraphed me that the birds were alive and apparently in good condition. They are to be turned loose at New Sweden, among the Swedes, who are very anxious to have them, as they will be a reminder of home, and they will be likely to care for and protect them. We are expecting another lot later on for the Rangeley region. I have very strong hopes of success with these birds. Ex-Minister Thomas, formerly United States Minister to Sweden, writes me that the climate in Sweden is identical with that of Maine. Also the forest growth, the hills, mountains and deep snows. He is familiar with the birds, having hunted them in Sweden, and he was very anxious that the experiment should be tried in Maine."

The capercailzie and black game are the two game birds that have been strongly recommended by Dr. John D. Quackenbos for New Hampshire and northern New York, and I believe a special appropriation was made by the former State for the purpose of introducing them. In fact, I do not know but an importation of birds or eggs has already been made by New Hampshire, as my memory is a little fogged on the subject, although Col. Wentworth has written me on the subject within a few months.

The experiment in Maine will be watched with considerable interest, and if successful there it should be successful in other States where conditions are similar.

A. N. C.

The Hunting Rifle.

LOS ANGELES, Cal.—*Editor Forest and Stream:* In your issue of Feb. 8 Cecil Clay gave an account of his experience with the .44-40 in moose hunting.

I must say he is either a wonderful rifle shot or had a long run of good luck.

In my opinion a .44-40 with 26 or 28in. barrel is a poor gun for moose hunting, not to mention the 20in. barrel. I think few hunters would want one even for hunting deer. I used a .44-40 Winchester a number of years and think I know just what it can and cannot do. Mr. Clay may be an excellent shot, but does the man live who can put a bullet where he wants it, under all conditions, with a .44, 20in. barrel at 200yds.? I think not.

Here, where the greatest part of the mountains are nearly covered with almost impenetrable brush, greasewood, buckthorn, etc., one wants a large caliber hard-hitting rifle to stop a deer quickly.

¶ If a wounded deer gets into the chaparral it is almost impossible to get him without a good dog, and when you have found him the work has just begun.

I should consider it risky business to shoot at a moose at 200yds. with a .44 if he were standing still.

A much better gun is the .45-70 with 405gr. solid or 330gr. Gould express bullet.

The .45-70 Winchester, half magazine, half octagon barrel, with shotgun butt, is a finely balanced and powerful rifle.

If any one doubts my opinion of the 20in. .44 let him try it at a target on a windy day for accuracy and penetration.

H. J. BURKHARD.

Editor Forest and Stream.

Noticing the comments upon the calibers suggested for large game in the recent issues of the FOREST AND STREAM, I wonder at some describing themselves as old hunters suggesting little but the largest caliber guns.

I have hunted deer and bears continually for over twenty years in season, in Wisconsin, Michigan and Northern Minnesota; during these years I have killed over 400 deer and a number of bears and moose.

When I first hunted in this country, I used the larger caliber, the .45-70 and .40-60 calibers, but found these guns very heavy to carry on long trips and discarded them nine years ago for the lighter .38 caliber, with a rifle weighing 7½lbs., which I find heavy enough at a long journey's end.

I find that a .38-55 bullet will do just as good service on all large game as the larger caliber if the vital parts are only struck.

One chief cause of so many deer, moose and caribou escaping wounded is often due to the poor marksmanship of the hunter, rather than to the smaller caliber of his rifle.

The killing effect depends upon the power of penetration, the force of the blow struck and the chances of striking a vital spot.

If one needs a larger wound to produce shock and hemorrhage let him use the .38-55 mushroom bullet, which with nitro powder gives most excellent service; causing a wound as large, if not larger, than a .45 caliber solid or metal patched bullet and doing even more destruction to the soft parts, as this bullet will expand without first hitting a bone. The only fault with the mushroom bullet is its destruction often of good meat, as with the .45 and .50 caliber.

Again a 7½lb. rifle is much more easily handled than those more heavy, and can be brought to bear from any position more quickly.

Again 1 or 2lbs. saved may be put into some other necessary article to be carried. I also prefer the 28 or 30in. barrels, giving a better range of sights than those shorter.

I have given nitro powder a thorough test this past fall and find it gives excellent results, especially with the metal patched bullet. With nitro powder used in a Marlin .38-55 the rifle will carry up to the line of sights, 170yds., while with black powder the same distance I note a drop of 10in.

E. M. C.

A Lucky Shot.

ONE night there was a light fall of snow; the next day was clear and warm, and we started out after rabbits. Ben took my double-barrel shotgun, George my Stearns pistol, and I took old "'60," an ancient muzzleloading rifle. Seeing a rabbit sitting alongside of an old rotten stump, George pulled out his pistol, shot, missed, and called to me to look out. I saw the rabbit coming full speed, and as he was going down the hill I blazed away, missing also. The rabbit ran across a prairie and on to another side hill about 200yds. distant and stopped by the side of a bare knoll. I told Ben to stand still and I would scare the rabbit out; so I hastily loaded the old rifle,

all the while keeping my eye on the spot where I had seen the rabbit last. I then took a rest over one knee and pulled. The rabbit jumped about 3ft. in the air and started to run, but Ben had seen him and served him with a well-directed shot. I had shot a hole through both ears with the old rifle, and called it a lucky shot.

J. H. G.

Sea and River Fishing.

ANGLING NOTES.

Peculiarities of Fishes.

SHOULD an investigator study the habits of a species of fish in one stream or lake and formulate his conclusions and publish them as hard and fast facts regarding the habits of that particular species, another student might study the habits of the fish in other waters, and when the two come together it might be a case of "wigs on the green" if it resulted in a discussion as to which was right and which wrong, when both might be right, although they arrived at different conclusions regarding the habits of the same species of fish. If all the conditions are not alike in the two waters the habits of the fish may be dissimilar in a marked degree.

It is the common belief that pike, generally called pickerel, are absolutely fatal to trout in the same water, yet there are waters where both exist and the trout increase annually in numbers and size. Pike found their way into an Adirondack lake and at once there was dismay in that region, and a movement was on foot to stock the lake with black bass to destroy the pike as the only remedy for the destruction of the pike. Before this could be done trout (lake trout) were caught with a lot of young pike inside of them. The black bass is praised for its care of its young after they are hatched, and yet the black bass has been convicted of eating its own brood after watching the eggs and guarding the young for weeks against all enemies.

Our common brook trout that every angler will swear is a home-lover, never straying from its birth stream except when opportunity offers for a dip in the sea and then only to return, when transplanted to Great Britain and liberated will promptly go down stream and disappear forever unless restrained. The rainbow trout, when brought from the Pacific slope and planted in Atlantic streams, disappears in a like manner, but if its journey is continued to England it remains in the water where planted. If there is any fresh-water fish in the world more destructive of trout than the black bass, by common report, I have not, I think, heard of it. The black bass has acquired such a reputation that when it made its bow to a British public there was one long and concentrated howl at its introduction to the waters of Albion.

I have just heard a complaint that is to me novel, and that is, that trout are eating the black bass in Raquette Lake, in the Adirondacks. Years ago the black bass was planted in this lake by the New York Fish Commission, and afterward it was believed to have been a mighty blunder to herd this lion fish with the lamb fish of the region, and I think it was. Now, Mr. Charles H. Bennett tells me the gentle, amiable, poetical, dainty trout has been caught with black bass in its maw. He caught one trout with 140 young bass in its stomach, and another that had swallowed 300 by actual count. After all, the bass are to blame and brought their fate upon themselves, for Mr. Bennett tells me that they ate the natural food contained in the lake and produced a state of famine, and the trout were finally forced to eat the famine producers. Fishculture has advanced to the point where serious attention must be given to food for the fish hatched and planted in such waters. We have improved upon nature in the number of fish hatched from a given number of eggs, but we have not made the same progress in keeping or providing food for the fish after they are hatched.

Since I wrote the foregoing I have learned from a correspondent in Maine that another tradition has been upset, knocked galley west, and crooked. He says that the limit in pounds that one could catch of togue (lake trout) in one day has been removed from the Maine law, and this action was taken because it was thought that the togue (lake trout) were devouring the brook trout. To me this precaution seems to be parallel to warning the people of Kalamazoo to keep indoors, so that when the statue of Liberty in New York harbor toppled over it would not fall on them. The two species of fish do not naturally inhabit the same depth of water; they spawn in different places and at different times, but if they do meet and one captivates the other as a stomach lining, it is another argument for more natural fish food in our waters.

Dancing for Animals.

In a personal letter from a lady residing in Rome, Italy, which came on the last steamer, she says: "To-night we are going to a ball at the Grand Hotel which promises to be very fine. It is for the Society for the Protection of Animals, under the patronage of the Queen and the highest ladies of Rome. I wonder if after dancing for charity and education and the warm-blooded animals we will dance for the fishes." Why not? I think it would be a good idea; but instead of dancing for the fishes, dance to provide them with food and let the fish breeders continue to hustle for the fishes themselves. If it should become fashionable to dance in the interest of our food fishes the matter of fish food would have an inning such as it never has had, but the millennium is not due yet.

Ouananiche on Pacific Slope.

My friend Dr. W. H. Drummond, President of the St. Maurice Club, writes me from Montreal under date of Feb. 28 and in his letter says: "An 'old country' friend of mine now living in Northern British Columbia, Cariboo District, tells me he is positive they have ouananiche out there, as he has caught them averaging 2½ lbs. and never more than 5 lbs. The description is exactly that of the Lake St. John fish." This is the third time, from three different sources, that I have heard of the presence of the supposed ouananiche in British Columbia waters, and yet, from any positive information on the subject, there is no good reason for thinking the fish exists on the Pacific slope. Mr. J. G. A. Creighton was the first to call my attention to what was supposed to be a landlocked form of salmon on the Pacific Water Shed, but he did

not intimate that it might be other than a form of Pacific salmon that had become landlocked, as we are pleased to term it. But later information pointed to a landlocked form of the Atlantic salmon in the same waters, but thus far there has been nothing offered to substantiate this belief. Starting with the knowledge as a positive fact that the ouananiche is the Atlantic salmon with solely a fresh-water habitat, although it may have access to the sea, and that the Atlantic salmon is utterly unknown on the Pacific coast, it is difficult to understand how the ouananiche can be found in British Columbia unless it has been taken there overland, and this I believe has not been attempted by the fisheries department of the Dominion.

Snowshoeing over Slumbering Black Bass.

A friend writing me to-day from Canada—a friend with whom I had some of the best trout fishing last year that is to be had in the waters of this free earth—says, rather mournfully: "Oh, how I long for the winter to pass away and the spring to come. It is such a tedious, hardly-ever-ending time to wait, and helps to make life seem so short. At present we have to do our fishing in our dreams." Well, that is as one may look at it. I went fishing on snowshoes one night this week without rod, reel, hook, bob or sinker, but my catch was something to remember as long as I live, and I may never equal it again unless I am favored with the same conditions. It was one of those occasions that fishermen refer to as red-letter days, though this was a red-letter night.

I had had a headache for one solid week, and my thinking machinery was out of repair. I had, added to other trifling ills, a cold, and could not move my arms without pain in some portion of my anatomy. I was taking several kinds of medicine and lots of advice, and all the time I knew I was seven different kinds of an ass to bend over a desk from morning until after midnight and expect a physician to heal me with drugs.

One afternoon a younger sister sent me a note asking if I would go snowshoeing that evening with her and a lady who was her guest, and if so to meet them at the train for Lake George that evening at 7 o'clock. I presume my physician would have said no and charged \$2.75 for the advice, but I did not consult him. I got a lot of advice for nothing, but I had decided to go very promptly and I was deaf to everything not in accord with my decision. I got to the train by running for it, but landed in a seat a demmed damp, moist, unpleasant body, with my heart making about 209 revolutions a minute. By the time the train stopped to let me off I was able to speak to the friends I had joined, and there were four of us. We got off the train on the high ground south of Lake George, and at once put on our shoes, and hauling a toboggan started south toward Glen Lake. The night was glorious, the moon nearly full, no wind and a temperature of 16° above zero. The snow was not the best, nor was there as much of it as I have seen in this locality, but on the south side of the hills we found once in a while sufficient crust to hold the toboggan for a slide. There was nothing whatever to mar the tramp and nothing tried to except one or two barbed-wire fences. Where I had the greatest pleasure, soul satisfying, and gifts were showered upon me to cause my heart to throb with pure delight, was in a piece of brush where I made a short cut with the toboggan. That toboggan treed on everything that was above the snow. Once in a while it was right side up, but not often; the cushion came off every time the toboggan treed or turned over, and the rope broke with becoming regularity every time I tried to haul the toboggan over a stump. The others were out in the clearing shouting to know why I did not hurry, but I was so happy I did not want to hurry, and when I caught one shoe in a stub and went on my head into a pile of frozen brush I was so filled with emotion and snow that I could not explain why I did not hurry. The sweetness and bliss of that passage of the short cut a poet would put into verse, but I cannot, I prefer to think of it. I got through finally with most of the toboggan and considerable skin left on my hands and face, and came out where the moon was shining brightly on the white snow and the other members of the party were awaiting me, and all was cheerful; but my heart was in the passage of the brush with a toboggan upside down. It was clear sailing to Glen Lake thereafter, except that one of the ladies instead of jumping a brook jumped into it, and the toboggan when turned loose ran down a steep pitch and smashed what was left of its nose against a tree; and when we were on its ice-covered surface I recalled to a select audience where I caught a small-mouth black bass of 8½ lbs., and how it took several years' time and as many quarts of ink to prove it to the angling world. As we crossed the lake I could fix in the clear moonlight the place where every big black bass had been taken during the past twenty years, and I would have given a small farm to have been able to turn the X rays down through the ice to the bottom of the lake where the bass were sleeping and found the largest one; for I believe there are bigger bass in the lake than ever came out of it. Across to Mud Lake is but a step, but there are no fish there, and thus another step and we were on Round Pond, where the 10lb. small-mouth black bass was taken. The fever was in my blood by this time, and if by any possible chance I had ever been able to sing, I would have sung a joy song then and there. We knew a sleigh was waiting for us a mile or so beyond, with fur wraps and heavy coats, and at the end of a sleigh ride a hot supper would be waiting later, and I postponed any outward manifestations of desiring to sing a joy or any other song, but my heart was light and my head clear and pains gone, or going, for I was free the next morning. The famous Lydia did not hit it exactly when she framed her familiar war cry, "Yours for health." She should have said, "Snowshoeing for health." Therefore I cannot agree with my dear Canadian friend and long for the winter to go, for if the same conditions should exist as on this evening, particularly if I was always permitted to make a short cut through the brush with a toboggan, I would wish for snow all summer. There is a moral concealed in this note, but I cannot point it out while I am on such excellent terms with my family physician, but it is free to all who discover it.

A. N. CHENEY.

A Minnetonka Pickerel.

HENRY PHELPS, of Excelsior, Minn., recently speared through the ice in Lake Minnetonka a pickerel weighing 20 lbs., of which, the record states, 3 or 4 lbs. were of roe,

FISHING TACKLE AND THINGS.

Now that the season approaches, each disciple of good Father Walton might be seen, no doubt, at spare moments, brushing up his tackle. Rods, reels, lines and hooks need to be carefully examined. The rods may require new whippings and a coat of varnish and mayhap a ferrule or so, while the reel, of course, needs tightening up, with perhaps a new screw; a drop of oil, too, is necessary for its well-being. Lines must be gone over with care to detect any weak spots, for what is more annoying than to have a line part when at the height of enjoyment with a good game fish? Hooks are to be retied, perhaps, and the points filed up, etc. Of course, the lines and hooks might be discarded and new ones added to the store, but there is to be considered the pleasure that comes to the heart of the angler in the overhauling of this old tackle.

Then there are the flies—those "poetized hooks" that must have particular attention—and what retrospection one falls into while at this pleasant occupation. There is that old "White Miller," the one sewed to a card with full record written thereon, and a bit of blue ribbon tied in a bow at one corner. It was with this fly at sundown many years ago that our very biggest trout was taken, since that date this particular "Miller" has reposed in luxury. He was pensioned at once, and when sometimes, at coldest winter, or at other times when a fit of blues is on, this fly brings up the recollection of one particular day and we are carried back to a time spent camping on one of Michigan's finest streams. That, however, was before the frost began to nip our locks. Ah yes, in the blossom time of life. But then, does one ever get too old to fish? We are up the hill and a part way down the other side, we are passing the mark "three score and ten," but still the other day our tackle box came out, as has been the custom for so many years, and all the implements were gone over and tricked up, while now we simply wait for the season. Or, as General Stanton has said,

"I jes' set here a-dreamin'—
A-dreamin' every day—
Of the sunshine that's a-gleamin'
On the rivers far away.

"An' I kinder fall to wishin'
I was where the waters swish,
Fer if the Lord made fishin',
Why, a feller orter fish!

"While I'm studyin' or a writin'
In the dusty, rusty town,
I ken feel the fish a-bitin'—
See the cork a-goin' down!

"An' the sunshine seems a-tanglin'
Of the shadows cool an' sweet;
With the honeysuckles danglin',
An' the lilies at my feet.

"So I nod, an' fall to wishin'
I was where the waters swish;
Fer if the Lord made fishin',
Why, a feller orter fish!"

OLD ROD.

The Art of Sizing them up.

YOUNG fishermen should take great care to acquire one faculty which only experience can teach and which all old fishermen possess. It is the faculty of mentally weighing fish. A young fisherman carries scales from the store, but with experience discards them for the mental scales, which are very much better, because by using them one can always weigh fish which are hooked and lost. At all times by a glance of the eye any fish is weighed. No danger, no doubt, but absolute certainty that the mental weight is the only reliable one upon which to base a story, particularly of a lost fish. Bass are so finely shaped, regularly curved and close mouthed that as soon as experience has given the angler his mental scales they are most easily weighed. One peculiarity of bass is their wonderful uniformity in size, length, breadth and depth, hence more are caught which mentally weigh 3 lbs. than any other weight.

Much sport is undoubtedly had in taking bass with bait, either common earth worms, minnows or fresh-water lobsters, but it is conceded by all of experience that the taking with the artificial and most deceitful fly furnishes the acme of sport and happiness. In fishing with the artificial fly the fisherman makes a cast and suddenly, quicker than electricity, quicker than even a "Hello!" comes back over a telephone, a signal flashes from the hook over the line and rod to the nerve center of the brain which entrills the angler, needing no Morse code nor code of civil procedure for interpretation; the wrist responds, apparently automatically, and yet with the prescience born of the most delicate skill, and the fish is hooked. This is only the beginning of care, anxiety and trouble. The instant that the angler feels the fish on his line all thoughts of business, money, wife or sweetheart are obliterated and the whole attention is absorbed by the one desire and impulse to save that fish. The prick of the hook and the restraint of the line and rod arouse the combativeness which the bass possesses to the highest degree. Look at that iron jaw and the fire in his eye, now of an intense scarlet hue, from the anger aroused. He darts this way and that, leaps from the water, sounds the depths, all the time on the move, changing his course like lightning, lunging and rushing like the born fighter he is. When at last he is safely landed the angler settles back in his seat, frequently pale and weak, but full of justifiable pride; one glance is given to mentally weigh the fish, he is carefully placed in the basket, and the angler is ready to try it again.—C. W. Smith in Syracuse Standard.

Mice for Bass.

I SHOULD like to suggest to my friends who expect to do any bass fishing this coming season, to add to their tackle a mouse trap, and keep themselves well supplied with live mice.

I have used them for bait for the last two seasons with splendid results, catching a great many large fish. The largest, and the record breaker for that stream (a small river in the northern part of New Jersey), weighed 5 lbs.

I hook the mouse under the skin of the neck and let him swim on the surface.

H. J. W.

BOSTON, MAINE AND THE SOUTH.

BOSTON, March 7.—Boston is annually visited each spring by many business men from the interior towns of Maine, and so great are the surrounding influences of game and fish in their native State that a large majority of them are sportsmen, and always have something interesting to say regarding fish or game conditions near their homes. Horace E. Jones, of Caribou, has just returned to his home after a short visit to the Hub, and waxes enthusiastic over the prospect of good salmon fishing in the Aroostook River at his native town. Twelve or fifteen salmon were taken on the fly at the dam last season, of which Mr. Jones captured two or three. It is the hope of the Caribou anglers that the fishing there will eventually rival that at the Bangor pool, and it is the intention to do everything possible to protect and increase the run of fish. The State has a large hatchery at Caribou, in which there are now 200,000 trout eggs, 100,000 landlocked salmon eggs, and 100,000 sea salmon eggs. Last year a feeding station was established in connection with the hatchery, the object being to care for the fish after hatching until they become of good size before turning them out to shift for themselves.

Capt. Fred. Barker, of Bemis Camps and The Birches, in the Rangeley region, has been in Boston over a week, having left for home but a day or two ago. He states that the Rangeley ice is quite heavy and well covered with snow, in fact, about in the usual condition of just this time of year. The Rumford Falls and Rangeley Lakes Railroad has been pushed through to Bemis camps, that being the terminal point of the road. An unique and interesting log station has been erected there which will show arriving tenderfeet that they are deep in the woods even though brought all the way by steam. It is the impression that the new railroad will make quite a change in the business of the sporting camps of that region, bringing a great many people for short trips who might be classed as transients. This is an excellent outlook in a business way, but does not promise too well for the fish and game.

Shooters and anglers bound for the South are still leaving Boston. Among the latest departures are W. M. Dizer, of Brookline, and S. C. Dizer, of Boston. A ten days' trip after ducks to Chesapeake Bay is the attraction that has drawn them away from home. Harry Cole and Mr. Pope, son of Col. A. A. Pope, have gone on a four weeks' shooting and fishing trip in the vicinity of Tampa, Fla. Not a few of those who have been South, particularly to North Carolina, have returned during the last two weeks, and pretty fair luck is the general verdict so far as I have heard.

HACKLE.

To Push the Game Preserve System.

FROM the following circular sent out by the vice-president it appears that the National Association has entered upon a crusade to promote the game preserve system in this country:

NATIONAL GAME, BIRD AND FISH PROTECTIVE ASSOCIATION. Vice-President's Office, Prairie du Chien, Wis., March, 1896.—Dear Sir and Brother Sportsman: For the better protection of our fast decreasing game and fish, I take the liberty of addressing you as a member of the National Game, Bird and Fish Protective Association. From actual experience I am satisfied we can accomplish our objects as set forth by the National Association.

If each and every member will endeavor to have clubs formed, and in localities favorable said clubs establish private shooting and fishing grounds, clubs so formed can exert greater influence in legislation and become a power that will be felt throughout the nation. Let us join hands and all assist in this noble work. If this meets with your approval, encourage the forming of rod and gun clubs and recommend them to join the National Association, and we will have a band of brother sportsmen all working for a common cause. In this way the sportsmen of our country will come in touch with each other and will make the willful slaughter of game and fish so unpopular that greedy sportsmen will not and others dare not continue their destructive work. Come, sportsmen, up and away to the fields of labor. The day is breaking, unless we are at our stations we will be too late. I hear the whir of wings in the distance and only an occasional splash of the gamy fish as he breaks water for his morning meal. Empty creels and limp game bags are not pleasing things to contemplate. Very truly yours,

J. P. BARNUM, Vice-President.

Megantic Club.

THE following directors were elected at the annual meeting:

Directors—Arthur W. Robinson, L. Dana Chapman, W. K. McClure, A. R. Justice, Philander Cutter, George McAleer, D. C. Pierce, A. R. Brown, George C. Ainsworth, W. G. Kendall, George W. Wiggin, S. F. Johnson, W. A. Macleod, Albert Bernard, George H. Burt, Thomas Dickson, James B. Harvie, W. W. Peirce, A. W. Gleason.

The officers for the year are:

President, Arthur W. Robinson, Boston; First Vice-President, W. K. McClure, Plainfield, N. J.; Second Vice-President, W. A. Macleod, Boston; Corresponding Secretary and Treasurer, L. Dana Chapman; Clerk, Dr. G. W. Way, Portland; Assistant Clerk, Charles W. McConnell, Boston; Corporation Counsel: Hon. Henry Ceylun, J. R. Reed, W. A. Macleod; Superintendent and Maine Warden, Robert Phillips, Stratton, Me.; Canadian Warden and Superintendent, William Boyle, Jr.; Steward, Fred. M. Viles.

The Kennel.

FIXTURES.

BENCH SHOWS.

March 17 to 20.—St. Louis Kennel Club's show, St. Louis. W. Hutchinson, Sec'y.
April 20 to 23.—New England Kennel Club's twelfth annual show. D. E. Loveland, Sec'y.
April 21 to 24.—Southern California Kennel Club's show, Los Angeles, Cal. F. W. Ingalls, Sec'y.
May 6 to 9.—Pacific Kennel Club's fifth annual show. H. W. Orear, Sec'y.

FIELD TRIALS.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.
Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings Sec'y, Pittsburgh.
Nov. 16.—Newton, N. C.—E. F. T. Club's trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.
Nov. —Newton, N. C.—U. S. F. T. Club's fall trials. W. B. Stafford, Sec'y.

DETROIT DOG SHOW.

THE fourth annual bench show of the City of the Straits Kennel Club was held at the Auditorium building, Detroit, Mich., on March 3 to 6. The attendance on the opening day was slim. During the remainder of the show the building looked well crowded, and it is to be hoped that this enterprising club have made up for some of their past losses. It speaks well for the sterling fanciers of the City of the Straits that reverse after reverse has not dampened their enthusiasm. Even on the opening day, when everybody looked for another failure, no trace of gloom was to be seen on the faces of the members.

Many Eastern exhibitors and visitors were present, and one and all seemed satisfied with the increased activity which seems after a long period of gloom to be springing up in the kennel world.

Spratts Patent benched and fed in their usual satisfactory manner. The benching was tastefully arranged, with the judging rings in the center of the building, and the judging completed by noon of the second day. Mr. George M. Hendrie, president, ably seconded by the members of the bench show committee, Messrs. R. Humfryes-Roberts, secretary; C. A. Parkinson, A. T. Knowlson, W. Howie Muir, Charles F. Backus, R. McDonald, Ed. Wiles, J. C. Guillot and Guy D. Welton, worked hard to make their visitors comfortable, and Mr. Thomas C. Ouellette, who undertook the arduous and thankless office of superintendent, made a most efficient one.

The judges were: Mr. John Davidson for foxhounds, greyhounds, pointers, setters, dachshunde, deerhounds, Italian greyhounds and beagles.

Mr. Robert McEwen for collies.

Mr. E. M. Oldham for spaniels.

Mr. James Mortimer for the remaining classes.

The quality of the dogs on exhibition was very good in many of the classes, and there did not seem to be much dissatisfaction with the decisions. Belle Isle Kennels reaped a harvest in the rough-coated St. Bernard classes, among other victories beating American Cæsar with Eboracum in the open dog class. The following is a brief review of the classes:

Only five mastiff entries, and one of those absent, Miss Constable. In the challenge class for dogs Prince Cola, looking well, but beginning to show his age, was alone, and his kennel companion, Minnie Beaufort, well shown, secured the same easy honors in the corresponding class for the gentle sex. A very moderate specimen all the way from Canada was all alone in the open dog class; in fact, so much did the judge think of his quality he withheld first and second prizes and awarded him a third. First withheld was again the order in the class for bitches, second going to an unworthy daughter of the great Beaufort, Lizzie Beaufort by name.

The grand tug of war came on in the open class for St. Bernards, rough-coated, and it took the judge quite some time to decide between American Cæsar, whom he placed over Le Prince last year, and Eboracum. Cæsar, however, did not look quite the Cæsar of old, while his rival had improved wonderfully in condition and movement since last shown. Eboracum was awarded first, American Cæsar second, and Scion Lomond, who lost to the winners in head and body, third. In the open bitch class Belle Isle Kennels were again successful with the well-known Artilla, who somewhat handily disposed of Arlington Pansy, second. The first prize winner is much the better type, has a better head and muzzle and also has a shade the best of it in body, legs and feet. Lady Taylor, third, is a fair one, but was lacking somewhat in coat and condition. Alta was alone in the challenge class for the smooth variety dogs; he looked well. Alta Kennels' Judith, shown, as Mrs. Lee knows how to show a dog, in capital condition, had a walkover in the corresponding bitch class. Rex Watch won in the open class dogs, with Victor Watch second and St. Augustine reserve. The winner is a bit plain in head, but has a good body and moves well. Sunol and Sunbeam, both owned by the Belle Isle Kennels, were first and second in the open class for bitches. The winner is a nice stamp of bitch showing much quality, both were set down in capital condition.

Dr. C. A. Lougest's Simon de Sudbury had an easy win in the open class for bloodhounds. His grand head, body, legs and feet will make him a hard one to beat in any company. Brough, the only other entry in this class, was fairly outclassed. Two entries in the open bitch class, and the result was not long in doubt; Layswood Chorus, first, scores over Queen of the West in head and body. The Queen lacks the quality of her sire.

Great Danes were a fair lot, Beau Brummel winning in open dogs from Prince, who lost to him in head and front. Senta II., the winning bitch, is a fair one that will improve with age; she had no difficulty in disposing of Earl's Olivia, second, who has but a moderate head and fair body.

Foxhounds.—Only six foxhounds were shown. Commodore easily beating Grandeur in open dogs, and Friendly having an easy win over Pastime in the open bitch class.

Pointers were a good lot. Moulten Banner won in the challenge class for heavy weights, beating Count Graphic. Although the winner shows age, he is still good enough to hold his own. Count Graphic loses in head and shoulders. Josie Bracket had a walkover in the corresponding bitch class, she looked well and fairly shone in condition as compared with some of the other entries in this breed. Mr. George Gould secured the ribbons in the challenge

class for the light-weight division with Ridgeview Comet in dogs and Miss Rumor in bitches. The open class for dogs 55lbs. or over was a fair one, but I cannot agree with the placing of the awards. Spot first, Furlough Mike second, and Hempstead Prince third, was the order. The issue seemed to be between Prince and Mike, with the former for choice. Spot is a big dog, coarse all over, heavy in shoulders. Furlough Mike should be in the light-weight class; he has a better head than the winner, but has a light eye. Hempstead Prince beats them both in head, body and shoulders, moves better, and shows the better quality and expression. In the corresponding bitch class Alice Leslie was rightly placed over Lady Graphic, second. The winner is a nice mover, has a fair head, good shoulders, and stands on good legs and feet. In light-weight open dogs, Chancellor, well known, won handily from Plain Sam, second, and Bert of Hessen, third. Plain Sam loses to the winner in head and muzzle. In bitches, Devonshire Pearl, another of the Gould string, won, closely pressed by Count Graphic's Baby, with Brighton Flossy third. It looked as if the last-named might have been higher. She has much the better of it in skull and shoulder, but is a bit wrong before the eye.

English setters were a good lot, headed by Cactus, winner in challenge dogs, and that grand bitch Maid Marian in challenge bitches. Warwick Kennels scored first and second in open dogs with Sheldon and Albert's Ranger, while Rodfield, placed third, might well have given way to Dan O'Light, R.; the last-named having the better of it in head, shoulders, coat, legs and feet. In open bitches, Blue Nell rightly won, with that nice bitch Albert's Moll second. The latter loses a trifle in body and action; in other respects they are close.

Irish setters, in the absence of Oak Grove Kennels, showed a falling off. Finglas was alone in challenge dogs. The old dog looked well and moved like a youngster. Bessie Finmore and Lady May Swiveller were the competitors in the challenge bitch class, the former winning by a narrow margin, principally in head. Kildare Malt first, Killane second, was the order in open dogs. Killane loses in body and coat. In corresponding bitch class Fawn won from Lady Finglas, second. I rather liked the last named best; she shows much the better type, gains in legs, feet and shoulders, and is the equal of Fawn in other points.

Gordon setters had seventeen entries, many of them being of good quality. Heather Lad was first in challenge dogs and Princess Louise in challenge bitches. Dash, first in open dogs, might well have changed places with Wang Ivanhoe, second, who beats him in head and body. Forrest Guy, third, is a fair-headed dog, but lost to Wang in all points. In corresponding bitch class Dwight Pearl first, Dwight Sarah second and Princess Bonnie third was the order, and rightly so. All three were shown well and are close together in quality.

Spaniels were a good entry, especially in cockers. In challenge dogs Pickpania easily beat old Bendigo, who, however, carries his years well and has done much good in the stud. In the open class, dogs, Viscount, first, has the better head, legs and feet, moves well and was shown in capital condition. King Cole II., second, is a good sort, but loses to the winner in head and front. Willie Silk, R., is too much field spaniel; he must be close to the 28lb. limit. In corresponding bitch class Woodland Minnie, first, is good behind the head. Miss Ginger, second, has a fair head, but is bad in body. Hamilton Jack again won in the any other color class for dogs. He is a good, workmanlike dog, but has not the proper cocker type. Had Cherry Boy III. been a little better in head he might have won.

Collies were a good lot, but some of the awards are hard to find a reason for. Sefton Hero was alone in challenge dogs, and Lady Gay beat Charlton Phyllis in challenge bitches, but wrongly so. Lady Gay has not got her last year's form. She had little coat. Dwight Ormonde, R. in open dogs, might have won. Hempstead Chief, first, is bad in head and ear, while Dwight Ormonde is good in head and ear; both have good coats. In the corresponding bitch class Cragston Thistle rightly won, with Hempstead Dorothy second. The winner is much the better quality.

Fox terriers were a good lot, Warren Safeguard winning in challenge dogs and Warren Capture in challenge bitches. Prisoner, first in open dogs, is a good one, with a nice head, good legs and feet, and plenty of terrier character. Dudley Stroller, second, is also a good one, a bit wrong in coat, but good in head. The Messrs. Rutherford scored first and second in open bitches with Warren Dusky and Warren Cautious.

Irish terriers were a good lot, the winners all being well known.

In bull dogs the Woodlawn Park Kennels as usual had all their own way, winning with Walhampton in the challenge class, Rustic Sovereign in the open dogs, and running second to Firefly with Grosvenor Lass in the corresponding bitch class. Firefly just had a little the better of it in head and chest.

Bull terriers were also a good exhibit. The bitch protested at New York for deafness was defeated by Frank Doll's Green Hill Empress.

Beagles were out in good force, headed by C. S. Wixom's strong kennels; needless to say, he secured most of the ribbons, dividing first prize, however, in the challenge class with Joe Lewis's good bitch Lonely. Champion Royal Krueger, alone in challenge dogs for dogs 15in. and under, was with others beaten for the special for best beagle by Ringleader.

RUSTIC.

AWARDS.

MASTIFFS.—CHALLENGE—Dogs: 1st, Dr. L. Younghusband's Prince Cola. Bitches: 1st, Dr. L. Younghusband's Minnie Beaufort. OPEN—Dogs: 1st and 2d, withheld; 3d, J. A. Spracklin's Brutus. Bitches: 1st, withheld; 2d, D. E. Lynn's Lizzie Beaufort.

ST. BERNARDS.—ROUGH—Dogs: 1st, Belle Isle Kennels' Eboracum; 2d, A. Froembling's American Cæsar; 3d, J. C. Guillot's Scion Lomond. Bitches: 1st, Belle Isle Kennels' Artilla; 2d, A. Froembling's Arlington Pansy; 3d, Mrs. A. Cline's Lady Taylor. ROUGH OR SMOOTH.—NOVICE—1st, Alta Kennels' Victor Watch; 2d, J. C. Guillot's Scion Lomond. PUPPIES: 1st, C. J. Hirt's Jerry Simpson; 2d, C. Leonard's Gladstone. R., J. C. Guillot's Lord Dufferin II.—CHALLENGE—SMOOTH—Dogs: 1st, D. E. Waters's Alta. Bitches: 1st, Alta Kennels' Judith. OPEN—Dogs: 1st and 2d, Alta Kennels' Rex Watch and Victor Watch. R., Fenwick & Bousefield's St. Augustine. Bitches: 1st and 2d, Belle Isle Kennels' Sunbeam and Sunol.—LOCAL CLASS—ROUGH OR SMOOTH—1st, Belle Isle Kennels' Sunbeam; 2d, C. Leonard's Gladstone. R., J. C. Guillot's Lord Dufferin II.

BLOODHOUNDS.—Dogs: 1st, Dr. C. A. Lougest's Simon de Sudbury; 2d, S. B. Christy's Brough. Bitches: 1st, S. B. Christy's Layswood Chorus; 2d, Alta Kennels' Queen of the West.

RUSSIAN WOLFHOUNDS.—BARZOIS—Dogs: 1st, G. M. Keasby's Optimist.

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in a Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

GREAT DANES.—*Dogs*: 1st, H. L. Robinson's Beau Brummel; 2d, O. H. Brown's Prince. *Bitches*: 1st, Smith & Lepper's Senta II.; 2d, Algonquin Kennels' Earl's Olivia. R., J. L. Trent's Nellie.

FOXHOUNDS.—*Open*—*Dogs*: 1st, B. F. Lewis, Commodore; 2d, J. Smith's Grandeur. *Bitches*: 1st, B. F. Lewis, Jr.'s, Friendly; 2d, J. Smith's Pastime. R., J. A. Spracklin's Spot.

GREYHOUNDS.—*Challenge*—1st, J. H. Lyke, M. D.'s, Southern Rhymes.—*Open*—*Dogs*: 1st, Maurice Barrymore's Davy Garrick; 2d, Dr. S. Dixon Barr's Duke of Morning Quest. *Bitches*: 1st, Toon & Thomas's Southern Belle.

POINTERS.—*Challenge*—*Dogs* (55lbs. or over): 1st, Glenrock Kennels' Molten Banner. R., Leamington Pointer Kennels' ch. Count Graphic. *Bitches* (50lbs or over): 1st, G. J. Gould's Josie Bracket. *Dogs* (under 55lbs.): 1st, G. J. Gould's Ridgeview Comet. *Bitches* (under 50lbs.): 1st, G. J. Gould's Miss Rumor.—*Open*—*Dogs* (55lbs. or over): 1st, E. S. Brink's Spot; 2d, G. J. Gould's Furlough Mike; 3d, George Douglass's Hempstead Prince. R., Leamington Pointer Kennels' Duke of Essex. *Bitches* (50lbs. or over): 1st, E. M. Beale's Alice Leslie; 2d, Leamington Pointer Kennels' Lady Graphic. *Dogs* (under 55lbs.): G. J. Gould's Chancellor; 2d, Dr. J. R. Daniels's Plain Sam; 3d, Leamington Pointer Kennels' Bert of Hessen. R., H. Leroy Jones's Young Americus. *Bitches* (under 50lbs.): 1st, G. J. Gould's Devonshire Pearl; 2d, Leamington Pointer Kennels' Count Graphic's Baby; 3d, R. K. Armstrong's Brighton Flossy.—*Local*—1st, Leamington Pointer Kennels' Duke of Essex; 2d, J. V. Revell's Judd Lansdowne; 3d and R., W. C. Wann's Ben Kent and Spring.

ENGLISH SETTERS.—*Challenge*—*Dogs*: 1st, H. Pope's Cactus. *Bitches*: 1st, J. Brett's Maid Marian. R., Washtenaw Kennels' Albert's Nellie.—*Open*—*Dogs*: 1st and 2d, Warwick Kennels' Sheldon and Albert's Ranger; 3d, P. J. Madison's Rodfield. R., F. F. Bock's Dan O'Light. *Bitches*: 1st, Dr. J. Kime's Blue Nell; 2d, W. S. Hastings's Albert's Moll; 3d, Washtenaw Kennels' Nellie Breeze of Washtenaw. R., Rathbone & Armstrong's Toledo Queen.—*Novice*—1st, Dr. J. Kime's Blue Lady; 2d, W. S. Hastings's Albert's Moll; 3d, T. G. Davey's Brighton Duke. R., R. Bingham's Bingham's London.—*Local*—1st and 3d, R. Bingham's Lock and Lady Mingo; 2d, F. Drouillard's Belle C. R., Rathbone & Armstrong's Max.

IRISH SETTERS.—*Challenge*—*Dogs*: 1st, W. S. Washington's Fin-glas. *Bitches*: 1st, W. N. Eakins's Bessie Finmore. R., A. von Cantz-hauser's Lady May Swiveller.—*Open*—*Dogs*: 1st, W. Sutton's Kildare Malt; 2d, J. B. McKay's Killane; 3d, A. Drouillard's Frank. *Bitches*: 1st, A. Drouillard's Fawn; 2d, A. von Cantzhausen's Lady Finglass; 3d, F. L. Moe's Nona. R., Muckross Kennels' Rosamond.—*Novice*—1st, A. Drouillard's Fawn; 2d, withheld; 3d, L. C. Smith's Gato. R., W. Sutton's Kildare Malt.

GORDON SETTERS.—*Challenge*—*Dogs*: 1st, J. R. Oughton's Heather Lad. *Bitches*: 1st, Dr. S. G. Dixon's Princess Louise.—*Open*—*Dogs*: 1st, C. S. Campbell, Jr.'s, Dash; 2d, O. Schafer's Wang Ivanhoe; 3d, Stone & McGregor's Forrest Guy. R., N. B. Tiler's Top. *Bitches*: 1st, 2d and R., J. R. Oughton's Dwight Pearl, Dwight Sarah and Dwight Bee; 3d, Dr. S. G. Dixon's Princess Bonnie.

FIELD SPANIELS.—*Any Color*—*Challenge*—1st, J. A. Spracklin's Daisy Dean.—*Open*—*Dogs*: 1st, Toon & Thomas's Endcliffe Ben; 2d, Walter V. Wann's Koon. R., J. A. Spracklin's Endcliffe Ebony. *Bitches*: 1st, Marcel A. Viti's Scandal; 2d, J. A. Spracklin's Spracklin Belle.

COCKERS (not over 28lbs.).—*Challenge*—*Any Color*—*Dogs*: 1st, Concord Cocker Kennels' champion Pickpania. R., Belle Isle Kennels' champion Bendigo.—*Black*—*Open*—*Dogs* (not over 28lbs.): 1st, Geo. Douglass's Viscount; 2d, Belle Isle Kennels' King Cole II. R., A. F. Knowlson's Willie Silk. *Bitches*: 1st and R., Geo. Douglass's Wood-land Minnie and Lady Lola; 2d, J. R. H. Wagner's Miss Ginger.—*Any Other Color*—*Open*—*Dogs* (not over 28lbs.): 1st, Ethelred Kennels' Hamilton Jack; 2d, Belle Isle Kennels' Cherry Boy III. R., Concord Cocker Kennels' Red Justice. *Bitches*: 1st, Belle Isle Kennels' Gaiety Girl; 2d, Mrs. Charles S. Wixom's Russette. R., Ethelred Kennels' Ethelred Bonnie.—*Novice*—*Any Color*—1st, Geo. Douglass's Viscount; 2d, Belle Isle Kennels' King Cole II. R., J. R. H. Wagner's Miss Ginger.—*Any Color*—*Local*—(not over 28lbs.): 1st and R., Belle Isle Kennels' King Cole II. and Mistress Disdain; 2d, Guy Crane's Maud S. II.; 3d, James Hendrick's Mollie.

IRISH WATER SPANIELS.—*Open*—*Dogs*: 1st, Foxhall Kennels' Roger O'Donohue; 2d, W. K. Cowan's Muldoon. *Bitches*: 1st, T. A. Casson's Marguerite; 2d, Foxhall Kennels' Nellie O'Donoghue.

COLLIES.—*Challenge*—*Dogs*: 1st, J. P. Morgan's Sefton Hero.—*Open*—*Dogs*: 1st, Woodlawn Park Kennels' Hempstead Chief; 2d, J. P. Morgan's Cragston Predominator; 3d, J. R. Oughton's Dwight Ormonde. *Bitches*: 1st, J. P. Morgan's Cragston Thistle; 2d, Wood-lawn Park Kennels' Hempstead Dorothy. R., Burgess & Mitchellree's Lady Middlesex.—*Novice*—1st, Woodlawn Park Kennels' Hempstead Chief; 2d, R. Humphreys-Roberts's Sir Sefton Doone. R., J. P. Morgan's Cragston Thistle.

POODLES.—*Curly*—*Any Color*—*Challenge*—1st, Morey Kennels' Rajah.—*Open*—*Dogs*: 1st, Morey Kennels' Morey Feat; 2d, Mepal Ken-nels' Mepal Cherry. *Bithes*: 1st and 2d, Morey Kennels' Morey Leah and Snow Ball.

BULL DOGS.—*Challenge*—1st, Woodlawn Park Kennels' Walhampton.—*Open*—*Dogs*: 1st, Woodlawn Park Kennels' Rustic Sovereign. *Bitches*: 1st, W. Wright's Firefly; 2d, Woodlawn Park Kennels' Gros-venor Lass.

BOSTON TERRIERS.—1st, S. M. Copeland's Bunker.

BULL TERRIERS.—*Challenge*—*Dogs*: 1st, R. L. Huidekoper's Car-dona. *Bitches*: 1st, F. F. Dole's champion Starlight. R., Mrs. J. H. McMillan's Edgewood Matchless.—*Open*—*Dogs*: 1st and 2d, F. Dole's Victor and Masterpiece. *Bitches*: 1st, F. Dole's Green Hill Empress; 2d, H. Thompson's Merle Goddess.

DACHSHUNDE.—*Dogs*: 1st, L. O. Seidel's Jay S.; 2d and R., A. Froembling's Blitz and Reinecke's Jay. *Bitches*: 1st, Venlo Farm Kennels' What's Wanted; 2d, G. M. Bryan's Brontzis. R., A. Froem-bling's Bonny.

BEAGLES.—*Challenge*—13 to 15in.—*Dogs*: 1st, J. Lewis's Ring-leader. R., C. S. Wixom's champion Sherry. *Bitches*: Equal 1st, C. S. Wixom's Daisy Corbett and J. Lewis's Lonely. R., C. S. Wixom's champion Elf.—13in. and under—*Dogs*: 1st, C. S. Wixom's champion Royal Krueger. *Bitches*: 1st, G. D. Welton's Kitty Clover. R., C. S. Wixom's champion Ava W.—*Open*—13 to 15in.—*Dogs*: 1st and 2d, C. S. Wixom's Trumpet and Roger W. R., J. Lewis's Ratflier. *Bitches*: 1st, C. S. Wixom's Popsey; 2d, J. Lewis's Spinaway; 3d, W. Maynard's Midget B.—13in. and under—*Dogs*: 1st and 2d, C. S. Wixom's Razzle and Little Wonder. *Bitches*: 1st, C. S. Wixom's Evangeline; 2d and R., G. D. Welton's June Clover and Henrietta.—*Novice*—1st, J. Lewis's Cherrywood; 2d, G. D. Welton's June Leader. R., C. S. Wixom's Dazzle.

FOX TERRIERS.—*Smooth*—*Challenge*—*Dogs*: 1st, L. & W. Ruth-erford's Warren Safeguard. R., F. H. Bowersock's Ripon Stormer. *Bitches*: 1st, L. & W. Rutherford's Warren Capture.—*Open*—*Dogs*: 1st, B. S. Home's Prisoner; 2d, Dr. F. D'Evelyn's Dudley Stroller; 3d, L. & W. Rutherford's Warren Sage. R., Foxhall Kennels' Dux. *Bitches*: 1st and 2d, L. & W. Rutherford's Warren Dusky and Warren Cautious. R., W. Le Mouier's Richmond Victory.—*Novice*—1st and R., L. & W. Rutherford's Warren Dusky and Warren Sage; 2d, E. S. Home's Prisoner.—*Wire-haired*—*Dogs*: 1st, Toon & Thomas's End-cliffe Brisk; 2d and 3d, J. J. Lynn's Endcliffe Banker and Endcliffe Nailor. R., G. H. Gooderham's Norfolk Warrior. *Bitches*: 1st and 2d, Toon & Thomas's Endcliffe Nimble and Endcliffe Fidget; 3d, G. H. Gooderham's Norfolk Promise.—*Novice*—1st and R., Toon & Thomas's Endcliffe Nimble and Endcliffe Teaser; 2d, G. H. Gooderham's Norfolk Warrior.

IRISH TERRIERS.—*Challenge*—*Dogs*: 1st, Toon & Thomas's Briggs Bent. *Bitches*: 1st, Toon & Thomas's A. Gessela.—*Open*—*Dogs*: 1st and 2d, Toon & Thomas's Briggs Blazer and Briggs Bargain. *Bitches*: 1st, Toon & Thomas's Endcliffe Maggie; 2d, J. W. Gar-ri-son's Briggs Breeze.

SCOTCH TERRIERS.—*Challenge*—1st and 2d, R. McDonald's Merry Coll and Colored Preacher.—*Open*—*Bitches*: 1st and 2d, R. McDonald's Coloo and Hlawatha Tibbee.

DANDIE DINMONTs.—1st, Toon & Thomas's Lothian Judy; 2d, W. W. Dunnell's Tweedside King.

BLACK AND TAN TERRIERS (over 7lbs.).—*Challenge*—1st, S. D. Ripley's Glenwood.—*Open*—*Dogs*: 1st, Raven Kennels' Rhodes Orme; 2d and R., E. Mack's Dandy and Perfecta. *Bitches*: 1st, S. D. Ripley's Surrey Gem; 2d, Mrs. J. T. Walker's Clow.

YORKSHIRE TERRIERS.—1st, L. Cullen's Endcliffe Model; 2d, W. C. Bishop's Bradford Rejected.

TOY TERRIERS (all other than Yorkshire, under 7lbs.).—1st, C. W. Stuart's Dandy Stuart; 2d, Mrs. J. Wright's Trixy; 3d, Mrs. S. Post's Trilby.

PUGS.—*Challenge*—1st, T. A. Howard's Al Von. R., Miss E. Cryer's Rod Ivy.—*Open*—1st, Miss W. G. Britton's Bradford Marvel; 2d, Toon & Thomas's Lord Sheffield. R., Ravenswood Pug Kennels' Drummer Lad.

ALL TOY SPANIELS.—*Dogs*: 1st, Alta Kennels' Little Billee. *Bitches*: 1st, W. C. Bishop's Dolcina.

ITALIAN GREYHOUNDS.—*Dogs*: 1st, P. H. Hoyt's Tee Dee; 2d, J. Lewis's Spring. *Bitches*: 1st, F. H. Hoyt's Valenza; 2d, J. Lewis's Sprite.

MISCELLANEOUS CLASS (for recognized breeds not classified, 0lbs. or over).—1st, Woodlawn Park Kennels' Boxer III.; 2d, G. R.

Pierson's McGregor (Cumber Spaniel); 3d, J. P. Morgan's Herdsman II. (Old English Sheep Dog). (For recognized breeds not classified, 30lbs. or under).—1st, L. A. Van Zandt's Rising Star (White English Terrier); 2d and 3d, Toon & Thomas's Blazer (schipperke) and End-cliffe Kompaway (whippet).

The Admonitory Record and Ready Reference List.

Offense.....Causing the ears of two dogs to be cropped.— Justice before whom tried.....Thos. J. Kenna. Date of conviction.....Sept. 18, 1889. Sentence.....Fine of \$5 or 5 days in prison. Title XVI. of the Penal Code of the State of New York contains the following sections among others:

"SEC. 655.—A person who overdrives, overloads, tor-tures, or cruelly beats or unjustifiably injures, maims, mutilates or kills any animal, whether wild or tame, and whether belonging to himself or to another, or deprives any animal of necessary sustenance, food or drink, or neglects or refuses to furnish it such sustenance or drink, or causes, procures or permits any animal to be overdriven, overloaded, tortured, cruelly beaten, or unjustifiably injured, maimed, mutilated or killed, or to be deprived of necessary food or drink, or who willfully sets on foot, instigates, engages in, or in any way furthers any act of cruelty to any animal, or any act tending to producesuch cruelty, is guilty of a misdemeanor.

"SEC. 669.—The word 'animal,' as used in this title, does not include the human race, but includes every other living creature. The word 'torture' or 'cruelty' includes every act, omission or neglect whereby unjustifiable physi-cal pain, suffering or death is caused or permitted.

"SEC. 15.—A person convicted of a crime declared to be a misdemeanor, for which no other punishment is specially prescribed by this Code or by any other statutory provision in force at the time of the conviction and sentence, is pun-ishable by imprisonment in a penitentiary or county jail for not more than one year or by a fine of not more than \$500, or by both."

Field Trial Comments.

IN a letter of recent date Mr. Thomas Johnson, of Win-nipeg, writes on the subject of field trials, and as he knows of them in all their details, his writings are worthy of weighty consideration. He says:

They demonstrate nothing. The only salvation of them is a few men born every year to take the places of the ones that have grown weary. There is, however, just one other chance for their salvation, and if this could be put in effect field trials would become popular, viz., to offer honorary prizes, eliminate the dollar-and-cents men, and make the trials a kind of annual "round-up" of sportsmen.

As to prizes, offer medals for the different essentials that make up a field dog, say a medal each for the fol-lowing qualifications: Fastest dog, most style on point, most stylish mover, best natural backer, best nosed dog, although this might be hard to decide, etc., and prizes for the winners. Some such move as this would enhance the circulation of sportsmen's magazines because a greater number would be interested. I told Mr. Wootton, Sec'y M. F. T. Club, the other day, he was a crank of a million; that this continent had 60,000,000 of population and he could not name sixty men who would or ever did do what he was doing. The FOREST AND STREAM has toadied to a corporal's guard of dog trainers and forgotten the army of sportsmen. Just for a moment think of the men you know, and you know them all, who have identified them-selves with the running of field trials, and if two-thirds of them are not dollar hunters and the remainder cranks you can call me a colossal prevaricator.

National Fox Hunters' Association.

A SPECIAL meeting of the board of directors of the National Fox Hunters' Association was called by the presi-dent at Lexington, Ky., Feb. 25, for the purpose of inves-tigating the charges recently preferred against the methods of awarding the prizes at the recent trials. There were present Dr. Wash Miller, President; W. W. Huffstetter, H. C. Trigg, Roger Williams, A. W. Hamilton, J. L. Bosley, C. M. Corbin, Francis J. Hagan.

Upon thorough investigation of all the facts and evi-dence in the case the board of directors finds that in the Derby the judges rendered a just, fair and impartial de-csion; that the awards were made unanimously upon the merits of the dogs as displayed in the field and were not determined by drawing names from a hat or any other species of lottery.

In the All-Age Stake they find that the first and second prizes were unanimously awarded by the judges to the respective dogs upon their merits as displayed in the field and not by drawing their names from a hat or resorting to any species of lottery; that for the third prize there were four dogs of equal merit in the opinion of the judges, and being unable to agree as to which was best the names of the four dogs were placed upon slips and the winner of the third prize decided by drawing a name therefrom.

FRANCIS J. HAGAN, Sec'y N. F. H. A.

DR. WASH MILLER, Pres.

Abolish Cropping.

NEW YORK, March 7,—*Editor Forest and Stream*: Allow me to thank you for the articles which have appeared in your paper against the cruel fashion of cropping. They have covered the whole subject, and should be enough to convince the American Kennel Club that the better way is to endeavor to lead any movement in the interest of humanity rather than to be forced, as is inevitable, to con-demn a custom which the laws justly declare a crime. May the late conviction in a Brooklyn court, which your paper recounts, be followed up in every guilty case, that it shall become actually odious to exhibit a cropped dog after July next.

HUMANITY AND GOOD TASTE.

English Bloodhound Club.

THE second annual meeting of the English Bloodhound Club was held in Madison Square Garden, Feb. 23, at 11 o'clock A. M. The committee on registration reported the names of several dealers who had been selling bloodhounds with fictitious pedigrees, and several cases were called to the attention of the club where dogs half bloodhound and half foxhound were sold for pure bloodhounds.

After consideration of the shows at which specials should be offered and the policy of the club for the en-suing year, the following officers were elected: J. L. Winchell, Fairhaven, Vt., President; Dr. C. A. Lougest, Boston, Vice-President; Charles H. Innes, 23 Court street, Boston, Secretary and Treasurer. Executive committee; the President, Vice-President, Secretary, Mrs. A. W. Lee, Toledo, Ohio, and Mr. Roger D. Williams, Lexington, Kentucky. CHARLES H. INNES, Sec'y.

POINTS AND FLUSHES.

Dr. F. W. Kitchel's home in Perth Amboy, N. J., was destroyed on Feb. 27 by fire. The fire began in a room just above the kitchen, near the library. Notwithstand-ing the efforts of the fire department, the house was com-pletely gutted. This room contained one of the doctor's spaniels and a litter of pups. A small oil stove had been placed there to take off the chill in the room, and it is assumed that the dog either upset the stove or that it ex-ploded. The room being lined all the way through with yel-low pine it was soon a sheet of flames. Thinking only of his dogs, he attempted to save them, and but for the pres-ence of Ald Deitch, who forced him back, the doctor would have attempted to enter the fiery furnace. As it was, he received severe cuts and burns on his hands and face, and his hair was badly singed. Mrs. Kitchel also fared badly in an attempt to follow her husband. The doctor's large collection of curios was destroyed. We sympathize with Dr. Kitchel in his loss.

Of the 929 entries of the Mascotah Kennel Club's show, which is being held this week, Mr. Chas. H. Mason will have the task of judging over half of them. The increase in several of the classes which Mr. Mason will judge is noticeably great over those of last year.

In our advertising columns, A. Bradbury, Monument Beach, Mass., offers trained setter; Geo. M. Keasby, New-ark, N. J., offers Russian wolfhound puppies; C. W. Hardy, Unionville, O., offers bull dog; D. J. Treat, Moodus, Conn., wants dogs to train.

Yachting.

IT is the fashion this winter among American legislators to deride England and to assert the superiority and complete independence of the United States in everything. If those statesmen who delight in twisting the Lion's tail are in the least honest or consistent in their assertions of absolute independence, they cannot do better than to pass the bill which we publish this week, for the construction of a tank for model experiments at the Washington Navy Yard. Thus far American naval architects have been entirely dependent upon the re-searches of the British Government for their knowledge of the essen-tial facts as to resistance and similar important subjects. Even to those of moderate views, who see no harm in learning from England if she can teach us, it must be evident that no great nation can depend on another for scientific work of this kind, but that there should be an open and friendly but hearty rivalry as to which shall lead.

The work of one American, Naval Constructor D. W. Taylor, in this field, of the resistance of vessels, has already reflected credit on the Navy Department, of which he is an officer; and with the necessary facilities that would be afforded by the proposed tank, much further progress might be looked for in the line of general experiment and investigation. What is still more important just now, when the con-struction of large and costly warships is under consideration, is the actual testing of models. The amount involved is comparatively small; but the importance of the early completion of this work cannot be over-estimated.

It seems reasonably certain that the Hendersons have on the stocks a racing cutter for the Emperor of Germany, as the old Thistle (Meteor) has been renamed Komet and turned over to the German naval authorities as a training ship for yacht sailors. At the same time, while the Hendersons deny everything save the fact that they are building a racing cutter of the largest class, it is reported that they have in hand a yacht for Sir George Newnes, with which he will challenge for the America's Cup in 1897. The report is thus far un-verified and is probably untrue. What has become of the large racing schooner recently ordered for the Emperor by some obliging news-papers does not appear. Still another story ascribes the ownership of the new yacht to the Emperor and his friend, the Earl of Lonsdale, ex-Impresario and manager, and adds that she will challenge for the Cup.

The Steam Yacht Josephine.

THE present year will be a notable one in steam yachting, as it will see some half dozen new yachts of extra size and quality added to the American fleet. The first of these to be launched, the Josephine, is building at the Crescent Ship Yard, Elizabeth, N. J., by Lewis Nixon, for P. A. B. Widener, of Philadelphia, from Mr. Nixon's own designs. The launch took place on March 4 in the presence of the owner and a large number of spectators and was in every way successful. The yacht was christened by the little granddaughter of the owner. The following description is from the *Maine Journal*:

The Josephine is of the following dimensions: Length over all 225ft., beam 28ft., depth 18ft., draft of water 11ft., indicated horse-power 1,200, speed 16 miles. This vessel is built of steel, the plates made by the Carbon Steel Co. and the shapes by the Phoenix Iron Co., and has been placed in the highest class of the American Shipmasters' Associ-ation by E. Platt Stratton, the surveyor. She has eight watertight compartments. The promenade deck is 140ft. long and 18ft. wide. This deck is on top of the mahogany and steel deck house. In this house, starting forward, the first compartment is the chart house, which is fitted up also as a smoking room. Aft of this on the star-board side is a large guest room, with bathroom attached, and on the port side the captain's room.

A passageway running along the starboard side of the house leads from the galley forward to a dumb waiter supplying food to the ward room pantry between decks. The galley extends entirely across the house and back of it is a laundry, barber shop, rooms for the cooks and stewards, and a large store room.

The main saloon is in the after end of the deck house. It is 30ft. long and 18ft. wide, fitted up in paneled mahogany, with a mantle and fireplace flanked by buffet and bookcases in the forward end. Large sofas are worked along the sides. A piano is also fitted in this room. A very large deck room is abaft the saloon, to be used as the owner's sleeping apartment, in connection with which there is a tiled bath room. Down below forward is the large compartment for the men, carried all the way up to the rail. The ward room has eight large double staterooms, with wash rooms, bath rooms, pantries, etc.

The boiler compartment comes next, and then an unusually large coal bunker with a capacity for 210 tons of coal. The engine compart-ment is just abaft the coal bunker, and then come the after quarters, having ten commodious staterooms, a ladies' parlor with fireplace and numerous divans, two bath rooms and a maids' room. The holds are large and roomy for carrying provisions and stores for long voyages. The yacht has numerous auxiliaries, such as an ice-making plant

JOSEPHINE—DESIGNED AND BUILT BY LEWIS NIXON FOR P. A. B. WIDENER, 1896.

and refrigerating machinery, a fresh-water distilling plant—making the vessel independent of shore supplies of fresh water, a great desideratum in many fever-ridden ports—steam and hand steering gear, steam windlass and two power launches. She will have a two-masted schooner rig. No cumbersome bits obstruct the gangways, but instead a neat, combined chock and cleat is used, which is entirely out of the way. She has a steel bowsprit. The yacht has a long overhang at each end and very flaring lines forward, tending to keep her beam up in a seaway.

The large square stern gives the owner a grand open air lounging room. Double awnings will be used, with a 4in. air space between. Electric lights will be used throughout, and a storage battery will run the lights after midnight so that the tremor of the dynamo will not annoy those who wish to sleep. An arc of lights stretching over the masthead will be supplied, and a search light will be carried on the forward end of the house.

The engines are triple expansion, 18, 27 and 42in. in diameter by 28in. stroke. Steam is supplied by two boilers with 120sq. ft. of grate surface and 3,600ft. of heating surface. These boilers are fitted with powerful blowers so that the vessel can run at a high rate of speed if desired. She will be able to make 6,000 miles without recoaling.

A Model Tank for the Navy Department.

The following bill has been introduced in Congress by Representative Hilborn, of California, to fill a want that has long been felt by the naval constructors of the United States. The cost of the plant is but small in comparison with the value of the results to be obtained, on which may largely depend the wise or unwise expenditure of millions of dollars in the construction of new warships. The immediate importance of an adequate plant for experimental work and investigation is so little understood and appreciated that it is quite possible that the bill may not pass, but we earnestly hope that it may. Apart from its use by the Navy Department, the tank will practically be at the service of private shipbuilders as well. When even private firms abroad consider such an experimental plant, expensive as it is, as a necessary and profitable part of their equipment, the Government of the United States should be capable both of appreciating and paying for one.

A bill providing for a model tank for the U. S. Navy: Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that the Secretary of the Navy be, and he is hereby, directed to establish a model tank with all proper appliances for the purpose of investigating and determining the most suitable and desirable shapes and forms to be adopted for U. S. naval vessels.

Sec. 2. This model tank shall be located at Washington, D. C., upon such government reservation already under the control of the Navy Department as the Secretary of the Navy may designate, and shall be built upon plans approved by him. A naval constructor shall, under the direction of the Bureau of Construction and Repair of the Navy Department, have charge of the model tank and all work done in connection with it.

Sec. 3. At this model tank experiments may be made for private shipbuilders upon the authorization of the Secretary of the Navy; provided that the cost of material and of labor of per diem employees in making such experiments shall be defrayed by the private shipbuilder; and provided further, that the results of such experiments shall be regarded as confidential and shall not be divulged without the consent of the shipbuilder for whom they may be made.

Sec. 4. For the model tank with all necessary buildings and appliances \$100,000 are hereby appropriated.

Model Experiments in Ship Resistance.

We reproduce from *Engineering* the following account of a paper read at the meeting of the Institution of Mechanical Engineers (British):

On the members assembling on Friday evening, Jan. 31, the president, Mr. E. Windsor Richards, occupied the chair. The first paper taken was by Lieut.-Col. Thomas English, and was on "The calculation of Horse-Power for Marine Propulsion." The object of the paper was to describe a method of calculating, from the results of a single sea trial of one ship, the horse-power necessary to propel another ship, of the same type, at any given speed. By the method treated upon, it is practicable with the ordinary appliances of a shipyard to approximate closely results which could otherwise only be obtained with a model tank. The author referred to Froude's method of separating the skin friction resistance from the wave-making resist-

ance. The former could be readily tabulated, while to ascertain the latter experiments have to be made either with an actual ship or with a corresponding model in a tank. The apparatus described consists of a small electric motor, furnished with a resistance coil, and running at a speed of about 1,000 revolutions per minute. The motor gives off about one-sixth of a brake horse-power, or a pull of about 8.4lbs. through 631ft. per minute on an endless piano wire stretched over two pulleys about 350ft. apart, one pulley being driven by the motor. The wire, therefore, is suspended horizontally over the surface of any convenient sheet of water. A towing frame is used, consisting of two similar and parallel levers, each 60in. between centers, and pivoted at their ends to the decks of the models. In this way the models are kept parallel to each other. The levers are divided, and are attached by short collars which can be clamped at any required graduation to pivots at the end of a bar, which is of the same length as the distance between the pivots on the deck of each model, that distance being 4ft. This bar carries a vertical spindle, to which the lower wire is connected by a ring which can travel up and down the spindle and thus allow for the sag of the wire.

Vertical slotted guides embrace the wire at both ends of the bar, and thus keep the latter, and therefore also the models, in a steady course. Loose diagonal guides connecting the models serve as stops to prevent them from coming close together when one lags behind the other. The levers are always clamped at the same graduation on each, and this graduation is varied by trial until the models tow abreast at the required speed. It is found that the requisite speed can readily be obtained within limits of 0.02 knots per hour. The principle upon which results are obtained is based upon the proposition that it will always be possible to make two models of such scales that the same absolute speed will for one of the models correspond with that of a ship which has been tried at sea; and for the other model with that desired for the proposed ship. The actual resistance of the model of the ship already tried can be calculated, and if the ratio of the total resistance of the two models at the same speed is found by trial, the actual resistance of the second model will be known; therefore the resistance of the proposed ship at the desired

speed can be calculated. The models, which are 10ft. long, are made of yellow pine.

The discussion was opened by the reading of a letter from Mr. Froude, who was unable to be present. The method proposed was ingenious, Mr. Froude said, for obtaining horse-power estimates without laboratory apparatus. The advantage of the system rested in the fact that the two elements which are most difficult to estimate were approximately common to both models. As a matter of detail, Mr. Froude would suggest that when towing the models of 10ft. long alongside each other, with a distance of nearly 4ft. between them, their respective waves might interfere with the result.

Prof. Barr said that if the resistances were not exactly equal while the models were being towed, instability might result, and the models would come together. He had designed an apparatus involving similar principles, but this was intended for measuring wind resistances. He also had thought that the point made by Mr. Froude might arise in regard to the models interfering with each other. He would ask if there was any advantage in cost of production in using wood models over those made of wax, which were generally employed in tank experiments.

Mr. Leslie Robinson referred to the examples given by the author in the paper, in which he determined the horse-power required for a torpedo-boat destroyer of 300 tons displacement and 30 knots speed. The Janus and Lightning, built by Palmer's Company at Jarrow, had displacements of 247 tons, and they steamed on trial at 27.85 knots. The wetted surface of the Janus was 3,796sq. ft.; on the proposed vessel it would be 4,321sq. ft. The indicated horse-power of the Janus at 27.8 knots was 3,840; while the Lightning, steaming at 27.9 knots, required 3,990 indicated horse-power. Working these figures out, the estimated horse-power required for the 30-knot vessel would be 5,220 H. P. Referring to these figures, Mr. Robinson asked whether the details of the calculations set forth had been obtained by means of actual experiments from models. He asked this because the horse-power to give the speed seemed low; those accustomed to designing vessels of this class would give rather 6,000 indicated horse-power.

Col. English, in replying to the discussion, said he would communi-

TRENT—MIDSHIP SECTION.

cate with Mr. Froude by letter. With regard to the distance apart of the models, and the interference of the waves thrown off by them, he had settled the distance from observation of the waves of an actual ship on trial. The distance was measured of the waves going out at the stern, and the models were adjusted accordingly. It was an illustration of the beauty of Froude's system that corresponding speeds in models reproduced the actual wave formation made by the full-sized ship. Photographs had been taken of waves formed at sea, and the models in the tank were found to reproduce them. Prof. Barr had asked if the models closed together when the levers were unequal. He had not observed that, but, as he had said, there were diagonal guides for preventing this difficulty, and thus the models were prevented from coming too close together. The trial referred to in the paper consisted of eleven runs, and all the time the models kept almost exactly abreast, and when the speed was adjusted they were perfectly equal over the whole course. The advantage of wood over wax for models for shipyard work was that the ordinary workman employed could deal with the material. He thought the average model maker of the shipyard would be somewhat puzzled if he were given paraffin to deal with. In regard to the proportion of horsepower allotted to the 30 knot boats, he thought that with 300 tons displacement the power would be as specified.

YACHTING NEWS NOTES.

The Spalding-St. Lawrence Boat Co., of Ogdensburgh, are now busy with a number of yachts, outside their large line of boat work. They have in hand a steam yacht for W. H. Post, of Ogdensburgh, to be 60ft. over all, 55ft. l.w.l., 9ft. 8in. beam and 3ft. 6in. draft; with an Almy boiler of 100 horse-power. They have also the 30-footer for J. R. Maxwell, designed by Winttingham, a fin-keel with double skin. They will exhibit at the Sportsmen's Exhibition a duplicate of Ethelwynn, and also a 17ft. 6in. yacht's cutter built for G. H. B. Hill, of the schooner Ariel, from a design by W. P. Stephens. They will also build from Mr. Stephens' design a sailing boat for the davits of the steam yacht Intrepid, Lloyd Phoenix. This boat will be similar in a general way to the 1-raters seen here on Sapphire II. and other English yachts, but will come in the 20ft. racing length class, though not intended for racing. She will be 26ft. over all, 19ft. l.w.l., 4ft. after overhang, 3ft. fore overhang, 7ft. beam and 11in. draft of hull. As she is to be carried regularly at the davits or swung in on deck, she will be a centerboard boat, with a knife board of 3/4in. bronze, weighing about 160lbs. She will be double planked with wales and planksheer of teak and will be very handsomely finished. The rig will be a sloop, with boom and gaff mainsail.

The annual meeting of the Jeffries Y. C. was held on Feb. 17, the following officers being elected: Com., Elmer E. Gray; Vice-Com., Wm. D. Pigeon; Fleet Captain, Chas. L. Joy; Meas., Ambrose A. Martin; Treas., W. F. McLaughlin; Sec'y, Chas. A. Braynard.

Hamilton Morton, at one time secretary of the New York Y. C. and one of its oldest members, died at his home in Flushing on Feb. 19, at the age of 91.

The Halifax (N. S.) Summer Carnival Committee are discussing the possibilities of an international yachting contest in connection with the Summer Carnival, between local craft and yachts from the United States.

Willard E. Case, of Auburn, N. Y., has under way in the shop of Emerson Head a steam launch from a design by J. Beavor Webb. She will be 65ft. over all, 9ft. 10in. beam, with double skin of cedar and mahogany. The engine will be a triple-compound of 75 H. P., with a 3ft. 6in. screw. Mr. Case is a member of the Owasco Lake Y. C.

The Royal St. Lawrence Y. C. has elected the following officers for the year: Honorary Com., Sir Donald A. Smith; Com., James Ross; Vice-Com., George W. Hamilton; Rear Com., Robert Fitz-Gibbon; Sec'y, W. Arthur C. Hamilton, Box 975; Measurers, J. C. C. Almon, G. Arthur S. Hamilton and Fred. P. Shearwood; Committee, L. J. Smith, S. Jackson, G. Herrick Duggan, G. de Sola, G. H. Labbe, W. McLea Walbank, A. F. Riddell and Wm. Davidson. The club has now a membership of 430.

Trent.

A HANDY CANOE-YAWL.

(Concluded from page 83, Jan. 25, 1896.)

THE accompanying drawings show the construction of the canoe-yawl previously described. It frequently happens in small craft, especially when designed to be built by amateurs, that the construction may be cheapened and simplified by the adoption of special

methods that would not be advisable in larger yachts. A good example of this is found in the skipjack Myra, illustrated in the FOREST AND STREAM of Nov. 3, 1894, the construction being novel and unconventional, but perfectly adapted for the special end in view.

In the present boat the construction is identical with that of large yachts, and the amateur who follows it out carefully, studying the use, the proportions and the fastenings of each member, need not be afraid, if he succeeds in this attempt, to venture on a larger and more pretentious craft. The absence of a counter removes the most serious difficulty in the way of the amateur builder, and leaves something for him to learn even after he has turned out a satisfactory canoe-yawl; but with this exception the construction is identical with that of the best yachts of such size as the amateur is likely to aspire to.

The first step is the "laying down" of the lines, or the duplication, on some convenient floor and to the full size, of the lines as already published. This is done by means of the following table of offsets, which, contrary to our usual practice, are to the inside of the planking and decking. The fractions in the table represent eighths of an inch.

After the lines are laid down on the floor, moulds are made from $\frac{1}{4}$ in. stuff for the stem, stern knee and the twelve sawn frames, shown as shaded in the sheerplan. The pattern for the iron keel is made full size from the lines on the floor; it may be worked to shape out of a single piece of common white pine. An allowance of $\frac{1}{8}$ in. per foot is usually made for the shrinkage of iron in casting, and the pattern should be larger than the lines in this proportion. Core prints are affixed for the core holes for the bolts, which are $\frac{5}{16}$ in. in diameter. The holes may be bored $\frac{3}{16}$ in., with a square recess for the head of each bolt on the bottom of the keel. It is well to have the casting made at the start, as there is no telling its exact size; it may vary more or less in cooling, and the oak keel and deadwoods should be accurately fitted to it at the start. If for any reason the keel cannot be cast until later, care should be taken that it will be, if anything, narrower and not wider than the wood keel.

The stem and sternpost will each be got out from knees, of hackmatack or oak, sided $\frac{1}{2}$ in. The head of the stem will be left square up to the top; it is usual to carry the bevel of the stem right up to the deck in catboats and sloops of the old models, as in all rowboats; but a much more shipshape finish follows from leaving the stemhead square, to take the gammon strap, stopping the bevel just below. The average boat builder or ship carpenter, however, will, if not watched, have the whole stem beveled before there is time to stop him.

The sternpost can be gotten out very nicely from a knee, one part forming the deadwoods. The grain should run straight down the after side of the post.

The rudder stock, of oak or locust, will be tapered from $\frac{1}{2}$ in. diameter at the head to $\frac{1}{4}$ in. at the heel, being rounded for about two-thirds of the circumference along the lower part. The sternpost must be the same taper, and in its after side a groove of circular section must be cut to fit the rudder. The rabbets will be laid out on stem and stern, the rabbit line and bearding line being shown in the drawing; the stem will be roughly beveled, leaving a little wood to finish up on; the score will be cut in the sternpost, and then they are ready for the keel.

The keel is of oak, $\frac{1}{2}$ in. wide and $\frac{1}{2}$ in. deep, the depth being uniform throughout, while the width diminishes to meet the stem and sternpost. It is squared up, the rabbit is marked and roughed out, and a tenon $\frac{3}{4} \times \frac{1}{2}$ in. is cut on the after end to fit a corresponding mortise in the sternpost.

If the keel casting is ready it is now placed on the wood keel, both being turned bottom up, and the holes for the bolts are bored with a $\frac{1}{8}$ in. ship auger.

The after deadwood is now fitted to the iron and wood keels, then the wood keel is set up on blocks, the stem is fitted and clamped fast and secured with a couple of $\frac{3}{16}$ in. blunt bolts, common round iron riveted over iron washers. The sternpost is next fitted, a couple of oak pins driven through the tenon, and a couple of spikes through the fore end of the horizontal arm into the keel.

At each sawn frame a cross floor of oak is required. These will be of $\frac{1}{2}$ in. oak plank, the shapes being gotten from the lines on the floor. Each will be jogged down over the keel, a limber hole being first cut, and in its upper side a jog $3 \times \frac{3}{4}$ in. will be cut for the keelson. This is also of oak, $5 \times 1 \frac{1}{4}$ in., and as there is absolutely no space to waste in this part of the boat, it will be jogged down into the floors, as already described, the floors being notched, and *not* the keelson. When floors and keelson are in place, a $\frac{1}{2}$ in. bolt will be driven through the keelson and the fore end of the keel, and two such bolts will be driven through the keelson and each floor and down through the keel, with washers on each end. In this way the stem, keel, keelson, floor and sternpost are thoroughly fastened together, entirely independent of the iron keel bolts.

Now the whole frame is turned until it lies horizontally on the blocks, the after deadwood is finally fitted and bolted through the keel and sternpost, and the iron keel is again put in place. The long ship auger is again run through the holes until it comes out on top of the keelson. The holes made in the keelson are then each plugged with hard wood, and with an expansion bit a hole just large enough in diameter to take a $\frac{5}{16}$ in. nut and allow it to be set up, and just deep enough for the nut and washer, is bored on top the keelson. The rest of the hole, which, it will be remembered, was originally but $\frac{1}{8}$ in. diameter, is then bored out $\frac{5}{16}$ in.

After all the holes are bored, the keel is moved back an inch or so, and as each bolt is pushed through, a grommet, made of oakum soaked in white lead, is slipped over it. The bolts are now driven home until they show flush with the top of the keelson or projecting a little. Before they are set up a block of wood about 2in. square, not shown in the drawings, is slipped in between keel and keelson just beside each bolt, unless a floor happens to come within an inch or so, in which case the block may be omitted. The frame is turned up to its proper position and the nuts are set up as tight as possible, drawing the iron keel closely into place.

Now the stop-waters are put in at each seam, of $\frac{1}{8}$ in. dry white pine, and the rabbets are finally trimmed out. Jogs are also cut for the heels of every frame. The whole frame is then set finally on the keel blocks, the waterline, as marked from the floor on stem and sternpost is set level, and the ends are plumbed until every part is true and fair and firmly shored and braced.

The frames are of two kinds, sawn and bent, the former being the larger. They are gotten out from knees of the proper sweep, either of oak or hackmatack, the latter being preferable on account of the lessened weight. They are sided 1in. and moulded $\frac{1}{4}$ in. at the heels, $\frac{1}{4}$ in. at the first bilge clamp, and $\frac{5}{16}$ in. at the extreme heads. They are spaced 18in. apart, as shown; the heel of each is well set into the keel and fastened with a boat nail, and each is also fastened to the floor beside it. For fastening the heels of all frames to the keel the common galvanized boat nail may be used. The floors and frames may be fastened with stout copper boat nails riveted over burrs, or with galvanized iron nails. As the scantlings are light throughout, it will be best to use copper nails, well riveted, for all through fastenings, as planking, clamps, etc. The cost on so small a craft is hardly an item.

After the sawn frames are in position, cross spalls of the proper length, as taken from the floor, are set across the heads of each pair of timbers, a center mark on each being brought into position by a line stretched from the stemhead to head of sternpost. When the frames are thus regulated and firmly shored, ribbands of rough stuff, of such size as will just bend easily, are run around them, being tacked to each frame with a small wire nail. The wale or upper strake, $\frac{5}{16}$ in. thick and $\frac{1}{2}$ in. wide amidships, tapering to $\frac{3}{16}$ in. at the ends, is then got out, of clear Georgia pine, or of mahogany if an extra finish is required, and put in place.

The steamed frames will be sawn from clear, straight-grained oak, to finish $\frac{3}{4} \times \frac{5}{16}$ in., and are spaced two between each two sawn frames, or 6in. apart on centers. The heels are jogged into the keel and nailed fast, but there are no floors on these frames. They may be bent nearly to shape, sprung into the boat, the heel nailed fast and then clamped to each ribband, a nail being put through each ribband in place of the clamp as the latter is removed. After all the bent frames are in, the garboards will be got out, also of clear Georgia pine, which is as good a wood as any for this purpose, quite equal to oak and easier to obtain. The planking may then be carried on, white cedar or cypress being used below the waterline and clear Georgia pine above.

One point demands special attention: as the lower planks are put on, in succession, they may be nailed to both bent and sawn frames, but the upper planks must not be nailed to the bent frames until all the lower ones are fully fastened. The reason is that by fastening in regular order, from the heel upward, the bent frames, being still free above, may be drawn down tightly into place, but if first fastened to the upper strakes, when it comes to fastening them about the bilge, it will be found that some of them do not fit quite snugly and cannot now be made to, being fast above.

There are two bilge clamps on each side, of clear Georgia pine, $3 \times \frac{3}{4}$ in. amidships and tapering to $2 \times \frac{1}{2}$ in. at the ends, located, as shown, above and below the turn of the bilge. They may be put in either before or after the planking is done. If the sawn frames, on which alone they rest, are got out neatly and are perfectly true inside as well as out, it will be well to set them before planking, as they help to hold the frame. They are fastened with copper nails, one on each sawn frame, through upper and lower edges of the clamp alternately.

The main clamps are also of Georgia pine, $4 \times \frac{3}{4}$ in. amidships and tapering to $3 \times \frac{1}{2}$ in. at the ends, where they butt on the stem and sternpost. They are set flush with the upper edge of the wales, allowing for the crown of deck, the deck beams being jogged into them. The deck beams may be of clear spruce or hackmatack, and are 1in. wide

and $\frac{1}{4}$ in. deep, spaced as shown. They are jogged in flush with the top of the main clamp and nailed to it. The inner ends of the short beams abreast the well carry a fore-and-aft strip of spruce $1 \frac{1}{2} \times \frac{1}{4}$ in., jogged in on top to help stiffen the coaming; the open spaces around the curve at each end being filled with 1in. spruce or pine. The coaming is $\frac{5}{16}$ in., of oak, steamed and bent, and fastened to the ends of the short beams, and this strip on each side.

The two bulkheads are of two thicknesses of white pine, cedar or mahogany, each $\frac{1}{2}$ in. thick, crossing each other diagonally and laid with canvas and paint between, both skins being very thoroughly riveted together while the paint is wet. A deck stop is placed in each bulkhead for ventilation, with a drainage plug at the bottom, but no use is made of either for storage; they are merely air tanks.

The planksheers may be of Georgia pine or mahogany, $\frac{3}{4}$ in. thick, being $\frac{3}{4}$ in. wide amidships and $\frac{1}{2}$ in. at the ends. They are fastened with screws to the deck beams, wales and clamps. The deck is of clear, dry white pine, $\frac{3}{4}$ in. thick and from $1 \frac{1}{4}$ to 2in. wide; it may be either blind fastened or nailed from above and the holes plugged.

The mast has a square tenon $1 \times \frac{3}{8}$ in. on the heel, which is banded with iron, and this tenon steps in a mortise in the keelson, $1 \times \frac{1}{2}$ in. No other mast step is needed, and the length of the mortise gives every chance to alter the rake of the mast until its best position is found. The mast hole at the deck is 5in. in diameter, allowing plenty of room for wedges, which should be neatly worked to the exact shape, and not the flimsy sticks too often seen. Beneath the deck is a filling piece of yellow pine between the mast beams, and a similar piece is placed forward to strengthen the deck at the bitts. The latter may be placed as shown in the present plans, further upward than shown in the former drawing.

The floor is flush with the upper side of the keelson, the bolt ends being chipped off after the nuts are well set up, and the small spaces around the nuts filled with Portland cement. In the same way spaces about the bolt heads in the bottom of the keel are filled with cement.

In order that all water may find its way to the lowest part of the boat, where it can be reached with a small, movable boat pump, limber holes are cut in the lower side of the floors where they cross the keel, and a little Portland cement and tar is used to fill the small angles between keel and garboards and at other points. While the boat is perfectly dry, and before the deck is laid, this mixture should be run all along the keel, in the ends as well as amidships, filling all small spaces and making the top of the keel the lowest point that water can lodge; then it will run freely through the limbers. The steam frames, and in fact the sawn ones as well, are so light that it is inadvisable to weaken them by cutting the usual limbers.

The inside of the boat may be fitted up with seats and lockers, as shown, to suit the convenience of the owner and the proposed use, but as there is hardly any space for bilge water, and when the boat heels it will find its way into the lockers along the bilge, it would be well to fit these with zinc tanks.

For general sailing in smooth waters the well shown is not too large, and a tent may be used over it in cruising. For work in open and rougher waters a smaller well would be better, or a third bulkhead may be placed at the middle of the well, as indicated, and a small house built, either permanently or so as to be removable. About 3ft. of headroom can thus be had, enough to sit up under and to insure always a dry place for bedding and clothes and a snug sleeping place at night.

The edge of the deck is finished with a small oak rail just enough to catch the toes when working on deck and projecting so as to take the worse rubs. For ornamentation a gold stripe in a $\frac{1}{4}$ in. cove may be run under the planksheer, and the bottom paint, of whatever color, may be carried quite high up the side with a curving line that harmonizes with the sweep of the sheer and the gold stripe, none of them quite parallel, but separated a little more at the middle than at the ends.

The rudder stock may be of oak or locust, with backing of white or yellow pine. The hangings are plain brass straps encircling the rudder post and riveted to the keel, as simple and durable as anything can be. The rudder head may be finished with a plain brass tube and a flat cap, but the seamless drawn cap, with hemispherical head, can be had, though more expensive. The tiller is of oak or of steel rod, as desired.

CANOEING NEWS NOTES.

J. H. Rushton, of Canton, N. Y., is building a miniature steam launch, or steam canoe, on the lines of the canoe Vesper, 17×3 ft., with 1ft. added aft and more depth; the engine being a $\frac{3}{4}$ h.p. with 10in. wheel. It has driven a 16×4 ft. boat from five to six miles per hour, and a still higher speed is looked for from the "canoe launch." She will carry one or two men.

REVOLVER PRACTICE OF THE NEW YORK POLICE FORCE.

At 3:15 P. M., Feb. 28, the first round of the preliminary revolver practice of the New York Police Force was finished. At that time Section 3 of the Harbor Squad, from the 38th Precinct, in charge of Acting Sergeant Robert Clark, came up from the ranges in the basement of the 8th Regiment Armory to the room above, where Roundsman Wm. A. Jones has his desk and blotter, and presented their score cards. Roundsman Jones is Sergt. Petty's second in command, and just now has charge of the revolver school.

The FOREST AND STREAM man—who was waiting for the completed record of the 2,470 men of the rank and file of the police who have now for the first time received instruction in handling the firearm which the law ordains they shall carry, and which circumstance may any moment oblige them to use—joined the little knot about the desk and read the scores with interest. Sergt. Clark lead off with 68; Roundsman John Kenmore had 50 to his credit; Patrolman John J. Crowley 52; Maurice O'Connor 55; Archie McCullum 59. The average for the squad was 57. Every man had qualified, and Sergt. Clark, by his score of 68, secured a place for his name on the "Roll of Honor," which carries with it exemption, for the present at least, from further practice. It was fitting that the last shots of the preliminary round should average so well. The reason was not far to seek. These harbor police have abundant opportunity for practice while on duty on the waters about the city shooting at bottles and river pirates and wharf rats of more than one species, and they are reasonably familiar with their weapon.

Their scores stand in notable contrast with those made by men from the first precincts called upon to shoot. The average score of 39 men from the second platoon of the 1st Precinct, for instance, was only 16 out of a possible 75; and of 43 men in the second platoon of the 4th Precinct only 2 qualified, the balance scoring under 45.

In this connection it is worth noting that the scores have steadily improved every week since the 30th of last December, when practice began. The men are beginning to realize that the practice is a matter of considerable importance to their future welfare, and they have begun to practice on their own account. The reward for creditable marksmanship is temporary exemption from practice, and the penalty for bad shooting is additional work at the range at a time when otherwise they would be free.

As the subject of police revolver practice is one of the greatest importance to our American municipalities, and as the articles already printed in FOREST AND STREAM have aroused considerable interest in various quarters and resulted in correspondence with the departments of other cities, it has seemed advisable to go into the actual routine as conducted in the New York school with more detail than heretofore.

We shall, therefore, in the present article endeavor to show how the men are brought to the score and how they are instructed, how the targets are arranged and how the ammunition is prepared, and other details of interest to police departments contemplating the instruction of their forces.

But first a summary of the scores showing what has already been accomplished is worthy of consideration.

The following table gives the scores by platoons of all the precincts with the exception of the 17th (Broadway Squad), 3d and 37th (Steamboat Squad), both of which precincts are on day duty exclusively, and for which no plan of practice has as yet been arranged. The number of men in each platoon or section is given, together with their total and average scores, and the men are graded into five classes, viz.: experts, first, second and third grades, and qualified. To qualify the man must score at least 45 out of a possible 75 on the Creedmoor target, 4in. bull. A score of 55 to 60 puts the marksman in the third grade; 60 to 65, second grade; 65 to 70, first grade, and 70 to 75, expert grade.

* Score 75.										

that the words would signify to another man. To the policeman it simply means that twelve of the twenty-four hours are free from work of the ordinary kind. As the other twelve hours of the day are devoted to patrol duty, however, and as much of his day off must be given to sleep, he does not have any too much free time. The little he has is especially valuable, and he does not view with favor the orders to report for pistol practice that come on his day off. These off days, however, furnish the only opportunity for practice, as on other days he is on patrol or held in reserve most of the time, so of necessity this time is taken. Fortunately for the man, the practice does not take long, and it only comes around a limited number of times each year, and the more ready he is to meet the conditions and do his best the fewer these times will be.

At the school for revolver practice it has been found feasible to handle two platoons a day. These platoons are of course taken from different precincts, generally one from a large and one from a small precinct, in order to make the total number of men average about the same each day. The first platoon is ordered to report for practice at 12 noon and the other at 2 P. M. The orders are sent from headquarters, and the platoon marches to the armory a little before the appointed time, in charge of a sergeant or roundsman. A list of all the men has been prepared for the record and to show the absentees, if any. This is turned over to the officer in charge of the practice, who receives the platoon in an anteroom arranged for that purpose.

The ranges permit of four men practicing at once, but eight are first sent down, half of them to shoot and the others to look on, and gain what experience they may. As soon as four men have completed their scores they are sent back to the platoon, with their scores filled out on cards that record every shot fired, and four more are sent down to the ranges to take the place of those who looked on at the first round.

Method of Instruction.

When the man enters the range he is at once taken in charge by one of the instructors on duty, of whom there are at present four; patrolmen Arthur E. Benham, Max J. Fischer, Edward A. Pearson, John B. Cameron.

The instructor stands at his pupil's right side, and cautions him if he notices any tendency to carelessness. He is also on the alert to guard against any possible accident, and from his position can control the pistol arm of the shooter if necessary.

He shows his pupil first how to assume an easy position, quartering toward the target and standing firmly upon both feet, and then he instructs him as to grip and pull. The standard weapon is the .38-cal. Smith & Wesson pocket revolver, and the method taught for holding this is novel. The middle knuckle of the middle finger of the shooter's hand is braced firmly against the under side of the trigger guard, while the last two fingers grasp the stock. The thumb is extended forward along the frame, and the barrel is kept as nearly as possible in line with the shooter's arm. In explanation of this grip it is stated that it obviates the bruising of the third finger that results from firing heavy charges in this particular revolver.

The trigger is grasped with the middle joint of the index finger and the man is instructed to pull off by a gradual tightening of the finger. The shooter has a new target for every string of five shots if necessary. Fifteen shots in all are fired. He is at liberty to rest his arm between each shot if necessary, and as yet no time limit has been adopted. Either single or double action revolvers are allowed, but no weapons of the hammerless type are permitted to be used on the range. If a man has not a revolver meeting the regulations, he is obliged to provide himself with one at once.

Sergt. Petty also instructs the men in loading, using dummy cartridges for illustration. The revolver is broken and grasped firmly in the left hand, the barrel pointing downward. The cartridges are then inserted and the revolver closed, but during the entire operation the barrel is kept pointed where no harm could result from accidental discharge. The men are also shown how to extract a shell that by any chance has slipped in behind the extractor, and various other points about the arm are explained, the object being to familiarize them thoroughly with their weapon.

Targets and Range.

The target used at present is the 100yds. Creedmoor rifle target, with a 4in. bullseye. The range is 10yds. The conditions, it will be seen, are very liberal. A score of 45 qualifies, which means that the man is only required to get the average of his 15 shots inside a ring 23in. in diameter. The fact that so many of the police fail in what would appear to be a ridiculously easy test proves beyond contention the vital necessity of practice.

Each instructor with his pupil has nearly 5ft. of lateral space, so that there is little danger of interference. To still further guard against anything of this nature the space is divided by slight temporary partitions. A guard rail separates the men from the range itself, and as it is not necessary to pass in front of this to change the targets the element of danger is reduced to a minimum.

The manipulation of the targets is very ingeniously arranged. The targets—numbering 150 to each range—are stenciled on rolls of stout paper, and by an arrangement of wooden ratchet wheels are wound off one roller and on to another whenever a new target is desired. They are supported on easel-shaped wooden frames about 7ft. high, which are protected by detachable pieces of 3/4in. boiler iron. The surface of the target exposed measures 2ft. 6in. square.

After the shooting is over the ratchets are disconnected and the targets wound back and all bullet holes covered with pasters. The original targets made when the ranges were first opened are still in use. There are 600 of them, including the four ranges, but as they have averaged 70 shots or so apiece, they will soon have to be renewed. Of course from time to time badly torn targets have been cut out and removed.

The ranges are laid out in two tunnels, 9 1/2ft. wide and 11ft. high. These tunnels are sheathed with brick laid in cement and floored with asphalt. The rear end of the range is protected by 3/4in. boiler iron, tilted at an angle that deflects the bullets upward, where they are caught by a similar shield tilted down and thrown back. Only a very small percentage of the lead fired upon this range is lost, and bullets now being made cost the department less than 8 cents per thousand.

Preparing the Ammunition.

The officers in charge of the instruction load all the ammunition used at the range. To date they have loaded about 50,000 rounds. The ammunition is perfect in every respect, and is turned out at a speed that is almost incredible to men familiar with the limitations of hand loading.

As the scheme of loading is in a large measure original with Sergt. Petty and his assistants, it is worth description.

Bullets.

The lead for bullets, which at present consists in large part of the sweep-up of the range, is put in a melting pot capable of holding 250lbs. This is heated by a gas stove which is a part of the apparatus, and by which the amount of heat can be gauged so as to keep the lead at the proper point of flux. Two bullet molds are used. One made by the Union Metallic Cartridge Company turns out ten bullets at once, and the other, an Ideal, seven. When the lead and molds are working right the bullets are turned out very rapidly. One man handles each mold.

Cleaning Shells.

Ten thousand shells are cleaned at once. They are first put into a tumbling barrel measuring 3ft. long by 2ft. in diameter. This is covered with wire netting and looks like an immense peanut roaster. It is turned with a crank, and a stream of water from a faucet above runs through till most of the powder residue is washed away. Then a stopper is put in the escape pipe of a kind of sink in which the barrel turns and water run in till the shells inside the tumbling barrel are covered. Pearline is mixed with the water to cut out the grease, and a gas stove beneath the sink is lighted. As the water becomes heated the barrel is turned and soon churns up a beautiful foam. The shells come out nicely cleaned and are spread on a drying frame made of zinc, 6ft. long and 2ft. wide, under which are arranged three sets of gas jets. As the shells become heated by the action of the fire they are stirred about with wooden paddles. The operation suggests popping corn. They must be kept moving at a lively rate, as there is always danger of annealing if the shells get too hot.

Sizing and Lubricating.

The bullets are sized and lubricated in one operation, and by a home-made machine that bears the stamp of Yankee ingenuity.

An old .32cal. loading barrel was taken and the sizing die bored out to .38cal. This machine works by a lever, and is firmly attached to a bench. Near by is a lubricating pump, worked also by a lever. A plunger with a leather washer on the end exerts pressure on the lubricant contained in a seamless brass tube 1 1/4in. in diameter and 8in. high. At the lower end of this reservoir is a small tube which conveys the lubricant from the piston to the sizing die, which is perforated on both sides at points opposite the canelure of a bullet inserted upside down with the heel just flush with the top of the die. The tube is connected with one of these orifices and the other is left open. When pressure is exerted on the lever controlling the plunger, lubricant is forced through the small tube and follows the canelure of the bullet till it reaches the escape orifice on the opposite side of the die. The bullet is then forced through the die and is ready for use. The lubricant is a mixture of 10lbs. beef tallow and 15lbs. mutton tallow and enough beeswax added to give it the required stiffness.

Loading.

About 600 shells per hour can be recapped by one man. The primed shells, 150 at a time, are placed in a steel loading block similar to a shotgun block. While one man fills one of the plates with bullets pushed in point first from the under side, another adjusts the charger plate above the shells and in a few seconds the powder charge for each cartridge has been accurately determined and the shells loaded. The plate containing the bullets is then placed above the loaded shells and each bullet is rammed home separately with mallet and plug.

Two men with the aid of this loading block turn out 1,500 cartridges per hour.

As all the ammunition used is loaded by the officers in charge of the range before and after the hours of practice, there is absolutely no expense for labor. All supplies are bought in quantities and at wholesale rates, and aside from powder and primers the expense is trifling.

As a general thing good things come high, but the management of the police revolver practice is an exception.

Results.

FOREST AND STREAM has placed on record the scores made in the preliminary round of the revolver practice. At future dates we hope to give detailed scores showing the improvement in marksmanship made by the department. Already the second round has begun, and before the last shots of the first were fired we were in possession of facts indicating that a marked benefit has resulted from the preliminary instruction.

As noted in the table above, the second platoon from the 1st Precinct, consisting of 39 men, in the preliminary round only scored a total of 638 points, or an average of 16 for each man. The first platoon from the same precinct, numbering 40 men, scored 911, or 23 per man. In the second round, however, these same platoons have scored respectively 1,496 points (average 38) and 1,429 points (average 37), an improvement for the precinct of practically 100 per cent.

The 2d, 4th, 5th, 6th and 32d Precincts all similarly show great improvement in their scores, though the percentage of gain is not so marked as in the case of the 1st Precinct, owing no doubt to the fact before mentioned, that the men in these precincts had been practicing in private in anticipation of the first round, and that their scores then made were better than they would have been otherwise. Of course it makes no difference to the department how the results are achieved. Good scores resulting from individual practice are, if anything, more desirable than those made as a result of coaching.

One thing is certain, and that is that the Board of Police Commissioners are in earnest in the matter of teaching their force the intelligent use of their revolvers along the lines proposed by FOREST AND STREAM, and the men are coming to realize the fact more and more each day. The results obtained show, in the first place, that the plan as adopted is perfectly feasible in all its branches, and in the second, that it is having the desired effect in improving the marksmanship of the force. There is of course abundant room for improvement in both plan and marksman-

ship, but that will come later. In the meantime New York may congratulate herself that she is at last in a fair way of having a police force that will understand not only the possibilities of their firearm, but also its limitations, and that will know when not to shoot as well as when to aim to kill.

Mr. Silas Burton, representing the Bridgeport Police Department, called on FOREST AND STREAM last week to discuss the matter of revolver practice.

The Bridgeport police have followed the New York Commissioners in deciding to instruct their force in the use of its firearm, and the local press has given the movement its hearty support. Other progressive cities are taking up the matter, and it is safe to assume that in the near future revolver practice will be a recognized part of police drill.

J. B. BURNHAM.

A New Revolver Club.

A NUMBER of gentlemen interested in revolver shooting met at 12 St. Mark's Place last week and organized a pistol and revolver club to be known as the Gotham Revolver Club.

Mr. J. B. Burnham was elected president pro tem., and Edward Maynard secretary pro tem.; Sergeant W. E. Petty, the amateur revolver champion, was elected shooting master. Messrs. Maynard, Waters and Burnham were appointed a committee to draw up the constitution and by-laws.

Since the disbanding of the New York Pistol and Revolver Club a few years since, this city has had no representative organization of revolver shooters, and no gallery open to the public since Conlin's Thirty-first street place was closed. Though the object of the new club is primarily to secure a range where amateurs may practice, it will include in its membership veteran material from which a team of cracks may be selected worthy of testing the mettle of any similar organization in the United States.

There will be a meeting of the club at 8:30 P. M., Thursday, March 12, at the range, 12 St. Mark's Place, to transact business of importance, and a general invitation is extended to all who are interested in revolver shooting. St. Mark's Place is nearly opposite Cooper Union, and the range is easily reached by the Third avenue L, Ninth street station.

Cincinnati Rifle Association.

CINCINNATI, O., Feb. 23.—Payne and Hasenzahl shot the last match of the series of three arranged between them. Hasenzahl won today's match by 10 points, scoring 628 to Payne's 616. In the club scores, Gindele distinguished himself by making two clean scores, 87 and 91 respectively. Scores to-day were as follows:

Gindele	8	10	9	8	9	10	9	10	8	10	—91
	9	8	10	7	10	9	10	9	9	3	—89

Meeting of the National Bund.

THE executive board of the National Bund issued a call for a meeting of delegates on Feb. 28 for the purpose of receiving the report of the board on the great festival at Glendale Park in 1895 and also for the purpose of choosing the place where the next festival should be held. The National Bund is an organization composed of 55 rifle clubs and schuetzen corps located in every portion of the United States. The attendance at the meeting on Feb. 28 was very good, about 40 out of the 55 clubs being represented by delegates.

The financial report of the executive board was passed, but the list of prize winners on the Point target was found to be in error; the report was therefore referred back to the committee to have the mistake rectified.

New York was unanimously chosen as the location for the next festival. It is uncertain, however, whether the shoot will take place in New York State or in New Jersey, as Hudson county, N. J., a stronghold of the Jersey riflemen, will be a candidate for the big shoot.

The officers elected were: President, Wm. V. Weber (re-elected); First Vice-President, Henry Offerman, N. Y. Schuetzen corps; Second Vice-President, Ignatz Martin, Elite Schuetzen corps, Brooklyn N. Y.; Third Vice-President, H. Hildebrandt, Brooklyn, E. D., corps; Fourth Vice-President, Gus. Ringler, Lutzow company; Secretary, Fred. Baumann, N. Y. C. corps; Corresponding Secretary, C. F. Roedel; Financial Secretary, H. J. Behrens, Independent Schuetzen corps, N. Y.; Treasurer, Geo. H. Wehrenberg (re-elected); Shooting Masters, Barney Walther, Geb. Krauss and Gus. Nowak. The executive committee is composed as follows: Fred Cooke, Robert Henke, Fred Exmeyer, Otto Uehlein and Geo. A. Fredericks. The honorary delegates are: Zeller, Lorenz and Wm. Hayes.

Carleton Rifle Association.

CARLETON, Mich., March 3.—The Carleton Rifle Association held its regular bi-monthly shoot this afternoon, some good scores being made by the members present.

Conditions, 200yds. range, standard American target, 8in. bull:										
J Orion	9	11	11	9	7	10	8	10	12	9—96
	9	9	9	9	7	12	9	7	11	7—89
	6	4	9	9	11	8	9	6	8	8—90
J Cole	8	9	9	11	8	9	8	9	9	10—95
	9	10	8	8	8	8	8	11	8	9—87
	9	7	7	8	8	8	9	9	10	9—84
L Richards	10	10	10	11	8	8	8	8	6	8—87
Ray Kent	9	4	8	8	9	7	7	7	12	5—76
T E Allen	6	10	7	9	7	7	7	7	8	6—74

The next meeting will be held on March 17, when the annual election of officers will take place. The conditions for prize shooting will also be arranged, and it is stated that all shooters will have an equal chance for the prizes, as a handicap will be introduced.

Walnut Hill Scores.

WALNUT HILL, Mass., March 7.—The weather at the range to-day was stormy, and as a result the attendance was small. Mr. Keough won the silver membership badge with 10 scores of 70 or better. Mr. J. B. Paine did some good work with the military revolver. The scores of to-day were:

Two hundred yards, standard American target:

Silver membership badge, won on 10 scores of 70 or better with a military rifle:

J. H. Keough.....81 70 83 81 73 72 74 70 74 77

All comers' off-hand match: C. A. Coombs 85, S. T. Parks 78, S. D. Martin 76, M. S. Day 74, A. W. Hill 68.

Off-hand medal match: C. A. Coombs 79, 78; A. W. Hill 74; G. S. Browne 73.

Military medal match: J. H. Keough 77, 77; M. T. Day 74; G. S. Browne 72, S. D. Martin 67.

Military revolver medal match, 50yds., 6 shots per minute:

J. B. Paine.....555555 555555 545555 555554 545555

Pistol, all comers' match, 50yds.: J. H. Keough 90 and 87, A. W. Hill 84.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

March 17.—ELIZABETH, N. J.—100-target handicap race, \$5 entrance, birds extra; handicap commences at 11 A. M. sharp.

March 17-18.—MORRISTOWN, N. J.—Tournament of the Morristown Gun and Athletic Club, at the driving park; live birds.

March 18-21.—BAYCHESTER, N. Y.—Tournament of the Cobweb Gun Club of New York city; first two days, targets; last two days, live birds. F. A. Kerker, Sec'y.

March 24-26.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap, at live birds at Elkwood Park; \$1,000 guaranteed in the main event, all surplus added.

March 31-April 2.—ELIZABETH, N. J.—Target tournament under the management of Neaf Apgar and C. C. Hebbard.

April 6.—PHILADELPHIA, Pa.—All-day shoot of the Forest Gun Club; grounds at Twenty-seventh street and Lehigh avenue. Wm. Morison, Sec'y.

April 14-16.—CHARLESTON, S. C.—Tournament of the Interstate Association, under the auspices of the Palmetto Gun Club.

April 14-17.—ATCHISON, Kansas.—Thirteenth annual open to all, and second annual manufacturer's amateur tournament; \$1400 added money and manufacturers' prizes. Lou Erhardt, Sec'y.

April 15-17.—PEEKSKILL, N. Y.—Annual spring tournament of the Peekskill Gun Club; first two days, targets; third day, live birds. O. J. Loder, Sec'y.

April 20-24.—HOUSTON, Texas.—Twentieth annual tournament of the Texas State Sportsmen's and Game Protective Association. J. Emmett Haney, Manager.

April 21-24.—OMAHA, Neb.—Nebraska State Sportsmen's Association's annual tournament; \$1,000 added to the purses. Frank S. Parmalee, Sec'y.

April 22-24.—WELLINGTON, Mass.—Tournament of the Boston Shooting Association; targets. O. R. Dickey, Manager.

April 28-30.—JOPLIN, Mo.—Annual Owl Shoot of Kansas and tournament of the Missouri Trap-Shooters' Association; also open-to-all programme; \$1,375 added to the purses. W. G. Sergeant, Sec'y.

April 29-30.—BIRMINGHAM, Ala.—Interstate Association's tournament, under the auspices of the Birmingham Rod and Gun Club.

April 30-May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

May 5-6.—BEDFORD, Ind.—Annual tournament of the Bedford Rod and Gun Club. R. R. Braxton, Sec'y.

May 5-6.—ALGONA, Ia.—Annual tournament of the Algona Gun Club.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; \$2,000 added money.

May 12-15.—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club. \$2,000 added money.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co. R. S. Waddell, Agent.

May 19-23.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

May 23-24.—MISSOULA, Mont.—Annual tournament of the Montana State Sportsmen's Association, under the auspices of the Missoula Rod and Gun Club. Will Cave, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 26-28.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club; nobody barred; targets. Royal Robinson, Sec'y.

May 26-28.—BINGHAMTON, N. Y.—Annual spring tournament of the Binghamton Gun Club; first two days, targets; third day, live birds.

May 30.—CANAJOHARIE, N. Y.—Tournament of the Canajoharie Rod and Gun Club; targets. Chas. Weeks, Sec'y.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 2-6.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. B. Meyers, Sec'y.

June 3-4.—NATCHEZ, Miss.—Interstate Association's tournament, under the auspices of the Gaillard Sporting Club.

June 8-13.—BUFFALO, N. Y.—Thirty-eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 9-11.—DAVENPORT, Ia.—Annual tournament of the Iowa State Sportsmen's Association. R. B. Cook, Sec'y.

June 9-11.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.

June 10-11.—FARGO, N. D.—Second annual tournament of the North Dakota State Sportsmen's Association; targets; \$500 added money. W. W. Smith, Sec'y.

June 16-18.—URBANA, Ill.—Third annual tournament of the Crystal Lake Gun Club. Frank L. Bills, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company. Targets thrown free; \$770 in cash also added to the purses.

June 23-26.—PITTSBURG, Pa.—Tournament of the Pittsburg Gun Club; targets; \$500 added money.

June 30-July 2.—WOPSONONOCK, Pa.—Fourth annual tournament of the Altoona Rod and Gun Club; targets. W. S. Bookwalter, Sec'y.

July 22-23.—PORTLAND, Me.—Interstate Association's tournament, under the auspices of the Portland Gun Club.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Aug. 4-6.—CHICAGO, Ill.—Tournament of the Du Pont Smokeless Powder Company. E. S. Rice, Mgr.

Aug. 26-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

The Huntingdon, Pa., Gun Club has started on another year of its existence. We have received the following report of its proceedings at its annual meeting, held on March 6: "The annual meeting of the Huntingdon Gun Club was held at the Leister House on Friday evening last, at which the election of officers for the ensuing year was held, resulting in the election of the following: President, J. A. Fleming; Vice-President, John McCahan; Secretary, Dr. G. G. Harmon; Treasurer, W. K. Crites; Field Captain, Elmer W. Stewart; Corresponding Secretary, F. E. Mobus; Board of Managers, W. A. DeForest, Gilbert Greenberg and L. R. Leister. Among the honorary members present were Sheriff Thomas M. Oaks, a bundle of humor on occasions of this kind; Martin Grube, an exponent of rifle shooting and a disbeliever in splash guns, and Henry Leister, once an active member, but now retired. The affair on the whole was quite a success. The schedule of events for the coming season, among which will be several live-bird events, will be announced at the next regular meeting.

Tuesday, March 17, is the date set by the Elizabeth, N. J., Gun Club for another of the 100-target handicap races that have become so popular lately. The entrance fee is \$5, targets extra, and the event commences at 11 A. M. sharp, no entries being accepted after the 25th round has been completed. All who enter the race will be entitled to a free ticket entitling the holder to view the Sportsmen's Exposition on the evening of the same day, March 17. Nate Asafalk wishes it to be stated that he will personally superintend the catering department as usual, while Robert B. Chetwood, William Parker and Billy Hobart will see to it that everybody gets all the shooting they want,

The April tournament circuit in Kansas, Missouri and Nebraska is decidedly on the boom. It's not now a plain "\$1,000 added" to the purses at each shoot. At Joplin \$1,275 in cash will be added to the purses, while the Kansas City, Pittsburg & Gulf R. R. will make a rate of a single fare from all points on its line to Joplin on account of this tournament. This tournament takes place on April 28-30. At Atchison, Kan., Lou Erhardt's shoot, April 14-17, the amount distributed in cash and prizes amounts to \$1,400, the cash alone footing up to \$980, while four prizes, aggregating in value the sum of \$420, will be given as merchandise prizes. Frank Parmalee writes from Omaha that the Nebraska State shoot, that fits in between the two above mentioned shoots, is going to be a corker. It's a great year for trap-shooting anyhow.

Ed Rike was in the city the other day; in fact he's located here for some little time. Mr. Rike looks as healthy as ever, and says that the Ohio "Big Four"—Heikes, Rike, Raymond and Macdonald—will be on hand and do something toward making records at the E. C. tournament next May. In speaking about the Grand American Handicap, Mr. Rike thought he would like to enter if he could get about the 24yds. mark; he suggested that, considering how few pigeons he had shot at, that would be a nice mark for him. We agreed with him, wondering whether there was a single self-respecting pigeon that would dare to fly, with Ed Rike looking at it from the 24yds. mark. It would be Davy Crockett and the coon over again.

M. JOURNU.
Winner of the Grand Prix, 1896.

A new gun club has been organized at Newcastle, Pa., under the title of the Newcastle Gun Club. This club, together with the clubs of Meadville and Greenville, Pa., and Warren and Youngstown, O., form a Trap-Shooters' League much on the same principles as the New Jersey organization of that name that has done so much to benefit trap-shooting in New Jersey. Efforts will be made to induce the Butler (Pa.) Gun Club to join the league. The officers of the league are: President, Jared Reis; Vice-President, D. A. Moore; Secretary, D. F. Harlan; Treasurer, G. L. Pearson. The Board of Directors are composed of W. L. Johnston, R. W. Cunningham and G. H. Mathews; Team Captain, Wm. Alexander.

GRAND PRIX TROPHY—SILVER SET.
Won by M. JOURNU.

Phil. Daly, Jr., of Elkwood Park and of Long Branch, N. J., has been doing some good shooting down South according to the telegraphic dispatches from Hot Springs, Ark. A message dated March 5 says that he shot a match that day with John Sumpter, Jr., of Hot Springs, the conditions being 150 live birds per man, \$500 a side. The match was shot in rain, Daly winning by the great score of 142 to 138. Daly's average was 94.6 per cent. He killed his last 78 straight.

The many friends of John S. Hoey will be very sorry to learn that his recovery from his late serious attack of the grip has been retarded by another setback, and that there is no immediate prospect of Mr. Hoey being able to either witness or take part in a shoot. Mr. Hoey is improving, but very slowly, according to latest accounts from Long Branch; still, it is cause for satisfaction to learn that he is once more on the way to good health.

J. L. Brewer has gotten into trouble and is now in the clutches of the law owing to his transgressing the laws of the State of New Jersey. The laws of that State don't allow any monkeying with goods upon which a chattel mortgage has been placed, but the McPherson Furniture Company, of Bridgeton, N. J., claim that Brewer bought several hundred dollars' worth of furniture upon which they had a chattel mortgage, and then sold the furniture without satisfying that mortgage.

The Binghamton, N. Y., boys are going to run their programme to suit the shooters, and will divide the purse on the Rose system. The Binghamton Gun Club is about as live an organization as there is in the State, while they can muster a pretty hot squad when it comes to shooting. Rochester, Syracuse, Utica, Rome, Buffalo, etc., will be surely represented at Binghamton, May 28-29.

Shooters must not forget that they can have a lot of fun in this vicinity during the Sportsmen's Exposition week. On March 17 there is the 100-target handicap race at Elizabeth; March 18-21 are the dates for the Cobweb Gun Club's target and live-bird tournament at Baychester, N. Y., about 20 minutes' run from 129th street station on the Third Avenue Elevated Railroad. The Cobweb Gun Club will make things very pleasant for their guests.

Our claim that a shell bursting in any manner in a repeating shot-gun, thus preventing an ejection of the shell and spoiling all chance of a second shot at a live bird or at a target, is a balk, has met with a very general indorsement, and by men too who never shoot the guns. The question is simply one of equity, and we think that Blue Rock's letter, which we give this week, is another facer for those who argue contra.

The near approach of the Grand American Handicap of 1896 is evidenced by the arrival of Manager Shaner in New York. During the next two weeks Mr. Shaner will become well acquainted with all the points of interest along the line of the New York and Long Branch R. R., the preparations for the handicap at Elkwood Park necessitating his constant attention, and consequently frequent trips to Branchport.

At the annual meeting of the Calumet Heights Gun Club, Chicago, Ill., the following officers were elected for the ensuing year: A. W. Harlan, President; G. C. Lanphere, Vice-President; A. P. Harper, Secretary; Committee on Shoots—G. E. Marshall, A. C. Paterson and W. Metcalf. The opening shoot of the season will be held Decoration Day.

The Delavan Gun Club, of Delavan, Wis., is another new organization that has been brought to our notice. The following is a list of its officers for 1896: President, A. E. Barker; Vice-President, H. S. Bowers; Secretary-Treasurer, M. D. McGill; Captain, F. S. Burrows.

Rolla Heikes is in the city and expects to stay North until after the Grand American Handicap week. "The Bald Eagle of the Ohio Valley" says he is well, and he looks it. His next visit to New York will be the first week in May, when he will be here to try and capture the target championship at the E. C. tournament.

Clarence Dolan, the Philadelphia shooter, has been doing his part to uphold the honor of the United States at the Monte Carlo traps. In addition to other victories, he celebrated Washington's Birthday by finishing second in a field of 49 for the Prix des Clematites Handicap, killing 11 out of a possible 12 birds, standing at 27 meters.

We have received a copy of the programme for the Interstate Association's tournament at Charleston, S. C., April 14-16. The Palmetto Gun Club, under whose auspices the tournament will be held, will add \$400 to the purse.

In the Murphy-Work match at the Westminster Kennel Club's grounds, Babylon, L. I., March 3, the contestants used the following guns and powder: Murphy, Francotte gun, 45grs. E. C. powder and No. 7½ shot; Work, Purdey hammer gun, 50grs. E. C. powder and No. 7 shot.

The Cobweb Gun Club's tournament, March 18-21; Cobweb Handicap, March 21, 15 live birds, \$15, birds extra, \$250 guaranteed, all surplus added. Entries, accompanied by a \$5 forfeit, should be made to F. A. Kerker, secretary of the club, 2312 Third avenue, New York city.

Mr. W. K. Everingham, secretary of the Missouri State Game and Fish Protective Association, informs us that the annual State shoot announced for May 20-24 will be held on May 19-23, the 24th of May being a Sunday.

Airy Lou Hardt's programme for his shoot on April 14-17 will be ready for distribution on March 15. Erhardt says of his shoot that "it will break all records of an amateur shoot, and probably bust that of an open shoot."

B. A. Bartlett has accepted an engagement with the Winchester Repeating Arms Company, and will be one of the company's representatives at the tournaments of 1896.

MARCH 10. EDWARD BANKS.

Binghamton Gun Club.

BINGHAMTON, N. Y., Feb. 29.—The weather has been so cold that the boys have not done much shooting as yet. A few of them got together to-day and did a little practice work, the scores below being the result of the afternoon's shooting:

No. 1.	No. 2.
Waldron.....111011101111111001110101—19	011111001111111010111011—19

Chaffee.....110111001110111001101110—17
No. 5 was a 100-target race between Kendall and Brown; it was a close affair, Brown winning by only 3 breaks with a score of 92 to 89. The score for each 25 was as follows:	
Brown.....23 23 24 22—92	Kendall.....20 23 23 23—89
H. W. B.	

Paducah Gun Club.

PADUCAH, Ky., Feb. 23.—The Paducah Gun Club met in its club room on Tuesday night, Feb. 11, and elected officers for the ensuing year. The officers were elected as follows: Fred Hoyer (re-elected), President; J. C. Piper, Vice-President; J. M. Lang, Secretary; A. E. Ans-pacher, Treasurer; G. H. Robertson, Captain; T. J. Moore, Vice-Captain; Haskel Hughes, Referee.

The first matter they brought up was the change of our grounds. At a meeting held a week later it was decided to move from Le Belle Park to the Riverside Park, a beautiful site on the Ohio River, near the Union Depot. The change was accepted and the move made. The club held a practice shoot to-day to test the traps and grounds. We are much pleased, and are satisfied that much larger scores can be made on account of having the beautiful Ohio River, about one mile wide at this point, for our background. Below are the results of the shoot mentioned. We shoot every Monday and Friday. All brother sportsmen are welcome.

T. J. MOORE.	

Potato Shoots.

WATKINS, N. Y., March 2.—We have no gun clubs in our vicinity, but there are a good many firearms owned here and lots of powder burned, both in shotguns and rifles. With a desire to let what little small game there is still left with us have some sort of a chance to increase, we have turned our attention mostly to target work.

In lieu of something better we have organized what we call "potato shoots." Our method is very simple: On the day appointed each man makes his appearance on the grounds with a goodly supply of medium-sized potatoes and plenty of ammunition. The usual officers are then appointed and also a man to act as trap, that is, to throw the target; with a good strong arm they are thrown quite a distance, I assure you. Very few have to be brought in for the referee to inspect, as when struck small pieces of skin and bits of potato are usually seen to fly off the target.

Our last shoot was a great success, and we intend to have another this week. Would like to say in conclusion that perhaps this might be a good way out of our vexed potato question, besides preserving no little small game.

S. S. NORRIS.

The Winner of the Grand Prix.

THROUGH the courtesy of Lieut. Peter Gibson, of Cincinnati, O., we are able this week to give a cut of M. Journu, winner of the Grand Prix at Monte Carlo, Feb. 5-6 of this year. M. Journu, who is a Frenchman, probably ranks as high as any pigeon-shooter in Europe, if not in the world. His form is consistent and he is a dangerous man at any time, no matter what his handicap may be. On Feb. 22 he won the Prix des Clematites with 7 straight, being the only scratch man—31 meters—and beating out forty-eight other shooters. The silver set, which was presented to the winner of the Grand Prix this year in lieu of the usual cup, is shown in the accompanying cut.

The photographs, from which the cuts were made, were presented to Lieut. Gibson by M. A. Blondin, secretary, Tir aux Pigeons, Monte Carlo; they are the work of Numa Blanc Fils, of Mente Carlo and Cannes.

Lynchburg Gun Club.

LYNCHBURG, Va., March 3.—The regular weekly shoot of the gun club, held this afternoon, was poorly attended, only 3 shooters putting in an appearance. The following scores were made:

In New Jersey.

SOUTH SIDE'S SATURDAY.

Feb. 22.—Heavy rain had only the effect of increasing the attendance at the grounds of the South Side Gun Club to-day, 14 shooters taking part in the events shot during the afternoon. The reason for the increased attendance is not hard to find. This club has never failed—rain or shine—to have its club house open and its traps ready for business every Saturday afternoon during the 15 years it has been in existence. When the rain is coming down with a persistency that is disheartening to anybody but a trap-shooter, making it doubtful whether there will be any shooting at his own club's grounds, if he wants to be sure of getting shooting he just hires himself off to the South Side Gun Club's grounds at Newark, N. J., feeling certain that he can get all the targets thrown for him that he wants to fire at. During the afternoon 1,100 targets were thrown, Neaf Apper doing the best work by breaking 92 out of 100. The scores made were as below:

Events:	1	2	3	4	5	6	7	8	9	10	11
Young.....	6	8	8	7	7	7	7	7	7	7	7
Hobart.....	9	7	6	6	5	2	5	1	1	1	1
W M Smith.....	3	7	8	6	7	4	8	4	1	1	1
Dawson.....	8	6	9	3	7	2	4	1	1	4	4
Orton.....	6	8	1	1	8	5	6	6	1	1	1
I H Terrill.....	5	8	1	1	1	1	1	1	1	1	1
Elbie.....	1	1	1	1	1	1	1	1	1	1	1
Whitehead.....	8	6	7	8	6	8	11	1	1	1	1
Thomas.....	10	10	9	8	9	15	10	1	1	1	1
Appar.....	10	9	7	9	12	8	1	1	1	1	1
Adams.....	10	9	7	9	12	8	1	1	1	1	1
Hassinger.....	6	8	10	8	1	1	1	1	1	1	1
Folsom.....	6	6	9	6	4	1	1	1	1	1	1
Parker.....	4	10	1	1	1	1	1	1	1	1	1

All were 10-target events with the exception of No. 9, which was at 15 targets. The team races at known angles, 25 targets per man, resulted in a victory for Hobart's team by 8 breaks. Scores:

Hobart's team: Appar 21, Whitehead 21, Parker 18, Thomas 18, Hobart 16, Folsom 15—109.

Terrill's team: Adams 21, Hassinger 21, W. M. Smith 18, Terrill 18, Orton 14, Dawson 9—101.

March 7.—Fourteen shooters were present at the South Side grounds this afternoon. The weather was a pleasant change from that which has prevailed of late, but the strong westerly wind that swept across the Newark meadows made the shooting very hard, the targets taking most eccentric flights when thrown from the traps. In consequence scores were not up to the usual mark. In the team race Edwards's team easily defeated Whitehead's team by 12 breaks. Scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

BRUNSWICK GUN CLUB.

Feb. 22.—The regular monthly shoot of the Brunswick Gun Club, of New Brunswick, N. J., was held to-day in a downpour of rain. The extremely wet weather kept the attendance down to a low mark, ten shooters being all that put in an appearance at the club house this afternoon. The club shoot is at 25 targets, unknown angles; the scores made were as below, E. Reynolds leading with 22 out of his 25:

H B Smith.....	0101110010110101100100111—14
S Randall.....	11011111111100011110111—20

H. H. STEVENS, Sec'y.

GREENVILLE GUN CLUB.

March 4.—The Walsrode Gun Club, of Newark, N. J., was the guest of the Greenville Gun Club to-day at its grounds on the shore of New York Bay. There was a good attendance of shooters, all of whom did their best to locate the targets that were wafted in every direction by the gale that was blowing from the northwest. A return visit will be paid by the Greenville men next Wednesday, March 11, the shoot taking place on the Walsrode Gun Club's grounds in Newark. The scores made to-day are given below:

Events:	1	2	3	4	5	6	7	8
Young.....	8	7	8	7	8	7	7	8
Perment.....	8	6	6	8	7	6	8	8
Leuthaus'r.....	7	6	8	7	6	8	7	8

AT THE CARTERET CLUB.

March 4.—The 50-bird race for the Knapp cup took place to-day at the Carteret Club grounds in a howling gale of wind that blew directly from No. 5 trap. The birds were a hard lot to kill, as the wind caught them and tossed them into the air, sending many of them back over the deadline with almost the speed of a cannon ball. Under such circumstances the scores made were not so low as they look on paper. It requires 5 shooters to make a contest, and just the requisite number put in an appearance at the club's grounds. These were: George Work, Louis T. Duryea, Fred Hoey, G. S. McAlpin and W. H. Stafford. Fred Hoey had hard luck and withdrew before the end of the match. The Carteret Club grounds have never been favorite ones with Hoey, who scarcely ever has any luck while shooting on them. He draws hard birds if there any in the traps, and he never does as clean work with his first barrel on these grounds as we have seen him do elsewhere.

The race between the other 4 shooters was very close and interesting. G. S. McAlpin finally winning the cup with 38 kills to his credit from the 29yds. mark. Next to him were George Work (31) and W. H. Stafford (28) with 37. Duryea coming next with 36 kills from the 31yds. mark.

A GOOD DAY'S SPORT AT ELIZABETH.

March 5.—While the New Jersey Trap-Shooters' League tournament was in progress at Dunellen on Feb. 27, a little badinage on the part of some of the shooters present culminated in arrangements being made for a shoot at Elizabeth to-day, the conditions of the main event to be as follows: 100 targets per man, unknown angles, losers to pay for the targets and a turkey dinner for the winners. Another condition and a most important one was that Nate Astfalk, one of the most energetic members of the Elizabeth Gun Club, and caterer to that organization, should provide the dinner in the club house so that winners and losers could sit down together and enjoy themselves after the 100 targets per man had been shot at. Originally, 14 shooters entered in this race, but the cold and wintry weather, with a gale blowing about 45 miles per hour, kept three men from showing up, while Major Breintnall was detained at home with the grip and Tom Keller had other business that kept him in New York. Thus there were only 9 contestants for the honor of furnishing the dinners for the crowd. The number being uneven, it was decided that the expenses should be divided among the 5 low men.

Prior to the commencement of the 100-target race, 8 events at 10 targets each were shot off to keep the boys, who were on hand early, in good trim for their dinners. The wind was blowing great guns from the northwest, practically right in the teeth of the shooters, causing the targets to perform all the wonderful tricks they are capable of in the way of shot-dodging. So strong was the wind that at times it almost blew the shooter at the score off his perch, while it made the muzzle of the gun wobble around somewhat after the style of the nozzle of a line of hose that has escaped from the firemen detached to direct its stream.

The 100 targets were, of course, divided off into series of 25, each 25 being made an optional sweep, two moneys. In the first 25 M. Herrington, the representative of the W. A. Powder Company, distinguished himself by spreading his load of shot with such accuracy that he made the best score of the day, 24 out of 25; naturally he took fire

money in that sweep, Edwards coming next with 21. In the next 25 G. M. Smith, a name that disguises a Long Island shooter who knows how to handle a gun, but who from innate modesty prefers to conceal his prowess as a shooter under what Billy Hobart terms a *nomme de fusil*, carried off first money with 21, Herrington again getting a slice of the purse by scoring 20 and taking second money. The third series saw Smith once more take first money alone on a really excellent score of 23, Herrington and Edwards cutting up second money on 20 each. In the fourth series, Hassinger won first money by breaking 21, Astfalk and Herrington dividing second money with 19 each. The scores were then totaled up, and it was announced that the four fortunates were Herrington 83, Smith 78, Edwards 76, Parker 71. The five who acted as hosts were: Hassinger 70, Astfalk 69, Thomas 67, Schortemeier 60 and Dr. Jackson 58.

The scores per series of 25 targets were:

	No. 1.	No. 2.	No. 3.	No. 4.	Total.
M Herrington.....	24	20	20	19	83
G M Smith.....	20	21	23	14	78
B Edwards.....	21	18	20	17	76
Wm Parker.....	17	19	16	19	71
W H Hassinger.....	16	14	19	21	70
N H Astfalk.....	18	18	19	19	69
L Thomas.....	15	15	18	19	67
L Schortemeier.....	11	17	17	15	60
Dr Jackson.....	14	16	14	14	58

At the end of the third series Herrington and Smith were tied with totals of 64 out of 75, capital shooting considering the conditions. In the last 25 Herrington went ahead of Smith, beating him out by five breaks. The tumble in Smith's score was due to his having to use some shells that were entirely different from those which he had been shooting, the load being plainly much slower than his previous one.

As regards the dinner, we cannot afford the space to do it justice. New Jersey shooters will realize what it was when we say that it was served in Nate Astfalk's very best style. It was a cause for rejoicing on the part of all present that Dutchy was in time to take charge of one end of the table and one turkey.

No sooner was the dinner disposed of than 15-target sweeps were started up. Before the boys quit shooting—and that was not until every shell on the ground had been used—11 15-target events had been shot off. During the day three or four of the shooters fired over 300 shots. Some idea of the difficult conditions under which the shooters labored in their efforts to break the targets may be gathered from the fact that M. Herrington was the only one to break 10 straight, while Edwards and E. Sickley alone succeeded in scoring 15 breaks in any event without losing a target. Sickley shot very well, having four 14s to his credit. Dutchy had a weakness for the 13 hole, as out of the 11 events he shot in he scored that number in 8 of them. The scores made in the sweeps were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19
Targets:	10	10	10	10	10	10	10	15	15	15	15	15	15	15	15	15	15	15	15

Boston Shooting Association.

Boston, Mass., Feb. 22.—The Boston Shooting Association held an all-day shoot on their grounds at Wellington to-day. Owing to all the clubs around Boston holding a shoot, and also owing to the severe cold, but few put in their appearance until the 11 o'clock train, when about twenty-five shooters showed up. From that time until 5 o'clock the traps were kept busy, and 3,305 targets were thrown. Following are names of winners:

- No. 1: Sanborn and Green first, Dickey second.
- No. 2: Jack, Sanborn, W. A. Brown and Dickey first, Green second.
- No. 3: Sanborn, Green and Dicky first, Brown second.
- No. 4: Sanborn and Dicky first, Green second.
- No. 5: Sanborn and Dicky first, Green second.
- No. 6: Sanborn and Dickey first, Green second.
- No. 7: Sanborn and Dickey first, Jack second.
- No. 8: Green first, Jack and Dickey second.
- No. 9: Green and Brown first, S. Wood and Sanborn second, Warren, W. A. Sanborn, Jack, Puck and Dustin third.
- No. 10: S. Wood first, Sanborn, Jack, Green and Puck second, Dustin and W. A. Sanborn third, Warren and Brown fourth.
- No. 11: Warren and Puck first, Green, W. A. Sanborn, Dustin and C. B. Sanborn second, Jack third.
- No. 12: Sanborn first, Puck and S. Wood second, Warren, Green and Brown third.
- No. 13: Puck first, Green second, Warren, W. A. Sanborn and Dustin third.
- No. 14: Green first, Puck, Dustin and LeRoy second, Warren and Brown third.
- No. 15: LeRoy first, Green, Brown and Allison second, Dustin third.
- No. 16: LeRoy and Dustin first, Green and Allison second, Brown third.
- No. 17: Puck and Brown first, Jack, W. A. Sanborn and LeRoy second, Warren third.
- No. 18: Dustin first, Warren, Puck and LeRoy second, Green third.
- No. 19: Dickey, LeRoy and Climax first, Puck and Allison second, W. A. Sanborn and Dustin third.
- No. 20: Dickey, Climax and Rule first, Puck, Allison and W. A. Sanborn second, Nichols, LeRoy, Burton and Jack third, Patterson, Brown and Ellsworth fourth.
- No. 21: LeRoy first, Dickey, Puck, Climax, Rule and Patterson second, Brown, Burton and Warren third, W. A. Sanborn, Dustin, Du Pont, Allison, Jack and Ellsworth fourth.
- No. 22: Dickey first, Puck and LeRoy second, Climax, Rule, Ellsworth and Stirling third, Allison Brown, Warren and Jack fourth.
- No. 23: Allison, Rule and Climax first, LeRoy and Jack second, Warren, Ellsworth and Dustin third, Puck fourth.
- No. 24: LeRoy and W. A. Sanborn first, Climax and Allison second, Puck, Rule and Jack third, Brown, Warren, Dustin and Ellsworth fourth.
- No. 25: Dickey and Climax first, Puck, LeRoy, Patterson and Eager second, W. A. Sanborn third, Burton, Rule, Stirling, Du Pont and Dustin fourth.
- No. 26: Puck and Eager first, Brown and Ellsworth second, Climax, Rule, Warren, Jack and Dustin third, LeRoy fourth.
- No. 27: Puck first, Dickey, Eager and Patterson second, Burton, Climax, Rule and Warren third, LeRoy and Dustin fourth.
- No. 28: Dickey first, Warren second, LeRoy and Stirling third, Burton, Climax and Patterson fourth.
- No. 29: LeRoy, Patterson and Eager first, Climax second, Puck and Rule third.

Trap-Shooters of Quebec.

SUTTON JUNCTION, Quebec, Can., Feb. 20.—Trap-shooting has taken a decided boom in this vicinity of late, and from present appearances it is safe to predict a number of local matches in the near future. We now have four clubs within a radius of fifteen miles, although up to the past four months a bluerock target was an unknown commodity. It is hard to say just what started the fad—if it may be called—but I think it would not be far out to assert that the influence exerted by the better class of sporting papers for good clean sportsmanship was responsible for the movement. Be that as it may, it's a real good thing, so push it along.

Waterloo was first to organize with a membership of twenty-four. J. E. Macfarlane was elected President, R. F. Shaw Secretary, and C. A. Nutting Field Captain. The club has had a number of private shoots and the fever is high.

Sutton Junction followed with a membership of twenty-three. The officers are: N. P. Emerson, President; J. C. Draper, Vice-President; A. W. Western, Secretary; W. R. Sofford, Treasurer; H. E. Hibbard, Field Captain; Dr. Page, C. A. Armstrong, E. G. Smith and J. Cran-dall, Directors. This club and the Waterloo Club have met once upon the field at Waterloo, as chronicled in the trap columns of FOREST AND STREAM of Feb. 1. The return match is booked for Feb. 27 at Sutton Junction.

Sutton Gun Club has only just been organized, and is not yet fully under way, but will soon be heard from. The president is Lieut. E. Greely; Secretary, C. M. R. Tarte; Field Captain, R. Curley.

North Troy, Vt., just across the border in Uncle Sam's territory, organized about the same time as Sutton, and although they have yet to hold their first meeting, they have the right material to push it once they get limbered up. Their officers are: C. Fowler, President; J. Lewis, Secretary; Dr. F. Page, Field Captain.

This constitutes the quartette. We will try and send you the scores as often as possible, that your readers may keep posted on what we are doing for sport up here on the border. If any up-to-date powder company has any spare cups or medals kicking around we are in the field.

A. W. WESTERN.

Rochester vs. Buffalo.

ROCHESTER, N. Y., Feb. 22.—The team shoot to-day between the Auubon Gun Club, of Buffalo, and the Rod and Gun Club, of this city, was a very large affair, the teams were composed of 31 men on a side, 63 shooters in all taking part in the contest. In view of the fact that the home club put 31 men in the field that averaged generally 84.3 per man at unknown angles, congratulations to that club are in order. The result of the race was another decisive victory for the Rochester men, the scores at the close of the contest showing 654 to 539 in favor of the home team. (N. B.—The scores furnished us foot up 652 to 538.—Editor FOREST AND STREAM.) After the team race the Buffalo shooters were the guests of the home club and partook of an elegant banquet, President Halley welcoming the visitors in an appropriate manner.

The scores made to-day were as given below, Slim Glover being the only shooter to score 25 straight:

Rochester.	Buffalo.
Glover.....	Schwartz.....
Foley.....	Talsma.....
Hadley.....	E C Burkhardt.....
Byer.....	Berkhardt.....
Hicks.....	Bennett.....
Lane.....	C S Burkhardt.....

WE HAVE BEEN TOLD that there are some dealers in FISHING TACKLE who do not keep our goods in stock. If you are so unfortunate as to live in a place where our goods are not offered for sale, let us know and we will send you our catalogue.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY.

MARSTERS HAS WORMS.

Sand Worms, 12c. per dozen.

White or Blood Worms, 25c. per dozen.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and increasing the quality, increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at 98c. until all are sold. These Rods are all nickel mounted, solid reel seats, beaded butts, silk wound. Extra tip. Complete in wood form and cloth bag, and will give satisfaction. Lengths and weights of Fly Rods are: 9ft., 6oz.; 9½ft., 6½oz.; 10ft., 7oz.; 10½ft., 7½oz.; 11ft., 8oz. Reel seats below hand. Lengths and weights of Bass Rods are: 8½ft., 9oz.; 9ft., 10oz.; 9½ft., 11oz.; 10ft., 12oz.; 10½ft., 14oz.; reel seats above hand. Any of the above rods sent by mail on receipt of price and 30c. extra for postage.

No. H.—A special lot of hard rubber and nickel, raised pillar, multiplying reel, with balance handle and side spring click, 40yds., 68c.; 60yds., 78c.; 80yds., 88c.; 100yds., 98c. Any of the above reels sent by mail on receipt of price and 10c. extra for postage.

No. E.—Special lot of hard rubber and nickel, raised pillar, click reels, 40yds., 48c.; 60yds., 58c. Sent by mail on receipt of price and 5c. extra for postage.

The Forest and Stream will shortly remove to new offices in the New York Life Building, No. 346 Broadway, entrance on Leonard Street.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream one year and the set of four pictures, \$5.
Forest and Stream 6 months and any two of the pictures, \$3.
Price of the pictures alone, \$1.50 each; \$5 for the set.

Remit by express money order or postal money order.
Make orders payable to

FOREST AND STREAM PUB. CO., New York.

THE "FOREST AND STREAM" INDIANS.

PERHAPS the most noteworthy of the exhibits on view this week at the Madison Square Garden is the FOREST AND STREAM's Indian camp. It is especially noteworthy because it is the real thing, the exhibition in New York to-day of a little piece of the old West—brought 2,500 miles East and carried twenty-five years back in time. Here is seen the old-fashioned skin lodge with the fire burning on the ground in the middle, the beds ranged around the walls and the door covered by the skin of a wolf—a medicine animal among many buffalo eating tribes. Behind the lodge stands the tripod which supports the medicine bundles and the sacred Thunder Pipe, which is of great antiquity. On the other side of the lodge stands another tripod on which hang the arms of the owner of the lodge; his bow and arrows, his shield and his lance, his raw-hide rope, his riding whip and other arms and implements. Scattered on the ground are skins of wolves, coyotes, mountain sheep, mountain lions. These are all either tanned or to be dressed for clothing.

Still further north is the sweat lodge, a frame of willow twigs woven into a bird-cage like structure. On the ground within is the place for the fire, where the stones are heated, and the painted skull of a buffalo bull. In this sweat lodge the members of the war party will take their medicine sweat before they start on their expedition of difficulty and danger. Before they do this, a fire is kindled in the lodge and the stones heated; then the frame is covered with robes or skins and the members of the party creep under them and sit about the fire, the leader of the party carrying his pipe. Water is thrown on the hot stones and a thick steam rises. Then the leader lights his pipe and smokes to the sky, to the ground and to the four cardinal points, and then he blows the smoke toward the bull's skull, and prays to the buffalo bulls, saying: "O, bulls, hear us this day and take pity on us. As you are able well to lead your people where you think they ought to go, so let me lead these my people in the right way and to success; as you are strong to run over whatever is in your way, so let us run right over our enemies when they are before us; as you have swift feet to run away when you are attacked and made afraid, so let us all, if we are attacked by too great numbers, have the power to run swiftly, so that we may escape. Accept this smoke which we offer to you and hear us now as we are setting forth to meet danger." Then the waiting warriors join in the prayer, "Hear us; pity us." More water is thrown on the hot stones, the men offer each some sacrifice, it may be a part of his body, sacred songs are sung, and when the ceremony is over the party starts off on its way to war.

One of the most interesting articles in the camp is the

tanned robe, on the flesh side of which Young Bear Chief has painted his *coups*—in other words, has written the history of the important events of his life. In the early days he was a great warrior, and on this skin he has set down in pictograph the account of all his important war journeys. Here are pictured the camps that he has stolen into by night, the horses that he has taken, the enemies that he has killed; and these pictures, if they could be translated and written out by a master of English, would form a volume which for interest and excitement would far exceed anything that civilized man can imagine. It is the true story of a brave man whose sole delight was war, and whose sole occupation in those old days was the war path, going or returning.

It is impossible here to give even a brief catalogue of the interesting old-time implements and relics which the FOREST AND STREAM camp contains. There is in it nothing new, nothing made for trade. Each article has been used a thousand times and has its own interesting history. To wander through this camp and see these old things brings back again so vividly the old days, which some of us think were the best days, that it is almost more of a pain than a pleasure to do so.

THE NATIONAL ZOO.

In our columns last week attention was called to a law which greatly hampers the National Zoological Park at Washington, and will always retard its growth and development. Congress, which appropriates the money for the support of this Park, provides in its appropriation bill that none of this money shall be expended for the direct enlargement of the collections, and forbids its use for the purchase of animals, although permitting the payment of transportation charges on specimens donated to the institution. As a result of this provision it is very difficult for the Garden to secure any except native American species. Now and then, it is true, some showman or menagerie keeper may loan an elephant, a lion or a hippopotamus to the Park, but such loans are likely to be withdrawn at any time. It is but a short time since a splendid hippopotamus—loaned to the garden, and which had been there for a year or more, and about whose temper and physical condition much was therefore known—was sold for about one-third its real value. If funds for the purchase of this specimen had been available it would have made a most desirable addition to the National collection. But although Congress declines to allow animals to be purchased for this Park, it does not forbid the reception of gifts, and an opportunity offers itself here for a wealthy man to spend his money in a very interesting and delightful way by purchasing from time to time desirable specimens and presenting them to the Garden. There must be many wealthy residents of Washington who are in a position to help these collections in this manner, and such persons after having made their gifts to the Garden will always have the specimens which they have presented under their own eyes, where their condition can be watched and their progress noted. The excellent health enjoyed by the animals confined in the Washington Zoo warrants the belief that such generous action would have its reward. Gifts to this institution would live and thrive for a long time, to give pleasure to the public and to be objects of especial interest and delight to their donor.

DR. NICHOLAS ROWE.

AFTER a long and painful illness, Dr. Nicholas Rowe died at his home in Chicago, on Tuesday, March 10, aged 54 years.

Dr. Rowe's youth was spent in the Barbadoes; he came to the United States and graduated in medicine, but his tastes and inclinations being more for the sports of the rod and gun, he abandoned medicine for the profession of sporting journalism. He attained some fame as a writer under the *nom de plume* of Mohawk before he began his editorial career in the year 1876. From that time till his death he was specially identified with the action and development of the sporting world as it pertains to the healthful pleasures of land and water. He was a member of many kennel and shooting clubs, and was a liberal contributor to their success. He was one of the most widely known of American sportsmen. Personally he was a gentleman of fine presence and great personal magnetism, and his executive ability was of a high order.

SNAP SHOTS.

THE effort which the Massachusetts Fish and Game Protective Association is making in opposition to the demands of the market dealers is regarded with an interest as widespread as is the territory from which the game is drawn to supply the Boston commission merchants. Boston has long had the undesirable repute of being a port of entry for goods contraband in other cities and States. It affords a market for game after the markets elsewhere have closed. We published last week the very intelligent and convincing argument made by Mr. J. Russell Reed before the legislative Committee on Fisheries and Game. The enactment of a law limiting the sale of game through the open season as it prevails in Massachusetts would be a distinct gain for game protection.

A PRESS dispatch from Denison, Tex., the other day recorded the feat of a Kansas man who in one day had killed 151 quail over a dog, "the greatest record at quail shooting ever held in the Southwest," and it was asked who could beat this quail shooting. Our notion is that almost any industrious Kansas shooter could beat the record, if he went about his work under proper conditions; but he would not be obliged to travel to Texas to accomplish the feat. If one is to shoot quail for the purpose of making a big score to brag of, the more expeditious method is first to have the birds trapped, crated and brought to the scene of operations. Score shooters of quail would do well to adopt the customary methods of trap-shooting.

General satisfaction was expressed when Florida adopted a law last winter limiting the number of quail an individual or a shooting party might take in a day, for it was anticipated that the statute would tend to discourage the inordinate record-hunting destruction of birds by guests of Florida hotels. Something may have been accomplished by the law in checking the abuse, but record shooting is still in full sway at some of the West Coast hotels, and pains are taken to chronicle the fact that some new record hunter has outdone all who went before him. In every one of these cases, of course, the breaking of the record means the breaking of the law as well; but the law apparently is the very last thing for a quail shooter to think of in Florida.

The Maine courts have decided, in the case of the ninety carcasses of venison shipped by schooner to the Boston market last winter, that the game having been killed legally might lawfully be shipped from the State. This decision was given before the rendering of the decision by the United States Supreme Court in the Connecticut export case. The result of that case was such as to make certain that if the existing Maine law does not answer the purpose of making game export a punishable offense, a new statute may be drawn which will effect this. We ought all to be grateful to Mr. Geer for his distinguished services in the cause of protection. What Mr. Geer has done is no less valuable because of the fact that the result was not in the least of his own seeking. His name will long be remembered with gratitude.

The importance of the Geer case decision, because of its probable effect upon game protection, has had very general recognition, and the report of it as given in full exclusively in the FOREST AND STREAM last week has aroused great interest and given decided encouragement to workers for protection. As we have pointed out, this decision indicates the direction in which effort should be expended in shaping legislation. Here we have a law which the highest authority says will stand the test. There need be no more half-hearted prosecutions under a non-export statute because of apprehensions respecting the attitude toward it of the courts of appeal. There can be no appeal.

We are so accustomed to note the constant diminishing of our game covers that we fail to give heed to the fact that wild nature is continually reclaiming her own from the dominion of man. A recent writer in *Garden and Forest* records that having driven through most of the hill districts of western Massachusetts in recent years, he has constantly been impressed by the extent of the areas which have reverted to woodland, and which promise to remain wild and uncultivated for generations to come.

The Sportsman Tourist.

UNCLE LISHA'S OUTING.—XVI.

Uncle Lisha and Joseph go Voyaging.

UNCLE LISHA woke early from a troubled dream of slaughtered geese that when picked up changed to a leering, disagreeable man clad in a garment of feathers and a red woolen comforter tied about his neck. As the unpleasant vision dissolved in the vanishing mists of dreamland his awakening senses realized the dim, chilling dawn of the autumn day, its silver promise of golden hours, its absence of bird songs, the near stillness stirred but not broken by far away sounds, the raucous call of dusky ducks, the chiming whistle of a flock of golden-eyes already on the wing and the crazy laughter of a distant loon calling the sleeping winds.

These sounds became more separate and distinct when he crept forth into the open air without disturbing his companions and stood shivering by the cold fireplace. He heard what more attracted his attention, the rustle of quick nervous footsteps in dry leaves near by and a sharp "K-r-r-r, quit, quit, quit" that at once told their origin. He cautiously drew his gun from the tent and went in stealthy pursuit of the partridge, which led him down to the brink of the cliff before it burst into flight and went clattering far out of sight through the branches.

Uncle Lisha stared a moment into the brief disturbance of branches along the bird's aerial path and then through a narrow aperture in the green wall of cedars he turned his eyes upon the lake, always an object of admiration to him, a dweller among the mountains.

He saw Split Rock and the further shore of the bay becoming distinct in the growing light, and looming above the low-spread veil of mist, whose nearer frayed edge dissolved in the silvery sheen of the water, smooth as glass, yet gently undulating with long swells that were not perceptible except as they swept downward the lengthening reflections of Garden Island trees, or washed the sands with recurrent, slumberous murmurs.

As he peered out upon the tranquil scene through the narrow casement of boughs, he heard a sonorous gabble of voices mingled with the soft wash of the swells, evidently close at hand, yet coming from an unseen source, for there was no living object in sight but a small flock of ducks crinkling the glassy surface with their wake just in the edge of the mist. Raising himself on tiptoe and looking nearer, his heart almost choked him at the sight of five noble geese standing midleg deep in the sandy shallows almost beneath him. One tall old gander stood on guard stretched to his utmost height, while his companions dived in the submerged gravel.

With breathless caution the old man trained his gun upon them. Remembering all he had ever heard of the danger of overshooting in downhill shots and aiming low at two that stood in range, the trigger was pulled, the mimic thunder rolled across the bay, and as the multiplied echoes came tumbling back from distant hills and shores the lifting smoke unveiled two sprawling forms floundering in the shallows and a brief vision of the survivors climbing skyward with flurried wing-beats.

He knew not how, but with a speed and safety that seemed to him miraculous Uncle Lisha descended the cliff and secured his victims.

"There you be anyway!" he panted as he stood exultantly regarding them, "an' if you're tame wil' geese you're almighty smart ones, an' if any dumb man claims ye he'll be an almighty smart one if he gits ye away f'm your Uncle Lisher!"

Casting a furtive glance around, he gathered them by the legs and made all haste along the beach. Though he had not far to go to reach camp, his breath was well nigh spent; his short old legs were weak and his arm ached with a pain that he was proud of when he had climbed the steep path, and bracing himself for a final effort, held up his game before his gaping comrades.

"There, boys," he cried, "haow'll that du for a fore breakfast's job? I tell ye it's the airy bird 'at gits the worm. These 'ere geese is the birds an' I'm the worm."

Then in response to a shower of questions he related all the incidents of his exploit, while each of his companions "hefted" the geese separately and together and burned with envy or glowed with admiration.

"An' naow le's ha' some breakfasts," he cried when the recital was concluded, "for it's hungry work a-huntin' geese an' strainin' work a luggin' on 'em, as you may not know, but I du."

"I s'pose you won't hev no 'bjections tu my hevin' the feathers if I'll pick 'em?" Joseph asked as they sat around the stone table, and between bites he turned his eyes upon the geese, and with slow rumination calculated their yield of down.

"Not a ident'cal feather comes off'm them geese till they gits tu Davis, an' Jerushy an' the hull consarn on 'em sees 'em jest as they be, feathers an' all. No, sir," the old man continued with increasing emphasis, as he waved the half-picked thigh of a duck in the direction of the subject of his remarks, "the ain't a-goin' tu be nothin' duberous abaout them 'ere geese, ner nob'dy a-twittin' me 'at they're someb'dy 'nother's tame geese 'at I shot."

"Probly you'll goin' prove it by de smell of it too, Onc' Lashal! Dey was git purty hol' nough for smell w'en you gat it home."

"I'll resk but what they'll keep three, four days, an' you'll be a-goin' hum by that time, won't ye, Samwil?"

"Yes, I guess we'll git 'nough on't by that time," Sam answered. "An' I would kerry 'em jest as they be if I was you, for they're better worth showin' 'an anything we've got erless it's aourselves. What be you an' Jozeff goin' tu du t'day? Me an' Antwine's a-goin' up the Saouth Slang tu hunt some an' see the Injins make the canew. Want tu go 'long up in the scaow?"

"No, I don't sca'cely b'lieve we du, du we, Jozeff? I b'en a-callatin' tu gwup the crik a piece some day an' see an ol' feller 'at I useter know time o' the war 'at I hain't seen for fifteen year, an' I guess if Jozeff's a min' ter go an' hunt along up that way in the scaow, we'll go. I'd ruther see an ol' friend 'an all the dumb b'llin' o' Injins in the 'Nited States, an' I don't care no gre't 'baout seein' 'em make a canew. If 'twas mockersins, it might be interestin'. What say, Jozeff?"

Joseph pondered long before he answered, casting doubtful glances out upon the creek while he slowly mopped his plate with a bit of bread.

"Wal, I do' know sca'cely, Uncle Lisher. Du you understan' haow tu oar a boat an' gee an' haw it? 'Cause ye see I don't, an' the plaguey dumb things goes a-shoolin' 'raoun' jest where they're a minter, a dumb sight contrayer'n a hawg, seems 's 'ough. I cal'late they got it 'baout right when they called 'em she. I do' know but what it can be larnt, but I kinder reckon a feller's got tu hev the gift o' managin' on 'em, same as o' women folks, which some hain't ner can't git. Naow if 'twas M'ri' er Ruby, I should know jest haow tu go tu work, but darn a boat, anyways."

"Good airth an' seas, Jozeff, 'tain't nothin' to manage ary one. You jest got tu humor 'em, that's all. I can run that scaow boat anywheres on this 'ere crik, I bate ye."

"Wal, if you c'n du it it's all right, an' I'll go, but if you haffer depend any on me, we shan't git anywheres ner nowheres else."

Joseph's doubts being overcome, they set forth on their voyage, Uncle Lisha at the oars, shaping his course by frequent glances over his shoulder.

The weather was in the genial mood that autumnal days often assume as if to make amends for later sullenness and turbulence. The sun shone warm and bright, and the genial air was stirred by so light a breeze that it only wrinkled the outer channel with ripples that flashed back the sunlight and repeated the azure of the sky in quavering lines of blue, cut athwart by gold and russet reflections of further woods and nearer rushy margins. The marshes were webbed so thick with a veil of spiders' weaving that they looked as if a hoar frost lay upon them, while the sun threw a glade of burnished gold across the broad silvery level, broken by the curving seam of the channel and the brown domes of the muskrat houses.

Uncle Lisha pulled an even, steady stroke, but a noisy one, with a creak and splash that awoke echoes and aroused flocks of wildfowl, while the boat snored placidly on its course, its broad bow seeming to exhale long respirations as it met the ripples with a decadent surge. A party of crows came out of the woods, cruising overhead in a brief tour of observation, whereof they made discordant report as they flapped back to cover. A kingfisher sallied from his perch to meet the voyagers with a rattling volley of clatter that did not cease till he slanted in upward flight to a steadfast poise above a shoal of minnows, into which he presently plunged like a plummet, and then retired in silence to his Lenten breakfast.

So they pursued the voyage, Uncle Lisha too busily employed and Joseph in too great trepidation for much conversation, till the mouth of the East Slang was passed, when the latter cleared his throat and remarked:

"I tell ye what 't is, Uncle Lisher, it kinder seems 's 'ough a feller 'd feel consid'able stiddier an' safer on one o' them 'ere mushrat haouses 'an what he does a-bolancin' hisself in this 'ere plaguey ol' wobblin' boat, seems 's 'ough he would."

"He wouldn't git fur on one on 'em, I don't cal'late," the old man answered.

"Mebbe he might git fur in 'em," said Joseph, feeling guilty for venturing to pun in such a perilous situation; but Uncle Lisha did not deign to notice it and he continued in serious vein. "But ye see I hain't wantin' tu go nowher', on'y tu git aout ont' the land agin, which the' hain't no chance o' duin' here, 'ceptin' I land on one o' them mushrat haouses."

Uncle Lisha vouchsafed no answer, but half turned in his seat to study his course, thereby slightly tipping the scow.

"Sam Hill! Look aout!" cried Joseph, pulling hard on the gunwale. "You'll hev the dumb tottlish consarn t'other side up fust ye know!"

"Go 'long wi' your nonsense," Uncle Lisha answered. "You couldn't tip it over." In proof whereof he wagged his head and shoulders from side to side and raised a wash that shook the boat, yet not so much as it did Joseph.

"For the Lord's sake stop it, Uncle Lisher," he pleaded, "I can't swim no more'n a grin'stun."

"Nob'dy wants ye tu. You jes' sit still an' I'll navigate ye." Uncle Lisha smiled benignly as he resumed his stroke.

"Set still? It don't seem 's 'ough I could, no more'n on a hetchel, an' the tarnal boat won't let me. Say, Uncle Lisher, I wanten git aout an' set on a mushrat haouse till you come along back. Like 'nough I c'd shoot a mushrat er suthin'."

"Sho, the' wouldn't none come anigh ye."

"Wal, I don't care if they wouldn't. I've rid fur 'nough, an' don't want to go nowheres! You back up tu that big one an' le' me git aout. My back aches an' my laigs cramps, an' I'm dizzy-headed an' sick tu my stom-erk an' I don't feel very well myself. You le' me git aout."

"Why, Jozeff, be you in ri' daown airnest?" Uncle Lisha asked, resting his oars. Joseph's scared face gave sufficient answer without supplement of speech.

"Yes, I be. It seems 's 'ough I wouldn't ask for nothin' in this world 'an tu be sot on suthin' 'at wouldn't tottle every time I drewed my breath or rolled my eye. You jest lemme git aout."

"Sho, now don't be sech a 'fraid-cat. It hain't more'n a mile furdur tu where we're a-goin', an' then you can huff it back tu camp, 'crost the bridge an' so raound."

"I tell ye I've rid fur 'nough. You back up an' lemme git aout. Come now, du, Uncle Lisher. Whoa! Back! S-h-s-h! Dumb the plaguey ol' contry thing! Whoa! Hush!"

"Wal, if you will, you will, I s'pose," Uncle Lisha said, stopping the scow's headway with a great surge of the oars and backing her in the direction of the largest muskrat house. "But you'll git turrible lunsome, an' you can't move raound none."

"I've moved raound 'nough tu last me a month. An' I'll be contented as a clam a-waitin' fer ye. Seems 's 'ough I would till—till the ma'sh froze, so I c'd walk ashore." The slanting stern of the scow slid up the sloped side of the house and Joseph, hitching his gun along beside him, crawled out on all fours to the top, where he seated himself with a sigh of intense relief.

"There, naow, if 't wa'n't fer thinkin' o' gittin' away f'm here, I sh'd be as independent as a man on the town. You needn't hurry none 'baout comin' back. Seems 's 'ough I wanted consid'able time tu git settled an' rested up an' look 'raound."

"Guess you'll git settled an' sick on't 'fore I git aout o' sight. If ye du, you holler, an' I'll come back an' git ye. Good-by."

Uncle Lisha bent to his oars and with a strong pull,

assisted by a push of Joseph's foot, resumed his course, continuing it with moderate speed till quite out of sight, in momentary expectation of a recall. He passed the mouth of the East Slang and the long curve of the reach above it when he came where shore and channel became neighborly at a sandy landing, the cleanliest of all the old homestead ports that the inland voyager finds between the lake and the first falls of Little Otter. He pulled in at the foot of a great elm and stepped out on the flint-strewn shore, stretching his legs and straightening his back before he beached his boat and climbed the breast-high bank, which was cut to a steep incline by the wash of the spring floods, and overhung with a fringe of naked roots of shrubs and grass.

A level meadow lay before him, the rank aftermath dappled with purple heads of the second blossoms of clover and starred with late daisies. Beyond it a farmhouse and barns nestled among locust, cherry and apple trees, and a footpath led to it from the landing. This Uncle Lisha followed till the old house assumed a familiar appearance as he approached it from the unaccustomed direction. The smoke of an outdoor fire drifted up from behind a row of cherry trees that bordered the garden, and with it broken clouds of steam that diffused a savory odor of mixed cookery, the old-time hog's hotch-potch of pumpkins, potatoes and apples.

When his feet brushed the plantain and scuffed the chips of the back yard, Uncle Lisha came close upon the source of the smoke and steam, a great potash kettle slung to a thick pole by a log chain over a brisk fire of stubborn odds and ends of the wood-pile. A wiry little man of about his own age was sidling around the windward side of the fire, punching it here with a wooden poker, kicking it there with a quick thrust of his cowhide boot, and then pulling a hat apparently as old as himself well over his brows and sinking his chin deep into the grizzled ruff of beard that surrounded his throat, stooped and peered into the bubbling kettle, getting brief glimpses of wallowing chunks of pumpkins, bursting potatoes and dropsical apples. He was in this position as Uncle Lisha approached in the rear and touched him lightly on the most prominent part of his person with his gun. The guardian of the kettle was not at all startled, but only called out without turning his head.

"Hy, ye leetle sarpint, tryin' tu skeer yer gran'dad, be ye?"

Uncle Lisha touched him again, when making a sudden clutch with his free hand, he caught the stock of a gun. Then he quickly faced about, the look of surprise growing on his face when it met the complacent grin on another face as old as his own and on a level with it. The expression of blank amazement softened to one of pleased recognition when the visitor roared,

"Good airth an' seas! Abil, don't ye know me?" and the host responded in a higher pitched but as hearty a voice.

"Why, Lisher Peggs, you goo' for nothin' ol' sinner, is it you? Where'n time 'd you come from an' haow be ye, anyway?" and the hands of the old friends clasped each other in a vise-like grip. "I never thought o' it a-bein' nobody ner nothin' but some o' the young uns a-foolin'. They're keen ones, I tell ye. But, by Hokey, I'm glad tu see ye. Where'd ye come from, any way, an' haow be ye?" Abel Benham ran on in an uninterrupted flow while he lugged a block of wood in front of the fire. "There, set ri' daown an' make yourself tu hum. Got yer pipe? Wal, here's some terbarker. Light up an' le's have a smoke." While he filled his own pipe he stood off and made a critical examination of his friend, beaming upon him a slow smile of approval. "Wal, ye look jest as nat'ral as an ol' shoe. Leetle older an' a leetle fatter, but jest as humbly as ever. Where'd ye come from, anyway?"

Uncle Lisha accounted for his presence and the two fell into a discourse concerning past experiences till Abel bethought him of another hospitable offering.

"Say, there's a berril o' cider 'at's worked some. 'T hain't very sartain, but it's better'n water. Won't ye ha' some?"

He brought a brimming quart dipper of it, from which they drank in turn, and Uncle Lisha gave it the usual compliment of "being good for the time o' year," while he thought of poor Joseph in thirsty isolation. They eat the mellowest apples in the variegated fragrant pile that was flanked by a yellow mound of pumpkins on one side and on the other by a great heap of potatoes, blushing a dusky red through the clinging soil. When conversation lagged Uncle Lisha was taken to see the hogs, which were duly admired and their weight guessed, while a treat of back scratching and corn nubbins made the visit a mutual pleasure. Then the dinner horn sounded, and the visitor was forced, not much against his will, to partake of a bountiful meal, served in civilized fashion, which he realized was the better and more comfortable way, for he was beginning to tire of eating with his fingers and sleeping in his clothes, and of the untidiness of womanless housekeeping, and he was glad to eat food nicely cooked, unseasoned with smoke and ashes, off a clean plate, in the companionship of women and children, and finish the meal with a dessert of pumpkin pie, so dear to the Yankee.

Now and then he had brief mental visions of Joseph munching his dry, unsocial repast on the roof of the marsh dweller's hut, and felt some qualms of pity for his friend's solitary plight; but both were as fleeting as they are apt to be when one in the midst of plenty considers the condition of the wretched.

Not till he noticed how his shadow had lengthened while he smoked and chatted beside the waning fire did he realize how long poor Joseph had been left in solitary exile. Then he bade his friend farewell and set forth on his return.

With a long and strong pull Uncle Lisha sent the scow surging down the channel, and though he grew scant of breath with the unwonted exertion, he abated not the length nor strength of his stroke till he drew near the place where his comrade had been left, frightening scores of ducks to unnoticed flight a furlong in advance of his noisy progress.

Then he began to look forward, the lifted oar blades dripping a dotted wake while he turned his head, or trailed, bumping the gunwales and creating a succession of miniature whirlpools while he twisted his short body for a long look ahead. Discovering no one, he became anxious, but tried to quiet his feelings with the idea that he had mistaken his reckoning, and again plied the oars vigorously, casting frequent glances on either side. Pres-

ently he passed a muskrat house that he was sure must be the one upon which he had left his companion, for it was the largest in the neighborhood, and the weeds in front were pressed flat where the boat's prow crushed them down, and in further proof of its identity a piece of paper that had held Joseph's luncheon lay on the shelving verge, one sodden half anchoring the other that fluttered in the light wind.

Uncle Lisha checked the boat's headway with a backward stroke and headed toward the house, calling out as he approached it, with his face over his shoulder, in a deprecatory tone:

"There, naow, Jozeff, you needn't try tu hideye. You can't skeer me wi' your foolin'. Git right up an' git right in here."

There was no response, and as the bow grounded with a soft, semielastic bump he called again, rather impatiently, at the same time getting upon his feet and facing about:

"Come, naow, quit your foolin' an' git in here."

His face became blank with amazement as he peered over the top of the muskrat house and saw only the naked slope of its further wall.

"Good airth an' seas, has the critter got asleep an' rolled off an' draownded hisself?" he cried in real alarm, then took an oar and gently prodded the shallow water on all sides, but met only the soft resistance of the oozy bottom.

"Shaw, he couldn't never," he assured himself. "'Tain't deep enough, an' he'd ha' left his gun. But what on airth can ha' become on him? If he'd ha' waded ashore he'd

THE CARLIN GROUSE.

"In somer, when the shawes be sheyne,
And leaves be large and longe,
Hit is full merrie in fayre forest
To hear the foully's songe."

"YES," quoth Mr. Legality to that excellent gentleman himself, "yes, there is much truth in the old ballad, and it is just as true to-day as it was when Robin Hood roved the woodland glade and added to the forest's music the twang of string and the whisper of stinging arrow." This soliloquy was inspired by the clear air and mellow sunshine of an October morning. Mr. Legality was standing on his front piazza in order to collect a few lungfuls of morning air therewith to sharpen his appetite for breakfast. The sunlight filtered through the shade trees and started the steam from the glistening asphalt pavement, that steam whose savor is inseparably connected in the city man's memory with the many sounds and smells of a warm morning in town. Those few lungfuls of atmospheres spoiled Mr. Legality's industrious intentions for that day. He thought of his office in the sixth story, and how the flies would buzz there toward noon, and how the whizz and clang of the trolley cars would wake into exasperating vibration every nerve in his jaded brain, and then he thought of a certain range of dark swamps of cedar and high knolls of beech and maple, joined by straggling lines of undergrowth and brambles; a wood of hollow, hill and glen, through whose midst ran a broad, clear stream that sparkled over rocks and boulders and

and indulged in a small period of mutual and self-admiration. "I made a first-rate shot if I do say it." "You must have; I didn't make a bad one myself. Guess I have my shooting clothes on to-day." "Pretty fair beginning. Looks as though we might take home quite a bag. Two here and five more just ahead." Every shooter understands this kind of talk, and knows the way one feels when he kills the first bird he flushes in the morning, and how he sees himself in imagination returning home about twilight with a heavy, heavy bag.

After a little of this mutual "aiming ahead" the hunters set out to secure the remainder of the brood of grouse. These latter, however, had apparently no desire to be secured, and proceeded to exhibit many of those niceties of character that most grouse seem born with. In vain the sportsmen chased and maneuvered. The only results were occasional whirs of invisible wings or the faintest possible glimpse of a brown streak in the air. Of course they shot at the "whirs" and shot at the "streaks," and half hopefully "sought dead" after every shot "just to make sure they hadn't hit him." At last it seemed as if the birds had all crawled into some woodchuck burrow or hied them to a happier land "far, far away," for not a feather could be flushed. So the sportsmen determined to hie them also and leave this untoward remainder to their meditations. They walked about a half mile up stream and struck the margin of a cedar swamp. Here as before they soon found birds, but they rose wild, three crossing to woods beyond the stream, and two cutting ahead into the swamp. These latter the sportsmen pur-

ha' left a track in the ma'sh like a tew-year-ol' steer, an' he couldn't git through the mud, anyways. The' hain't been no boat come along 'at he da'st go in. Where in tunket has the critter gone? Jozeff! Jozeff! Jozeff!" he lifted up his voice and called, first accenting and prolonging the first syllable, then the second, and then both, but there came no answer save the mocking echoes repeating his call from the woods.

"Con-dumb the tarnal fool! Wha' 'd he wanter go tu roost on a mushrat haouse for anyhaow, julluk a cussed mudhen?" the old man growled in a tremulous voice when he had taken breath after futile listening. "And wha' 'd I ever let him for? I'd give all my ol' boots an' shoes tu see him a settin' in this 'ere boat ag'in. Yis, sir, I would."

He looked long and carefully all around far and near, and then shoved off into the channel and resuming the oars pulled lustily toward the camp.

ROWLAND E. ROBINSON.

Massachusetts Ferreters Fined.

SOUTHBORO, Mass., March 10.—*Editor Forest and Stream:* A most unusual occurrence took place in the First District Court in Westboro, Mass., on Thursday, the 5th inst. A few days previous Southboro officers arrested eight lawless men for killing rabbits with the aid of ferrets. When surprised at their work they had six dead rabbits and two ferrets in their possession. Judge Bates gave them the limit—\$20 for each rabbit—which is pretty dear meat for the scallawags, and it ought to teach them a good, wholesome lesson. For years parties from Marlboro have raided Southboro covers with ferrets until the "cotton-tail" population was nearly extinct, and in spite of all local officers could do they have escaped arrest, as the law reads they must be taken in the act—an almost insurmountable handicap. The law should read that anyone caught in the woods with a ferret should be fined \$100 and denied the right of defense. However, all true sportsmen hereabouts are very thankful for this unexpected "pull," and are heartily congratulating officers and judge.

J. W. B.

caught the woodland shadows with its ripples. He thought of the cool shade and the cool springs, and above all thought of the burst of the whirring grouse, of echoing shot, of deadly aim and floating feathers. He thought, I say, of all these things, and his thoughts literally ran away with him. "That office doesn't see me to-day," was his final decree. He repeated this statement to his wife at the breakfast table, and having finished that meal he kissed his charming lady good-by and hied him to the railway station, bearing in his hand his light-weight gun and closely "tagged" by his invaluable friend and ally, Trump, this latter gentleman being a sturdy pointer of an orange and white complexion.

A ride of half an hour and a short walk brought this goodly pair to the rustic habitation of one Timothyseed, this same Timothyseed being a peculiar fellow, given rather to the sports than to the labors of the field. This trio, having become much acquainted in days of yore, were soon fully accoutered, and got them to the merry green wood to see what cheer they might find.

About 10 o'clock they reached the range of woods before referred to, and struck into a thicket of beech undergrowth. Luck was with them, for they had gone but a short distance when the unerring Trump began to give evident signs that there was an "indescribable something" in the air. "Birds ahead," quoth Seed. "Now, Legality, you walk along the edge of the cover and take the first bird that breaks across the open for the next piece of woods, and I will try my luck in the brush." And now Trump after a few more undecided steps came to a pause; then a few more steps, another pause—and then he settled into that pose so widely known and so justly admired, "a dead point." "Careful, old boy! Steady!" Whir—whir! "Mark!" A brood of seven grouse got up from a tangle of blackberry vines and buzzed off through the dense cover.

Mr. Timothy tried a snap shot at the only visible member of the bunch and was rewarded by a thud and flutter among the leaves. His shot was quickly followed by a report from Mr. Legality. "Dead bird!" "Tried to cross the open, eh?" "Yes, but I caught him at it." "That's right; I have one too." The two sportsmen got together

sued and flushed again, saluting them noisily, but unsuccessfully.

Now there was a moderately steep bluff bordering the swamp on the east, running through the swamp and across an open pasture to another piece of woods beyond. Where this bluff crossed the open it was thickly covered with stunted hemlocks and cedars. This was a favorite place with the grouse, and thither the two flushed in the swamp betook themselves. Mr. Timothy mounted the bluff to cross the open on the one side. Mr. Legality walked upon the open ground below. Mr. Trump took the cover. They walked a short distance when whirl-whir from the cover. Legality looked up in time to see a bird flashing over his head and trying to give him a nice open shot. "Bang! bang!" Well, some other noises followed the report, but they were neither echoes nor thuds of falling game. These sounds came from the mouth of Mr. Legality and described tersely and vehemently certain innate qualities which he considered himself possessed of. "Another bird ahead, look sharp!" came from Mr. Timothy, and sure enough whirl came a second grouse, apparently trying to see how closely he could imitate his predecessor. He imitated well, and Mr. Legality imitated himself. As the report of his second erring barrel died away an expression dawned on his face that caused Mr. Timothy to utter involuntarily to himself the closing line of the old ballad of "Chevy Chase," "God bring us all good ending." He described himself over and over again, told how much money he had wasted on dog, gun and paraphernalia, and finally offered his whole sporting outfit for sale at rock-bottom prices.

Timothy was used to this sort of thing, and after making a modest monetary offer, merely as a matter of form, he proposed they should cross the stream and seek out the three grouse that had betaken themselves that way. So a shallow place was found and the three companions were soon splashing to the other side. This was a more open stretch of woods, with considerable ground hemlock clustering about stumps and decaying logs. For some time they hunted in vain, and were getting a little dispirited when Mr. Trump struck a trail. He led forward slyly as a cat, stepping noiselessly, stopping for an instant, draw-

ing on again. "Toho!" Ah, look at him! a perfect statue, rigid as though frozen. Slowly the two sportsmen step forward—another step—whir-Whir. One bird cuts to the left past Timothy. "Bang! thud." "Dead bird!" The other tries to cross Mr. Legality. His gun springs to his shoulder. A quick, steady aim, and a stream of feathers drift away, while the brave old grouse whirls to the ground. "Can I buy that gun and dog now?"

"No, sir. The gun is worth \$500 and the dog \$1,000 and—by Jove! but this is great sport, eh?"

But now it grows late and the stream must be crossed. It is deeper up here, but Timothy's waders are all right. Legality's short boots are no good, but a tree falling across a narrow place had made a slender bridge, and some wise farmer had decorated this crossing with a length of that sportsman's friend, barbed wire. Upon this trembling, slippery way Mr. Legality essayed to cross. Mr. Timothy, meantime sitting upon the bank, remarked the native grace and dignified bearing of the Legal gentleman in a way which the said Legality apparently considered uncalled for. At the expense of a few trouser wounds the crossing was at last achieved and the hunters turned their faces homeward. On their way they fell a-talking of the "Carlin grouse." That is that bird that ends so many a day's hunt by flying out of some unheard of, unthought of place where he has been lurking to exasperate the wily sportsman and to spring off at the most inopportune time, draw the fruitless fire of the entire party, and with a triumphant "hum" vanish over the tops of the tallest trees in sight. All grouse hunters know him. I myself doubt his true grouse nature. Isn't he some nasty little invulnerable imp that assumes grouse clothing and performs this final act just to take the conceit out of crack shots and take all hope of future skill from shots that are not "crack?"

Well, our two hunters were just discussing the "cussedness" of this variety of bird, and wondering if they were to see him on this occasion when—"buzz"—right out of a hollow stump not 20 yds. away. Not a tree nor bush for 30 rods. An elegant open shot. Four barrels emptied themselves into the air, but not into that portion of the air the bird occupied, and "over the hills and far away" he vanished in the twilight. "*Sic transit gloria silva*," quoth Timothy. "May he live long and prosper," rejoined Legality, and then without further venture they betook them to the railway station, shook hands and

"Each went on his several way,
Resolved to meet another day."

TIMOTHYSEED.

OMNIUM GATHERUM.

THERE appear frequently in your columns accounts of duck hunting experiences, mostly from the far East, wherein the relator gets up very early in the morning to the rattle of the alarm clock and goes away off miles to some pond or other duck resort, arriving just at day-break as like as not in a cold drizzle, putting out decoys or hiding in the grass or bushes near some flyway, getting a few shots and a whole lot of discomfort and wet, and going home with a good deal of (expressed) satisfaction, together with a black duck or two or a coot or sheldrake. I always feel sorry for such shooters and wish they could have the opportunity enjoyed by some others who have such good times and luck that I am afraid they don't appreciate them; but I don't know as the first-named want any of my sympathy. From their accounts they have a rattling good time, and whistle up courage in a very commendable way. All the same I'd like them to have a real good time, just once. Now, I'm not asking for inference that I am situated in duck shooting clover, as defined by some, and can go out and kill my 50 or 150 ducks a day. No, I can't do that, and I'm glad of it; but I can get more than a small family can eat without getting foundered, if I wish, and can do it very easily most any day in an hour or two, and that, I take it, is as much as any decent sportsman ("true," if you like) would desire to do. I can wander along the creek in the early morning after a three minutes' walk from the house, a few hundred yards above where the stream empties into the salt water; and surprise an occasional mallard as it seeks fresh-water tidbits among the bushes or sparse timber, and rises loudly quacking, to fall end over end when the gun speaks. Or I can wait, when the tide begins to flow, behind a log blind near the creek's mouth and see the wary widgeon in pairs or bunches cautiously sail to and fro just out of shot, querulously and timorously squawking, voicing its fear of unseen danger, though unable to resist the temptation that lies where the food is succulent, sailing, sailing to and fro, ever a little nearer, until they arrive where they can upend themselves and pull up the tender grass, which they wish they'd never done when the earthquake opens and two or three or four duckies flap out their lives in the shallow water, while the rest mount heavenward as from a spring-board; and the awful roar is repeated, followed by a very sudden collapse of one or two more baldpates and the rapid disappearance of the remainder. It must be an awful experience for them. By the way, I wonder if this is "pot-shooting." Or I can sneak along under the cover of the sandspit just beyond which the bluebills are diving a few yards from shore, and waiting until all or a majority have uptilted and disappeared in their funny and wonderfully slick way, make a rush beachward, and when they come up and hustle off terrified with great beating of wings put a full stop to the proceedings of some of them, which the boat a short walk away enables me to pick up at leisure.

Now this is very convenient and comfortable and enjoyable, and as Unc' Remus used to say "Dat make me say what I duz," when I express sympathy with the sportsmen alluded to. And isn't this just as well as it is to keep hammering away at ducks, day in and out as long as they fly, so as to boast of the big bag and slaughter in the papers? What a pitiful spectacle a game hog is, anyway!

I say I can get ducks as described, but I don't always when I want to, as happened the other evening when I shot a right and left as they rose only to see them disappear the moment they struck the water, and though I waited and watched patiently almost into the gloaming neither reappeared, at least to my careful vision, but the next day I found one washed up by the tide near by. I have heard tales of ducks mortally hurt diving and seizing grass or weeds in a death grip, and so anchored rob the shooter of his victory. But may be it's fable,

Do you s'pose my ducks played that trick? It's not the only instance in my experience of ducks diving in open water and not coming up.

Another instance of sudden and mysterious disappearance that occasionally nonpluses shooters occurred a few mornings since when I shot a trout-stealing kingfisher as I approached the creek, and alarmed a pair of mallards that rose straight up among the low trees and were quacking me adieu as the other barrel went off. The duck towered. The drake went off across the marsh, dropping lower and lower, evidently hard hit. Upward went the duck and I nearly dislocated my neck endeavoring to keep track of both. Finally the duck ceased towering and circled into the edge of the timber, and with futile beating of wings began to settle straight down. I gave a final jerk of my head drakeward and he had disappeared. Jerk again duckward and she was out of sight, and there I was, but I didn't stay long. I crossed the creek, and going to where I had marked the duck down, began the search, and failing to find her on the level ground ascended the side hill which quite abruptly dropped into the valley here, and when on the upper side of a towering fir, peering through the brush, I spied Mistress Duck cuddled down in a hollow at the foot of the tree almost concealed by brush and bush, which intervened between me and the bird and hedged her in on either side. I noticed that she cocked a bright and watchful eye at me and discretion suggested "better blow her head off," but I scoffed at prudence (as I so often have) with the reply: "What! shoot a crippled duck in the woods! Go to! I'll pick her up," and made a movement to step over the intervening brush, and, as Unc' Remus has it, "right dar I broke my merlasses jug." That duck turned and just scooted back through the brush, down around the tree, and when I had stumbled and floundered through the thicket and craned my neck after her I caught sight around the tree of her disappearing tail, and when I had fairly extricated myself and got to the lower side of the tree the earth had opened and swallowed her bodily, and though I searched for a good part of an hour through, around and under logs, brush and debris over a quarter of an acre faithfully, erect, on hands and knees, and prone on my prostrate body with hat off and head under a log, she never came to light. There were the feathers dropped by the tree, mute evidences of her trickiness, smartness and flight, but where, O where was the owner? I made several excursions round about and grew disgusted, and as often as I'd come back to those feathers hope sprung anew in the immortal breast, and I'd go off and do the thing all over again. I came to the conclusion afterward that she had climbed the tree when I was wrestling with the brush, and sailed out of the top or hidden therein until I removed from thence. I call such disappearance as that superlatively humiliating and exasperating. When patience had had "her perfect work," and more too, I pattered off to the marsh after the drake, if haply I might find his deceased body some'er's; but though I searched that open tidal resort faithfully, so as with tears, round about and way beyond where my strained eyes had last beheld his vanishing form, I never saw him more. He probably bored down in the ground with the crawfish. Duckless and despondent, "homeward the weary (hunter) wends his way," musing on the vicissitudes that euchre him when he has a hand full of trumps.
